Rao Bahadur Ramanbhai's valuable work in the field of pure literature is known to every Gujarati. His essays on poetry and literature collected in book form had been long out of print and taking advantage of a fresh edition he has very conveniently grouped them into different appropriate groups and thus this volume contains essays only on poetry or poetics. It has taken its place already as a classical work on the subject.

DISESIA. By Sibdas Chansy Thakkar is a collection of several public letters and contributions from him at the time a conference of the subjects of the Cutch State was held in Bombay in October 1926. They throw a flood of light on the subjects treated therein.

VIR DHANVADY. By Maha Sanhar Somersaur Pathak printed at the Prithvi Vidy Press Baroda First Cuth Board Pp 149 Re 1 1 0 (1926)

As its name implies it is a connected life story of Arjuna, taken from the Mahabharata and told in a simple style. This enables the reader to appreciate Arjuna's prowess at its proper value at a glance.

DIVYA DHAM DARHAN. By Vrajlal Tribhuvanlal Kulkarni printed at the Gaur Prathat Press Ltd Calcutta Paper cover Pp 150 Price Re 1 0 0 (1926)

Kailas and Manasarovar are names to conjure with the case of Hindu pilgrims, and books narrating the difficulties of travel to these distant places in the Himalayas are very scarce in Gujarati. This guide is both useful and interesting and gives

a vivid description of the privations suffered by the author as well as of the charming natural scenery witnessed by him.

ARBO KI NTRI. By Chhaganlal Dalpatram Upadhyay printed at the Kalamaya Printing Press, Surat paper cover pp 190 price Re 1 0 0 (1926)

It is a book based on Mr G. A. Chandavhar's Manual of Hindu Ethics and shows by means of various quotations from the ancient literature of India the high level of culture there. The book is meant for the uplift of our society.

SAMTA. By the Udaya Mandal members of Bombay is a thin little volume, consisting of papers written on various subjects by little students. Considering their age and equipment, they have done creditably.

ANAN DHARA PART III. By Ramanlal Nandalal Saha printed at the Sagar Vidy Press Baroda Paper Cover Pp 80 Price Rs 0 9 0 (1926)

Short—some of them very short tales to enter into children and with pictures they are sure to interest the little ones.

K. M. J.

MARATHI

MUKTABANDHI. By Mr M. D. Altekar M. A. Published by the author Pages 330 Price Rs two

Writers of social novels in Marathi seem to have acquired a habit of depicting society not as it is at present but of modelling it after the Western pattern. Unrealism seems to be the order of the day in social novelistic literature. Mr Altekar's novel is no exception. Otherwise the book is readable and entertaining.

DHARMA RAHASYA. By Mr K. L. Dapthary M. A. B. L., Pages 290 Price Rs Three.

That Hindu religion stands in need of re-modelling and re-setting in accordance with the needs of modern times goes without saying. But the task is beset with great difficulties, specially because education and enlightenment have not so far penetrated into the strong hold of Hindu orthodoxy. Mr Dapthary has however done his level best to show that a liberal interpretation can be placed on the old religious texts so that the reforms which are absolutely necessary in these days to bring the Hindu religious practices in a line with enlightened ideas about religion may be easily introduced without in any way coming into conflict with old religious texts. The subject is a vast one but the present work I am glad to note gives a sufficient foretaste of what the author desires to place before the public in further volumes on the subject. It is a pity that rich thoughts should be clad in poor trappings.

JEEVAN RASAJANA SHASTRA. By Mr V. M. Kulkarni M. A. D. Price Rs two

The book will serve as a very useful guide to those who will desire to try Schussler's Biochemic remedies which are of late deservedly coming into popularity.

John Singer Sargent

"Our single outstanding type of genius governed by complete technical authority." The phrase is applied to John Singer Sargent, who died in London April 15, 1926. Measured in terms of pure painting John Sargent was one of the giants, a figure in modern art comparable only to the great leaders in the heroic periods. This supremacy has been frequently accorded him in recent years and his death brings forth a unanimity in such expression. He was the sole heir of Velasquez. The New York Sun states:—

"No great artist, ever held a more undisputed primacy in his own field. Titian was rivaled

by Veronese, Rubens by Rembrandt, and Reynolds by Gainsborough, but Sargent in our generation has towered alone as a portrait painter. The National Gallery of London which seldom accepts the work of a living man,

An early portrait by Sargent by which "he astonished the habitués of the Paris Salon." It hangs in the Metropolitan Museum.

hung his pictures alongside those of Sir Joshua. In Italy and France, in Berlin and St. Petersburg, his fame was secure before he reached middle age.

He started as a variable Prince Charming, with all the favors of fortune clustering in his hands and with the ability to justify his possession

of them. In all the picturesque annals of the studio there is nothing quite like it until you pause upon say the lives of such men as Rubens and Van Dyck.

When Sargent came as a youth to Paris fresh from the impressions of old Italian art received in his Florentine home he had talent enough promptly to win admission into the atelier

Painted when Sargent was 26 from which says one of his critics, it is easy to see, the artist had nothing to undo.

At a stride he achieved the supremacy in European portraiture. There were envious commentators then—and there are some to this day. They could accumulate a little evidence in his formative period. Inevitably perhaps he took over from Carolus a little of that fashionable craftsman's fondness for *effilage*. The costumes and upholstery in some of the earlier Sargents are a trifle overdone. But to dwell on the circumstance is to miss the correct perspective in which to regard him. The preoccupation with *frou frou* passed and what remained was the easy strength of the great artist.

One of the Giants a figure in Modern Art comparable only to the great leaders in the heroic periods—John Singer Sargent

He was great primarily in his mastery over the instruments of expression. Since Hals there has been no one to beat him in technical virtuosity. He drew with great force and precision. His brushwork was of that instinctive and marvellous variety which we associate with men like Hals and Velasquez. In powers of design he fell short of that standard which is designated as the grand style. His group portraits like the one which came to be known as 'The Three Graces' or that other one which he painted from the Hunter ladies were impressive *tour de force* without quite reviving the serene perfection of his greater predecessors. But design as it could be exploited in the presentation of a single figure was emphatically his. He placed the sitter with unerring tact and sometimes with an amazing felicity.

Those who sit to Sargent took risks, says the writer in *The Sun* for he could turn a white illumination upon the inner man which was sometimes merciless.

Art in Japan

It must be freely admitted that the remarkable degree of excellence obtained by Japanese artists in expression, art through difficult technical means such as metal work and ivory cuttings unsurpassed in any other country and practically all great Japanese painters are masters at expressing their ideas in woodcuts. It is true though that a lot of apparently Japanese ideas concerning art have in reality filtered through from China, accepted by the Japanese as the Japanese themselves call it, but the Japanese have a natural genius of their own which shines through.

Perhaps Westerners do not fully realize what a hard and callous nature they have developed until they come into contact with the genuine Oriental nature which is so sensitive to the smallest thing, that it gives us quite a surprise. And no doubt, it is this keenly sensitive nature which is the cause of the delicacy we always notice in Japanese art of all kinds.

In examining art in print, we find that the

very first book ever printed in Japan was called the Moku Shoko gyo published by order of the Emperor Shotoku this was in the year 763. It had

Older Bird Scenes

Okyo was a Kyoto artist of the eighteenth century school of art in Japan. His work marks the beginning of the naturalistic school of painting. He was fond of tramping the fields to paint the wild animals directly from nature.

THE SCROLL

The Japanese organize their prints on systems of intersecting lines free at the ends, a horizontal line crossed by a diagonal or a half curve swinging over a vertical straight line, and so on.

however illustrations. The exact date when the first printed illustrations appeared is not known but in 1370 Priest Ryokin had already published a number of religious souvenirs to be bought by pilgrims some of which are still in existence. During the centuries which followed many so-called masters of art appeared but anything like real advance seems to have been slow. Indeed some of the very early work appears to have been quite as good or better than the later. One always notices the same remarkable delicacy and care throughout the Japanese work.

About the middle of the seventeenth century the old style in Japan learnt from China, was nearing its end. Ukiyo broke away from the Yosa School; he was called the moving world because

HEROSHINE

It is not the color but the line and composition in the Japanese and Chinese art that is beyond the emulation of the European. That line is the expression of a flexible brush which is not a part of European culture.

He went to the common life of the people for his inspiration and it is said liberated Japan from the traditional Chinese dogs and monkeys.

Then again as in other countries art in Japan has had its vigorous back to Nature periods its heraldic or hero-worship episodes, its Fecklers as a German author terms the artists of the Ukiyano period and so on. It seems to be a debatable point as to whether printing in colors was first executed in Japan or China at any rate two or three color printing was done by the Japanese in the early part of the eighteenth

century and more colors were not slow in following owing to the superiority of the Japanese over the Chinese in the manufacture of pigments.

The history of the development of Japanese art is a long and interesting study. The more one studies Japanese work the more fascinated one becomes with it. Naturally owing to the adoption of European methods by the Japanese, great changes have come about during the last twenty years. But it is evident that Westerners have a good deal to learn also from the Easterners.

'COOPERISM THE PREDECESSOR OF "DYERISM"

OR

OVERAWING AND STIRLING TERROR INTO THE PANJABS

By MAJOR B D BASU IMS (Retired)

PERHAPS no other province in India was acquired by the East India Company by more Christian methods than the Panjab. Hence the peculiarly Christian

treatment meted out to the Sirdars and people of the land of the five rivers as narrated in the "Rise of the Christian Power in India, Vol. V, pp 377-79. And hence arose

the desire to convert it into a model Christian province

It is on official record that hut for the Panjab India would have been lost to England in 1847. The Panjab had to be rewarded for her loyal services rendered during the Mutiny. The Panjab was the best recruiting ground for the Native Indian Army. So after the Indian Mutiny, steps were taken to reward the Panjab by depriving her sons of the right to serve in the Artillery. Because the natives of the Panjab were very or rather extra loyal therefore a more oppressive system of Government was established over them by the servants of the East India Company.

It was therefore that cold blooded judicial murders by such highly-professing Christians as Sir John Lawrence and Sir Robert Montgomery were the order of the day in the Panjab during and for some time after the Mutiny. One Frederick Cooper, belonging to the 'Heaven born Service' and the author of *The Crisis in the Panjab* was not ashamed to write

One of the most portentous features of the insurrection in Hindoostan was official ingratitude and disloyalty. We have read of judges and collectors mocked with a trial and murdered deliberately by their native official subordinates principally if not always Mahomedans. Even in the Panjab where the people were as yet on the whole loyal the execution by orders of Mr. Montgomery of a Subadar of a Sikh Battalion of the residual of the mounted police and of the gaol-dweller for having failed in their duty to the State was necessary to show publicly in the eyes of all men that at all events the Panjab authorities adhered to the policy of overawing by a prompt and stern initiative (the only way to strike terror into its semi-barbarous people) and to the last would brook nothing short of absolute active and positive loyalty. Government could not condescend to exist upon the moral sufferance of its subjects.

Referring to this John Malcolm Ludlow writes in his *Thoughts on the Policy of the Crown towards India*, pp 180 181 Allahabad reprint —

Men like Mr. Frederick Cooper who in the face of God and man dare to boast of the butchery or death by suffocation of nearly 500 of their fellow creatures as of the ceremonial sacrifice of a Christian should be made distinctly to feel at the hands of every one of their fellow countrymen from the Sovereign to the poorest of her subjects that righteous horror which is due to acts which transcend the grasp of human punishment.

* *The Crisis in the Panjab* pp 151 152
† See this hideous story in Mr. Cooper's book *the Crisis in the Panjab*, pp 152 153. The men in question belonged to a disarmed regiment,

No messages of mercy can avail while it is liable to be belied and perverted by such instruments. Cooperism and the Queen's sway over India are two incompatible things henceforth those who choose to perpetuate 'the one must forego their allegiance to Victoria'

There is no reason to suppose that the order given by Montgomery was a hasty one. It was deliberately given in *India under the Company and the Crown* writes Thurlow, pp 82 83, Allahabad reprint —

Under Providence all this has been effected by a pleasant-looking man of middle height, whose benign appearance militates against the known severity of his decisions. In him regular attendance at divine service, and able reputation of the responses and large participation in all missionary works did not prove incompatible with displace, or even mitigate the readiness with which he had resort to capital punishment or applauded a liberal use of rope by the junior members of his administration. This peculiar feature in a man so gentle as Sir Robert Montgomery has not escaped the keen observation of some previous writers and Mr. Martin quotes in his *Progress and Present State of British India* a letter dated Lahore Sunday 9 A.M. wherein the Lieutenant Governor congratulates Mr. Frederick Cooper one of his so-called hanging commissioners in the warmest terms on the manner in which the 20th Regiment of Native Infantry had been by him blotted out of the book of life for some imagined signs of disaffection adding Three other regiments here were very shaky yesterday but I hardly think they will go now. I wish they would as they are a nuisance and not a man would escape if they do. Mr. Martin holds that this rejoicing over the extermination of a thousand men and eagerness to find a pretext for the destruction of three thousand more reads strangely from the pen of one of the most prominent advocates for the propagation of Christianity in India but it explains in his eyes why our success as subjugators has been attended by failure as evangelists. The fact is that Sir Robert ruled in virtue of power received from others ever stretched by him to its utmost limits not by the suffrage of making it large and could at any moment the third Napoleon's invention of the plebiscite have been introduced throughout the

whose rising must have been a very panic of self defence. They were jaded fugitives craving for mercy. They were more numerous than their captors and had to be decoyed into their power by a sham of leniency planned as such devils deeds usually are amidst intense mirth. Some on being led to execution petitioned to be allowed to make one last salaam to the Sahib. One of the Sikh executioners swooned away at the 150th who was shot. The narrator seems proud to compare the suffocation of 40 with the bodies at the Hole of Calcutta, and the well into which the bodies are thrown with that of Cawnpore. The hasty sanction given by Sir John Lawrence and Mr. Montgomery to such acts cannot absolve them (John Malcolm Ludlow's footnote in his *Thoughts on the Policy of the Crown towards India*).

land of the five rivers, at that moment Sir Robert would have ceased to reign. He governed rather by reason of the machinery at his command than by his personal ascendancy and it may be questioned whether attributes like his would have shone with equal lustre in the piping times of peace as in the years of Mutiny and reconquest that little short of his prosperity could have adorned

Such being the training ground of the Christian civilians in the Panjab they developed a mentality which found expression in the Jallianwalla Bagh massacre in 1919.

Delhi people had to be punished on account of the Mutiny, and therefore they were handed over to the tender mercies of the servants of the Government of the Panjab after the Mutiny. As long as the Panjab frontier was under the Panjab Government, there was the Frontier Law which knew only hanging or transportation for all serious crimes.

It would thus appear that "striking terror into" the people of the Panjab was one of the means for consolidating the Christian Power in India.

It was the Mahomedans who were the greatest sufferers at the hands of the Europeans at the time of the Mutiny. Proportionately more of them were summarily tried and executed and mercilessly all treated than the Hindus. It made the last titular Emperor of Delhi write —

Lakhon begunan hon ko diya fani
(That is, hundreds of thousands of innocent people were hanged.)

But the Mahomedan being now recognized as the favourite wife it would not do to remind her of the treatment meted out to her during the Mutiny. No, some British writers are trying to suppress this fact by all means in their power. Thus the *Pioneer* which was considered the leading Christian daily in India while admitting that after the capture of cities like Lucknow and Cawnpore too many innocent Hindus were summarily tried and executed 'deliberately suppressed the fact of the Mohamedans being the greater sufferers.

Frederick Cooper proceeds in the chapter of his book the opening lines of which have been quoted above —

Suffice it to say that it was reported at mid day on the 31st of July that they were trying to skirt the left bank of the Ravee but had met with unexpected and determined opposition from the Tehseedar with a posse of police aided by a swarm of sturdy villagers at a ghāt twenty six

miles from the station. A rapid pursuit was at once organised.

At four o'clock when the district officer arrived with some eighty or ninety horsemen he found a great struggle had taken place, the gore the marks of the trampling of hundreds of feet and the broken banks of the river which augmented with the late rains was sweeping in a vast volume all testifies to it. Some 150 had been shot, mowed backwards into the river and drowned inevitably too weakened and famished as they must have been after their forty miles flight to battle with the flood. The main body had fled upwards and swum over on pieces of wood or floated on to an island about a mile off from the shore, where they might be described crouching like a brood of wild fowl. It remained to capture this body and having done so to execute condign punishment at once.

Everything natural, artificial and accidental favoured the attempt and combined to secure the fate of the mutineers. So cool was the day that no horses were knocked up though the riding was very heavy and the distance they had made (twenty six miles) from Umrtsur was great. The sun was waxing low and the dispirited mutineers probably would magnify the numbers of the reinforcing party, and moreover probably would think that the Tehseedar with all the villagers who had attacked them so warmly in the first instance was still on the bank flushed with recent triumph and eager with accession of strength, whereas in fact many had gone in pursuit of stragglers some ten miles off. These were the calculations of the district officer and they turned out not amiss.

There were but two boats both rickety and the boatmen unskilled. The presence of a good number of Hindoostanees among the sowars might lead to embarrassment and accidental escapes. The point was first how to cross this large body to the main land if they allowed themselves to be captured at all (after the model of the fox the geese and the peck of oats). This was not to be done under two or three trips without leaving two-thirds of the mutineers on the island under too scanty a protection and able to escape whilst the first batch was being conveyed to the main bank nor also without launching the first batch when they did arrive into the jaws of the Hindoostanee party who in the first trip were to be left ostensibly to take care of the horses on the main land from the desperate conflict which had already taken place a considerable struggle was anticipated before these plans could be brought into operation.

The translation of the above fable to the aged Sikh Sudar who accompanied and to the other heads of the pursuing party caused intense mirth and the plan of operations after this formula elicited general approval.

So the boats put off with about thirty sowars dismounted (of course) in high spirits most of the Hindoostanee sowars being left on the bank. The boats struggled a little but managed to reach the island in about twenty minutes. It was a long unsheltered patch with tall grass, a most undesirable place to bivouac on for the night, with a rain-flood peculiarly if wet and panted hungry without food, fire or dry clothing. The sun was setting in golden splendour and as the doomed men with

joint palms crowded down to the shore on the approach of the boats, one side of which bristled with about sixty muskets, besides sundry revolvers and pistols their long shadows were flung far athwart the gleaming waters. In utter despair forty or fifty dashed into the stream and disappeared rose at a distance and were borne away into the increasing gloom.

Some thirty or forty sowars with matchlocks (subsequently discovered to be of very precarious value) jumped with the shallow water and invested the lower side of the island and being seen on the point of taking pot shots at the heads of the swimmers orders were given not to fire. This accidental instruction produced an instantaneous effect on the mutineers. They evidently were possessed of a sudden and insane idea that they were going to be tried by court martial after some, luxurious refreshment. In consequence of which sixty-six stalwart sepoy submitted to be bound by a single man deputed for the purpose from the boats and stacked like slaves in a hold with one of the two boats emptied for the purpose. Leaving some forty armed sowars on the island, and feeling certain that after the peaceful submission of the first batch (or peck of oats) the rest would follow suit and suit, orders were given to push off.

On reaching the shore one by one as they stepped out of the boats all were tightly bound their decorations and necklaces ignominiously cut off, and under guard of a posse of villagers, who had begun to assemble, and some Sikh horse they were ordered to proceed slowly on their journey back, six miles to the Police Station at Ujjaini. Meanwhile the Hindoostanees (the geese) had been despatched to the island back in the boats with an overawing number of Tawana sowars and it was gratifying to see the next detachment put off safely though at one time the escorting boat got at a great distance from the escorted and fears were entertained that escape had been premeditated. However by dint of hallooing with threats of a volley of musketry the next invoice came safely to land, and were subjected to the same process of spoliation disrobing and pinioning. At any moment, had they made an attempt to escape, a bloody struggle must have ensued. But providence ordered otherwise, and nothing on the side of the pursuing party seemed to go wrong. Some begged that their women and children might be spared, and were informed that the British Government did not condescend to war with women and children.

The last batch having arrived the long struggling party were safely but slowly escorted back to the Police Station almost all the roads being knee-deep in water. Even this accident, by making the ground so heavy—not to mention the gracious mood which came out through the clouds and reflected itself in myriad pools and streams, as if to light the prisoners to their fate—aided in preventing a single escape.

It was near midnight before all were safely lodged in the Police station. A drizzling rain coming on prevented the commencement of the execution so a rest until daybreak was announced. Before dawn another batch of sixty-six was brought in, and as the Police Station was

then nearly full they were ushered into a large round tower or bastion.

Previously to his departure with the pursuing party from Umritsur, the Deputy Commissioner had ordered out a large supply of rope, in case the numbers captured were few enough for hanging (trees being scarce) and also a reserve of fifty Sikh Levies for a firing party, in case of the numbers demanding wholesale execution, as also to be of use as a reserve in case of a fight on the island. So eager were the Sikhs that they marched straight on end, and he met them half way twenty-three miles between the river and the Police Station, on his journey back in charge of the prisoners, the total number of which, when the execution commenced amounted to 282 of all ranks besides numbers of camp-followers, who were left to be taken care of by the villagers.

As fortune would have it again favouring audacity a deep dry well was discovered within one hundred yards of the Police Station and its presence furnished a convenient solution as to the one remaining difficulty which was of sanitary consideration—the disposal of the corpses of the dishonoured soldiers.

The climax of fortunate coincidences seemed to have arrived when it was remembered that the 1st of August was the anniversary of the great Mahomedan sacrificial festival of the Buhra Eed. A capital excuse was thus afforded to permit the Hindoostanee Mussalman horsemen to return to celebrate it at Umritsur while the single Christian, unembarrassed by their presence and aided by the faithful Sikhs, might perform a ceremonial sacrifice of a different nature (and the nature of which they had not been aware of) on the same morrow. When that morrow dawned, sentries were placed round the town to prevent the egress of sight-seers. The officials were called and they were made aware of the character of the spectacle they were about to witness.

Ten by ten the Sepoys were called forth. Their names having been taken down in succession they were pinioned linked together, and marched to execution a firing party being in readiness. Every phase of deportment was manifested by the doomed men after the sullen lining of volleys of distant musketry forced the conviction of inevitable death, astonishment, rage, frantic despair, the most stolid calmness. One detachment, as they passed yelled to the solitary Anglo-Saxon magistrate as he sat under the shade of the Police station performing his solemn duty, with his native officials around him that he, the Christian, would meet the same fate then as they passed the reserve of young Sikh soldiery, who were to relieve the executioners after a certain period they danced, though pinioned, insulted the Sikh religion and called on Gungajee to aid them but they only in one instance provoked a reply, which was instantaneously checked. Others again petitioned to be allowed to make one last salaam to the Sahib.

About 150 having been thus executed one of the executioners swooned away (he was the oldest of the firing party), and a little respite was allowed. Then proceeding, the number had arrived at two hundred and thirty-seven when the district officer was informed that the remainder

refused to come out of the bastion where they had been imprisoned temporarily a few hours before. Expecting a rush and resistance preparations were made against escape but little expectation was entertained of the real and awful fate which had fallen on the remainder of the mutineers they had anticipated by a few short hours their doom. The doors were opened and behold! they were nearly all dead! unconsciously the tragedy of Holwell's Black Hole had been re-enacted. No cries had been heard during the night, in consequence of the hubbub, tumult and shouting of the crowds of horsemen, Police, Tehseel guards and excited villagers. Forty five bodies, dead from fright, exhaustion, fatigue, heat and partial suffocation were dragged into light, and consigned in common with all the other bodies into one common pit, by the hands of the village sweepers.

One Sepoy only was too much wounded in the conflict to suffer the agony of being taken to the scene of execution. He was accordingly reprieved for Queen's evidence and forwarded to Lahore with some forty one subsequent captures from Umritsur. There, in full parade before the other mutinously disposed regiments at Meean Meer they all suffered death by being blown away from the cannons mouth. The execution at Uniala commenced at daybreak and the stern spectacle was over in a few hours. Thus within forty eight hours from the date of the crime there fell by the law nearly 500 men. All the crowds of assembled natives, to whom the crime was fully explained, considered the act *righteous* but incomplete, because the magistrate did not hurl headlong into the chasm the rabble of men, women and children who had fled miserably with the mutineers; they marvelled at the clemency and the justice of the British.

The above account, written by the principal actor in the scene himself, might read strangely at home a single Anglo-Saxon supported by a section of Asiatics undertaking so tremendous a responsibility and coldly presiding over so memorable an execution without the excitement of battle, or a sense of individual injury to imbue the proceedings with the faintest hint of vindictiveness. The Governors of the Punjab are of the true English stamp and mould and knew that England expected every man to do his duty and that duty done thanks them warmly for doing it. The crime was heinous and had there even been no murders to darken the memory of these men the law was exact. The punishment was death.

Political reasons also governed the occasion and led to the decision as to immediate execution. Nicholson had left for Delhi and was far on his road to Ludhiana. This fact was as well known to every mutinous corps as if it had been heralded trumpet-tongued through the bazars. Nearly three months had elapsed since the first outbreak and still Delhi was untaken. Nothing could be more gloomy than the aspect of affairs at this time. In the Doab, there were no less than seven and a half armed regiments besides two armed Hindoostanee Irregulars of doubtful allegiance. Such an opportunity for an immediate and tremendous example never presented itself before and might never do so again. To transport three hundred and twenty disciplined and desperate sepoys, after refreshing them was almost as

difficult as confining them with a due regard to safety for so short a time much embarrassment for escort might have been produced and perhaps a sensation created among the disarmed Poorbeah regiments at Umritsur who might have been seized with an impulse to rescue. The effect on the whole Doab and upon the mind of native society has not proved to have been over estimated for since the extinction of this regiment, there has been no sign among the native troops therein located. Had the 26th N I escaped or even had their punishment been less terrible and instantaneous the whole of the disarmed regiments would of a certainty have followed their example and consequence which it were fruitless now to speculate upon but easy enough to conjecture might have ensued. Their extermination probably saved the lives of thousands. In his proclamation on this subject the Chief Commissioner wrote: 'It is fervently hoped that this final and summary punishment which has overtaken this corps may deter all others from committing atrocious and wanton murders which have disgraced the name of the Bengal Sepoy.'

Further on the same rapid fate pursued the miserable residue. The gallant Major Jackson of the 2nd Irregulars (still performing active service) went out and pushed on so fast that he outdied his party and encountered forty of them. He attacked killed and wounded several and being in a swamp got surrounded and wounded himself. Going further on the desperate remnants fled by Madhopore and Messrs. Garhett and Hanna with the utmost gallantry (the village people being negatively loyal) dashed out and performed repeated feats of gallantry almost unaided for which they received the merited thanks of the Government. The few remnants have since been brought in and executed. There is a well at Cawnpore but there is also one at Ajnala.

The annexed letters are appended as a proof that no officer in the Punjab can do his duty without instant and warm recognition. They were received by the Magistrate the day after the occurrences narrated. The first letter is from the Chief Commissioner Sir John Lawrence G. C. B. the second from the next highest authority in the Punjab. They are highly characteristic and redound to the honour of both. Their perusal will sensibly diminish the wonder why the Punjab Government is so successful.

Dear official from Sir John Lawrence K. C. B.
Chief Commissioner for the Punjab
Lahore, 2nd August 1857

My dear Cooper—

I congratulate you on your success against the 26th N I. You and your police acted with much energy and spirit and deserve well of the State. I trust the fate of these sepoys will operate as warning to others. Every effort should be exerted to glean up all who are yet at large.

Roberts will no doubt leave the distribution of the rewards mainly to you. Pray see that they are allotted with due regard to merit and that every one gets what is intended for him.

Yours sincerely,
Sd John Lawrence

Frederic Cooper Esq D C
Umritsur

D O from Robert Montgomery Esq Judicial
Commissioner for the Punjab

Sunday 9 A M

My dear Cooper—

All honour to you for what you have done, and right well you did it. There was no hesitation or delay or drawing back. It will be a feather to your cap as long as you live.

Get out of the wounded man all you can and send him to I shore that he may himself proclaim what has been done. The people will not other wise believe it.

I congratulate you very heartily on your success. There will be some stragglers I have them all picked up and any you get send us now. You have had slaughter enough. We want a few for the troops here, and also for evidence.

Believe me yours sincerely
Sd R Montgomery

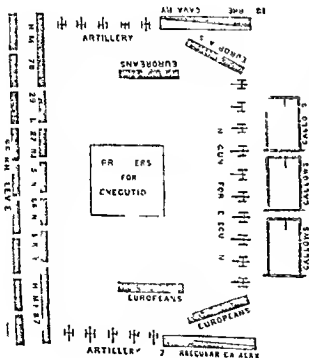

F Cooper Esq D C

P S The other three regiments here were very shaky yesterday but I hardly think they will now go. I wish they would as they are a nuisance and not a man would escape if they do.

Sd R M

PLAN OF PARADE FOR EXECUTION

67

Lord Canning who through evil report and good report has steadily insisted on discriminating justice at once accorded his high commendation of the summary proceedings narrated in this chapter.

The Crisis in the Punjab contains narratives of many other gruesome incidents out of which one is reproduced below.

In a previous chapter we have depicted the position of 900 of H M's 51st and 12 Europeans HEIC's guns as they disarmed four regiments N 1 at Meean Meer. The annexed diagram will show another imposing spectacle. The first terrible evidence of the British Government asserting itself to the death was about to be given. A Subadar Major of the 51st had been captured and hanged boasting that he had been a rebel for more than a year and that the English rule was at an end. On this man's person was found 900 rupees. He inquired what was to be done with his money. Having no doubt in his mind some testamentary disposition to make and revolving therein the question as to residuary legacies. He was informed that after deducting 81 rupees the price of the gallows on which he was to swing the balance would be credited to the State. Twelve men of his regiment were hanged two days after him in a row on full parade of all troops and subsequently the awful punishment of blowing away from guns was inflicted upon forty of the 59 mutineers. The pacific English mind will observe the position of the gallows (see p 67) and will comprehend the feelings of the forty doomed men the last batch of whom had to be dragged up almost senseless to their merited fate. The impossibility of a rescue would owing to this snug disposition appear at a glance to the most interested spectators. A Mr Rich M P moved for a return of mutineers blown away from guns but the motion was not seconded. General Cotton who knows no squeamishness will no doubt be happy to supply him with every information as to the draconic code in force and which he was the first to execute. Ip 66-69

It may not be inappropriate to indicate briefly why, in this article and in some of his books, the writer has used the word

* Christian is referring to the servants of the East India Company and their rule Frederick Cooper, author of "The Crisis in the Punjab" writes in the preface to that book —

From Delhi to Calcutta lay a clear field for mutiny and insurrection. The sepoy army had become intoxicated with their sense of power. Every heart prayed though few dared hope for the Christians' utter overthrow of that boundless area. P. xiv

The concluding paragraph of the preface runs as follows —

The following pages will show how just was the confidence placed in the loyalty and honour of the chieftains of Puthala, of Jheend and of Bikaner. The aim with which they have been written is to depict now the Punjab Government, embarked on a series of operations based on one broad grand line of policy which must for

ever remain to the world a monument of wisdom and self-denying heroism but that wisdom and that heroism are still but mere dross before the manifest and wondrous interposition of Almighty God in the cause of Christianity. P. xvi

Frederick Cooper concludes his book on "The Crisis in the Punjab" with the following words —

The continent of Europe during the great struggle [the sepoy war] might have been looking on with ill-dissembled gloom at Great Britain's fancied extremity whereas the harbinger of her greatest triumph has already heralded the downfall of the seat of Islamism in India. To those fond of reading signs we would point to the solitary golden cross still gleaming aloft on the summit of the Christian Church in Delhi whole and untouched though the bill on which it rests is riddled with shot deliberately fired by the infidel populace. The cross symbolically triumphant over a shattered globe. P. 246

TRUE STATUS OF HINDUS REGARDING AMERICAN CITIZENSHIP

By MARY K DAS

SOMETIME ago *The Modern Review* published an article "Some Stateless Persons in the United States" by Dr Taraknath Das and an article entitled "A Woman Without a Country" written by me was also published in the *Indian Press*. In these two articles facts and legal aspects affecting the American citizenship of those Hindus who were naturalized in the United States and their wives were presented to the Indian public. Recently Mr Surendra Nath Das Gupta from Berkeley California has published an article on the same question in the *Indian papers* which might spread false optimism and mislead the Indian public about the true status of the Hindus in the United States regarding American citizenship.

I

By Mr Das Gupta's article the wrong impression has been spread in India that Mr S G Pandit of Los Angeles has won the case, started against him by the United States Government to cancel his American citizenship on the ground that the U S Circuit

Court of appeals in San Francisco recognized Mr Pandit's contention that Hindus being of Caucasian race are white persons and he was therefore eligible to citizenship. But the actual fact in the case was that the U S Circuit Court of appeals in San Francisco in its decision did not recognize and consider that the Hindus are white persons and thus eligible to American citizenship, on the contrary it held that the interpretation of the term white person as handed down by the United States Supreme Court, in the U S v Bhagat Singh Third case decided on February 19 1907 is binding on all courts in the United States unless the Supreme Court reverses its own decision in some future instance. The Circuit Court of Appeals in San Francisco thus held that the Hindus are ineligible to American citizenship because they are not white persons and the judges who granted the citizenship to the Hindus rendered erroneous decisions. However the court held that the error committed by a judge in granting a certificate of naturalization did not mean that a Hindu secured his citizenship fraudulently or illegally. The

court rendered its decision in favor of Mr Pandit, retaining his American citizenship, on the purely technical ground of "*Res Adjudicata*." The opinion of the court in part reads as follows —

The issue in the trial court was clearly an issue of fact. The defendant asserted a status—free white person' within the meaning of the Naturalization Act. This status the court determined as a question of fact in considering the evidence presented and after the issue was fully briefed and argued. *The court erred in its conclusion of Hindu being a Caucasian and thus white persons and eligible to American citizenship*

'Erroneous' means deviating from the law. Courts often speak of erroneous rulings and always as meaning as deviating from or are contrary to the law but the term erroneous is never used by courts or law-writers as designating a corrupt or evil act. The question of *res adjudicata* or estoppel by judgment is that *both parties have had their day in the court*. Chief Justice Taft in N.C.R.R.V. Story 269 U.S. 253 292 said

Coming now to the merits it may be conceded that the first judgment against the company in favor of the administrator however erroneous it was in view of the cases of Missouri Pacific Railroad v. Anit 236 U.S. 554 and North Carolina Railroad Company v. Lee Administrator 260 U.S. 15 not having been appealed from was *res adjudicata*."

"By the same token the judgment granting naturalization to the defendant the right to citizenship having been distinctly put in issue, directly determined by a court of competent jurisdiction, not having been modified or reversed cannot now be disputed. The judgment is affirmed

Court in the pending appeal of the Pandit case. However it is conceivable that the court may uphold the contention of the Government, or at best may render a decision favourable to Mr Pandit on the ground of *res adjudicata*. But it is safe to say that the United States Supreme Court will not reverse itself on the established position of the court and the Government, that the Hindus are not white persons and thus not eligible to citizenship. Because to the best of our knowledge, there was no dissenting opinion from any one of the other eight members of the Supreme Court when Justice Sutherland wrote the decision in the Thind case. In this connection, it may be safely asserted that in the Thind case, the Supreme Court rendered a "*political decision*" at the request of the Government of the United States and for other considerations involving foreign governments

Even if Mr Pandit wins his particular case, on the ground of *res adjudicata* as he has in the Circuit Court of Appeals, it will not solve the question of citizenship of all Hindus who were in the past naturalized. It would mean that only those Hindus, whose citizenships are now being contested, and whose cases are still pending before the courts for final decisions, or against whom no actions has been yet taken (only 24 persons) will be able to cite the decision

Third case (1923) placed the peoples of India, China and Japan in the same category. Long ago the Chinese were barred from American citizenship and in 1922 the U S Supreme Court decided that the Japaoese, being Mongolians and thus not 'white persons' are ineligible to American citizenship.

At first there was some doubt in the mind of many, that the United States would go so far as to seek to apply the decision of the Supreme Court in the Third case retro-actively to cancel the citizenship of those who were naturalized in good faith, long before the decision in the Third case was rendered. But for political reasons the United States authorities ignored the fundamental principles of jurisprudence and instituted cases against the Hindus and already about 45 naturalization certificates have been cancelled and these Hindus are technically "stateless persons."

It occurred to us that there were three distinct aspects to the situation. First The American women who married Hindus who were naturalized Americans should not lose their American citizenship because they did not marry aliens ineligible to citizenship *but they married American citizens*. Secondly The Hindus who were naturalized as American citizens should not lose their American citizenship and be rendered stateless. Thirdly The Hindus should not be classed as aliens ineligible to American citizenship because they are Caucasians and thus white persons.

III

In 1925 I took steps to interest the National Woman's Party of America so that the law governing the nationality of married women in the United States be so amended that no American woman would lose her American citizenship because of her marriage to *any* alien. Our contention was that there should be no discrimination against any American woman. Because she marries an alien she should not be penalized by the loss of her citizenship as no American man ever loses his citizenship because of his marriage to an alien woman who is ineligible to citizenship. Through the efforts of Miss Emma Wold, Attorney at Law, Washington, D C and the Legislative Secretary of the National Woman's Party a bill was introduced in the Congress of the United States

to accomplish the object. But it did not succeed primarily because of the spirit of anti-Asianism of the American legislators and public. The National Woman's Party has not given up its hope of securing some sort of remedy to relieve the American women suffering from the injustice done to them. But there is no prospect of any action before 1928.

IV

After the failure of the attempt to amend the law, governing the status of married women (popularly called the Cable Act) we felt that some steps should be taken to validate the citizenship of those Hindus who were naturalized and whose citizenships have been recently cancelled and against whom cases were still pending. During the nine months from June 1926 to February 1927, my husband Dr Taraknath Das and I spent all our time and energy and a considerable sum of money in the effort of securing such legislation as would validate the citizenship of those Hindus who were naturalized as American citizens and those of their American wives. We had an interview with the Chief Justice of the United States Hon William Howard Taft who agreed with us that a remedial legislation should be enacted to afford relief to those who were naturalized as American citizens, before the Third case was decided by the U S Supreme Court. At our request the Chief Justice wrote letters of introduction to the Secretary of State Hon Frank B Kellogg and to the Secretary of Labor, Hon James J Davis. A copy of the letter to the Secretary of Labor is reproduced below —

SUPREME COURT OF THE UNITED STATES
Washington D C October 19 1926

MY DEAR MR. SECRETARY: Mr Alfred Martin a gentleman of the highest standing whom I have known for a great many years and a member of the Society for Ethical Culture has talked with me with reference to the injustice that he conceives to have been done to Dr Taraknath Das a Hindu who took out his first papers of naturalization in this country in 1908 and when in 1914 he applied for his naturalization certificate, the examiner contested his right to become an American citizen. The matter was carried into court, and United States Judge Doohog of the United States District Court in San Francisco held that the applicant was entitled to a certificate, which was issued to him. Since that time he has travelled and has received passports and has married an American born woman. Now by our decision at the instance of the Government

it is held that such certificates are void because under the law there was no authority to grant a certificate to anyone but a white person and that Hindus do not come within that description. There are about 49 Hindus who received certificates and who acted on the assurance that they had become American citizens have lost the citizenship of Great Britain and are really without a country and with no allegiance to any government. It would seem to me that such a situation calls upon Congress to right the matter and that the admission of a few Hindus would not at all break down our rule of rigid exclusion. Their might well be special legislation on the subject to meet a real injustice. Doctor Das has called on me and has asked me to give him an opportunity to be heard by the heads of the departments whose advice and wishes in the matter Congress would be certain to consult. I have therefore given to Doctor Das a letter of introduction to you with the hope that some time at his instance you may be able to receive him for a few minutes and talk the matter over with him.

With very best wishes my dear Mr Secretary

Sincerely yours
Wm. H. Taft

persons of the Hindu race are ineligible for naturalization in the United States and

Whereas prior to such decision naturalization was completed by the following persons of the Hindu race in the following Courts (*here follow names*)

Whereas certain of said naturalizations have been canceled by judicial proceedings since February 19 1913 and certain of them are threatened with cancellation in cases now pending and in certain of them cancellation has been denied and in certain of them no cancellation proceedings have been instituted and

Whereas there is need of a uniform rule of law relating to such cases Now therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled That the naturalizations aforesaid are hereby ratified and confirmed and the persons aforesaid are declared to be citizens of the United States and no woman citizen of the United States shall be deemed to have lost her citizenship by reason of her marriage to any of said persons

comes through the fear on the part of many Senators that it will set an uncomfortable precedent which would embarrass us if a similar bill were introduced for the benefit of Japanese.

Very truly yours
(Sd) D A Reed

Another Senator in a confidential communication says that the investigation at the U S State Department shows that there is considerable danger in the enactment of this legislation. Simple justice has no show in these days of political opportunism. As things stand today the efforts to validate the citizenship of Hindus who were naturalized as American citizens have failed because the U S Government does not want to see this done. Until next December no further efforts can be made for this purpose because the Congress will not be in session after March 4, 1927. Furthermore it is our belief that because of the opposition of the Government all future efforts will be futile.

V

Sometime Ago through the efforts of Mr. Satendranath Ghose of New York Senator Copeland introduced a bill which if enacted would have qualified the Hindus as white persons and thus eligible to American citizenship. Now it is quite clear to us that when the American Government and legislators are not in favor of validating the citizenship of less than one hundred Hindus it will oppose the Copeland Bill, which will make all the Hindus (about three thousand of them) in America eligible to American citizenship. Senator Copeland personally told us that he did not see any chance for his Bill, and his Bill even did not have a hearing before the Senate Immigration Committee. The Copeland Bill will die with the ending of the session of the Congress on March 4, 1927. We do not know if Senator Copeland will re-introduce the bill. If he does there is no reason to think that it will ever be enacted as a law.

VI

In conclusion the true status of the Hindus regarding their citizenship in the

United States is as follows — First the United States courts have already cancelled citizenship of forty five persons and alone in the case of Mr S G Pandit the courts have sustained his contention that the United States Government has no right to take away citizenship which was secure in good faith on the part of Mr Pandit. This decision is going to be reviewed by the U S Supreme Court. Secondly All efforts to validate the citizenship of the Hindus who were naturalized and their American wives have failed due to the opposition of the American Government and the American public. There is no reason to think that the prospect of securing justice in the future will be more favorable than in the past.

All men are born free and equal. It is one of the inalienable rights of man, to give up the allegiance of one Government and to acquire citizenship of another State for the purpose of upholding "life liberty and pursuit of happiness". These are supposed to be the spirit of the fundamentals of the American ideal of human rights. In America today, as well as in other countries there are in existence double standards of international morality—one for the superior White men and the other for the Asiatics—The people of India are enslaved Asiatics and they cannot, under the existing circumstances expect to have equal rights with the superior Whites. In the Western world a new and more rigid caste system has arisen based merely upon the color of the skin of men. Let us hope that the dawn of a new era is in sight, when the Asiatics will be able to demand and extract recognition of equality in matters of human rights as human beings.

Does the fate of these Hindus and their American born wives so unjustly rendered stateless make any appeal to the Indian people?

New York City
February 21 1927

1 BINDU'S SON

By SARAT CHANDRA CHATTERJEE

(5)

THAKURJHI i.e., Elokeshi, appeared to be a bit foolish, but was in reality something quite different. No sooner did she find out that the childless Chhotobou had a good deal of cash than she discovered a lot to love in her. Every night she would scold her husband Priyanath, 'I have lost everything for you. Had I not been staying away with you I would have become a king's mother by now. With my boy, who is beautiful as the golden moon in the house would Chhotobou ever look at that ugly imp—' Elokeshi would then heave a sigh, which, if it could blow over the ugly imp's life would surely scorch it to annihilation, and conclude, 'The poor have God to help them.' She would then find solace and silence in sleep. Priyanath too would repent his folly and so fall off into slumber. Thus passed the days of this couple and Thakurji's love for Chhotobou was rising fast like the waters of a river in flood.

To day she was saying, 'With a mass of hair like the rain clouds, why don't you ever coil it up properly. The ladies of the Zemindar family are calling to day, come, let me do it up for you.'

Bindu declined her offer. 'No, Thakurji, you know I cannot keep my head veiled and (with the edge of the Sari) my son has now grown up. He will notice the change.'

Thakurji was surprised, 'What an idea Chhotobou! Let the son grow up. Would you, a married woman with your husband alive, give up doing your hair for that? My Narendranath (may his enemies have their faces covered with ash) is even a few months older, would I therefore give up attending to my hair?'

Bindu said, 'Why should you? your case is different. Naren has all along seen you do so. But if Amulya suddenly finds me to-day with my hair nicely coiled up

he would be astonished no end, perhaps he will shout or do something else—no, no, it will be a terrible shame!'

Annapurna was passing by. She looked at Bindu, suddenly halted and said, 'Why are you looking so flushed Chhotobou? come here, let me touch you and see if you have got fever.'

Bindu felt shy because Elokeshi was there. She said, 'Why must you touch me everyday to see if I have got fever? Am I a child that I should not know when I have a temperature?'

Annapurna said, 'Oh no, you are shrivelled up with age. Come near me these months (September and October) are extremely bad times.'

Bindu answered 'No, I will certainly not go near you. I am telling you I am perfectly all right and yet you must examine me.'

Annapurna said, 'All right. But don't mislead me.' She went away looking very suspicious.

Elokeshi commented 'Barabou is rather fond of fussing, isn't she?'

Bindu kept quiet for a second and said, 'May all people be as fond of fussing—Thakurji, as she is!'

Elokeshi kept quiet.

Annapurna was returning the same way with something in her hand, Bindu called out, 'Didi, listen, will you have your hair done up?' Annapurna turned round. She stood silently for a while and took in the whole situation, then said to Elokeshi, 'I have requested her ever so many times, but it is useless to request her. Such a mass of hair, she won't touch it, such abundance of clothes and ornaments, she won't wear them, such beauty, she won't look at herself, she is altogether unearthly in her ideas and ways. The boy too is taking after her. Do you know, Chhotobou, what Amulya told me the other day? He said, "What is the idea in wearing nice clothes and ornaments? Chhotoma has a lot, does she wear them?" Bindu looked up proudly and said with a smile, Now you see Didi,

* A widow is not supposed to do things which will improve her personal appearance.

if it is necessary to be unearthly in one's ideas and ways to make ones son a great man' If you live till then you will see how people will point out and say, look, that is Amulya's mother" Her eyes filled with tears as she said these words

Annapurna saw this and said in a soft and affectionate tone "It is because of that that we never say anything where your son is concerned May God grant you your wish? But we are never so extravagant in our hopes as to expect the child to become some day a leader of the community"

Bindu wiped her eyes with the end of her sari and said, "It is with this one hope in my heart that I live My God" She suddenly felt a shiver run through her body and her hair roots were set atingle She was ashamed of this rush of emotion and said with a semi-apologetic smile, 'No no Didi, if ever this hope is blasted, I shall go mad"

Annapurna remained silent She had known of her sister-in-law's hopes and desires but had never before felt them so strongly in her own heart Today she became fully conscious of the reasons why Bindu was wakeful as a Yaksha* and alert as a ghoul where Amulya was concerned Her mother's heart filled with the greatest respect and love for this woman whose whole existence was in thoughts of her son's fullest well being She turned her face to hide her tears of joy

Thakurji said, "Well all right, but to day you—"

Bindu cut her short and said, "Yes, Thakurji, do up Bidi's hair to day—I have never seen it done up since I came here" She smiled a little and disappeared

About five or six days afterwards, one morning, the old family barber was descending the stairs after giving Jadab his shave, when Amulya came and stopped him

He asked the barber, "Kailashday can you cut my hair like Narendra has his cut?"

The barber was surprised He asked 'What is that like?'

Amulya pointed out various parts of his head and said, "See, you have to leave three-fourths and cut away one-fourth here, three-eighths and five eighths here, one eighth and seven eighths here and here, close to the neck, cut it as short as possible Can you do it?"

The barber laughed and said, "No, dada, I don't think even my father could do it"

Amulya wouldn't give up He encouraged the barber and said, "It is nothing very difficult—Three-fourths here and three-eighths at this place"

The barber sought a new avenue of retreat He said, "What day is to day? I cannot cut your hair unless Chhotoma gives permission, you know"

Amulya said, "All right, wait, I shall go and enquire Give me your umbrella, otherwise you will run away" He captured the umbrella forcibly and ran away Entering the room like a cyclone he said, "Chhotoma, do come at once"

Bindu was about to sit for her hair Anshik* after her bath She cried, "Don't touch me y don't, I am doing my Anshik"

"Oh, do your Anshik later on, come outside and order him to cut my hair, he won't do so otherwise He is waiting"

Bindu was rather surprised It has always been a fight to have Amulya's hair cut Why was he so eager to have it cut to-day? As soon as she came out the barber said, "I have been set a very difficult task mother, I must cut his hair like that of Narenbahu and there are ever so many rupees, annas and pies in the calculation I don't think I could do it"

Amulya said 'Oh yes, you could All right, just wait, I shall call Narendra" He could not find Naren, for the latter was out Amulya came back after searching the whole house for Naren and said 'He is not in, however that does not matter, Chhotoma, just instruct him, will you? About three-fourths here, three eighths here and one eighth here But cut it very short at this place"

Bindu was amused at his eagerness She protested, "But I have got my Anshik to do!"

* A Yaksha is a subject of *Kubera* the god of wealth Misers are superstitiously believed to become yakshas and guard over their hidden treasures after their death

† In Bengal it is the custom to address menials who are old and have served long as Dada (elder brother) or as Khuro (uncle) or something else. This ancient and truly democratic system has received a set back through contact with the West.

* Religious duties which are to be performed morning, afternoon and evening

† One has to observe purity of body and clothing during Anshik One must not be even touched by any body with impure garments on at such times

Do your Annik afterwards, or I will touch you"

Bindu had to give way.

The barber began his work Bindu signed to him and he gave Amulya a good even crop Amulya felt his head all over with his hand and said, "That is all right" Then he jumped up and disappeared

The barber took up his umbrella which had been restored to him and opined, "But mother, it will be difficult for me to enter this house to-morrow"

The Brahmin woman had prepared his meal and was looking for him every where. Bindu heard, while measuring out the milk in the kitchen, Amulya shouting about in quest of his uncle's hair brush. A little later he rushed into the kitchen weeping, rested himself against Bindu's back and cried "It's all wrong! He has spoilt every thing Chhotoma, I shall kill him when he comes to-morrow" Bindu could no longer suppress her mirth Amulya left her and cried in disappointment, "Are you blind? Can't you see?"

Hearing the noise Annapurna entered the kitchen, heard the case through and then said, "But what does it matter he will cut your hair again to-morrow and put things right"

Amulya became even more angry and cried, "Where will he get the three-fourths bern? Where is the hair for it?" Annapurna attempted to pacify him by saying "Oh, it may not be three-fourths, but it will be half or somewhat more at any rate"

"Rubbish! Is it the fashion to keep only half or five eighths here? Ask Narendra, he will insist on having three-fourths" Amulya could not even eat his food properly that day He stirred and scattered some of the rice, then went away

Annapurna asked Bindu "Since when has your son developed a taste for hair-dressing?"

Bindu smiled, but the next moment she became dead serious and said with a sigh, "Did it is something negligible and paltry but I am frightened to death, for all things have a small beginning" Annapurna too was infected by her fear and could say nothing

The Durgapuja festival came on In the other part of the village, the Zemindar house was preparing for it on a lavish scale. For about a couple of days Naren lost himself there. On the night of the *Saptami** Amulya

came * and said, "Chhotoma, they are having a *atra*, aren't you coming?"

Chhotoma said "Having it now? You mean they are going to have it to-morrow"

Amulya informed her, "Narendra told me, it will begin at 3 in the morning"

"You don't mean to say that you will pass the whole night there out in the cold? That cannot be allowed Go with your uncle to-morrow morning, you will get a good place" Amulya was on the verge of tears and said, "No send me now Uncle may not go or may go very late"

Bindu said, "All right, go to bed now. I shall send you with a servant at 3 or 4 in the morning"

Amulya was angry and lay on the bed with his face to the wall.

Bindu tried to drag him closer to her but he threw off her hands and remained stiffly aloof After this everybody had probably fallen asleep for some time—the sound of the big clock outside striking one—two—three—four woke up Amulya all of a sudden He counted the strokes jumped up, shook Bindu violently and cried, "Get up Chhotoma quick, get up, it is past four" The clock went on striking, five—six—seven—eight—Amulya burst into tears and said, "It is past eight now, when shall I go there?" The clock was still striking nine—ten—eleven—twelve Then it stopped Amulya understood his mistake and lay quietly in one corner being thoroughly put out of countenance. Madhab used to sleep in another bed at the other end of the room, the noise woke up also him

He laughed aloud at Amulya's discomfiture and asked, "Amulya what has happened?" Amulya remained silent in shame. Bindu, who was highly amused, said, "Oh, the way he shook me out of my sleep! People don't behave that way even if a house was on fire."

Amulya's silence roused pity in her heart and she said, "All right, go now, but don't you quarrel with anybody"

Then she called Bhurrah who went out with a lamp as Amulya's escort. The next day Amulya came back at about ten in the morning, quite happy after attending the performance to the finish Seeing his uncle he asked, "Well, why didn't you come?"

Bindu asked him, "What was the show like?" "Very nice, chhotoma Uncle, do you

* *Saptami* the first day of the Pujas which last for four days.

know they are having a *Khemta** dance this evening. Two of the dancers have arrived from Calcutta, Narendra has seen them, they are, just like Chhotoma—very beautiful—they will dance. I have also told later."

"You have done very well," said Madhab and laughed heartily at this naive comparison of Bindu and the nautch girls.

Bindu's face went red with indignation. She said, "Just listen to the sayings of your accomplished nephew! (meaning Naren) she turned to Amulya." "You shall not go there again—wretched swine. Who said they were like me, Naren?"

Amulya said in a frightened voice, "Yes, he has seen them."

"Where is Naren? All right, let him come home!"

Madhab suppressed his mirth with great difficulty and said, "Have you gone mad! Dada has heard the story, so cool off and don't make a row." Bindu had therefore to swallow her anger and burn within herself.

Towards evening Amulya went to Annapurna and entreated her, "Didi, They are having a dancing show at the Puja house may I go there? I shall get back in no time."

Annapurna was busy, she said, Go and ask your mother."

Amulya persisted, "No didi, I shall come back very soon, do let me go."

Annapurna said, "No, no, she is one with a temper, you had better go and get her permission."

Amulya began to cry, pulled her this way and that way by the sari in order to drive home his appeal—"No don't tell Chhotoma, I shall go with Narendra—I shall come back in no time."

Annapurna said, "If you go with Naren—"

Before she could finish her words Amulya dashed out.

About an hour later she heard Bindu searching for Amulya. She kept quiet. But when the search was beginning to assume serious proportions, she came out and said, "There is some sort of a dance going on, he has gone there with Naren—he will come back soon. There is nothing to be anxious about."

Bindu came near her and asked, "Who gave him permission to go, you?"

Annapurna knew that if Bindu came to

learn that Amulya had gone without taking permission, there would be trouble, she told a white lie in fear. "He will come back soon." She said.

Bindu went away her face dark with anger. A little later, Amulya came back and heard that he was sent for by his Chhotoma. He dared not respond to this call and went and lay on a corner of his father's bed.

Jadah had his spectacles on and was reading the *Bhagavad* in the light of an earthen vegetable oil lamp. He looked up and asked, "Well, Amulya?"

Amulya did not speak.

Kadam came and said, "Come, Chhotoma is calling you."

Amulya came nearer to his father and whined, "You come with me, father."

Jadah was amazed, "I come with you! What has happened Kadam?"

Kadam explained the situation.

Jadah knew that this would lead to a quarrel. One was forbidden, the other was permitted, so he went with Amulya to Chhotoma's room and addressed her from outside, "Pardon him this once, he is promising not to do so again." That night when the two sisters-in-law were having their meal, Bindu said, "I am not angry with you didi, but it will not be possible for me to stay here any longer—Amulya would go absolutely wrong in that case. It might have been different if I had not expressly forbidden him to go, but, I have been wondering since that time, how could he dare to go out in spite of what I told him. Then, see, how wicked he has become. He did not come to me, he went to you, coming home as soon as he heard that I wanted him, he went straight to Barathakur and brought him over to plead for him. No, didi, such things were unknown till now and I would much rather go and live in a rented house in Calcutta than see this only child go to the dogs and make me weep for the rest of my life."

Annapurna was upset and said, "But if you go away, how shall I live alone?"

Bindu kept silent for a little while and said, "That you know best. I have told you what my intentions are, that Naren is an extremely bad boy."

"Why, what has Naren done? And if

* Popular dance of which the rhythm is light and easy.

*One of the sacred books of the Hindus.

they had been brothers, what would you have done in that case?"

Bindu said, "In that case I would have him tied up by servants, flogged with *Bichhuti* * and driven out of the house. Moreover, I don't count in practice—didi, let them go away."

Annapurna was inwardly displeased. She said, "It is not for me to keep them or drive them away. Go and ask him who has brought them here—don't find fault with me."

"How can I go and tell such things to Barathakur?" "Tell it in the same way as you tell him all sorts of things." Bindu pushed away her plate of rice and said, "Don't try to hoodwink me, didi, I am now about twentyseven or twentyeight, the affair is not one which concerns the servants of the house but is one in which relations come in—while you are alive, if I went to talk over things like this with Barathakur wouldn't he be angry?"

Annapurna said, "Of course, he would be angry, but if I told him such things he would never look at my face again. What—over we might be, we are outsiders, and they are brother and sister—why can't you see that? Moreover, I am an old woman, if I pranced about with such talk wouldn't people call me mad?"

Bindu pushed her plate farther away and remained stiffly silent.

Annapurna knew that she kept quiet only in fear of her elder brother-in-law. She questioned, "Why are you sitting with folded arms—what sin has the plate of rice

the door and take in your son. Even my father * couldn't stand such wickedness as his."

As soon as Bindu opened the door she came in with Amulya and said, "I have seen lots of pigs in my time, but never one to heat this one. It is now nearly two and I have not been able to get a wink of sleep—now he says he is hungry, now he complains about mosquitoes, now he wants a drink of water, now I must fan him—no, Chhotobou, I have to work the whole day, I couldn't live if I didn't get a little sleep at night."

Bindu smiled and put out a hand to Amulya who at once crawled into her bosom and fell fast asleep within a minute. Madhab laughed at her from the other end of the room, "Well, Bouthan, has your desire been fulfilled now?"

Annapurna said, "It was not my desire, brother, he himself got into my bed to escape his mother's wrath. But I have no doubt been given a lesson! And what shameful words, Thakurpo—he told me it made him feel shy to sleep with me in the same bed!"

All the three of them laughed out.

Annapurna said, "No more now, let me go and get some sleep." She then went away.

About ten days later, Bindu's parrots, who were going on a pilgrimage, sent a *pakka*† for Bindu in order to have her with them for a time before they started. Bindu was, without Amulya's cognizance, preparing to go over to her parents for two or three days, when suddenly Amulya appeared there.

her mouth to hide her smiles and went out.

Bindu held back her smiles and said, 'Must we all wait patiently for the day when your bride will come and put on ornaments and go without any ourselves in the mean time? Go to the school!'

Amulya did not pay heed to what she said. He persisted in his enquiry, 'Why is didi laughing like that? I am not going to school any more—you must be going out somewhere.'

Bindu said, 'Well, what if I am, must I take your permission before so doing?'

'I too shall come with you.' So saying Amulya went out with his books.

Annapurna entered the room and opined, 'Don't you think he has gone to school? It is not so easy as all that. But, isn't he cute! He asks why you have put on alta and ornaments! In my opinion, you would do better to take him with you, or when he comes back he will kick up no end of a row.'

Bindu said, 'Do you think he has gone to school? Never. He is hiding somewhere and will appear at the right moment.' It turned out to be so. He was hiding and when Bindu was taking leave of her elder sister in law, by taking the dust of her feet, Amulya suddenly appeared and stood holding on to Bindu's dress. Both the sisters-in law laughed out.

Annapurna said 'Don't beat or scold him, now when you are going out. Better take him with you.'

Bindu said, 'Well supposing I did take him with me, but, even then, isn't it a bit too much that I should not be able to move out a step anywhere?'

Annapurna answered, 'That is how you have brought him up, haven't you? Amulya, why not stay with me for a couple of days?'

Amulya coolly refused her offer, 'Oh, no, I couldn't stay with you.' Then he went and got into the pallo before anyone else.

(to be continued)

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations etc., in the original contributions, and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor The Modern Review.]

'League of Nations Bound to Maintain Status Quo'

Re a note under the above caption which appeared in the March issue of *The Modern Review* at page 379 might I be permitted to make the following observations with respect to the duty of the League to maintain the status quo of India as it is the British Government.

Article 10 of the League covenant says 'the members of the League undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all the members of the League (italics are mine). While interpreting this article we cannot leave out of consideration the words 'as against external aggression.' Thus my interpretation is that the League is bound to respect and preserve the territorial integrity and existing political independence of all members of the

League as against external aggression but it has no jurisdiction to interfere if a subject nation seeks, by internal aggression to gain further political power or comp etc independence.

I would unhesitatingly say that the League is not only not bound to maintain the status quo of subject nations or dependent states but that it must encourage the attainment of full self government by them. President Wilson's fourteenth point which was the foundation of the League's birth opened with the words 'a general association of Nations must be formed.' Thus the idea distinctly was that the League should be a world organisation of which as many nations as possible should be members. By Article 1 any fully self governing state, Dominion or colony can become a member. Thus dependent, subject or subordinate states cannot become members of the League and this is as it should be because the League cannot be a free and democratic League unless all its

constituent members themselves are free and democratic. Now if the League has got to be a world organisation it must make an honest effort to see that all the states in the world become its members which can only happen when they first become free and fully self governing.

The general aims of the League as contained in the pre-amble of the covenant are

to promote international co-operation and to achieve international peace and security by the acceptance of obligations not to resort to war by the prescription of open just and honourable relations between nations by the firm establishment of the understandings of international law as the actual rule of conduct among Governments and by the maintenance of justice in the dealings of organised peoples with one another (italics are mine.)

Though Great Britain and India are part of the British Empire yet the English Nation and the Indian Nation are two different nations and two sets of organized peoples, and it is certainly the paramount duty of the League (i) to promote international co-operation between India and Great Britain (ii) achieve international peace by the obligations not to resort to war viz the relations between India and Great Britain should not be such that one may think of resorting to war against the other (as some Indians on the Government's own showing are contemplating) (iii) prescribe open just and honourable relations between Nations (e.g. India and Great Britain) (iv) maintain justice in the dealings of organised peoples with one another (e.g. India and Great Britain) Thus a close analysis of the pre-amble leads to one and only one conclusion and that is that it is the duty of the League to examine the relations between India and Great Britain and see that their relations with each other are open just and honourable and are based on justice and tend to promote co-operation and achieve peace with each other and other nations of the world.

Article 3 of the covenant says that the League may deal with any matter affecting the peace of the world. Under the provisions of this Article also the League can and should help India to adjust her relations with Great Britain on honourable and just lines. The League is a League of Nations and not a League of kingdoms, and there is no provision in the covenant which lays down that any nation whatsoever (whether) it is dependent or independent of any member of the League and (whether it is itself a member of the League or is an outsider) may not lodge a complaint with the League and the League may not go into its question in order to maintain the peace of the world and to safeguard the just rights of the complaining nation.

Whatever may be the position of India *Quas* the British Empire, India and Great Britain are both independent and equal members of the League. India does not owe its position inside the League to the good grace of Great Britain or any other country. She became its member by virtue of its signing the peace treaty and paying its quota of expenses. Articles 12 and 13 of the covenant make the members of the League promise to submit all their disputes to arbitration. I wonder who would be the position if India as a member of the League informs it of

its dispute with Great Britain as another member of the League and formally seeks the League's arbitration! India is the only dependent country which has become a member of the League. Article 1 of the covenant prevents any other subject country ever becoming a member of the League. Perhaps the League owes it to its own honour and dignity as a free and democratic institution to see that none of its constituents continue any longer in the humiliating position of a subject nation. As India cannot be turned out from the membership of the League its dependence would continue to be a matter of shame and disgrace to the League as long as India is not free.

The above is based on a purely legal and equitable interpretation of the League's covenant. I know it as well as any other man in the world that the League will not act on behalf of India to the detriment of Great Britain's power even if there was a distinct article enjoining the League to help subject nations to attain full self-government!

Jyoti Swarup Gupta

Editor's Note

In the last sentence of the criticism printed above the writer says 'I know it as well as any other man in the world that the League will not act on behalf of India to the detriment of Great Britain's power even if there was a distinct article enjoining the League to help subject nations to attain full self-government.' So whatever the purely legal and equitable interpretation of the League's covenant may be practically it comes to this that the League will be sure to maintain the *status quo*. And probably that is what I meant when in the heading of my Note in the March number I considered the League of Nations Bound to maintain *status quo*. I cannot say now positively in what sense I used the word 'bound' when I wrote the Note. But, according to Webster the word is used in following senses—

Under legal or moral restraint or obligation obliged

Constrained or compelled destined or certain—followed by the infinitive as he is bound to succeed.

It seems to me that I used the word in a sense which approximates more to the last than to the first. I nowhere said that it was the duty of the League to maintain the *status quo* of India vis-à-vis the British Government. And in fact my Note was concerned not merely or chiefly with the present condition of India but also with the status of all other subject peoples so that even if the critic's arguments held good with regard to India as a member of the League they would be inapplicable in the case of other subject peoples.

The writer thinks that by using the words 'as against external aggression in Article 1' the League has deprived itself of any jurisdiction to interfere if a subject nation seeks by external aggression to gain further political power or complete independence.

Though I am not a lawyer this verbal loop-hole has not escaped my observation. I wrote in the February number page 207—

It may be argued that as the members of the League undertake to respect and preserve the territorial integrity of all its members against external aggression, therefore it is not bound to do anything to prevent internal rebellion, whether violent or non violent,—neither being just now within the range of practical politics—for obtaining independence. Moreover as India does not enjoy any *existing* independence Article V does not exactly apply in her case. But assuming that the interpretation we have suggested here is correct the League could at best remain a non-interfering spectator in case India made any active effort to be free as it (the League) has done in the case of Syria, India can never expect the least help or sympathy from the League in any fight for freedom.

In the new edition of Chambers Encyclopedia Article V has been quoted in full because it has in any case become so much a centre of controversy. Discussing the meaning of Article V Lord Robert Cecil writes in Volume XXI of the twelfth edition of the Encyclopedia Britannica p 738—

Article V when closely examined will be found to be little more than a rather clumsy assertion that territorial or political changes ought not to be made by aggressive warfare. Such changes if required should be made under Article 19 which enables the Assembly to reconsider treaties which have become obsolete or dangerous to peace.

So according to this interpretation all aggressive warfare, external and internal is shut out. As for the reconsideration of treaties, it cannot be said that Great Britain has become the mistress of India by virtue merely of treaties. Both external and internal aggression is also excluded by the member states acceptance of obligations not to resort to war mentioned in the Preamble to the Covenant.

I need not discuss what the writer says with reference to President Wilson's 14th point, as the League is not bound legally morally politically or by the circumstance of the world to pay any attention to it.

Great Britain has not yet redeemed in a just

and generous manner the unambiguous pledges given by the East India Company by her sovereigns and by various statesmen who had anything to do with India. One need not therefore expect that the vague expression of some politically pious sentiments in the Preamble to the League's Covenant or in any Article thereof will impel the League to do anything to free any subject people. Moreover the word *organised* used in the Preamble has left a loophole of escape for diplomats, Indians and other similar subject peoples it may be contended are neither nations nor organised peoples.

It is true that the League is not prevented by any article from receiving complaint, from even subject peoples. But on the other hand there is no article which provides for the acceptance and consideration of such complaints and on that ground the League is sure to refuse to entertain any petition from subject peoples. Moreover the question of the representative character of the petitioners is sure to be raised and decided most probably against them.

It is a misreading of facts to say that India does not owe her membership of the League to the good grace of Great Britain. In fact, the Imperial British Government practically made the subordinate Government of India sign the Peace Treaty for the purpose of increasing the number of British Votes.

The mere idea of India informing the League of its dispute with Great Britain must excite laughter. The Indian delegation is Indian only in name. It is chosen by the alien and foreign subordinate British Government of India and carries out its behests. Can this subordinate Government of India instruct its nominees (forming the Indian delegation) to complain against the Imperial British Government which is its master?

I should be glad, if the League ever came to have any feeling of shame or disgrace because of a subject country like India being one of its members. But I am not very hopeful of ever having any such pleasure.

March 23 1927

RAMANANDA CHATTERJEE

PROFESSOR MEGHNAD SAHA

PROFESSOR Meghnad Saha was born in 1893 in the village of Scorafali P S Kaliakur, in the district of Dacca. His father Jagannath Saha, was a small trader and had to bring up his large family with great difficulty. He had his early schooling in his native village and later since there were no schools above the primary stage at his place at the age of 10 he was sent to the village of Simulia about 6 miles from his native village, where he was housed by a charitably disposed

gentleman Dr Ananta Kumar Das, family physician to the Zemindar family of Kasimpur. From this school he passed the M. E examination in 1905 standing first in the Dacca Division and securing a scholarship.

This scholarship enabled him to proceed to the city of Dacca, and prosecute his studies at the Dacca Collegiate school. Later he was obliged to change to the K L Jubilee School from which place he passed the Calcutta University Entrance Examination of 1909, standing first in Eastern Bengal,

and first in Mathematics in the University and first in languages in Eastern Bengal. While a student in the second class he competed for the all Bengal Bible Prize Examination held by the Baptist Society, and stood first with a prize of Rs 100.

He passed his I Sc. examination from the Dacca College in 1911, standing third in the Calcutta University, and first in Mathematics and Chemistry. In 1911 he

came to Calcutta and joined the Presidency College. From the Presidency College he took his B Sc and M Sc (Applied Mathematics) degrees standing second in both cases. Mr Satyendra Nath Basu Prof of Physics in the Dacca University and author of Bose Einstein's Statistik beating him both the times. At the Presidency College he had amongst his teachers Sir J C Bose, Sir P C Ray, Prof D N Mallick and Prof C B Cullis. Though engaged in the study of Mathematics he came much under the influence of Sir P C Ray and was associated

with him in many of his philanthropic and other activities.

In 1916 he was appointed by Sir Asutosh Mukherjee a lecturer in Physics and Mixed Mathematics in the newly established University College of Science founded on the donations of the late Sir T N Palit and Sir R. B. Ghosh. While serving in this capacity he submitted a thesis for a Doctorate which was examined by a board consisting of Prof O W Richardson, of King's College, London, Prof A W Porter of the University College, and

Mr E B Cunningham. Dr Saha was a student of Einstein's theory of Relativity, even before it attained its present celebrity, and conjointly with his friend Mr S N Bose had prepared translations of his works which were afterwards published by the Calcutta University. His doctorate thesis was a result of these studies. He received his doctorate in 1919 and the same year he was awarded the Premchand Roychand

Professor Meghnad Saha

studentship on a thesis entitled "Selective Radiation Pressure, and its Application to Problems of Astrophysics." This thesis marks his entry into Astrophysics (or physics of heavenly bodies) to which his researches were to give a new stamp, and a fresh period of activity. The P R Studentship and a Guruprasanna Ghosh Scholarship enabled him to proceed to Europe in 1920. He worked for sometime in the Imperial College of Science with Prof A Fowler, successor to Sir Norman Lockyer. It was at this time that he published the most famous of his scientific works. On the Thermal Ionisation of Gases. At the present time it is probably known to many that atoms are not the ultimate constituents of matter but they can be further broken up into parts which are atoms of negative electricity (electrons) and a remainder which is positively charged. Dr Saha was the first to point out that this breaking up of atoms could be accomplished by mere heat, and he gave a detailed description of the way in which this "splitting up of atoms", or "ionisation", as it is called, can

bo detected His theory gave a clear and precise explanation of the facts accumulated by Sir Norman Lockyer and Prof Pickering of the Harvard University observatory, who examined the spectra of two hundred thousand stars, and classified them into a number of well defined groups. A popular account of Dr Saha's work appeared in the *Modern Review* of October, 1922, from the pen of Sir P C Ray

In 1921, Dr Saha went to Berlin to work at the laboratory of Prof W Nernst of Berlin on the experimental verification of his theory. While engaged at work in Berlin he received an invitation from Prof Sommerfeld of Munich to address the physicists there on his works. This was done in May, and the lecture was published in the *Zeitschrift für Physik*, vol 6. About this time, Sir Ashtosh Mukherjee created for him a chair in Physics on the donations of the Rajah of Khaira, and recalled him to Calcutta.

The Calcutta University was then passing through a very critical stage. The Government of Lord Lytton and the University under Sir Ashtosh were fighting like Kilkenny cats, and the scholars were allowed to starve or vegetate. Dr Saha remained at Calcutta trying in vain to get a laboratory where he could work further on the experimental verification of his theory. At last, through the efforts of his friend Dr N R Dhar he received an appointment at Allahabad as Professor of Physics, and left Calcutta in October 1923, to join his new appointment. While he was at Calcutta, the memorable North Bengal Floods occurred, and the Calcutta people spontaneously combined to form the Bengal Relief Committee with Sir P C Ray as President. At Sir P C Ray's request, he took charge of the publicity department of the Relief Committee, and did his work with enthusiasm and thoroughness.

Prof Saha has been at Allahabad for about four years. He has given his labour and attention wholeheartedly to the improvement of his own department, to the reorganisation of studies, and to the initiation of research work. He has since been elected a life member of the Astronomical Society of France, and is a Foundation Fellow of the Institute of Physics in London. Alone or with his colleagues and students, he has

been publishing papers of great value and wide interest. His new theory of "the Structure of the Atom" has not yet seen the light of day, and is expected to be an important contribution to physics.

In the meantime, his 'ionisation theory' has been gaining new adherents and new workers. The first and foremost is Prof. Henry Norris Russell, Prof of Astronomy in the Princeton University, U. S. A. With the resources of American observatories at his disposal Prof Russell verified many of Saha's predictions, and carried out an important extension of Saha's theory. Following Russell, two brilliant Cambridge graduates, R H Fowler and L. A. Milne, carried the theory still further mathematically, and pointed out fresh fields of application. Milne in particular took up Saha's theory of Selective Radiation Pressure, at the point where he left it, and put it on a sure physical basis. For these works, Fowler was admitted to the Royal Society in 1925 and Milne in 1926. So that if Prof Saha were an Englishman carrying on research in England, he would probably have been admitted to the Royal Society in 1924. Professor Saha was elected to preside over the Mathematics and Physics Section of the Indian Science Congress in 1926 and in his Presidential address he gave a complete survey of these works.

Prof Saha and Prof D M Bose of Calcutta have been invited to represent India at the Volta Death Centenary which will be held in Italy in September this year at Como the native town of Volta. About a hundred and thirty years ago, Volta following Galvani's obscure observations on the twitching of a frog's nerves when touched by a metal, discovered what is now known as the 'Voltaic Pile' or Voltaic Cell. His researches were responsible for ushering in the age of 'Electricity,' and Italy is celebrating the Death Centenary of her great son with great pomp, and enthusiasm. Eminent scientists have been invited from all over the civilized world, and it is in the fitness of things that Prof D M Bose and Prof. M N Saha have been chosen to represent India at this unique gathering.

BEETHOVEN, THE SPIRITUAL HERO

By ROMAIN ROILAND

THE musical genius of Beethoven is of universal renown. But what is very little known is his grand spirit. I wish to say a few words about it to my Indian friends, for I know that they would appreciate fervently the heroic and religious aspect of Beethoven's character.

Beethoven coming as he did of a poor family received an education which was not at all complete. He supplemented it by his own effort his life long studies and his burning meditations. He was never satisfied, like most of the musicians (even some of the greatest like Mozart), with a deep knowledge of his own art. Beethoven wanted to know everything. He wrote in 1809:

There is no work of thought which should be too learned for me. With the least pretension of knowing such works thoroughly I have striven from my very childhood to grasp the sense of the best and the wisest works of all ages. Shame to an artist who does not consider it his duty to push this spirit of research to the farthest point possible.

But mere study is not all merely to understand is not sufficient. One must learn to select. Beethoven has preference always for the greatest and the best. His instinct goes straight thither from the beginning. Homer, Shakespeare, Goethe, the sages of Greece and Rome, the poets and the thinkers of India—a veritable *Faëst's vision*! I think of his correspondence with the orientalist Hammer—Purgstall in 1809 and their common plan of working on an Indian pastoral drama (on *Deviyam* vide the *Modern Review* March 1907). I remember his attraction for the religious ideas of India and for the literature of Persia. The Soliloquy of Macbeth threw Beethoven into a delirium of emotion and he conceived writing music to Macbeth unfortunately not finished*. No less a loss to

the world is his music on Faust which Beethoven wanted to write from 1808—a work which made him cry with enthusiasm and regret, when a friend reminded him of it in 1827. But the indifference of Goethe not to speak of his ill will with regard to Beethoven discouraged the latter. What to speak of sympathy, even a single appreciation from Goethe of the admirable music for *Hamlet* was denied to Beethoven*. But

Beethoven in 1814
when he met Goethe

more generous than Goethe, Beethoven conferred his warm admiration for the Poet

lost to us, for his premature death prevented him from translating his dramas into notations.

* Apart from a certain personal coolness Goethe already aged felt a sort of instinctive antipathy for the new born romanticism whose passionate music seemed to Goethe (and he was wrong) to have a dangerous expression through Beethoven. Those crises of the soul disturbed Goethe's serenity, conquered at the cost of struggles and sacrifices. The Olympian as Goethe was called alone knew the dangers which he repulsed from the depth of his soul and which he wished to impress upon all those who took the risk of re-awakening the soul troubles.

* Beethoven possessed the power of concentration to an extraordinary degree. He used to carry in his memory the contents of several great compositions simultaneously. He used to construct them in spirit without producing them publicly till they satisfied him completely. That is how numerous inspired creations almost complete were

down to the last days In his conversations Beethoven expressed profound thoughts and judgments on Goethe Schiller and Klopstock

Beethoven used to read again and again his favourite books The volumes of his small library were full of marks and underlinings which all attest his warm admiration Unfortunately that library is dispersed with the exception of two volumes of Shakespeare the *Odyssey* and the *West-östlicher Divan* of Goethe A Berlin manuscript of Beethoven contains a collection of quotations which he had transcribed out of the books that he studied here also we find the *transcriptions* mixed up with Beethoven's own *reflections* and both are of equally great interest Quotations and personal thoughts seem to be of the same substance While reading we are inclined to ask if it were Homer Herder Kant Schiller or Beethoven who speaks One would feel that the same hand had been striking the notes of accord and that the whole weaves into the same texture of Harmony Being a man whose natural language was that of sound and not of words Beethoven sometimes used to borrow his expressions from others but he only took such expressions as were already his own One would almost swear that some of the most striking expressions are Beethoven's own language In any case what were only noble thoughts general and abstract truths with the authors cited came to be animated quivering pulsating under the pen of Beethoven who seemed to rewrite them with his heart's blood For we read them in his life and find them transfused into his blood His grand cortege of friends from ancient India from Greece or from Germany—all idealist participants in his sufferings and his heroism

From this ensemble of thought, flowing or sparkling what is the form that emerges? What picture? What statue of the soul?

To begin with we see a Herculean grandeur wrestling with Fate then a heroic renunciation which raises itself above Fate by accepting it—Hercules on the funeral pyre

The ancient writers had worked on a tragedy—Hercules on Mount Oeta which later on the Christian writers had likened to the Passion of Christ When I read Beethoven I am struck by the identity of suffering and of magnanimity It is always the same Passion the Eternal Passion of offering oneself in sacrifice to Humanity

I shall cite certain poignant pieces

extracted from the notes of Beethoven and I shall mix in the design the passages which he had transcribed from his studies and his own thoughts, so that one can see to what an extent the one and the other proceed from the same spirit

Now fate has laid hold on me (Homer) Would that I do not disappear into the dust without glory No let me accomplish first of all grand things whose echo would resound in the ears of the generations to come (Beethoven)

Wishest Thou then the laurels of victory without the dangers of battle? (Herder)

Show thy strength O fate! We are not masters of ourselves he who is determined would attain self mastery May it be so then (Beethoven)

Under the teeth of the tiger I thank thee Almighty on high I die in suffering but not in error (Herder)

Endure! (Entsagung) Accept (Ergebung) Thus we shall gain ground even in the depth of misery and we shall render ourselves worthy of the pardon of God for our faults (Beethoven)

Vide *salutis et accepti* I saw evil days and I accepted (Höly)

Only to Him to Him alone to God who knows everything that we should resign all (Beethoven)

What can I do? To be greater than Fate to love them who hate us and to seek the highest good of perfecting ourselves in creation (Zacharias Werner)

Thou canst not be a man only for thy sake Thou canst exist only for others O God give me strength to conquer myself (Beethoven)

And in conclusion I quote four lines of Zacharias Werner which Beethoven so well extracted that they seem today like the brazen inscription of the soul of Beethoven—a Christian Marcus Aurelius—a warrior sage of antiquity—

Do!t for Righteousness and for his daughter the Eternal Liberty glorified by Law Submit thyself to the inflexible will of Iron Fate Obey and re to once thyself

Kampf für das Recht und für des Rechtes Tochter

Die durchs Gesetz verklaarte ewige Freiheit
Freiung in den ungebundenen Willen

Des ewigen geschicks gehorsam und
Entsagung

The most penetrating spirits amongst the contemporaries of Beethoven—men who had approached him with understanding which gives sympathy—had found in him the grand drama of Sacrifice and their hearts were pressed with a sort of religious emotion The poet Reklab the musicologist Rechlitz the organist Freudenberg have almost the same expressions in depicting Beethoven the patient man of suffering—who had brought to millions of souls the joy the pure spiritual joy—the man who in order to give his

best to the world was obliged to be deeply wounded and tortured and who although lonely had united in the embrace of his *Hymn to Joy* all men all brothers

To a noble friend—a woman suffering like him to Countess Erdody Beethoven wrote in imperishable words which had become the motto of all heroic souls —

We finite beings are endowed with infinite spirit we are born only for suffering and for joy, and we may almost say that those who are chosen by Fate receive Joy through Suffering

He was while alive as he is to day the great consoler for us He is for all

Countess Theresa Brunswick
Beethoven's Immortal Beloved

ages the most noble tonic in European music with the vigorous Haendel but the latter health incarnate, turns his eyes away from suffering or screens it with his dazzling brilliance Beethoven opens his arms to all sufferings and leads them to Joy

The benefaction of his music does not rest only on his large and profound humanity comparable only to that of Shakespeare*

* The great composer Schubert while young used to see Beethoven often worn with age lost in his dreams Without daring to discuss with Beethoven Schubert said to one of his friends To compare Mozart with Beethoven is like comparing Schiller with Shakespeare Schiller is already understood Shakespeare far from being so for a long time still

who shares the bread of daily life with all To those who know how to listen to Beethoven his music seems to be a religious light, a revelation of the Infinite of that *Double Infinite*, that which is enveloping us and that which is within us Beethoven passes through our hearts that ecstasy in which J H Andreas Stumpff (1823) found Beethoven sitting, on a grassy sward in a valley near Vienna contemplating the starry heavens—that ecstasy which Beethoven made to shiver with the palpitation of the stars, in the sublime *Adagio* of one of his Quatrets. (10 E flat opus 59, dedicated to Count Rasumoffsky)

My Spirit, said Beethoven to Stumpff mounts up to the *Primo Source* (Urquelle) from which flows inexhaustibly the stream of the whole creation The things that would penetrate the heart must come from on high otherwise we have only notes, bodies without soul mere mud The human spirit should build out of the earth where the divine spark had been sent banished as it were for a time and like the field sown by the peasant the human spirit should blossom and fructify thus enriched and multiplied it should go back to the Source from which it had emerged

Thus the genius of Beethoven appears as a perennial stream of Life which flows from the Urquelle the *Primo Source*, and with thousands of human streams mingling with one another goes back to the original spring Thus the great musical genius is the mediator between the human and the divine and he is fully conscious about the magic character of the Art of which he is the Sovereign

Music said Beethoven is the nonmaterial entrance into a world that is the highest in our knowledge it is a world which envelops mankind and yet it cannot grasp that world fully Music is the revelation which is higher than all philosophy all wisdom It is the Sacred Wine that exalts the soul up to the region of New Birth unto a New Childhood and I am the Bacchus who presses that magnificent wine for human beings—wine that makes them God intoxicated God is nearer than anybody else to me in my Art He who would understand once only my music shall be free from misery in which the others are engulfed' (Conversation with Bettina Brentano 1810)

These are words of illumination We who have verified on ourselves their efficacy we

can bear witness to their prophetic value Two women of his age measured the comprehensiveness of the words, through their intuition of love and of genius Bettina Brentano was so fascinated as to dare writing to Goethe "None has any doubt on the matter, but I declare that Beethoven marches long in advance of the thoughts of the whole humanity and I have doubt as to whether we shall ever be able to capture his thoughts fully" (1810)

Theresa of Brunswick, "*The Immortal Beloved*"* old and lovely, long after the death of him who loved her, wrote in her diary

* Beethoven used that name in a letter which had been discovered amongst his intimate papers after his death and which were supposed to have been addressed to the Hungarian Countess Theresa of Brunswick. Although certain doubts subsist still on that identification, it is no less certain that

"Beethoven had outpassed his age as well as ours His epoch did not understand him A Christ, without comparison"*

ROMAIN ROLLAND

Translated from the original French

By Dr KALI DAS NAO

profound affection united Beethoven with the Brunsviks He dedicated to Theresa the lovely Sonata for piano (opus 78) and to her brother Franz the famous *Appassionata* (opus 57) Theresa never married and after the death of Beethoven she consecrated her life to the service of the poor She was the first to found in Europe a foundling hospital

* Theresa, profoundly Christian in spirit, wished to say in this phrase (written in French in the original text) that she is not permitted to compare Beethoven with Christ but that maintaining all proportion Beethoven was a Christ.

R.R.

INDIAN PERIODICALS

Opium and Government Excise Policy

In *Welfare* Mr C F Andrews has concluded his series of informing and outspoken articles on the Government's opium policy In his last article he says —

A word of praise must be given for much of the contents of the Government of India's own letter to the Provinces, when it turns aside from perversely and stupidly recommending the Royal Commission on Opium of 1893 and faces the hard facts of the excessive consumption in India at the present time over large areas Sections 4 and 5 in the Letter which I shall quote in full leave very little to be desired, as a bold and frank statement of the evils of opium addiction existing without any serious control in India.

The following is the text of sections 4 and 5 of the Letter —

Section 4 While there are large areas in India where the consumption of opium per head of the population is considerably lower than the standard of legitimate consumption laid down by the League of Nations which is 600 milligrammes per head per annum (equivalent to a little over 6 seers per 10,000 of the population per annum) the consumption in different parts of India, and in different areas in one and the same province, shows very large variations, and there are places where the consumption per head very largely exceeds the League's standard

Section 5 As examples I am to mention the following —

1 The whole of Burma, where of course smoking is rife—both among the Chinese and among the older Burmans, consumption is as high as 15 to 20 times the standard of the League of Nations in districts full of Chinese like Rangoon, Tavoy, Merga and about 5 times that standard in the whole of Burma on the average

2 The Brahmaputra Valley in Assam where there is both smoking and eating consumption is as high as 30 times the League of Nations' standard in the Frontier Districts, and average 8 to 9 times the League's standard for the whole of Assam

3 Orissa and Midnapore. Consumption is about three times the League's standard

4 The Northern Circars of Madras Consumption is about four times the League's standard (but ten times the standard in one district).

5 Sind—where consumption is about six times the League's standard

6. Central Provinces and Berar Consumption is about three times the League's standard on the average and five times in Berar

7 The districts peopled by the Sikhs Consumption is about four times the standard on the average, and in some districts 8 to 13 times the standard

8. Areas adjoining Rajputana e.g., the northern districts of Bombay where the consumption is about 6 to 8 times the League's standard.

9. Big industrial centres like Calcutta (7 times), Bombay (7 times), Cawnpore (3 times), Lucknow (3 times), Madras (4 times), Ahmedabad (7 times) etc., and

10 A few places in the Deccan like Poona, Ahmednagar (4 to 6 times the standard)

11 Isolated places like the Nilgiris (over 3 times) and Benares (over 5 times the standard.)

It seems clear that in places where the consumption is so high there is a likelihood of abuse and it appears to the Government of India that it would be well to consider whether any special measures are necessary and practicable to reduce the consumption and prevent abuse in such areas. In Assam and Burma, of course, special measures of restriction have already been taken and there it would only be necessary to consider whether anything further can be done either in the province as a whole or in particular parts of it.

If the very frequent assertion not only of the Government of India, but of the local Governments in this matter were entirely genuine beyond even the point of self-deception and they were unmistakably anxious to reduce consumption even at the sacrifice of revenue then there are two very easy methods of testing their absolute sincerity—

(1) Let the staff employed for detection of opium smuggling be appreciably increased out of the revenue gained from the Government sale of opium.

(2) In the black spots let the opium offered for sale at the licensed opium shops be rationed down year by year and a registration of names of purchasers open to public inspection be made compulsory. The fall in opium consumption would at once be found to be large—much larger indeed than any reduction obtained by increasing the price of opium. The amount purchasable at one time by one customer on one day should be reduced at the same time wherever it is still as high as 3 tolas.

Obstacles to Indian Social Unity

Mr Jyoti Swarup Gupta points out in *Welfare* some of the obstacles in the way of Indian social unity and makes suggestions whereby they may be overcome. The things which he has in mind will be understood from the following sentences—

1 It was an evil and inauspicious day when denominational schools, colleges, hostels and Universities were started in the country. They became the centres from which the Hindus and Muslims began to look upon themselves as separate entities.

2 Very often we are distinguished as belonging to different communities and different parts of India by our dress. During communal riots the Hindus make their dastardly attacks on members of the other religion simply because they recognise them as belonging to a different religion by their dress. Dress is responsible for the growth of communalism and provincialism. Hence it is absolutely necessary to have a common national dress.

3 When we meet different people we have to use different forms of salutations and greetings and these create confusion and sometimes also a little unpleasantness or awkwardness.

4 We have got a bewildering number of

nomenclatures viz. Babu, Jala, Shrivast, Pandit, Seth, Munshi, Moulvi, Syed, Mirza, Mr. etc. by which to address different men. It is very confusing and troublesome to remember these fine distinctions and then some people have a fancy for a certain prefix and they do not like being addressed in any other way.

5 We should select a suitable day—a preferably some full moon-day in spring or autumn—and celebrate it every year as a national festival in which all Indians irrespective of caste or communal considerations should partake.

6 We should also have a national flag and motto to constantly remind us of our nationalism.

7 If possible we must have a national park in all important places. It must have Hindu and Jain temples, Sikh Bhakurdwara, Muslim mosque, Christian church, Parsi fire temples and Jewish synagogues.

Wanted An A Nation

Prof Diwan Chand Sharma rightly observes in *Welfare*—

We are not an A nation nor are we a B nation. We are a C nation—a nation which consists of men whose health is very poor whose vitality is very low whose energy is extremely limited whose capacity for work is meagre and whose joy in the mere fact of living is non-existent. How can we think ourselves to be otherwise when the average expectation of life of an Indian is only 22 years when most of the infants that are born are never born with a long lease of life and when for our womenfolk the duties of motherhood mean a life and death struggle.

As an example of what may be achieved by combined individual and national efforts which he advocates for India, he instances the case of England.

In England the slogan is—better health for every body. There is a progressive decrease in the general rate of mortality there every year. The President of the British Medical Association said in his presidential address this year that the rate of mortality in England had fallen by nearly one half in the last fifty years and that a large percentage of humanity can now outrange the palmists three score years and ten. Sir George Newman, Chief Medical Officer of the Ministry of Health, gave it out sometime back that the English people had put at least a dozen years on to the average life. Where two adults died before only one infant dies now. In England they have routed the great pestilence and won victories over diseases which are more splendid than the victories of Waterloo and Trafalgar. The Black Death killed half the population of England in the fourteenth century but the Black Death no longer constitutes a menace to the life of the English people. Plague used to make London like a deserted house in the sixteenth century and small pox used to claim tens of thousands of inhabitants as its victims but these scourges of mankind are now conquered. So have diseases like leprosy, typhoid and diphtheria disappeared and ceased to impose very heavy toll.

on the lives of old and young. Of course England still suffers from tuberculosis, cancer and rheumatism but men are trying their level best that the English people should be rid of these pests of mankind also.

Veneration for Ancestors

We read in the *Light of the East* —

Every great nation whether of the past or the present, has, or has had when it was a great nation, the deepest veneration for the memory of its ancestors. The most ancient documents of India's civilisation already speak of honours rendered to the fathers similar if not equal to the worship rendered to the gods. The same ancestor worship characterised the ancient civilisations of China, Japan, Egypt, Rome and Greece.

One can truly say that attachment to the ancestors and a vivid remembrance of their deeds is one of the most essential features of civilisation.

Mankind therefore only rises above the savage state into which it ever tends to relapse, owing to the efforts of several generations. If we are civilised today we owe it as much to our ancestors as to ourselves. On the other hand as witnessed by several countries of the West to-day civilisation goes down with worship of tradition and of those that handed it over to us. All the immorality or amorality preached openly by European and American newspapers their tales of divorces their nude pictures, the materialism blatant in their pages go hand in hand with the forgetfulness or even scorn of the Medival or the Mid Victorian. Thus in olden times Roman virtue sank apace with the respect for the *mos majorum* the rule laid down by the ancients.

We owe them life and with life not only the enjoyment of civilisation but also every other gift. Rightly do the Ten Commandments place immediately after our duty to worship the one true God to serve Him and to honour His name the great commandment which also is equal to the first. "Thou shalt honour thy father and mother. And history confirms their promise that thou mayest live long for these nations alone have lived long who loved their fathers and mothers and—for their sake—loved their race and tried to keep it alive.

Nor do we only love our ancestors. We preserve as sacred treasures the memories of their heroic and holy deeds.

The Three Jewels of Jainism

The *Jaina Gazette* observes —

The Three Jewels of the Jaina faith are *Samyak Darsana* is right intuition or faith, *Samyak Gyaana* right knowledge and *Samyak Charitra* right conduct. A combined acquisition of these three leads to Nirvana, the ultimate goal of a true Jaina's spiritual life.

An old Jaina work defines *Samyak Darsana* as *Sradhana*, i.e. intuitive faith in the *Tattvarthas* i.e. in the true significance of the nature of things. It

means a full belief in the reality that underlies all phenomena of nature. This is gained when one realizes the true importance of the seven *Tattvas* as enumerated by the Jains. These are Jiva, Ajiva, Asrava, Bandha, Samvara, Nirjara and Moksha or Nirvana.

Samyak Gyaana is right knowledge of the ultimate reality of things. It comes as a flash of intuition by leading an intensely pure and ascetic life or by a study of Jainism both with regard to its origin and its contents.

The third jewel *Samyak Charitra*, is right conduct, both for house-holders and ascetics. The rules for laymen are designed to prepare them for following the harder discipline of Yatis or Monks in course of time.

India's Greatness

The editor of the *Young Theosophist* writes —

In the Course of his address to the graduates of the Calcutta University at its Convocation Prof. Jadunath Sarkar the Vice-Chancellor enunciated a proposition that the chief belief that a certain caste was the eldest son of the Creator or that a particular race was the chosen seed of the Lord or that particular country was destined by Providence to lord it over all others was opposed to scientific truth contrary to the teaching of history, and fatal to the world's peace and progress. In maintaining this, the learned Vice-Chancellor emphasised that no nation could be great unless it realised that the supreme value of the community of life and thought rested in the transcending of the barriers of caste and creed the privileges of birth and communal peculiarities. We associate ourselves whole heartily with these sentiments of the Vice-Chancellor and earnestly appeal in our readers to make India great by acting in a spirit of brotherhood with all fellow beings irrespective of caste or creed. That will indeed make the task of the Lord easier in establishing peace in this country as against the present strife between the various sections of the Community.

Indian Revolutionaries

"Politicus" opines in *The Volunteer* —

The existence of the revolutionary party may have its influence over the government as well as on the other parties that preach peace or peaceful war. It may remind the country of the depth of the wound and register the intensity of the pain felt. It may warn the government that all is not well. It may be one of the signs and symptoms of existing injustice of a deep national sore. With all that one wishes that the revolutionary had never existed and had used his gifts to shine in other ways and in other paths of life.

But whether we will it or not, whether he is a desirable or an undesirable the revolutionary has been a fixture in the struggle for freedom. I

cannot commend either his negative ideal or his methods. But I know that the country and the government have to bear him since he would not be wiped out unless his temper his point of view were changed. Yet no government can neglect the fact when some of the best brains coming from some of the highest families set about subverting it by all possible means. Nor can the leaders of the people neglect such a movement since such noble youths engaged in revolutionary activities are the best material for turning out the most devoted servants of the land in other fields.

I think that it is waste of blood and endeavour for the revolutionary to act as he does. With such an intense patriotism with such an instinct for the service of his countrymen with such a zeal for reform it were better to try to free his country by other means. To be ready to die for one's country is no doubt a great thing but it is greater still to live for it—to live a life of constant service and sacrifice. How profitable would it be if the conflagratory fire of the revolutionary that seeks to consume the foreigner were to transmute itself into the steady and silent flame of fervent service to his countrymen.

Hand spinning as a Supplementary Industry

Mr C Rajagopalachari writes in the *Mysore Economic Journal*

The Royal Commission is among other things in search of a supplementary occupation to fill the idle hours of our agricultural population. Actual experiments have proved beyond doubt, the validity of the claims made on behalf of the Charkha in this respect. There can be no satisfactory solution of the problem of rural poverty in India other than the removal of the drink temptation and the revival of hand spinning.

Hand spinning is the only supplementary industry that can be taken up by the large agricultural population in the dry areas of this province. Other industries that may be suggested can be taken up only to a very limited extent in particular localities. Most of them are not feasible for want of a sufficient market for the products in the neighbourhood. Again they are not suitable by reason of want of the necessary skill opportunity for special training education aptitude and initial outlay.

Hand spinning is the only occupation that can fill the spare hours of the rural population if we take into account the limited skill and knowledge of the people and the necessary conditions of any spare time occupation namely that it should be simple, easily learnt and capable of being taken up and put aside any time so that it may not interfere with the main occupation.

That hand spinning with its poor return has appealed to the economic sense of the rural labourer is evident from the rapid and spontaneous development in every dry rural area where a management has been started with efficient

The Man-eating Microbe

After mentioning the bacilli of dysentery, diphtheria and tuberculosis and the germs of the two venereal diseases and describing their ravages Mr Thurman B Rice observes in the *Oriental Watchman and Herald of Health*—

These and other death dealing microbes are responsible for more deaths in a day than all those caused by wild beasts in the entire history of our country. We have heard it said that certain persons with reputations for being fighters could whip their weight of wildcats. We should like to see the man who could whip one ten thousandth of his weight of tubercle bacilli. Strong men not infrequently die of a pin scratch, because it opens the door for the man eating microbe.

It is true that these germs are very small but they are deadly for all that. What families Mrs. Microbe does have! She makes the old woman who lived in a shoe look like a rank amateur. A baby microbe under favourable conditions is mature in about ten minutes of age. It is a parent at half an hour and at the end of an hour is a grandparent. Its progeny after twenty four hours, if it should continue to reproduce itself at the rate of one division each half hour and under favourable conditions many bacteria can beat that, will be about 17,000,000,000,000 of other man eating microbes, each a fighter and each a chip off the old block.

Though a single germ is small the sum of its potential progeny after three or four days of multiplication makes a mass larger than a lion, an elephant, or any prehistoric monster. It would be a comparatively simple and easy matter to start with one germ of certain kinds and after two days of cultivation have enough to kill the entire population of large cities.

Mathematics as Fine Art

Dr R. Vaidyanathaswamy M.A., Ph.D., D.Sc. contributes to the *Benares Hindu University Magazine* a thoughtful, well written and suggestive article on 'Mathematics as Fine Art.' We give below two paragraphs from it.

Art divides itself into two schools according to the amount of suppression we demand or are prepared to sanction—the classical and the Romantic. The dominant note of classic Art is its Restraint. It discards the lower emotional levels pertaining to the personal life and easily achieves sublimity. It is pitched too high to be impressionable to the traces of the author's personality. What for instance can we learn of Valmiki from the Ramayana? The classic Art constitutes therefore the most effective screen for the sensitive soul of the Artist that Aesthetic Concealment may require.

Mathematics as Fine Art is of the classic type. She is not the Venus but the Pallas Athene of austere brow her harmonies are not of the physical ear but belong to a subtler sense. The discipline

she demands is the transmutation of emotion into the intellectual plane for she dwells on the heights with the Cosmic Deities rapt in the unfolding Rhythm of Form

Buddha Day Celebration in India

We are glad to read in the first number of *Buddhist India* —

The dawn of the two thousand four hundred and seventieth year of the Buddha Era which was initiated by Asoka the Buddhist Emperor of India marks a new spirit on part of both Buddhists from Ceylon Burma, Chittazong Nepal and among Mysore, Bombay and Hindus of different provinces of India. Four decades back the vast majority of the Indians had almost forgotten all about Lord Buddha and His Message of Unity, Universal Love and Brotherhood and the spread of ancient Buddhist culture and literature in the East and the West formed the monopoly of oriental scholars of Europe and America. With the advent of a few Buddhist organisations into India the growing interest taken by broad minded Hindus of India, and the zealous attempts of Buddhists to restore the historic position of Buddhism as a religion of India the New Year of 240 forms a landmark in the history of Buddhism in Modern India. Indians who professed different systems of religion in India, leaders scholars and people have come forward to commemorate the Buddha Day in the land of Buddha, or Buddhas. Until the advent of the Moslems into India, the Indians professed Buddhism. They were the scholars, the missionaries, the artists and what not, who unfurled the sacred banner of Dharma not only in India but to the overseas lands—China, Korea, Tibet, Burma, Ceylon Siam etc. Ashvaghosha, Nagarjuna, Asanga, Vasubandhu, Dipankara, Sanjaya, etc. were all Indians and it is therefore not strange that they should as of yore take lively interest in the furtherance of the Indian yet universal religion in the exploration of the vast Sanskrit and Pali literatures, as well as those now in the different languages of Asia, of art and architectural remains which originated with the advent of Buddhism. It is therefore quite in the fitness of things that the Hindus should participate in the Buddha Day celebration nay organise it in holy centres where there was none before

Enrichment of Indian Literature

Mr J N C Ganguli writes in the *Young Men of India* —

In order to enrich Indian literature prose ought to be used profusely since even now song literature has a disproportionate place in the publications here and there. Since the days of Ram Mohan Roy the importance of prose was fully realised as opposed to the Sanskrit fashion of having even chemistry and medicine in verse. Thus more critical essays have to be produced in literature and prose translations ought to be made of the master minds of the world Mere names

can never inspire a nation—for this, the thoughts of the great intellects have to be imported from all parts of the world. This is true of Western countries otherwise there is no explanation for the great demand for the translations of foreign classics in every country in Europe. This will be possible in India when the vernaculars are used more widely not only in the universities and law courts but in all the higher walks of life. It will be right to say that the great works of Western philosophers have no mention in our vernaculars nor those of the poets and artists. Such cultural neglect is becoming day after day really culpable.

Science, which is the basis of modern life and civilisation will not be at all found in the vernaculars, except perhaps as a few juvenile readers. Apart from its many branches the elementary formulation of the more common ones has not as yet taken place. Science Primers for schools and colleges have not even the proper vernacular glossary of terms since such words cannot be found. Although such attempts are being made in certain quarters e.g. the Calcutta Sahitya Parishat the result has been very meagre and therefore nugatory. Sanskrit philosophical terms are not understood today because of the poverty of the Sanskrit vernacular dialects. Word coming is admitted to be one of the best avenues for the assimilation and importation of thought and here the vernaculars fail because of the want of thought units. There is not a single vernacular book in higher mathematics whether Indian or Western and it is an instance of a subject native to the soil. The same holds good roughly with regard to medicine, chemistry, astronomy, etc.

The country is apparently keen on politics but if the question is raised, How many solid books on politics and sociology are available in the vernaculars? the answer will be a direct negative. It is because there is no systematic political and social thinking language following thought in all ages. Western political social theories ought certainly to be known in India more generally together with what there is in ancient Indian thought itself. Economics is in a similar plight.

Shock Tactics in Social Reform

Mr M. Madhava Rau observes in the *Canara High School Magazine* —

It is all important stages of the World's progress leaders of Society have been divided into two groups one advocating what would in military language be called a massed frontal attack on social abuses and the other advocating social reform on the lines of east resistance.

He does not favour the latter method as the following paragraphs will show —

Society may be often likened to the blindman in the American ship (we believe it was the Lusitania) which was torpedoed by German submarines. All the best doctors had tried to restore his sight but had failed. The shock given by the torpedoes led to wailing and weeping and wringing of hands. Good mothers went crazy with anxiety for their offspring. But the shock instantaneously removed the thick film before the blind man's eyes and even, etc. restored his sight. Nations

frequently go purlind to their social ills, and it is only a great shock that can open their eyes. It was the Muslim riots of 1923 that opened the eyes of the Pandits of Multan to the necessity of reclamation to Hinduism and made them take back into their community a Brahmin Lady who had embraced the Muhammadan faith. The shock thus comes sometimes from without but sometimes it has rendered from within.

No fortress is impregnable to devoted troops. Port Arthur was deemed impregnable but fell in a few months before the heroic assaults of General Nogis troops. The sacrifices of the Japanese were great, but not disproportionate to the momentous result. Long rooted customs seem unconquerable they cannot be starved out like fortresses. The human mind quails at the idea of frontal assaults. Weak generals devise flank attacks which are dispersed before they are well on the way. The selfishness of vested interests is ever on the alert, to repel inroads from whatever direction. An able and intrepid general arises who deems a sustained frontal assault to be the cheapest in the long run. The very magnitude of the task, the forlornness of the hope awakens the necessary *elan* among the young which spreads by moral contagion and the invincible citadel is carried in a few rushes. It is thus that in history invincible customs have fallen and not by feeble tactics which are honoured by the name of Reform on the lines of least resistance.

Religion and Politics

Pandit Chamupati M A tells us in *The Vedic Magazine* —

In all countries that are today self governing the struggle for religious liberty has proceeded hand in hand with the struggle for political freedom. In England Reformation and Renaissance were two mutually convertible terms. In Indian history political upheavals have been ushered in invariably by successful campaigns for religious reform. Political subjection is an outward symptom the root of the disease is in the internal working of the social organism. The outlook of the community has to be broadened from within so that every part of it is given its due place in the social hierarchy. Only a novice in politics would hope to achieve Swarajya for India without giving to the depressed classes the fundamental right to make equal progress with the rest of the Nation. The plight of the widow and of the early married girl pushed into the meshes of wedlock in order either to further the gross worldly interests of her father or else to satisfy some so-called religious whim of her mother is to the serious-minded politician no small barrier in the way of his battle for equality. The dominance of the priesthood which keeps the masses bound to silly superstition is a fetter from which the feet of the community must be released before they are made ready to tread on the path of liberty. Immorality is a canker which is eating into the vitals of the society. Added to evils inherent in political bondage there are which the ignorant wilfulness of the people themselves is alone responsible.

The writer does not contend that a country has

to be made a moral and social Utopia, before it is fit to fight for its political rights. No politically free country is free from moral and social evils. What is contended in this article is that because of the lower political status from which a subject community has yet to rise, special moral stamina is required of its members to cope with the exigencies of the unequal struggle, it is going to put up in free countries politicians even of dubious moral purity may hold the helm of affairs. In subject nations spotless moral character is the foremost qualification of leaders. What force is there to purge the nation of its moral and social iniquities, if not religion?

Madras Goes Ahead

We read in *Stri Dharma* —

The first province in India to enfranchise women to its Legislature the first in which a woman was nominated (the first also along with the Punjab for a woman to have contested a seat in open election) to it. Madras has the honor also of being first in having unanimously elected a woman as the Deputy President of the Legislative Council. While congratulating Srimati Muthulakshmi Ammal M L C on the great honour that has been done to her we congratulate the other members of the Legislative Council on their chivalry in having bestowed it upon her.

In his opening address to the Madras Council, the Governor gave out certain interesting facts about the polling by women at the recent elections. Of the 116,536 women voters in the Presidency there were about 108,274 registered voters in contested constituencies, and 19.3 per cent went to the polls. In the previous elections in 1923 out of 82,367 registered voters, 9,361 or 11.36 per cent went to the polls. With proper facilities at the polling booths for lady volunteers to guide their sisters how to exercise their franchise and perhaps also a lady polling officer we are sure the percentage will show a still more considerable increase. We are also happy to note that the Madras University has five lady members on its Senate—Miss Serena E J Zacharias B A L T elected by the registered graduates. Miss K. C. Kimsalya, B A L T by the Academic Council and Miss Lowe M A L Sc. Mrs Paul Appaswami B A M Sc Mrs R Lakshimpati B A nominated by the Chancellor.

But Others Left Behind

The reigning of Madras at this honour to its womanhood is however very much tempered by the disappointment at the unjust treatment which the sister provinces have received at the hands of their respective Governments sadly lacking in imagination. No other Legislature in India except Madras has women members.

Child Marriages Forbidden in China

The same magazine notes that

The Governor of Shantung has forbidden early marriages and has issued a circular to all the magistrates in the province to that effect. No boy

under the age of 18 shall be allowed to marry and no girl shall be allowed to marry under the age of 16. And the Chinese Knomintang Congress adopted resolutions in favour of equal political, economic, and education rights between men and women.

Progress of Women in Turkey

We read in the same magazine —

Bedrie Hanoum has been appointed to the most important Government position yet granted a woman by the Turkish Republic, namely Head of the Bureau of Hygiene.

Indian States and Women's Rights

According to *Stri Dharma* —

The Indian States are peculiarly fortunate in being able to effect reforms in social and other conditions, unhampered by the neutral attitude of the Government, as they are in British India. In Baroda, a Committee has been appointed to enquire into the working of the law preventing child marriage, which has been in force for the last 20 years and recommend how to make it more effective. The Ruler of Bharatpur in a recent Proclamation has forbidden early marriage in his State. In Travancore and Cochin women can vote for and sit in the Legislative Councils and they actually do so. In Travancore, a lady is a member of the Government. In Mysore, recently the proposal to give women the right for voting and membership of the Representative Assembly and the Legislative Council was adopted by a majority after "a full dress debate" for over two hours. The measure received support from unexpected quarters, in spite of the opposition of the usual kind. It is expected in all quarters that Srimati Parvathi Ammal Chandrasekhar will soon be nominated to the Council and we can assure the State that she will be an acquisition to it. Mysore has in the meanwhile nominated her to the District Board of Bangalore. Mrs. Madurabai Udegavkar (Lady Surgeon) to the Kador District Board and Mrs. Mandyan BA and Mrs. Lewis (Lady Surgeon) to the Kolar District Board.

'Yoga Mimansa

Yoga Mimansa may be roughly described as a quarterly journal devoted to an exposition with illustrations of the general principles underlying the Yogic poses, their physical culture and therapeutical value, their claims in the field of psychophysiology, etc. Physical culturists, medical men, experimental psychologists and those who are classed as general readers should find the periodical interesting and instructive.

Tiru Pan Alwar

The *Indian Educator* has been giving short accounts of the saints known in South India as *Alicars*. The following extract relates to Tiru Pan Alwar.

It is folly, sings Kabir, to ask of a Saint what his caste is for the quest for God and manifestation of Divine grace have been witnessed in all grades of human society without distinction of high and low. Tiru Pan Alwar is the Vaisnava counter part of the Saiva Nandanar. Though born of the lowest caste Tiru Pan Alwar has been recorded one of the highest places among the Vaisnava saints.

There is a short poem of 10 stanzas which forms Tiru Pan Alwar's contribution to the *Nalayira Prabbandam* and the following lines are rendered from that poem.

The heavy karmic load of my past lives that bound
Me to the earth removed He and made
Not that alone He entered me and did in me reside
I know not what great tapas I performed to deserve this boon
It is the gracious Heart alone of Ranganatha
Where nancy's self eternally resides
That made my humble soul His serf

Need of Higher Education of Girls

We read in the *Social Service Quarterly*

The state of civilization which any particular nation has reached can be gauged from the conditions in which the educational work of the nation is carried on. If the State spends a goodly portion of its revenues on educational activities if a large number of brilliant young persons have devoted their lives to the sacred but humble work of training young boys and girls of their countries into excellent citizens if the merchant princes in large business centres vie with one another in endowing educational institutions with their magnificent donations if even the poorest of men deny themselves the comforts of life for the future of their promising children one may take it for granted that the nation with all its grievances and drawbacks is sure to rise to a high level of prosperity and eminence. It is needless to comment on the conditions which prevail in India but I intend touching only one phase of the problem of education and that is of the higher education of women. How necessary the spread of higher education is in India today can be found from the scarcity of women teachers, women doctors and women social workers in certain spheres where women alone can do real effective work. In western countries women form a large proportion of primary and secondary school teachers in boys as well as girls schools. On account of their zeal and devotion they have improved the quality of work and the value of their systematic training is highly assessed. In the sphere of social work we find that we have very few

really capable workers who can be safely entrusted with activities like those of vigilance associations or rescue work. In short, as the needs of society become highly complex it is very difficult to meet the demand for capable workers unless we adjust our educational system to our present requirements.

Economic Consequences of the Calcutta Riots

Mr Samarendranath Guha tells the reader in *Labour*

The riots have done incalculable mischief to the Marwari community of Calcutta. The grasp of these businessmen from the north over the commercial industrial and economic life of the province is as complete as things can possibly be. This community in particular was the target of the Mahomedan hooligans from the upcountries and being by nature the most timid and harmless of men they had no other alternative but to close down all business and keep themselves carefully guarded within their houses. Burrabazar the busiest part of the city therefore looked dull and deserted and in the absence of any business for about a month the Marwari business men lost lacs and lacs of rupees if not crores.

But the financial loss to this community had its repercussions on other classes of workers who are so intimately connected with them. The carters the coolies and other labourers who generally can save nothing to fall back upon in times of emergency were hard hit owing to the suspension of business at Burrabazar and some of them had to live on scanty diet for several days. A socio-political upheaval of such intensity always brings misery in its train but of all classes of people the worst sufferers are the day labourers at whom it deals the most stunning blows.

But even the European merchants and manufacturers in Calcutta were not immune from some amount of financial loss which fell to the lot of the Marwaris. They manufacture and import goods to this country and it is by the agencies of the Marwari and merchants and tanias that they find a ready market in the country. The conclusion becomes irresistible that the European merchants must have suffered heavily owing to the Hindu Muslim fanaticism in Calcutta. This should be an eye-opener to the bureaucracy that it is in the interest of their own nationals that all communal riots in the country should be suppressed with an iron hand and suppressed as speedily as possible.

are other valid reasons why second hand books appeal to me so much. The new book which you buy from the first hand bookseller (I wish to be excused for calling him so) comes to you fresh without any living associations. From the printer to the bookseller there is no human being who has taken an intelligent interest in the particular copy which you purchase. You find that the copies that are issued from the press are all exactly alike. There is no individuality about any one of them. The second hand book on the contrary has the personal human touch about it (alas it often proves to be a very rough and dirty touch) while reading it (for the matter of that any volume of a popular novel from a circulating library which is much in demand) you come in contact with a thousand thumbs that have turned over its pages. As you proceed with it, you begin to take delight in constructing for yourself from internal evidences—the passages they have marked the notes they have scribbled even the very odour they have imparted to it, and the general manner in which they have handled it—the true personality of the previous owner or reader (for the two are not always identical)—his age education nature tastes and inclinations. His habits the inevitable cups of tea having left indelible disc-marks on the cover and the cigarette ashes lying between the leaves at various places of rest. But above all you discover at once the industrious book worm who has greedily devoured the whole volume from cover to cover as also the flitting dilettante who has gone only half way and has abandoned his further pursuit. Thus through the second hand book you smell the breath of many more beings besides that of the author.

Chinese Nationalist Spirit

The editor of the *National Christian Council Review* holds that

It is impossible for us in India to remain uninterested and unmoved while China is in convulsion. Now especially when Indian troops are landing on Chinese soil we have a right to know what they are there for and whether it is intended that they be used to intimidate or coerce in any way a kindred people rightly struggling to be free. Mahatma Gandhi describes the purpose with which these troops are sent as in reality to aid in suppressing China's bid for freedom and ostensibly to protect 'foreigners'. We cannot believe that this is so far to believe it would be to abandon all faith in the veracity of British statesmen of whatever party. At the same time it is well that we should endeavour to obtain as much reliable information as possible as to the character of this powerful upsurge of a nationalist spirit in China and as to its relation to the Christian movement in that land.

Roads and Civilization

In the opinion of *Indian and Eastern Motors*

The history of civilization may well be called the history of roads and highways. Communi-

cation has always been a most essential requirement of any established community. Where people are numerous and their very numbers demand roads for the unity and coherence which is essential to their preservation.

In the earliest civilizations of which we have record roads have played a vital part in the growth and preservation of nations. Natural highways in Asia and Europe have been utilized time and again in the great migrations which have changed and rechanneled the political maps of the two continents innumerable times. Many of them have been trodden by so many millions of feet that they have become well defined highways, dating back beyond the time known to man at present. The famous Bhyter Pass in India used by countless hordes which flowed into India's fertile plains from Northern Asia is one of the oldest of these natural highways. But the earliest roads constructed by any nation, so far as is known at present existed in Ancient Egypt.

The same periodical states —

No discussion of the history of roads would be complete without mentioning the names of Telford and Macadam. The incredible condition of roads in England in the 18th century was due to the law compelling each parish to maintain its own roads. Later the establishment of turnpike trusts and toll systems for maintaining the roads effected very little improvement owing to the ignorance and incompetence of those in charge. Telford worked out a pitch foundation for roads which proved to be fairly satisfactory and Macadam introduced the idea of keeping sub-soils dry and firm by a water proof road covering and adequate drainage. Macadam's methods have been the most lasting and have had a great effect upon road building everywhere even to the present day.

The Calcutta All India Olympic Sports

We gather from Mr A. G. Noehren's article in the *Young Men of India* on the Calcutta All India Olympic Sports

That the activities of the Indian Olympic Association during the past triennium have infused life and enthusiasm into Indian track and field sports all over the country must have been evident to the crowds who witnessed the final Olympic trials at the beautiful Eden Gardens, Calcutta, on the 5th February. Over a hundred picked athletes and swimmers all of them specially selected as the best in their class as a result of provincial Olympic meetings conducted all over the Indian Empire journeyed to Calcutta from such distant points as Travancore, Bombay and Lahore to try for a place on the team that is to represent India at the IX Olympiad.

This goodly company of men comprises Hindus of all castes, including Brahmans, Mohammedans, Parsees, Anglo-Indians and Europeans, were so imbued with the spirit of sportsmanship that racial and religious differences were entirely submerged and the gathering took on the character of a happy family.

The five-mile event was won by D. V. Chavan of Karachi. In swimming D. D. Mohji of Bengal won both the quarter and the mile. Abdul Hamid of the Punjab won in the 10 yard high hurdles contest. The half mile was won by Murphy of Madras. The mile was won by Venkataramanswamy of Mysore. And so on.

The inter provincial mixed relay was the most thrilling race of the meeting, and the success of the Bengal team, which won by a narrow margin over Madras was due only to the superiority of their sprinters. The outcome of the whole inter provincial contest depended on this last event, for had Bengal lost, the Punjab would at least have tied for first place.

It was decided not to enter an Indian team for the Far Eastern Championship Games this year because of the ominous political situation in China. The following gentlemen were then provisionally chosen to represent the Indian Empire at the Amsterdam Olympiad in 1928: Balli Buros, Murphy, Abdul Hamid, Ghulam Murtaza and Venkataramanswamy. Two additional reserves were put on the list, tentatively viz. Chavan and Mohji, the swimmer. A subsidiary elimination test will be conducted in Lahore early in 1928 at which these athletes will be required to meet any challengers developed in the course of the year before their ultimate selection is ratified.

The Indian Olympic Association is now in a satisfactory financial condition with over Rs. 10,000 on fixed deposit to her credit, and a fairly strong organisation representative of all the best sporting element in the country. The Indian movement believes that the development of star athletes should always remain secondary to the greater Olympic ideal of promoting mass play and recreation among the youth of India. The Y.M.C.A. too, has always consistently maintained this point of view believing that character initiative and manliness can only be developed on a strong physical foundation. The All India meetings bring the diverse races of India together on the friendly field of sport, and it is the hope of all friends of the Indian Olympic movement that these periodic meetings will bring about that spirit of loyalty and cohesion between communities, on which the integrity and progress of the country depend.

The Greater India Society

Prabuddha Bharat looks upon the establishment of this society as one of the happiest events of recent days.

To know oneself is to be strong. The proverb knowledge is power is never truer than in our case. To become conscious of a glorious heritage is to be filled with large hopes and indomitable power. We cannot therefore too highly estimate the value of such a venture as the foundation of this Society from the national point of view.

From the scholastic standpoint also we are sure it has a great usefulness and a bright future. Many of those who are associated with the Society

are well known for their profound scholarship and enjoy international reputation. If they take in their work with earnestness as we hope they will do, the achievements of the Society are bound to be very fruitful in the advancement of historical knowledge and the Society may one day become a great centre of the study of Indology.

St Francis of Assisi

Serampore College Magazine observes in the course of a character sketch of St. Francis of Assisi that

Francis looked upon the world of Nature around with a sense of kinship far above what was commonly felt in his day. The objects of the outer world were to his eye not merely the works of God's creative hand but in themselves the expression of His eternal love and the channels by which it might reach and attract the heart and mind of man. Coming from the essential life and love of the Most High and intended to enrich and beautify the souls of His creatures, the orbs of heaven, the elemental forces of the world and even the experience of men in the midst of earthly existence might be regarded as in a real sense the fellow-offspring of every true child of God.

It is this sense of the intimate union and communion with Nature into which the human soul may enter that constitutes the charm of Francis' *Canticle of the Sun*. In this respect, it rises higher than the Hebrew Psalm 148 on which it is based.

there is a good deal of truth in the argument often advanced that in relation to the Government of India there is room only for two parties—the party of the Government, always in power and the party of the people or the non-official party.

In the Provincial Governments on the other hand so far as the Transferred Subjects are concerned the party system can work well under normal conditions.

Value of Indian Lives

The Telegraph Review exclaims —

HUMAN LIVES AND THEIR VALUE

Poor Sheikh Mahmood a Telegraph Peon died at the hands of the rowdies during the last communal riot in Calcutta—and the benevolent Government has given a generous dole about Rs 40/ to his family! Apparently human lives in the Post and Telegraph Department are estimated at a less value than that of a fox terrier whose master was sometime ago compensated by the court of a moffussil station by more than Rs 100/. We have heard from reliable sources that the same charitable dole is extended to Postal officers and clerks as well. A sub-postmaster at one of the moffussil stations in Assam was done with fever, and wanted relief at the earliest opportunity. That opportunity did not come till the officer sacrificed his life in the discharge of his responsible duties and it is said that his family received compensation to the extent of about Rs 100. Such is the value of our lives under the benevolent Post and Telegraph Department! It is a most amazing surprise that no effective calculation is made of the loss suffered by the relatives on the death of the earning member and the helpless position in which they are placed.

who have made a name in other fields of art, as a means of aesthetic expression.

This Communal' Strife !"

In the same magazine Mr. Ashoka Chatterjee tells the reader. —

Whenever some Indians fight and murder one another and are at the same time found to be fighting as a Hindu crowd against a Mahomedan crowd, we give the whole affair the name of a 'Communal' strife and feel satisfied that we have explained everything in the way of causes and motives connected with such outbursts of passion and pugnacity. People outside India, when they read of these Communal' disturbances understand that there are two strong communities in India, one Hindu, the other Mahomedan, and that they cannot help fighting one another occasionally as their interests and ideals are mutually opposed.

But is there a Hindu Community in India? And is there one Mahomedan?

By a community we should understand a group of men who live together, have common ideals work for mutual benefit and attempt to move forward along the path of progress unitedly and in the spirit of co-operation, fellowship and enlightened self-subordination. Thus we may speak of the Quaker Community, the Society of Friends, than whom one can scarcely find a better example for illustrating the true meaning of community life and positive communalism. 'Watching over one another for good' is the soul of Quakerism. If one Quaker fails to pay his just debts or go in any other way against the ethical principles of the community, the others try to reclaim him by admonition or help.

Looking at ourselves both Hindus and Mahomedans, we cannot say that we are very much of a community except in so far as we get ourselves stabbed in the back by a member of the opposing community (Hindu by Mahomedan and vice versa) during a period of 'Communal' tension. We say this because we find that in practically every field where we could look for manifestations of the community spirit we find a tragic barrenness in India.

First of all there can be no true community life among masters and slaves. Where some members of a group are denied their just and elementary rights there can be no question of building up a community. Be we Hindus or Mahomedans, we keep down half of those who form our community — the Women. This great injustice and drawback heads a long list of shortcomings that stand in the way of our attainment of the ideals of positive and true communalism.

Do we care for our poor and our aged?

Do we arrange for the education of our young?

Can we claim to be succouring those Hindus and Mahomedans who are stricken by leprosy, deformity or any other of the countless chronic and acute scourges that have made India their favourite hunting ground?

Where are our communal efforts to make ourselves more honest, brave and pure and less cowardly, selfish and dishonest?

Are we practising mutual help and co-operation

in any considerable scale anywhere to place our individual and social economy on a stabler and more solid basis? 'No.'

The Problem of the Future of the Indian States

Mr C Vijayaraghavachariar, president of the Nagpur (1920) Session of the Indian National Congress, discusses in the *Hindustan Review* the problem of the future of the Indian States. His article contains much curious and instructive information. For instance

Of the 562 Indian States, only ten have an annual gross revenue of a crore and more, the highest being the revenue of about six crores which Hyderabad has. There are 53 States which have a revenue of 10 lakhs and over up to 100 lakhs. There are 127 States with 1 lakh and above up to 10 lakhs. The remaining 372 States have all revenues below one lakh. Of these so many as 137 States have a gross annual revenue of less than Rs. 10,000 while no less than 40 States have an income of less than Rs. 1,000 a year. Two of the 'Ruling Princes' deserve special mention. Rajah Nank Gangarham Ankush, Nank of Vadhyaawan has a gross revenue of Rs. 169 a year and his 'subjects' number 54, compressed within an area of five square miles. Rajah Baji of Bilbari has an income of Rs. 90 a year and his 'subjects' number 32 inhabiting a tract of 1 1/2 square miles. It would be a most marvellous study to know under what circumstances such States were constituted. In the meanwhile we may venture to compare a vast group of such States, at least, those with the gross annual revenue below Rs. 1,000, to children's toy puppet representing animate Rajas and Ranas.

The writer thinks that we shall have to give up the slogan that our political freedom is best attained with the whole country for our Dominion. His reasons are stated below.

If we would take India to mean what was intended by nature to be a physical geographical unit surrounded by the seas and the Himalayas and designate her 'India Irredenta' in analogy to Italy on the eve of her political unification, then Statutory India and India Irredenta are by no means exactly the same. British India on the one hand includes Burma and Aden and does not include Ceylon the half of India while the Indian States necessarily exclude Bhutan and Nepal and there are the French and Portuguese possessions in India. If then the makers of Modern India would, for political unification, have their country as God made it and gave it to them then they should exclude Burma and Aden which would be easy enough and include not only Ceylon which may be practicable but also French and Portuguese India as well as Nepal and Bhutan which is impossible unless we go to war and conquer. Thus we shall have to give up the slogan that our political freedom is best attained with the whole

country for our Dominion. If then we have, of necessity, to confine ourselves to a geographically and ethnologically imperfect India for our political and economic freedom, is it absolutely necessary for us to think of mending and ending the Indian States as part of our programme for achieving our own salvation? We are decidedly of opinion that it is not. Nay more. Not only is it constitutionally impossible but also the very attempt would be injudicious on our part. On the one hand the declared policy of the Suzerain has ever since the Mutiny been one of once an Indian State always an Indian State." Therefore the Dominion Home Rule of British India may not interfere with this recognised and long established imperial policy.

Nirvana

The Rev Mahinda, an English Buddhist, writes in the *Mahabodhi* —

Nirvana, far from being annihilation is a very real and tremendous experience, the greatest indeed that any being may find. It is the awakening from the evil dream of life with its sordid lusts, hatreds and ignorance. It is the manifestation of man's final and supreme victory—the conquest of self! It is the profound comprehension of the conditioned nature of all existence—its transiency, its suffering, its soullessness. It is the realisation of freedom, freedom from the triple bondage of lust, hatred and ignorance. When man has found this inward peace, freedom and serenity, he no longer looks to any heaven for happiness. Released by wisdom from desire, supreme amongst god and man, he looks upon the very gods in heaven with sympathy and compassion even as grown man looks upon children transported with trifles. Clinging to nothing whatsoever in all the world, he does not fear or tremble. Unfearing, untrembling, he attains to his own deliverance and he knows. Rebirth is ended, lived out is the holy life, done all that was to be done for me this world is no more!

"This, brothers," says the Buddha, "is the highest, this is the holiest wisdom, namely to know that all suffering has vanished away. He has found the true deliverance that lies beyond the reach of any change. And the Saint whose peace is no more disturbed by anything whatsoever in all the world the pure one, the sorrowless, the freed from craving, he has crossed the Ocean of Birth and Decay. Steadfast is his mind, gained is deliverance. For he has surmounted the lust of the world."

The Struggle of Hindus

In the *Hindoo's Cause*, it is said of the struggles of peoples —

There are two phases of a struggle. Defensive and offensive. Hindus have ever been on the defensive, rather because their Dharma teaches them so or because they are incapable of going beyond defence. Defensive means stop and stand. Off-

sive means 'marching on and it means go on and win'. Other nations and communities are to go on and win!—We are to stand. It implies we can never progress. It denies marching on probing in new discoveries and new fields. But can we march on? Marching is always as a body. With two crores of widows whom we are bent always to leave and shun, we can never march on.

So with a number of dissatisfied widows which fail to organise the Hindu nation, which is a cause of its daily decrease which tells upon its potentiality, who unnecessarily consumes up the provisions of the garrison who may run away at any critical moment to the enemy and divulge the secrets of the garrison whose existence is not conducive to the morality of soldiers and who are great check to marching on! the Hindu stronghold may explode at any moment to yield to enemy.

This is a picture of our struggle in India.

We are not to play to dream to drift.
We have hard work to do and loads to lift,
Shun not the struggle, tis God's Gift."

Poultry Farming as a Profession

Mrs. A. K. Fawkes, poultry expert to the U. P. Government, observes in the *Fedara tion Gazette*

In a large number of middle class families in India today there are many young men who are unable to find employment owing to the overcrowded state of most of the so-called professions.

The desire of most young men is to secure some post or other which will bring him a comfortable home and the means to support himself and possibly a wife and family.

To try and do this on a very slender income in the unhealthy surroundings of a big town or city is not worth the struggle.

I would suggest that such a man should turn his attention to a country pursuit more especially if he has a love for country life, animals and simple pleasures.

Common sense and a small capital

He may not amass wealth but he will lay up a store of good health for himself and his family and many happy experiences and memories.

The great advantage of choosing poultry farming as a profession is the fact that it can be started on a small capital and that although there is plenty of scope for brain work and business methods one need not have taken a University degree to succeed if he has ordinary common sense and is of a persevering nature.

She then roughly sketches out her plans for the career of a would-be poultry-farmer

Necessity of Prayer

The annual number of the *Byemah High School Magazine* Mr. Salahud Dean Hajee Ismail writes —

If the development and the steady growth of the body demands attention at particular times of

the day, there is no reason why the needs of the soul should not be ministered to in a similar manner. And it certainly does not stand to reason that the satisfying of these needs should be limited to once in seven days. Such a process, if persisted in continually must bring about ultimate deterioration. There comes in then the absolute necessity of daily prayer.

We possess the religious instinct, which helps to raise a certain side of our human nature. Man is a worshipping animal. He adores beauty and loves the sublime; he bows down before the Supreme Power. But his doing so must help his own growth in some way and that way consists in winning for himself that which inspires him to worship the object of his adoration. Lacking power ourselves we bow down to One who possesses it. We pray then in response to our religious instinct which is inborn innate in us.

Value of Local and Family History

Mr H. D. Griswold tells us in the well got up 25th anniversary number of the *Forman Christian College Magazine* —

There are a multitude of interesting customs, queer sects (some of them secret), strange books and stranger people, all waiting to be written up. If such work is done in a right manner with accuracy and simplicity it is often of permanent value.

The true work of an historical society is not the rehashing of old matter but the investigation of things that enlarge the boundaries of knowledge.

Then consider the second line of research, namely family history. Here a limitless and virgin field is open. Let a Hindu student trace his ancestry back by names and dates (Births, Marriages and Deaths) just as far as he can, distinguishing carefully between definite facts on the one hand and conjectures and traditions on the other. The names both of his male and female ancestors should be given, names of the various *gotras* that have intermarried, forms of religion, professions, occupations of the members, University degrees or other honours, etc. etc. Information bearing on the caste or community should be carefully given. Family history should be studied, both as an illustration and as an integral part of general history and sociology. Muhammadan, Sikh, Parsee, Christian students should follow a similar plan. A multitude of questions might receive illumination in this way. In the emphasis these days on historical and genealogical studies the truth of Pope's saying is recognized that 'The proper study of mankind is man'.

The First Modern Indian Dissector

Among other interesting reading matter, the newly started *Medical College Magazine* of Calcutta gives some details of the life and work of Pandit Madhusudan Gupta, who was in modern times the first Indian to dissect a dead human body, as narrated below.

On the 10th January, 1836 "at the appointed

hour with scalpel in hand he followed Dr Good eve into the godown where the dead body lay ready. The other students deeply interested in what was going forward but strangely agitated with mingled feelings of curiosity and alarm, crowded after him but durst not enter the building where this fearful deed was to be perpetrated; they clustered round the door, they peeped through the planks, resolved at least to have ocular proof of its accomplishment. And when Madhusudan's knife held with a strong and steady hand made a long and deep incision into the breast the onlookers drew a long gasping breath like men relieved from the weight of some intolerable suspense.

Thus was the barrier which ignorance and superstition had for ages opposed to the acquirement of a correct knowledge of the wonderful mechanism of the human frame broken down by this courageous man, and a way opened for his countrymen to the acquirement of one of the noblest sciences which can occupy the human intellect.

In commemoration of this courageous deed on the part of Madhusudan Honble J. E. Drinkwater Bethune caused a portrait of the pandit to be painted by Mrs. Belones at his own expense and had it hung up in the Anatomy Lecture Theatre of the College where it is still carefully preserved.

The writer of this article has been told that the claim of Madhusudan to be the first Hindu Human Anatomist has been doubted in certain quarters. For the benefit of these people the following quotations from authoritative sources are given.

On the 10th January 1836 the Pandit Madhusudan Gopta, a Hindoo of the Boido caste who had held the post of Medical teacher in the abolished class at the Sanskrit College, and who was well acquainted with Sanskrit Medical literature, practised with his own hand the dissection of a human body.

A few courageous pupils led by the example of one whose conduct on that and many other occasions cannot be too highly appreciated—our respected Pandit, Madhusudan Gopta secretly and in an out-house of the building, ventured under my superintendence with their own hands to dissect a body.

Major General Hehir wrote to the *Times* as follows in the Mail week. Western medicine is still young in India. Only a few generations ago Hindus would not touch a dead body in the dissecting and post-mortem rooms. I have personally had many conversations in Calcutta with that fine old man the late Pandit Madhusudan Gupta, who in 1835 was the first Indian to dissect the human body to teach Anatomy.

* J. E. D. Bethunes speech as quoted by N. M. Baner in *Indian Lancet* 1896.

† W. C. B. Eatwell M.D. Principal of Medical College of Bengal on 'The rise and progress of rational medical education' 1860.

‡ Dr H. H. Goodeve's General Introductory Lecture addressed to the students of Calcutta Medical College 1848.

§ Article under the heading 'Need of Western men' published in the *Statesman* of the 9th January, 1925.

We hope the magazine will publish a portrait of the Pandit in its next issue

Rural Labourers in Bengal

In the *Calcutta Review* Mr Nalinaksha Sanyal dwells on an aspect of the agrarian revolution in Bengal and comes to the tentative conclusion that

The difficulties of labour have reacted in a very unfortunate manner on the different classes in rural society and it appears at times as though the labourers, who are on the upper hand are exploiting the land-owning classes and taking revenge for the

exploitation of labour in the industries. This state of things cannot make for a healthy reconstruction of the villages. Those young men that are now being asked to go back to the villages must be warned as to the necessity of working on the plough with their own hand and they must have the necessary physical and mental equipments for the work. Otherwise their distress will know no bounds and they will come back in a few years to their old services and will again swell the ranks of the unemployed more dejected and broken down.

At the same time a scheme for sanitary improvement and mass education must be actively taken in hand to give steadiness to the improvements in the condition of rural labour. And above all a systematic endeavour should be made to reconstruct our broken up social edifice and to consolidate the disintegrating forces of our agrarian life.

FOREIGN PERIODICALS

Great Britain's Fitness for Self rule

Britishers assert with reference to India that among other qualifications for self rule which she must acquire is perfect religious toleration and equal treatment of all religious sects forgetting that their own country and many other independent countries did not possess this qualification during centuries of political independence. And theoretically even up to the commencement of the present year religious toleration did not exist in Great Britain as the following paragraph quoted from *The Living Age* will show —

Among the obsolete Acts repealed by the Roman Catholic Relief Bill which has just become a law in Great Britain are statutes dating back to 1549 forbidding books of Roman Catholic ritual ever to be kept in this realm. Catholic burial is legalized for the first time in four centuries, monastic organizations may legally receive gifts and bequests and a priest who performs Mass or wears the habit of his order elsewhere than in the usual place of worship is no longer subject to a fine of fifty pounds. Naturally these ancient laws have not been enforced for a considerable period and their removal from the statute books is mainly a matter of form.

mann they probably anticipated considerable joking about the matter. Since M Briand has been honored with the order of the olive branch by both the Vatican and the Nobel committee the irreverent Paris press professes to regard him as the next candidate for canonization after Jeanne d'Arc. Some serious criticism upon the award to Mr Austen Chamberlain appeared in the English papers. We might expect the *Radical New Leader* to exclaim: 'Could irony go further than to present the prize to the Foreign Secretary of a Government which substitutes the Locarno Pact for the Protocol refuses to sign the potential clause for universal arbitration protests against the inquiries of the Mandates Commission makes an ally of Mussolini proceeds with the Singapore dock denies Egypt independence and India self government and takes pride in the fact that it rules the seas and declines to surrender the right of blockade? It is rather more surprising to find the *Saturday Review* which is a champion of the present Government, although it reserves wide latitude of independent criticism qualifying its approval of the award by the remark that Mr Chamberlain appears to have forgotten that it was the pressure of public opinion which compelled him to abandon his own dangerous plan for a Franco-British alliance in favor of the Locarno scheme and adding that there is some color to the fear that he is trying to build up a sort of Supreme Council of the four European Great Powers which shall do in secret all the work that should be done by the League Council in public.'

Winners of the Nobel Peace Prize

The same journal observes —
When the Nobel jury awarded peace prizes to Messrs. Dawes Chamberlain Briand and Stres-

The Awakening of the Orient

In the opinion of Deputy Mahmoud Boy, as expressed in *L'Echo de Turquie* The Asiatic world is on the move. Many

significant events some brusque and brutal others gradual and gentle, impress this truth upon us.

Why have the peoples of the Orient so long endured the sufferings that have been their lot? Why have they bent their necks patiently under the yoke of tyrannical monarchs, chieftains, and foreigners? It is because modern civilization with its inexorable demands has paralyzed them both physically and morally. That explains their spirit of resignation, which has benumbed their will and robbed them of defense. This passivity this apathy is due to the fact that the Oriental nations have believed for generations that their predestined fate was slavery and subjection. They have never realized that they like other men were entitled to a place in the sun that they had the right to enjoy a full free life.

Consequently the awakening of Turkey is the most striking thing that has occurred among the Eastern nations. Her revolution shines like a beacon light over the rest of Asia. It is a pillar of fire, a guiding torch to our racial and religious brethren wherever they dwell.

We feel that the logical series of deliberate reforms which we have put into effect should enable foreigners to make reasonable and hopeful deductions regarding our aims and prospects. A new flame burns brightly in the soul of the East. It is love of independence of political and social freedom. To-day the number of purchasable men among us is negligible compared with those who guard jealously their private and national honor. No longer can we be beguiled by beautiful but empty promises or forced to bow before the threats of strangers. Henceforth the Orient thinks for itself. It has definite ideals and men capable of pressing steadily toward them. Physical force cannot subdue the power of thought or the love of higher things. When the men who direct the destinies of nations have fully learned this truth there will be more peace in the world.

We have just adopted the Swiss civil code, with all its provisions concerning marriage. We have thoroughly reformed our social institutions. But the world at large is unaware of our transformation.

Only two months ago I took my wife to consult an eminent physician in Germany—a man who holds a chair in a great university. After the consultation the Professor said to me *sofista* (sage) in the most matter of fact way in the world: "But of course you still have other women in your harem."

Germany Supreme in Commercial Aviation

According to a British correspondent of the *London Morning Post*:

Germany to-day, as far as commercial aviation is concerned is mistress of the world. Her lines stretch from city to city in direct competition with the railroads and her influence extends to every adjoining country.

During the years that followed the Treaty of Versailles Germany was seriously hampered by its restrictions which forbade her to construct air planes of over a given power. This year they

were abolished once and for all, and almost overnight the great airplane factories of the country were humming with work. Germany had set out on her career of conquest in the air.

Private companies such as Junkers and Aero-Lloyd which had organized a network of light airplane services across Germany were immediately amalgamated into one monster society, the Luft Hansa. To-day this company has an influence in Germany only comparable with that of the Canadian Pacific Railway in Canada. Her machines full of passengers, winter and summer run to schedules with the regularity of the railways and the fares are exactly the same as first-class by train.

To-day in Germany it is possible to travel five hundred miles in a night by sleeper smoking cabins allow the German to continue puffing his everlasting cigar and—greatest commercial asset of all—the amazing absence of accidents or forced landings; his brought about a confidence in air travel unknown in any other part of the world.

Women's Movement in India

The *Inquirer* of London writes —

At the All India Conference of Women held in Poona last month the Maharani of Borda made an eloquent appeal to the women of India to carry on the work of overcoming social evils which (like *suttee* now abolished and other unhappily practices still in existence) impeded their progress and kept their status low. She very rightly emphasized the importance of Indian princesses being emancipated and soundly educated for this small but influential class can do an enormous amount of good (far more than we can possibly realize in England) in helping on the advancement of their sisters and making it possible to get many serious wrongs concerning them righted.

Again —

Women's Institutes exist in India and are known as Mahila Samitis. There are about a hundred of them already in Bengal and they owe their foundation to the late Mrs. G. S. Dutt whose biography by her husband with an introduction by Rabindranath Tagore has just been published. It is said that as a result of the work of these Institutes or (Samitis) Indian women are gradually leaving the purdah and entering upon social work, and at a recent meeting Mrs. Lotika Basu B. Litt. (Dxon) who presided made an earnest appeal to her hearers to work together without any caste or religious bias. Addresses were given on educational physical training, and health.

Preparations for World-Peace

We read in the *Literary Digest* —

THE RUSH TO BUILD SHIP YARD SHIPS NO LIMIT was set by the Washington Arms Conference in 1921 on the number of cruisers and submarines to be built by the Powers. As a result the relative strength of the Powers in these craft is as follows as given by the *New York World*:

Great Britain—Cruisers, 40 built, 11 building
3 appropriated for, total 54 of 332,290 tons
Submarines, 35 built 10 appropriated for or
building

United States—Cruisers 10 built, 2 building, 6
authorized total 18 of 155,000 tons. Submarines
56 built 3 building

Japan—Cruisers 19 built, 6 building total 25
of 1,620 tons. Submarines 49 built, 19 building

France—Cruisers, 3 built, 6 building 1 authorized
total 10 of 80,350 tons. Submarines 22 built, 23
building or authorized

Italy—Cruisers 8 built, 2 building total, 10 of
50,784 tons. Submarines 9 built, 13 building

Sunkar A. Bissey a Hindu Inventor

East West of New York contains a biographical sketch Sunkar A. Bissey a Hindu inventor born at Bombay on the 29th April, 1867. His inventions relate mostly to type casting, details of one of which are given below

The monotype caster has over 1500 operating parts the Universal Caster has about 1000 parts the Thompson caster has about 600 parts while Bissey's new type caster has only 250 parts. Therefore not only is it the simplest, smallest and cheapest of all but it also gives a larger output than other machines and so the experts named it the "Ideal Type Caster."

BISSEY IDEAL TYPE CASTING CORPORATION

This Corporation was organized in New York in 1920 to develop and market the type casting and lead rule machine. The type caster was built and operated to the satisfaction of experts some time ago. The lead rule caster is partly built and is undergoing further developments. Over \$50,000 have already been spent on such work during the last six years.

He has half a dozen other inventions equally meritorious as those here mentioned, but which have remained undeveloped for want of capital. Some of his countrymen, friends, and admirers realizing these facts, have organized Bissey Patents Company and are endeavoring to raise capital to further finance his existing work, develop and market his other inventions, and give possible help to other Indian inventors.

Editor's Note: Readers who are interested in Mr. Bissey's work and the aims of the Bissey Patents Company can get further information by writing to the Bissey Patents Co. P. O. Box 288, Grand Central Station, New York City.

Regional Sociology

Professor Radhakamal Mukherjee's book on "Regional Sociology" has been favorably criticised in American periodicals. For instance, *The American Journal of Sociology* says—

The available facts rather than the theories in-
- to man's relation to his environment have

been subjected to a searching analysis by the professor of economics and sociology in Lucknow University, India, Radhakamal Mukherjee. On the basis of this analysis he has constructed a program for systematic studies which he has called regional sociology.

Mukherjee's regional sociology outlines in fact, a program of scientific studies more comprehensive than anything else that has yet been attempted in this field. The title suggests that the volume is an extension of recent studies in human geography. On the contrary the point of departure is not geography but ecology. It is a study in other words not of man and society as parts of the changing landscape, but rather of the whole complex physical environment in which human aggregations develop a cultural life. To the studies of plant and animal communities, arising out of the characteristic conditions of a natural region, the new science of regional sociology proposes to add the study of the human community. Just as plant formations and human communities are determined not merely by their physical environment but by their relations to another by their co-operation," as Mukherjee calls it—so the human community is determined not merely by physiography and climate but by the plant and animal communities which with it constitute the regional complex. In other words the geographical region and the web of life within that region has been made the subject of a new division of the social sciences.

The relations of man to other living things—plants, animals and microbes—are, however, complicated by man's relations to other men. The effect of the multiplication and extension of the means of transportation and communication has tended to extend vastly man's physical and social environment and to bring about a new division of labor among the peoples and races of the world. Furthermore the inventions and devices of civilization which have emancipated mankind from immediate dependence upon the physical world have at the same time increased man's dependence upon other men.

What Mukherjee's interesting and suggestive volume mainly contributes to our present knowledge is a point of view and a frame of reference. Briefly the point of view is this: The region which nurtures man—his habitat—has as a result of the cumulative effects of environment and ecological succession" become at once a natural and a cultural entity. It is the interrelation of all these factors—physiographic, economic, and cultural—which reduce themselves eventually to specific types that the new regional sociology proposes to describe, classify and explain.

Vocational Education in China

International Labour Review has a well documented article on vocational education in China from which we learn that

With a view to developing the commercial and industrial resources of the country training schools of three different grades—primary, secondary, and advanced—were set up in China by an Imperial

Order of 1900. The Order also provided for the establishment of apprenticeship schools, of training schools for teachers of industrial subjects and of supplementary courses of study for students having left school.

In 1916 according to the Ministry of Education there were 531 vocational schools. The National Association of Vocational Education gives the total for the year 1921 as 719 and for 1922 as 1209. From 1921 to 1922 therefore there was an increase of 70 per cent and the multiplication and development of vocational schools has continued since then.

Prior to the reform the attention of private initiative had already been turned to vocational training.

In 1917 the National Association for Vocational Education was founded at Shanghai. It has thousands of members from all the provinces in China and even some in foreign countries. Although a private association it receives a subsidy from various provincial governments, and is of considerable importance.

By way of experiment the Association itself has established several vocational schools of which the oldest and best organised is the Chung Hwa vocational school at Shanghai. Trade courses are held there in iron working, wood working, button making etc. there is a practice workshop for each of these courses. In addition it has been decided to establish continuation courses and evening courses for pupils over 14 years of age who are already in employment.

Government activity in respect of vocational training for workers was first exercised in September 1921 in the initiative of the Ministry of Communications.

In view of the large number of workers (about 50,000) employed on the State Railways and their social conditions, it was considered that the level both of their moral and of their material existence might be raised by general and vocational education. With this object in view a preparatory committee was appointed as a result of its deliberations twelve schools for the general and vocational education of the workers were established along the four main lines (the Peking Hankow Peking Mukden Peking Sui Yuan and Tientsin Pukow railways) three schools being allocated to each of them. In addition a system of lectures was organised at the ten principal railway stations of each of these four lines. Central branch and itinerant libraries were provided for the workers and two reviews have been founded one of which appears weekly and the other once in ten days.

The instruction given varies according to the age of the workers. Those who are over 40 are advised to attend the Sunday lectures those aged 30 can take special courses after the day's work and for young workers instruction is provided in general and vocational subjects. The duration of the various courses is from ten to twelve hours weekly they have been attended by more than 4,000 workers.

When Restriction Creates Liberty

Professor Henry W. Farham (Economics) Yale University writes in the *International Student*—

The most over-worked of all slogans at present is liberty. It is so abstract that unless qualified it means nothing. To most of the early Puritans liberty meant freedom to worship God according to their consciences. To some of their descendants it means freedom to buy a cocktail. In fact there may be as many different kinds of liberty as there are possible restraints to be negated.

Now many of our legal restraints on liberty are imposed solely because they make other forms of liberty possible. Physical liberty has been promoted by compulsory vaccination laws which have nearly eliminated what was once a scourge of humanity yet are still criticized by many. Mental liberty has been promoted by compulsory education laws which have forced parents to send their children to school. Economic liberty has been promoted by labor laws which make the wage-receiver more efficient and prevent the stunting of his growth and strength by overwork in childhood or in unsanitary surroundings.

The test then of every law which restricts personal liberty is this: Does it make for liberty in the larger and real sense? To try to discredit a proposed law by resorting to phrases and catch words is simply to muddy the stream of thought and to give us heat when we need light. It is a mere platitude to condemn a law because it infringes personal liberty. There are few laws which do not. Our constitution was not adopted to secure absolute liberty. With the felicity of diction which marks this wonderful document it aims to secure the *blessings* of liberty. If liberty is to be a blessing and not a curse, it must be a liberty which subserves, not the crude egotism of the individual but the general welfare.

Lanka's Lassitude

In *The Indus* Mr P. C. C. De Silva gives a rather depressing picture of the people of Ceylon as will appear from the following paragraphs—

The Majority of her people are quite indifferent to her welfare or her prosperity. They seek their selfish ends, they live their unwanted lives and die their unmourned deaths. Castes and creeds divide her people. Birth false birth is still the hall mark of superiority and the oneness to all well paid posts. Family influence and fawning servility bring titles and honours and the slaves are satisfied—they have done their bit—they can die happy!

What of her poor? The majority of them cannot even read or write their own names. The towns have an overwhelming number of schools but the villagers are left with nature as their only teacher and their only book.

Westernization has so overspread the country that even the poorest think that a knowledge of English and a possession of a coat and a pair of trousers with all their necessary paraphernalia is the only passport to respectability.

It is partly this that has made most of our young men and some of our older men utterly lacking in the knowledge of reading or writing their own language, though they are almost adepts at English—a foreign tongue and

partly the system of education carried on in the big schools, which puts English first and one's own mother-tongue second. Nowhere else in the civilized world as far as we know do we find the same state of affairs.

Politically Ceylon is in a muddle. She has many leaders but no leader. There is no unity among them, and one often finds personal passions predominating over patriotism.

The difficulty in Ceylon is her mixed population—Sinhalese, Tamils, Malays, Moors, Burghers and Europeans make up the majority by her numbers and it would need a greater than Gandhi to unite all these heterogeneous elements into one homogeneous whole.

The first and primary step to be taken must be the abandonment of caste and clan prejudices. Here it must in fairness be said that these prejudices are not half as tightly bound as in India. We have no untouchability but we have the outcast Ravidra, whose daily task is to beg for crumbs of bread and eat the crumbs that fall from their master's table.

Buddhist Propaganda in the West

In an article on Buddhist propaganda in Europe and America contributed to the *Young East of Tokyo*, Mr. Har Dayal points out certain mistakes which the Buddhist missionaries in Europe must avoid if they wish to succeed. The first is—

Buddhist propaganda in Europe must not be carried on in the name of Hinayana or Mahayana. These old forms of Buddhism were necessary and useful in the past. Europe needs a Nava yana or Paschima yana. We need a few intelligent Buddhists who can pick out the essentials of Buddhism and then give them a European form. Why should they preach Japaoese or Ceylonese Buddhism in Europe? Europe is not Japan or Ceylon. The Christian missionaries in India, China and Japan make the fatal mistake of trying to convert us to the Anglican church or American Presbyterianism or German Lutheranism. They forget that these particular forms of Christianity were evolved for the needs of particular countries and epochs. Hence they fail miserably. They cannot seize the spirit of Christianity and embody it in new forms for Asia. The Buddhist missionaries must not repeat this mistake of the Christian missionaries. Europe will not be converted to Hinayana, or Mahayana or Zen or Lamaism. That is impossible and undesirable.

A Century's Retrogression in Primary Education in India

We read in the *Australia India League Bulletin*—

It may interest our readers to note the fact that in 1913 it was reported to the House of Commons that almost every village in India had its school—a sad contrast to present conditions

after over 100 years of British rule. Much good has doubtless come from the British connection but in the educational field there has been a lamentable failure. A foreign system of education, grudgingly financed, is not suited to India whose ancient system of education compares more than favourably with the Western system. Efforts are being made by Indian patriots to restore the ancient system which gave a school to every village in pre-British days and under self government education may hope to recover the ground it has lost by reason of the foreigner not working with the people however much he may work for them.

Proposed Treaty to Outlaw War

Senator Borah introduced a resolution toward the Outlawry Of War in the United States Senate on December 9, 1926. As the proposal to abolish war by outlawing it first took form in the mind of Hon. S. O. Levinson, Chairman of the American Committee for the Outlawry Of War, he was requested to prepare a draft of a possible treaty which would adequately embody the principles which Senator Borah has formulated in his Resolution. Stressing the great difficulty of such a task, Mr. Levinson 'with considerable diffidence' offered the following which has been published in *The Modern World*—

We the undersigned nations of the world hereby condemn and abandon for ever the use of war as an instrument for the settlement of international disputes and for the enforcement of decisions and awards of international tribunals and hereby outlaw the immemorial institution of war by making its use a public crime as the fundamental law of nations. Subtle and fatal distinctions between permissible and non-permissible kinds of war are blotted out the institution of war is thus outlawed as the institutions of duelling has been outlawed but the question of genuine self defense with nations as with individuals is not involved or affected by this treaty. In order to provide a complete and pacific substitute for the arbitrament of war we hereby agree to take immediate action for the equipment of an international court of justice with a code of the laws of peace based upon equality and justice between all nations. With war outlawed and hence approved and ratified the court shall be given jurisdiction over all purely international disputes as defined and enumerated in the code or arising under treaties with power to summon in a defendant nation at the petition of a complaining nation and to hear and decide the matters in controversy. We hereby agree to abide by and in full good faith to carry out the decisions of such international tribunal. The judicial system thus established being a complete substitute for the outworn and destructive war system will enable the nations to adopt far reaching and economically vital programs of disarmament.

(Signatures of the Nations.)

China and U. S. A

The New Republic writes with reference to America's attitude towards China —

If Great Britain is acting short sightedly the United States is equally guilty and with less reason. The Nationalist government of China has offered to protect the citizens of any country which will repudiate its unjust privileges. The United States has in the past looked with favor upon such an action which would cost us far less than it would Great Britain or Japan and indeed would probably result in no substantial loss whatever. A resolution looking in this direction has been introduced in the House by Stephen G. Porter, Chairman of the Foreign Relations Committee. Yet in this grave crisis when the whole future of the Orient for many years is at stake and a possible disastrous war looms what is the policy of the United States? No one knows. All we have done thus far has been to concentrate our war vessels in Chinese waters and thereby make more likely the very catastrophe we are supposedly seeking to avoid. So far as can be learned President Coolidge and Secretary Kellogg are without any plan save to stand with Great Britain, Japan and France. That we submit to this no policy. These not allies have all but succeeded in pulling the house down upon their heads. Must we wait until it has collapsed beyond repair before we exhibit any mind or will of our own?

Lynching in America

The following is from the same journal —

Thirty four persons were lynched in the United States in 1926. Florida leads the roll of du honor with nine, Texas is next with five and Mississippi third with four. Arkansas, South Carolina and Georgia had three each. Louisiana and Tennessee two each and Kentucky New Mexico and Virginia, one each. Contrary to popular supposition not all the victims of mob passion were Negroes accused of crimes against women. Three were white, one was an Indian, two were Negro women. Three persons were killed for a murder a year old after one of them had been ordered acquitted by a judge and the other two were in the course of being retried. Three others were killed in revenge for a crime they had not committed, one was shot by white officers while manacled.

It is this country which pretends to be afraid of racial degeneration if Asiatics were allowed to emigrate there.

(Drome) at the end of September has been the most remarkable for its condemnation of the war policy and colonial aggression of the French Government its very definite opposition to all military action even by the League of Nations and its championship of the right of conscience. The following resolution was carried by a large majority —

"The Eleventh National Peace Congress, desirous of achieving a really pacifist task considers it necessary for France to give an example to the whole world—and to other nations in particular—in opening the way for the organization of universal brotherhood.

Demands—

- (a) Complete national disarmament in the sense proposed in Denmark.
- (b) The immediate cessation of all colonial wars and of all violence against any other people or country.
- (c) The complete and definite abolition of conscription.
- (d) Absolute recognition for every conscientious objector of the individual right not to kill not to learn to kill not to assist (directly or indirectly) in killing his fellow man.
- (e) The total suppression of military prisons and courts martial.
- (f) The immediate proclamation of a complete amnesty—so long promised—to the 120,000 objectors and deserters, as well as to all other military offenders.
- (g) Requires all those proclaiming pacifism in France to bind themselves morally never in the future to assist or participate in any war whatever may be the consequence."

NO ARMS BEYOND THE LEAGUE

The Congress also endorsed the following statement —

Being opposed to all military action the Congress desires that even the League of Nations should have recourse only to political moral and economic sanctions for the execution of its decisions and not to an international armed force.

The Congress further hopes that men will refuse in greater and greater numbers to carry on war. It thinks that if there is a conflict between the law prescribing war service and the conscience forbidding to kill that conscience ought to triumph in its categorical but non violent refusal to participate in that which is condemned by religion and morality."

The Congress further carried a resolution condemning the wars in Syria and Morocco and declaring the Ruff war to be one of conquest.

Valley long before the most primitive European races even the Heidelberg Man? Professor J. H. Breasted of the University of Chicago is now seeking fresh evidence in favor of this theory. Very well made stone implements have been found in various parts of both Upper and Lower Egypt and it is claimed by some that the depth or thickness of the decomposed surface on some of these proves that they must be at least two million years old.

However this may be, professor Petrie has definitely proved the existence of highly intelligent people who lived in Lower Egypt about eighteen thousand years ago. They made better pottery than that made in the same vicinity today and they weaved linen of as good a quality as ours. He thinks their origin can be traced to the Caucasus Mountain region, and that much of the landscape 'background' as it may be called in the book of the dead is derived from the topography of that district. We know that in the earliest historical period that sacred ritual was considered quite archaic and parts of it even incomprehensible.

The Singapore Base

According to the Living Age

Among the more confidential topics that occupied the attention of the Imperial Conference was the Singapore naval base, England's proposed citadel between India and the Pacific. Some English military authorities contend however that unless garrisoned by an army which no modern British Government would maintain this base will be more vulnerable against Japanese attack than was Port Arthur. They recommend possibly at instance of Australia, that the new base be placed in that continent, not too far from Sydney, where it could be readily garrisoned by local white troops. The Empire's problem in the Pacific would be still further complicated, of course were our Government to withdraw from the Philippines.

England and China

The same journal tells us —

China occupies more attention in Europe, and especially in Great Britain than at any time since the disintegration of the Republic. The Nationalist movement spreading from Canton is considered a much more serious menace to Caucasian interests in the Far East than the rivalries and wranglings of tuchuns. The *Saturday Review* believes the crisis calls for masterly inactivity, which is its formula for waiting to see which way the cat will jump. 'It is an open question whether we have not prolonged and intensified the struggle by giving support to Chang Tso-lin forgetful of the fact that his Kuomintang—that is Cantonese—enemies are not nearly so Red as they are painted. The same paper reports that the British American Tobacco Company is rumored to have offered a large loan to the Northern armies to help the campaign against the Cantonese.' The *Nation* and *Athenaeum* believe

that the powers should recognize the de facto authority of Canton in Southern China. Colonel Maloney, a British officer not long back from China, finds Canton very different from the Northern treaty ports. At Tientsin Hongkong and Shanghai the foreign quarters are modern, clean, sanitary, and excellently policed, while the Chinese quarters are generally filthy and medieval. Precisely the reverse is true of Canton. The little island of Shameen occupied by the foreign concession—one-half French and two-thirds English—is deserted and neglected on account of the boycott, and because every Chinese coolie shuns it like a pest spot. On the other hand the great native city across the river is a modern metropolis, clean, well-paved, its broad new streets thronged with motorcars and lined with up-to-date hotels and shops. Lloyd George has sprung into the breach in favor of the Cantonese with a sensational speech at Bradford where he ridiculed the idea that they are the tools of the Bolsheviks. The Cantonese revolt, he said, is not a Communist move. It is simply that the Chinese are struggling for the elementary and fundamental rights of every free and self-respecting nation. They were highly civilized when the ancient Britons, to whom I belong were barbarians. Yet they are deprived of rights enjoyed by some of the smallest nations in the world that only a few centuries ago emerged from savagery. Their ports are occupied by foreigners and governed by foreigners. They cannot raise revenue in their own way, but only under very narrow restrictions, and their customs are administered by foreigners.

Would Mr. Lloyd George have said these things if his party had been now in power with himself at its head?

'An Islamic League of Nations

Henry de Jouvenel, a distinguished French journalist, a member of the French Senate, and an ex Governor-General of Syria, writes in *L'Europe Nouvelle* —

Believing it impossible to restore the caliphate at present, the Islamic nations naturally seek some other way to defend Mohammedan territory. One suggestion is an Islamic League of Nations to oppose the Geneva League, which they consider a specifically Christian agency. The Locarno treaties have strengthened the latter conviction in the East. Neither M. Briand nor Chamberlain nor Herr Stresemann, nor Signor Saloja realized, when designed these peace accords how generally they would be regarded in Asia as an alliance of Europe against that continent. None the less, every important Mohammedan newspaper thus interprets them.

This unfortunate misconception, which we should have hastened to correct, was aggravated a few months later when the League Council decided against Turkey in the Mosul dispute. The most influential names in that decision were the same as those allied to the Locarno accords. Therefore, the Turks felt absolutely certain that the territorial despoliation of which they rightly or wrongly thought themselves the victims was a direct result of the Locarno 'alliance.' When the Kurd revolt

raised on their Iraq frontier the concentration of the Italian fleet at Rhodes and the threat of a military landing forced them to submit to what they believed was an unjust judgment, this conviction was confirmed not only in their own minds, but likewise in the minds of Egyptians, Arabs, Syrians and Persians, all of whom believed that Europe had conspired at Locarno to partition Asia.

Turkey's rulers on account of their anti-clericalism, prefer an Islamic League of Nations, in which they would play a preponderant role, to the resurrection of the caliphate which would weaken their influence. Mustapha Kemal Pasha aspires to make the Turks the Westerners of Asia. Meanwhile English influence in Persia, which has been preponderant until recently, seems on the decline. At Angora Persians and Afghans met Mr Alfred Sze China's Minister at Washington who is visiting the Turkish capital on official duties. Turkey's Ambassador to Persia, Shefiat Memduh Bey, helped to draft the Treaty of Friendship between China and the Soviet Union which we have reason to believe was signed about the first of October by Sun Pao-chi the Chinese Ambassador at Moscow.

Russia, Afghanistan and India

Leopold Weiss records in *Frankfurter Zeitung*—

Russia and Afghanistan have concluded a treaty of mutual friendship and protection. By it each Power obligates itself not to attack its neighbor to preserve an attitude of benevolent neutrality in case of a conflict between its neighbor and a third Power and not to tolerate hostile propaganda against its neighbor in its own territory. It is the third agreement of this character which Russia has concluded with bordering States in Asia, and the Russian press hails it as one more step forward in the Soviet Federation's policy of peace.

The Afghans are a young nation and are just beginning to be conscious of their political destinies to develop the natural resources of their country and to organize a modern government. In spite of their youth they already have military traditions behind them of which they are justly proud. They were once masters of Northern India, where they founded several independent States which attained a high degree of prosperity under Afghan rulers. The people dream of eventually recovering what they have lost. Even shrewd and matter of fact Afghans look forward eventually to reconquering India's northwestern provinces which are inhabited almost exclusively by people of Afghan blood and have been relatively a short time under English rule. This may be visionary, or it may some-time prove to be a practical political programme. We may be sure at least that it is a project the Afghans will not forget if at some future time Britain's hold on India ever weakens.

Russia's peace offensive—her treaties with Turkey, Afghanistan and Persia—has started the rumor that she is trying to organize under her Asiatic League of Nations. Recent events in China have strengthened this conjecture. London and Simla have watched her doings with

some concern. It seems to us however that the situation in Islamic Asia, with the possible exception of Shih Persia is trending in another direction. Moscow's treaties are rather to be considered as reinsurance contracts in which Asiatic countries commit themselves to little more than passive friendship for their great northern neighbor along whose exposed southern frontier they form a protective covering of buffer States. Indeed a vivid and abiding fear of armed aggression by the imperialist Western Powers determines all Soviet foreign policy.

A Hebrew Quarterly Bibliographical Review

Kiryath Sepher is the name of the Hebrew quarterly bibliographical review of the Jewish national and University library in Jerusalem. It is in its third year. The annual subscription is ten shillings. Address Jerusalem P O Box 36 Meah Shearim. Except the names and descriptions of books in European languages and in Arabic or Persian everything else in this review is printed in Hebrew characters filling the greater portion of it.

National Feeling in China

The Indian of Singapore opines that

There is a clear expression of Chinese National feeling amidst all the weeping and confusion in China. And that must give anybody pause. It has been the fashion to deride things Chinese and even a writer like Mr G. H. Chesterton could talk with withering scorn about Chinese civilisation. But it is Duan Byrne we think who speaking of the general sense of immobility and passivity that the world generally associates with the Chinese calls it a wise passivity and recent events would seem to confirm his diagnosis.

Social Studies in Japan

Dr Toru Nagai writes in the *Japan Magazine*

According to what is recently reported in the Japanese press repeatedly the Education Department officials seem to strongly oppose students of colleges and academies devoting themselves to the study of social thought and social sciences. In my own opinion it is a trifling matter in itself, if the study of social matters were neglected while in the student life?

No wonder that the Japanese Minister for Justice has lately been hustling to establish an organization in which judicial officers will make for the first time in their lives, research into social thought. There would not have been the necessity

of establishing such an organ if the present day judges and public procurators had been thoroughly taught social science while they were students of law.

Nothing is more strange than that people who study social science or social thought at all are not serious in their researches. Why do they not make it a true study? Marx's scientific socialism is not all of social science. If one is wedded to a single thought or principle, adhering to it as if a religion after the manner of an adherent of the Omoto-kyo Sect, who is inclined to idolize the *Ofudesaki* or Holy Scripture of that religion he is not pursuing his study in sobriety.

One should not be an adherent of this or that one scientific theory. One ought to make thorough study in various directions so as to utilize one's knowledge thus gained for the sake of real social life. I hope my readers will deeply meditate on this matter of economic thought.

Home Rule for Scotland

There are very many persons in Scotland who though willing to remain citizens of the British Commonwealth of Nations want their country to have a separate and independent existence—a very natural and honourable desire. *Scottish Home Rule*, the monthly organ of the Scottish Home Rule Association, advocating self-determination for Scotland gives expression to their views of which some idea can be formed from the following paragraphs from that periodical—

It is generally recognized that the chief achievement of the Imperial Conference held during November is the new definition of the status of the various members of the British Commonwealth.

They are autonomous communities within the British Empire equal in status in no way subordinate one to another in any aspect of their domestic or external affairs though united in allegiance to the Crown, and free yet associated as members of the British Commonwealth of Nations.

A minority of critics see in this a capitulation to those elements of the populations of the Dominions bent on loosening if not severing the bonds without which the Imperial Commonwealth cannot hold together. (Toronto Globe)

For our part we are glad to see that the statesmen of the Empire are beginning to recognize that a free association is much more likely to endure than one which is forced. If the British Commonwealth of Nations has a future before it of development and prosperity until it may become merged in a coming World Commonwealth of Nations. As we hope and believe it will be on the lines of national freedom and equality of states leading to even more friendly relations between the nations associated.

This principle must be applied to Scotland. Scotland has demanded Self-government and its demand has been refused or put in the waste paper basket, by the English Parliament. We call it English because the great English majority

dominates there, and will continue to do so. On the five occasions on which a vote was taken on a Scottish Home Rule Bill the majority of Scottish representatives voting in favour was never less than four to one.

Can it be said then that Scotland is freely associated? by remaining incorporated as a province of England? Scotland entered into the Union with England by a Treaty which was carried through against the wishes of the people by means of bribery and corruption for the benefit of England.

That England has reaped enormous benefits from the Union no one denies. England remains the predominant partner and Scotland according to Lord Rosebury 'the milch cow of the Empire' and well has the cow been milked. Of the hundred million pounds or more raised by taxation in Scotland something like three-fourths is retained in London. Scotland is impoverished. Her natural resources are undeveloped. Agricultural land is deteriorating. Deer forests and grouse moors continue to spread. It is wonderful then that in proportion to population unemployment is over 50 per cent. higher and emigration over 200 per cent. greater in Scotland than in England?

And yet there is a small but too influential class of Scotsmen who would maintain the present incorporating Union which has reduced Scotland from a famous free and independent nation such as Wallace fought to save to become subordinate to its overbearing neighbour, and a reproach to its children. These men are the successors of those chiefs of the nobility and their hangers on who betrayed their country into the grip of England for gold.

They sentimentalize over the ancient glories of Scotland and are content that its future history should be that of a dead nation whose sons abroad may rise to high position and show of what they are capable, but are denied at home the opportunity of devoting their powers to the good of the land of their birth. This they do though seeing that the other members of the British Commonwealth have obtained full control of their national treasures and equality of status with England.

True Scots must be up and doing and see that Scotland is no less self governing than the Dominions and the Irish Free State. The Scottish National Convention has shown to way by its Bill for the better government of Scotland.

The Philippines and the United States

The World Tomorrow for February, very commendably devotes much space to the consideration of the United States' duty in the Philippines and discusses questions like 'How did we get them?' 'What have we done?' 'What of the Future?' The declarations of America's purpose to give independence to the Filipinos, and the extracts from the Wood Forbes Report of 1921, which the journal prints leave no room for doubt that the Filipinos should have independence at

an early date. Some of these declarations are —

If the time comes when it is apparent that independence would be better for the people of Philippines and if when that time comes the Filipino people desire complete independence the American Government and people will gladly accord it. — *Republican Platform 1924*

We declare that it is our liberty and our duty to keep our promise to those people by granting them immediately the independence which they so honorably covet. *Democratic Platform 1924*

We favour the immediate and complete independence of the Philippine Islands in accordance with the pledges of official representatives of the American people. *Progressive (La Follette) Platform 1924*

It is as it has always been the purpose of the people of the United States to withdraw their sovereignty over the Philippine Islands and to recognize their independence as soon as a stable government can be established therein. For the speedy accomplishment of such purpose it is desirable to place in the hands of the people of the Philippines as large a control of their domestic affairs as can be given them in order that they may be the better prepared to fully assume the responsibilities and enjoy the privileges of complete independence. *The Jones Law 1916*

Imperialism in the Balance

To the same monthly Mr H. N. Brailford contributes a judiciously written article on what may be said for and against imperialism. Says he —

Those of us who profess an instinctive and reasoned opposition to imperialism make a grave mistake if we deny its civilising mission or doubt the sincerity of those who devote their lives to it. It has graven the superb epic of its courage and organization on the very crust of the earth from ice-bound Siberia to the sands of South Africa. But always the gifts of education and intellectual stimulus and humaner government which it brings with it, are a by-product of its self-regarding activities. To be true, the gifts are rarely if ever the motive of the robust pioneers. If they have any motive which stands a little higher than material gain it is glory and aggrandisement of the mother land. But the impulse which drives them to these places in the sun has usually been either the desire to monopolize a market or a new material or the even to be reckoning that there is cheap and unorganized labour awaiting exploitation. When it is none of these things, it is a reckoning that springs from the interplay of interests with geographical accident. Trans-Siberian advanced along the paths that led to an ice-free port, or England must acquire the gates and the strategic posts which dominate the road to India. Unless it be in some of the British West African colonies, the civilizing motive which has hitherto been the acquiescent motive, in the hope of justifying violence after the fact, has never yet

grown strong enough to restrain or transform the crude egotism of conquest. We have it is true introduced Western education into India, but our purpose was always to train a corps of satellites, who would serve our trade and our administration as intelligent underlings. To this day we have created no system of compulsory primary education and the impressive mass of our subjects remain untouched by all the intellectual wealth which we have to bestow. We have done something for public health in the sense that we have checked the epidemics which might have swept the cities where we do business, but we have done nothing to lessen the hideous sacrifice of child life which curses every home in the Indian village. Order and security we can organize. The mechanism which grinds out its average dividend of 90 per cent from the Bengal jute mills is well-oiled but the mass of the people continues to cultivate by the methods of the Bronze Age and stagnates in a poverty to which we would not condemn the most worthless paupers of our own Imperial race. The by-product of civilisation is a convenience which too plainly serves our own purpose. And because, in our strategical railways our health service, and even in our colleges, the limitations of this purpose are leisable to the awakened intelligence of a conquered but critical India, we have reached the stage at which the schoolmaster can still keep order in his class, but can neither teach it nor inspire it.

A Singularity of the League of Nations

Mr H. M. Brailsford continues —

The Versailles Settlement has left the world more heavily armed than it was in 1914, and over in Europe the landscape is covered with finger-post that point to the scene of the next inevitable war. But let us suppose for argument's sake, that the older causes of armament and war were removed as completely as men of good will desire. Can a world which retains imperialism enjoy the reality of peace? Lord Cecil surveying British commitments the other day remarked that we had already reached the limits of disarmament. Our army was barely sufficient for the police of our Empire, while in secure its sea-communications we required all the cruisers we possessed though they might by international arrangement be built on a lighter model. An optimist may look forward to the growth of the influence of the League of Nations as the peace-maker among European Powers. But this institution has one singularity. It meets from time to time on Europe in crown itself with "olive of endless age" and it performs these flattering ceremonies to the accompaniment of a constant fusillade in Africa and Asia. France plunges undisturbed through two second class wars in Syria and the Ruff Great Britain hurls her ultimatum at Independent Egypt, and China's entry into the very Council of League is greeted by a salvo of British guns upon the Yangtze. Concede, if you please that among nations of white race the League has somewhat diminished the risk of war, it excludes from the morass of its artificial procedure all the peoples of inferior status

in the outer continents who find themselves in the path of the expanding empires. When they revolt our arrogance refuses to dignify their struggle for freedom with the name of war but these exercises mean, nonetheless wounds and massacre burned villages of homeless populations. Nor is it only pity which shrinks from this spectacle in alarm. So long as it is possible for the Imperial Powers to assign to themselves to hold by arms, the sources of the raw materials indispensable to modern industry can we boast that force has been banished from our planet, or reason seated on her throne?

Civilising without Conquering and Exploiting

Mr Brailsford would assign to civilized nations the task of civilising without conquering and exploiting and therefore asks and answers the questions —

And yet, the reader will say it is too late for abstention and *Laissez faire*. Can we leave Africa to revert to barbarous tribal war with slaves as the state in the barbarous game? Or because a savage clan hunts game over the ground where copper will be hidden can we from a prurish dread of violence deny these riches to mankind? On what page of Creation's Domesday Book is that clans title registered for eternity? There are, I think two answers to these legitimate questions. If our purpose be to educate or even to police how comes it that we have never confined ourselves to these far from remunerative activities? For how long together have we even tried to keep school without a machine gun in the playground? And if it be the interests of all mankind which guide us to oil wells how comes that we reserve their products for ourselves? Searching for the new technique by which we may civilise without conquering and exploit the earth's riches without injustice to simple peoples we shall find the solution in the development of international machinery which can aid the backward peoples assist their finances or their administration and control the development of their natural resources without robbing them to any government's exclusive guidance.

one or the other of the two principles just mentioned

These ultra-radical transformations in the political structure of the State have been accompanied by equally far-reaching changes in the social organization of the country. Among the latter special mention should be made of the formal abolition of polygamy which was already all but complete in practice the emancipation of woman and the substitution of the hat for the national headgear. What prodigious revolutions these changes represent, the latter two no less than the first, only those can realize who are acquainted with the special prejudices of the East.

As regards the abolition of the Sultanate, there is no doubt that the best form of government is, in principle democracy no less for Eastern than for western peoples. The theory that Eastern countries are radically incapable of making progress under a constitutional regime is entirely false.

It was predicted that the transference to Greece (under the Turco-Greek convention for the exchange of populations) of the native Greek element of the provinces would act very detrimentally to the economic interests of the country. Nothing of the sort has happened. The incoming Turks are little if at all inferior to the outgoing Greeks in economic capacity besides which the Armenians and Jews have promptly stepped in and filled any remaining gaps.

TREATMENT OF NEW TURKS

A matter of special interest to the American public is that of the relations between the Turkish element and the Christian communities—the minorities to use the consecrated expression. Opponents of the ratification of the Treaty of Lausanne in the United States have made such charges as that Christian women are at present immured in Turkish harems that the non-Turkish elements are under rigid persecution fanaticism being the incentive and that atrocities are even practised under cover of official connivance. These accusations may be dismissed in their entirety.

human she could not have done more. The rest—so be it said to avoid appearing in the light of a patriot actuated by too sanguine expectations—the rest is on the lap of the gods.

Fallacy of Racial Inferiority

Dr Franz Boas professor of anthropology, Columbia University, thus concludes his article on 'fallacies of racial inferiority' in *Current History*—

We may dismiss as entirely unfounded the arguments based upon an assumption of inferior ability of various European and Asiatic groups. There is no reason to suppose that from the present migration from all parts of Europe and from many parts of Asia there will result an inferior mixed population. All historical, biological and sociological considerations point to the conclusion that we have at present merely a repetition on a large scale of the phenomena of mixture from which have sprung the present European nations.

The Message of Buddha

The *British Buddhist* prints Anatole France's views on the message of Buddha, some of which are printed below.

Without believing for a moment that Europe is ready to embrace the Doctrine of Nirvana, we must recognize that Buddhism now that it is better known has a singular attraction for free minds, and that the charin of Shakyamuni works readily on an unprejudiced heart. And it is, if one thinks of it, wonderful that this spring of morality which gushed from the foot of the Himalayas before the blooming of the Hellenic genius, should have preserved its fruitful purity, its delicious freshness and that the sage of Kapilavastu should be still the best of counsellors and the sweetest of consolers of our old suffering humanity.

Buddhism is hardly a religion, it has neither cosmogony nor gods, nor properly speaking a worship. It is a system of morality and the most beautiful of all it is a philosophy which is in agreement with the most daring speculations of the modern spirit. It has conquered Tibet, Burmah, Nepal, Cambodia, Annam, China and Japan without spilling one drop of blood. It has been unable to maintain itself in the Indies excepting Ceylon but it still numbers 400 millions of its faithful of Asia. If one reflects, its fortune in Europe during the last sixty years has been no less extraordinary. It was barely known when it inspired the most powerful of modern German philosophers with a doctrine whose unguishous solidity is uncontested. It is well known that Schopenhauer built his theory of the will on the basis of the Buddhist philosophy. The great pessimist, who kept a golden Buddha in his modest bed room, did not deny this.

China Eminently Worth Knowing

Mr Arthur de C Sowerby joint editor of the *China Journal* exhorts all who live in China to make it their business to know her, saying—

To one who has been imbued with a spirit of curiosity a desire to know all about everything this apparent indifference on the part of Europeans in China regarding things Chinese is hard to appreciate but harder still is it to understand the appalling ignorance of many Chinese themselves along the same lines. The latter phase of the subject has been forcibly brought to the notice of the writer during the last few years in his intercourse with members of the younger generation of modern Chinese, and it is harder to assign an adequate reason for it than for the indifference and ignorance of the foreigner in China. Whatever the reasons for this ignorance, however the fact remains that it exists, and our object here is to call attention to it, and to suggest that on the one hand it is one of the main causes contributing to the present day lack of understanding that exists between the Chinese and the Western sojourners in their midst and on the other is largely responsible for the lack of balance and sound judgment shown by the younger generation of Chinese.

China is a great country with a long history behind her. Time after time her people have risen to high states of cultural development. She has produced a great art, a remarkable literature, and until the revolution of 1911 upset things, a sound political system. She has great natural resources, marvellously rich fauna and flora, scenic glories that are surpassed nowhere in the world. Her people are industrious and under good government as good citizens as are to be found anywhere. Surely such a country calls for study on the part of those living within her borders, be they native or foreign? Surely the student of such a country and all she contains and stands for will be greatly rewarded for his pains?

We of the West pride ourselves on knowing our own countries, we pride ourselves on knowing neighbouring countries. We make tours for this very purpose yet here in China we scarcely stir outside the precincts of the city or settlement that shelters us. It is the *tour d'été* tourist on a round the-world trip who visits Hangchow, Soohow or Peking and it is the *bagging* tourist picking up odd scraps of misinformation here and there, who goes back to America or Europe to tell the world about China.

Let us, then, who live here Chinese and foreign alike, make it our business to know China, and, knowing China, let us see to it that the rest of the world is made to know her too, for so will the stupid antagonism between yellow and white and the ignorance that breeds strife be dispelled.

ON THE BIRTH-DAY OF THE BUDDHA

BY RABINDRANATH TAGORE

The World seized by the fury of carnage
 writhes in the ceaseless grip of conflicts
Crooked are its ways, tangled its coils of bondage
 Wearily waits the earth for a new birth of thine,
 save her, Great Heart, utter thy eternal words,
 let blossom love's lotus with its honey inexhaustible

O Serene, O Free, thou Soul of infinite sanctity,
Cleanse this earth of her stains, O Merciful

Thou great Giver of Self, initiate us in the penance of sacrifice,
 take, Divine Beggar, 'our pride for thine alms,
Soothe the sorrowing worlds, scatter the mist of unreason,
light up truth's sun rise,
 let life become fulfilled, the sightless find his vision

O Serene, O Free, thou Soul of infinite sanctity,
Cleanse this earth of her stains, O Merciful

Man's heart is anguished with the fever of unrest,
 with the poison of self seeking,
 with a thirst that knows no end
Countries, far and wide, flaunt on their forehead
 the blood-red mark of hatred
Touch them with thy right hand,
make them one in spirit,
bring harmony into their life,
 bring rhythm of beauty

O Serene, O Free, thou Soul of infinite sanctity
Cleanse this earth of her stains, O Merciful

LETTERS FROM THE EDITOR

VII

DURING my less than twelve days' stay in England I could not possibly have seen much of the country, even if I had devoted all my waking hours to moving about from place to place. Any expression of regret, therefore, that I had not seen this place or that, this institution or that, would be vain. Nevertheless, I must say that I was sorry that, owing to an unforeseen circumstance, I could not go to Bristol to see the tomb of Raja Rammohan Roy, and his portrait in oil colours kept in the town hall of that city. That I was able to see the little that I did of England was due chiefly to the persistent zeal of Mr. Arabinda Mohan Bose which overcame my apathy.

I was to have left London for Geneva and Paris on the first of September. But as I could not reserve my seat in the railway train that day, I actually left on the second. Mr. Sasadhar Sinha of Santiniketan and Dr. Subodh Kumar Nag of Rangoon accompanied me to Victoria station and helped me in various ways, such as hooking my luggage, etc. Mr. Nalin Kanta Ray also came to see me off. All these young men, and a few others whose names I am sorry I do not exactly remember, were very good to me.

The train by which I travelled from London to Dover was a very comfortable one. In England and on the continent of Europe my rule was to travel first class in the case of long journeys and mostly third class and sometimes second class in the case of short journeys. From London to Paris I travelled in a first-class carriage. In the train which took us from London to Dover, each first class passenger had a separate luxuriously upholstered chair with a small table in front. Meals were served to each such passenger on his table, it was not necessary to go to the dining car.

Alighting at Dover, I found passengers who wanted to cross over to Calais filling in an embarkation card. I, too, did so. But the officer who was at the gate and was collecting the cards said that British nationals need not do so. I did not feel proud at this ignoring of my motherland and my nation, though, of course,

as India has no independent political existence, we belong to the British household—as serfs or menials.

I did not feel sea-sick while crossing the English Channel in the ferry steamer. I took my seat on a bench on the deck. Finding that my attache case had slipped under the bench, I stooped to pick it up and place it on the top of my other baggage. Seeing this a European gentleman and a European lady came forward to help me. I do not know their nationality. I thanked them for their courtesy. I mention this trifling incident, because it serves to show that civility to strangers and old men is to be found among all peoples. Similarly, when, on the same day, I was travelling in the train from Calais to Paris, seeing that the sun shone full on my face, an elderly European lady, who was a fellow-passenger, asked her son to pull the curtain, and she did so, as often as this happened. When we all got down at Paris (Nord) station, she gave me good-bye. I do not know her nationality.

Mr. S. R. Rana, the well known Indian merchant of Paris, and two Indian students, named Mr. Bijay Krishna Basu and Dr. Bimal Kumar Siddhanta, had come to meet me at the station. On my previous visit to Paris, too, Mr. Rana had been kind to me, and Basu and Siddhanta had helped me to see the city. After the long fatiguing journey from London to Paris I wanted to go to a hotel as soon as possible. But fumbling in my pockets for the baggage receipt, I found I had somehow lost it. So Mr. Rana kindly took the trouble to go from one railway official to another and so on to ascertain what I was to do to get my luggage. He was told that I should write out an application on stamped paper, take it to the police officer in charge of the police station nearest my hotel, &c., &c. A printed form of application was supplied, but we were informed that the formalities were to be gone through during office-hours and that as it was then evening nothing could be done that day. So there was nothing for it but to go to the hotel in the University quarter which Basu and Siddhanta had chosen for me. As the night was rather saltry and I had no change of clothes with me

for sleeping, I managed somehow to pass a very uncomfortable night. Next morning, Basu, who, by the by, belongs to Malabar, came to my hotel after purchasing a stamped paper from a tobacconist's shop (I am told, in France and Italy, and perhaps in other European countries, too, tobacconists sell stamps), copied out on it the printed application, and got it signed by me and countersigned by two of the hotel people as witnesses. Then we marched off to the nearest police station. There we were told that nothing could be done before 12 noon—it was then nine. Basu pleaded in French on my behalf that I was a stranger and that all my things, including change of clothes, being in my portmanteaux at the station, I had been put to great inconvenience. The police official then relented, took my application to his boss, and handed it back to us after a few minutes, duly stamped and signed. We then went to the railway station, paid a small fee and got my things. From the fact that printed application forms are kept, it appears that loss of luggage receipts is not infrequent. But my unpleasant experience ought to make young Indian travellers (and old ones too!) very careful.

Visvabharati library. I wanted to see her also because she is a friend of my elder daughter. I was told that she too wanted to meet me. So this time when I was in Paris, I went to her and her husband's charming residence in a suburb of Paris. They both kindly came to my hotel and took me to their home. They are both lovers of India, and great "bhaktas" of the poet Rabindranath Tagore. Naturally enough their house has been named "Chitra," after the name of the heroine of one of the poet's works. The long drive to Boulogne-sur-Seine was very pleasant. We passed by the side of some large patches of ancient forest land thickly overgrown with tall trees as in olden days but not at present infested with bears and wolves as, I was told, they were in days of yore.

To my great delight I saw at 'Chitra' Rabindranath Tagore's little grand daughter Nandini sitting here and there like a fairy. Everyday she played at carrying on correspondence with her grand father. Any piece of paper or used envelope which she made marks on with a pencil and dropped into a basket or a box was sure to reach the poet! She is perhaps five or thereabouts, and though she was at 'Chitra' only for a few months she was speaking French quite fluently, now and then using a Bengali word when at a loss for its French equivalent. Children learn a foreign language quite easily and quickly, when they learn it by hearing others using it to denote certain things and actions, with which the words used are thus associated. At Chitra we had some home made refreshments, and fruit sherbet in the oriental fashion instead of coffee or tea.

On the morning of the 4th September I was to start for Geneva. On the previous day I had bought a ticket and reserved my seat. Buying the ticket was not a difficult matter. But on going to the office where the seat was to be reserved I found a long queue of men and women waiting for their turn to come, which did not come quite quickly. This habit of forming queues and waiting patiently for one's turn should be cultivated in our country. There is too much of unseemly jostling and elbowing here at the windows of railway booking offices etc.

In the train in my compartment, there was only one fellow passenger. I learnt afterwards from her that she was the wife of an American journalist. She was bound for Geneva probably to do some journalistic work in connection with the League meetings there. She was an elderly woman and did not seem to me to be in the best of health. When the train started I found her covering her face with her hands and sobbing.

I could at once guess that she had left her near and dear ones at home "and drags at each remove a lengthening chain", like myself I managed somehow to fall into conversation with her, which comforted her. She asked me what Mahatma Gandhi was now doing. In fact, the few Americans I have met abroad seemed all to be greatly interested in the Mahatma's great spiritual and socio political adventure. In the train nothing worth noting in particular happened. But, as is my wont, I will note one small

incident. At lunch in the restaurant car I sat at table with some Europeans. As I did not take any liquor and I had been warned not to take plain water, which was not always potable, I asked for a bottle of mineral water which was given. I asked the waiter to open it for me, he did not. But soon afterwards I found the same man opening a bottle of his own accord for the passenger who sat next to me at table.

In a former letter in speaking of the inconvenience caused to travellers in some European countries by customs inspection I have described what trouble I had in getting my luggage when I got down from the train at Geneva. I need not repeat what I have written there. Owing to the kindness of my esteemed friends Dr and Mrs R. K. Das the delay in getting my luggage did not put me to any inconvenience. The hotel which they had chosen for me was a good and quiet one and the charges were moderate. Its name is Hotel Pension des Familles. The food and service here is better than at some other hotels in some European countries which charge twice or thrice as much. What must be particularly pleasing to vegetarians is that all the cooking is done in this hotel with butter not with lard, which is said to be usual elsewhere. In the dining saloon of this hotel I saw an old Englishman taking his meals for a week or so. One day he saluted me and asked where I came from and what was my business. Evidently he had spotted me out as a likely customer. I answered his questions, whereupon he introduced himself as the travelling representative of a British firm of paper manufacturers and asked me whence I obtained my supply of paper. He wanted to send me samples and quotations of his firm which I received after my return from Europe. It is thus that European firms try to extend their business. The British firm in question naturally thought during that the season of the League Assembly meetings various descriptions of press people would come to Geneva from all parts of the globe and so had sent its representative to meet them and know their wants. Another Englishman whom I met in this hotel was Mr F. E. James of the Calcutta Y. M. C. A. With him I had conversation on the League and other topics on two days. He came to ask when it would suit me to take tea with Mr H. R. Cummings of the League Secretariat. H. too

Musalman, gentleman, a

ist, who said he usually resided at Zurich. He inveighed bitterly against those Britishers who set Hindus and Moslems by the ear, using unparliamentary language, and had nothing but contempt for those of his co-religionists and countrymen who quarrelled among themselves to make it easy for the foreign masters of India to domineer over and exploit us.

The first meeting of the seventh session of the Assembly of the League of Nations took place on the 6th of September, 1926. In the Notes which I sent from Geneva I have already said something about this meeting, and also about the meeting at which Germany was admitted to the League as a member and the subsequent one at which the German delegates were welcomed and took their seats. The proceedings of the first meeting were to have begun at 11 A.M. But it was nearer to 12 than 11 when the proceedings actually commenced. Before that there was some disorder, and noise, too. The only persons in the hall who were entirely or partly dressed in non-European costume were Prince Arfa, the Persian delegate, Sir C. P. Ramaswami Aiyer of Madras, an Indian substitute delegate, A. Sindhi gentleman, Miss Nehru daughter of Pandit Motilal Nehru, one or two more Indian ladies, and myself. This might be taken to symbolise the respective proportions of their power and influence in the League of the European and non-European peoples of the world. By European I mean also those who are wholly or partly descended from Europeans and whose vernacular is some European language or other. Oriental figures being rare in the hall, some newspaper reporters made a curious mistake. For example, *La Tribune de Geneve* of September 7 wrote—

A la tribune d'honneur on remarque un venerable personnage a longue barbe grise qui n'est autre que le poete philosophe Rabindranath Tagore.

In the tribune of honour one could see a venerable person with long grey beard who was no one else than the Poet philosopher Rabindranath Tagore."

The Poet-philosopher was then nowhere in Geneva or Switzerland!

Perhaps owing to the same mistake, the Maharaja of Kapurthala saluted me from the floor of the hall on the first day of the League Assembly meeting. I did not, of course appropriate the salute to myself. My beard was responsible for similar mistakes made by

some people in Germany also. For this reason Rabindranath Tagore told me in Berlin one day playfully 'Ramananda Babu, I am tired of lecturing. You take some of my written lectures and read them out in some towns, and Pauditji (Professor Tarachand Roy of Berlin University) will translate them orally into German.' That will be a great relief to me."

I was able to attend the meetings of the Assembly of the League kindly as I had been, supplied with twenty-four cards by Mr. H. R. Cummings of the Information Section of the League on the very first day. He also promised to give me a special ticket which would take me into Assembly commissions, council meetings, etc. But as I did not get it even a few days afterwards, a friend called for it on three days, but, somehow or other, could not get access to Mr. Cummings, or he was not in his office. I got the card afterwards, and it came about thus. One evening, as I was taking my usual walk by the side of Lake Geneva, I met Khan Bahadur Shaikh Abdul Qadir and Mr. Patrick, Secretary to the Indian Delegation. After exchange of greetings Mr. Patrick asked whether I was going to attend the meeting of the second committee, dealing *inter alia* with intellectual co-operation, which was to be held next day, at which the Khan Bahadur was to speak on behalf of India. I enquired whether I would be allowed to get in. He replied in the affirmative. So, next day, I went punctually to the League Secretariat building, where committee meetings were held. At first I went to the wrong room and was refused admission. Then after I had found out the right room, I tried to get in but there also I was refused admission. So, I had nothing for it but to send my card to Mr. Cummings, who was good enough to come out in a few minutes. I told him that I had come to hear the Khan Bahadur's lecture on being assured that I might do so, but had been refused admission, and that this had happened probably because I did not possess the special card which he had kindly promised to send me. Thereupon Mr. Cummings said, he had been very busy, etc. I replied that in my country I, too, was considered a rather busy man, and that, if I was not to have all the facilities promised to me in the letter of invitation, I had better have remained at home and bought the publications of the League for some rupees, instead of travelling so many thousand

miles and wasting so much of my time and money Mr Cummings then took me to the committee room himself, where among the audience I found some persons of both sexes young enough to be at school or college. And there I sat for some time hearing the French or English speeches and their translations into English or French immediately following them. I am glad to record that the Indian delegate's speech was not inferior to those of the other speakers I heard, and, though a Musalman bailing from the Punjab, he referred to India in the following terms:

'As a home of one of the most ancient civilizations of the world, India has great faith in intellectual culture and believes that the final solution of the great problems of humanity lies in the recognition by various nations of the value of the contributions made by each one of them to the progress of mankind and in a better appreciation of the merits of one another by means of intellectual cooperation.'

The same evening I received the special card from Mr Cummings.

On the 6th of September when, before attending the meeting of the League Assembly, I saw Mr. Cummings I wanted to have some information relating to the League so far as India was concerned. He took notes of what I wanted, but probably he was too busy to write to me on these points afterwards. No doubt, all that I wanted to know could be found in some publication or other of the League but at that time I was not in possession of such literature, nor have I been supplied with all such publications afterwards. But more of this anon.

I have never been accustomed to see bigwigs, and at Geneva I did not find any such special circumstance as would encourage me to change my habits. Hence I did not want to see anybody of my own accord. So, even after receiving a letter from Mr Cummings on the 14th September telling me, "when the Assembly is over and the members of the Secretariat are not so rushed, I hope to be able to introduce you to those dealing with business in which you are specially interested," I did not ask him or anybody else to arrange for interviews with any important or unimportant persons connected with the League and thus encroach on their leisure. However, on the 28th of September Mr Cummings wrote to me again. His letter is quoted below.

'Dear Mr Chatterjee

Dr. Rajchman could see you to-day at 5 o'clock if that is suitable for you and I thought I would try to get an appointment with the Secretary-General after it, however you would rather not have more than one interview, I will try and get some other time for the Secretary-General.

If you are able to manage Dr. Rajchman, perhaps you might find it possible to come in ten minutes beforehand so that we might have a little talk.

Yours sincerely
H. R. CUMMINGS"

I duly intimated acceptance of this arrangement, saying that I was willing to have both the interviews on the same day. I sent my card quite punctually to Mr Cummings and had a little talk with him. He then went to see Dr. Rajchman. Soon after an assistant in the Information Office, where I was waiting told me after conversing with somebody by telephone, 'He (Dr. Rajchman) is frightfully sorry that he cannot see me now. He is very busy now in a Committee.' Mr Cummings also told me this. For all this I do not wish to blame either Dr. Rajchman or Mr Cummings. But what I wish to point out is that the Committee meeting which kept the Doctor busy did not take place all of a sudden, it was pre-arranged, and therefore it could have been foreseen that it might not be possible to see me at or after 5 p.m. that day. And as I was not a suitor or an applicant for any favour, the interview need not and should not have been arranged just to give me a chance. It would have been better if the League people had exercised a little imagination in relation to a man who had come to Geneva at their invitation from a distance of six or seven thousand miles. This was my first experience of being invited to see a person and then being told that he was too busy to see me.

After I had learnt that Dr. Rajchman was frightfully sorry that he could not see me, Mr Cummings went to Sir James Eric Drummond, Secretary-General, to ascertain whether he could be seen. But he too was too busy to give *darshan*. It is to be hoped, he was not either frightfully or even slightly sorry. I say again, I have no desire to blame Mr Cummings for what happened. He asked me now whether he could arrange for interviews the next day. I replied, he should fix the day and hour after hearing from me. I never wrote to him on the subject again. When I bade him good bye, he came with me out of his room, and told me that it had been

always the intention of the League to pay my expenses and if I agreed to accept them payment could be made at once I said that I had decided before leaving India that I would pay all my expenses myself adding that if the League would give me the literature I wanted I would consider that to be sufficient courtesy He agreed to send me home to India the publications of the League I wanted and I sent him from my hotel a marked copy of the League pricelist of publications Some of those marked by me I have received As for the rest, he has written to me.

There are some of the things such as the complete set of Mandates minutes which I could not get etc. I do not quite understand what this means Does it mean that he could not get from the League Secretariat the complete set of the Mandates minutes for me? Or can it be that each and all of these minutes are out of print? If there be some which are not out of print why could not these be sent?

All this will show that the League has not been able to give me all the facilities which were promised in its letter of invitation

As for interviews with the important officials of the League Mr Cummings wrote to me on the 22nd November last

I am sorry you had to leave Geneva just at the period when senior officials were freer after the Assembly to discuss general League questions as I was anxious that you should meet them before you left.

I have no reasons to question the sincerity of Mr Cummings's anxiety But, as I could spend only a limited period of time at Geneva I was between the horns of a dilemma as it were If I went to Geneva after the Assembly to meet the senior officials when they were freer I could have had no first-hand knowledge of the League meetings but if and as I wanted to attend the Assembly meetings I had to forego the honour and advantage of having *darshan* of the senior officials Not being a man of abundant leisure I could not await the convenience of the League officials though be it noted the Assembly meetings were over on the 20th of September and I received the letter fixing the time for the interviews on the 28th

Should it be thought desirable for the League hereafter to invite any Indian editor it would be better if he were invited after consultation with the Government of India, as I was not, and if he accepted money from the League as I did not, though asked to do so more than once Such a person might possibly be more lucky than I was or expected to be

INDIANS ABROAD

INDIAN STUDENTS UNION AND HOSTEL, LONDON

THE Seventh Annual Report (1926-27) of the Indian Students Union and Hostel London has just been received The aim of the organisers of the Institution is to "render useful service to the Indian Student Community in England and to provide a Home "which will surround students with all possible help in their pursuit of further education and also to bring them in touch with the best life in this country But in the report we do not find any account as to how far the organisers have succeeded in translating their aim into action—besides holding several Sunday Lectures Group

Conferences Socials At Homes etc. In *The Modern Review* for January 1927 (at p 81) our Editor who visited the Hostel made the following observations

The company of fellow countrymen in a foreign country is undoubtedly a great comfort The means of recreation and culture provided by these hostels are also much to be commended But as far as Indian student centres and rectly though not intentionally serve to keep our students from seeking the company of and mixing with British students of good character and other desirable non-Indians, they present a problem whose existence the authorities of both the centres do not ignore They have been trying in their own way to solve it I know there is much undesirable company in England It is better for our youth not to have such company But I am

not sure that these hostels succeed in keeping their boarders and other students away from such company I was in fact told that some of them frequent dancing saloons of a questionable character but I cannot vouch for the truth of this allegation."

Regarding other activities of the Union the Report states

"The physical activities of the union are carried on as usual with enthusiasm and considerable improvements have been made in the Library and Reading Room by addition of books especially on India. The number of volumes in the Library has increased during the year from 700 to 2000. The *Indus* (monthly magazine of the Union) has been improved in size and appearance."

But the financial position of the Union is not satisfactory. Although the debt on the Hostel building has been cleared yet funds are needed for extending the accommodation and effecting necessary improvements in the Hostel.

REVIVAL OF SEGREGATION IN MOMBASA

The Asiatic inhabitants of Mombasa have been subjected to a fresh indignity recently. Taking advantage of the absence of the Indian members on the Mombasa District Committee, the 'white' members of the committee threw out an application by the Japan Cotton Trading Company who had applied for permission to house their staff in Cliff Avenue on Kilindini Road, Mombasa. The *Tanganyika Opinion* says that an suitable explanation has come from the Committee and the same journal affirms that the application was rejected on grounds of segregation. The affair has created a commotion in Mombasa, as according to the white paper of July 1923 the principle of segregation was given up and European claims were considered to be thoroughly upheld by the rigid enforcement of the sanitary regulations of the city. This revival of the objectionable and iniquitous principle has been received with great hostility by all Asiatics and will probably lead to further trouble.

CONGRESS AT MOMBASA

Some of the important items discussed at the Congress held at Mombasa were as follows

There was a resolution for having trade commissioners in all the East African Territories with a view to help Indo-African trade. It was also emphasised that the

various Indian Merchant Bodies should send representatives to Africa to study trade conditions and possibilities there.

Another resolution dealt with the inadequacy of Indian Representation on the Tanganyika Legislative Council. There was also a resolution pressing settlement by the German Government of the war claims of Tanganyika Indians (mostly holders of pre-British German notes) which the former were attempting to avoid may be with the approval of the British Government. The resolution was supported by Mr A. B. Patel who said that if the British wanted to let the Germans off in the matter of these payments, the British should themselves settle the claims as the successors of the Germans.

A further important resolution dealt with the restrictions imposed upon Indians who desired to possess fire-arms for self defence. The Merchants in the interior very often suffered as a result of having to go unarmed. It was therefore in all fairness that the present regulations were modified to suit existing conditions. The Indians were also not allowed to join the Defence Force though many of them wanted to do so. This injustice must also be removed.

SHAIK EMMAMALLY

By the death of Shaik Emmamally the Indian community in South Africa have lost a prominent member. He was an outstanding figure in many fields and his loss will not be easily made up. The following short sketch of the late Shaik Emmamally's life is taken from the *Indian Opinion* Natal.

Colonial born in every respect, it would be hard to believe that the late Shaik Emmamally was actually born in India, and it was in the year 1880 that he arrived in Natal with his parents when only two years old. He received his education at the St. Aidan's Mission School, which was then under the head mastership of the late Dr. Godfrey. His sporting career commenced as far back as 1897 when he played for the Eastern Star Football Club to which he acted as Secretary also. This club was in the year 1893 merged into the Greyville Football and Cricket Clubs. As a member of the Greyville Cycling Club he participated in many events. His activities in the sporting circle are manifold. He has held the highest positions that the sportsmen could offer.

As manifold as his activities have been in the sporting sphere, he had found sufficient time to devote his time to the amelioration of the conditions of the Indian community. He has been a prominent member of the Natal Indian Congress and was Chairman of Committee in the year 1920 commencing from 1917 to 1924 and since then to the date of his death one of the Vice-Presidents. He was the first Treasurer of the South African Indian

Congress As Treasurer of the M. K. Gandhi Library and Parsee Rustomjee Hall Committee since its inception, he had rendered splendid services As a member of the Comforts Committee, he was ever ready to look into the interests of the S.A.I. Bearer Corps

He had not forsaken religion, for he devoted much of his energies towards the Anjuman Esha-atul Islam He was a foundation member of this Institution He was a Life Trustee of the May Street Mosque, to which he also acted as Secretary and Treasurer

He was for over 20 years Manager of the well-known firm of G. H. Miankhan & Co from which he relinquished his services to become the senior partner in the firm of Victory Mineral Water Works

He leaves a widow, four sons, five daughters, a brother and a host of relatives to mourn their loss.

"NATIVE" DACOITS IN NAIROBI

We learn from the *African Comrade* that there has been of late many cases of dacoity committed by armed Africans, the victims being Indians In this connection the *African Comrade* has found it necessary to say harsh things against the dacoits as "natives" We

are told for example, "the native fosters an immense sense of gusto which tacked on to his criminal propensities work and have wrought and has, at one time or other, been a standing menace to the peaceful inhabitants." Such language is no doubt very expressive; but is a bit unfair in this way that it suggests that there is something wrong with being a "native" (over and above being a dacoit) We do not think there are more African criminals in existence than there are Indian criminals. In India too, outrages, atrocities and brutalities abound This has however nothing to do with race but with criminality which is common to all races We, therefore, suggest that when condemning anything in an African Criminal, stress should not be laid on his race He need not be referred to as "native", for that suggests an assumption of superiority In order to keep Indo-African relations friendly it is necessary that Indians never try to carry a 'Brown Man's Burden' in the land of the black Journalists should take the lead in this matter

NOTES

An Appeal to the 'Free Spirits'

By THE GREAT LIBERAL FRENCH THINKER
MONSIEUR HENRI BARTHUSE

The state of war has continued during the eight years which have elapsed since the termination of the world war Everywhere we find all the conquests of liberty, painfully won through centuries of sacrifice and uncompromising struggle, crushed or jeopardized. The right of association, liberty of the press, freedom of opinion, even the liberty of conscience, are threatened and violated In the face of this bankruptcy of progress, we cannot any longer remain silent.

We think the time has come for calling upon any and every person who exercises any intellectual and moral influence in the world to reunite into an Association destined to fight against the wave of fascist barbarism.

In many countries of the Occident we find a "White Terror" violating the life and liberties of the people and the most sacred

principles of individual and collective freedom. This "White Terror" appears in a more or less open manner in different countries, but everywhere it is becoming more and more audacious and criminal, more and more organised from day to day.

Against this state of things, multiplying assaults, outrages, inexcusable and undeniable crimes, and against the danger of the most odious eventualities being brought to pass, the public opposition of persons who are universally respected and admired would offer an effective barrier The mere fact of the formation of such an international association would have a forceful repercussion on public opinion, clarify the ideas, challenge the attention and prepare the mind of the masses for expressing their will with regard to their permanent interests and their ultimate destiny.

Such an initiative would bring also a salutary pressure to bear upon the governments which are betraying an intolerable spirit of complicity or complacency with regard to the forces of violence and fascism.

This is not all. Almost everyday we hear from everywhere the echo of crimes and innumerable outrages. Measures of reprisal are depriving hosts of loyal and brave citizens of their means of subsistence. Dire misery is raging in certain areas owing to the dictatorship and the reaction of fascism. One of the first attempts of the international association should be to extend its helping hands to the victims and martyrs of violence and to study the ways and means of supporting them in their privations.

Once the international association is established above all parties purely on the ground of justice of reason and of democratic progress, now in peril, it will decide for itself as to the appropriate means of realising its noble and just mission.

Hence we send this appeal to each and every soul who may join the cause in principle.

HENRI BARBUSSE

Editor's Note.—We have neither the desire nor the power of effective interference in the affairs of foreign nations or in the activities and methods of the parties into which they are divided. But so far as our convictions and opinions may have any influence on world tendencies we unhesitatingly unreservedly and heartily support the principles underlying the Appeal printed above. We also thank M. Barbusse for sending us this appeal to us in French of which we have given a free translation.

Neither Indians nor foreign peoples should think that the methods of violence, followed in disregard of sound moral and political principles, to which the name of fascism has been given by European champions of liberty, are confined to Europe. The belief in force, dissociated from the dictates of reason, justice and morality, call it by whatever name one will, exists also in India in our midst. Our Government and its servants, the bureaucracy, whatever political or other creed they may profess evince in their practice this sort of belief in force. It is quite safe for us to condemn Mussolini's methods in Italy or similar methods in other European countries, it is not so safe to condemn the methods of the British Government in India. But questions of safety apart, the lover of liberty must condemn despotism wherever it may be found. So while we support the liberal free intellectuals of Europe

in their campaign against unprincipled despotism in Europe we also call upon them to lend us their vocal and practical support in our struggle for liberty. We do not write in a spirit of hargaining, for India's political influence cannot stand comparison with that of the European peoples. We write because consistency demands that the lovers of liberty should exert themselves to secure its triumph all over the world and most where its greatest and most strenuous endeavour is needed.

It is not merely the British bureaucracy in India who are practical believers in fascism. Some sectarian leaders too and their followers believe in violence and act up to that belief.

In Asia, it is not Indians alone who have suffered and continue to suffer from the cult of violence. The intellectuals of Europe should investigate the causes of the insurrection in Java and the methods adopted to crush it. France's treatment of the Syrians should form the subject of another such inquiry.

We intend to give in a future issue some idea of the "White Terror" in Bulgaria and the Balkans by translating passages from M. Henri Barbusse's book *Les Bourreaux Dans les Balkans—La Terreur blanche. Un formidable proces politique*.

The Bengal Detenus

For years more than a hundred persons in Bengal have been in detention without trial for political reasons. And this is not the first time in Bengal that men have been deprived of their liberty without trial. Of all those subjected to this kind of treatment, some have died of illness due to such confinement. The health of a larger number has been irretrievably ruined. Some are suffering from tuberculosis. We do not know of how many of the detenus it can be said that they are in an ordinary state of health.

If the Governor General in Council or the Governor of Bengal in Council had passed an order that, as the detenus were enemies of H. M. the King of England they were to be subjected to such treatment as would shorten their lives, one could understand how matters stood. But as no such order has been passed those Government servants who are in charge of the detenus should be held responsible for the death of those who have died of illness due to the treatment they received and for the serious

illness of others due to the same cause. It may, of course, be contended either that those Government servants were only carrying out orders or that they did not intend to cause the death of any detainee, shorten the life of any detainee or ruin the health of any one of those who have been deprived of liberty. The first contention we have already met. So, it is for the Government servants concerned to state what orders, if any, of the Government they are carrying out, we do not know of any. And, it is superfluous to add that neither Regulation III of 1818 nor the Bengal Ordinance provides for the shortening of the lives of those whose detention they authorize. As for absence of intention, all who are not insane must be presumed to intend the usual and natural consequences of what they do. So the plea of absence of motive or intention to ruin the health and shorten the lives of the detainees cannot free the officers of Government concerned from responsibility for the death of some detainees, the contraction of fatal illness by others, and the ruining of the health and the shortening of the lives of more. It is the bounden duty of the Government of India and of the Government of Bengal to punish those officers and subordinates who have been instrumental in shortening or ruining so many lives. Should they not do so, they would lose the moral right to accuse those of unfair criticism who might then hold that they either approved of or winked at the conduct of the public servants concerned.

be released, or brought to trial in the ordinary courts of law. But the legislative bodies in India can no more see to the execution of their decisions than school debating societies. So those resolutions have not been given effect to. The Government's plea is that the continued detention of these persons is necessary for public safety. But there cannot be a greater absurdity than for foreigners to profess greater anxiety for public safety or to pretend to have greater knowledge of the means of securing the same than the accredited and elected representatives of the people.

Mr. Subhas Chandra Bose is a young man who, before he was deprived of his liberty, had been all along in the best of health. But after his detention news of continued ill health have appeared constantly in the press. Among other symptoms, there has been a daily rise of temperature and loss of weight to the extent of forty pounds. It has been long suspected that he had contracted tuberculosis. One of his brothers, who is a qualified physician, has given it as his considered opinion that he is suffering from tuberculosis. A high medical officer of the Government only suspects that he may be suffering from tuberculosis. But he, too, opines that Mr. Bose should not be kept in confinement, but should be given the benefit of free air in a healthy climate. There appears to be no doubt, however, that he has contracted tuberculosis, particularly as it has been reported in the papers, without any subsequent contradiction, that he was kept in a cell previously occupied by a prisoner suffering from that disease. The Government of Bengal has now come out with the very generous, merciful, just and wise proposal that Mr. Bose would be allowed to proceed to Switzerland in a steamer sailing direct from Rangoon, where he now is, to Europe, the conditions being that he is to give his word of honour not to land in any port in India and not to return to India before the Bengal Criminal Law Amendment Act expires, which it will in 1930. But as there is nothing to prevent its renewal or the enactment of a fresh law like it, the Bengal Government's proposal is tantamount to indefinite exile for Mr. Bose without an iota of any publicly tested evidence against him.

We do not know how our political opinions have been labelled by the British bureaucracy in India. But *The Servant India* of Poona is the organ of the Servants of India.

Society, a society which has rendered conspicuous political, social and economic services to the country and is unequivocally in favour of the perpetuation of the British connection.

This is what this prominent Liberal organ says —

The Government of Bengal have offered Mr. S. C. Bose indefinite exile in Europe in exchange of indefinite imprisonment in India for reasons of his ill health. After the submission of the joint report by one of Mr. Bose's brothers who is a physician and Col. Kelswall, Chief Medical Officer, Bangalore on the present condition of Mr. Bose's health, the Government are not likely to have any doubt as to the seriousness of his illness. A strange fate, however, seems to pursue each step of the policy of the Government towards the alleged revolutionaries. Mr. Bose's ruined health is directly due to his long imprisonment without trial which in spite of all the speeches delivered in its behalf by the Government members remains inexplicable in moral terms. The Government have substituted and followed the law of force in place of the law of justice with regard to the alleged revolutionaries in defiance of the opinion of the public whose interests they so ostentatiously claim to protect. The Government know that the condition of Mr. Bose's health is such that any further imprisonment may easily prove fatal; they also know that a change in Europe will do him good. In their anxiety, however, to justify their past conduct they have imposed certain conditions on his transfer to Europe. One of them is that he is not to return to India before the Bengal Criminal Law Amendment Act expires a condition which amounts to indefinite exile for him. The other is that he should leave for Europe from Rangoon in a boat which does not touch any Indian port. The latter condition is obviously meant to create in the mind of the public a psychological effect, namely the extremely dangerous character of the detainee, Mr. S. C. Bose. This miserable and palpably stupid device will utterly fail to produce the stage effect which the Government wanted. Humanity and justice even though much belated demand that Mr. Bose be at once unconditionally set free.

Similar true stories of other detainees, and some worse true stories, too may be told but this one will suffice.

Personal Rule or Self rule by the People ?

Which is preferable ?

In the course of his speech at Bhopal, the Viceroy observed that if the end of public benefit is constantly kept in view and pursued the difference in the systems of government would not present insuperable difficulty in the way of achieving that end. Or, in other words, there is no difference between rule by a capable, wise and benevolent despot and

self rule by the people. Such a pronouncement does not show that the Viceroy has been a good student of history or of human nature. In no country has there been a succession of such despots. And there cannot possibly be, because the possession of uncontrolled and irresponsible power naturally and inevitably leads its possessors, barring a few noble exceptions to use that power for private ends instead of for public welfare, making them voluptuaries or ambitious tyrants or both. But even if an unbroken succession of benevolent wise and capable despots were possible their rule would not be preferable to popular self rule. The Viceroy postulates public benefit as the end. Everything depends on the sense in which that expression is understood. Is it to be understood in the sense in which cattle receive benefit from good breeders and good farmers ? But men are not like cattle. Those men are not entitled to be called men in the highest sense of the word for whose good feeding, clothing, housing, medical treatment, locomotion, instruction, entertainment, etc., others make provision even when they are adults. Men entitled to be called by that name must possess the knowledge, the capacity, the will and the power to do for themselves what the advocates of personal rule want should be done for them. Thus public benefit or benefit to the public will be seen to mean benefit not only to the bodies of men but benefit also to their minds and hearts and souls. Or, in other words, the benefit that ought to be aimed at includes as its highest constituent the full development of the personality of men so that they may be free agents for their own and their fellow creatures welfare.

Mistakes may be made by democracies and crimes committed in their name, but on the whole they are guilty of fewer mistakes and crimes than other kinds of government, and greater progress is made under them.

The League of Nations and Health Problems

A Reuter's telegram reads as follows —

LONDON March 23.

The party of foreign medical officers visiting England under the auspices of the health section of the League of Nations will reassemble in London to-morrow having completed an intensive course of study while attached to the provincial health departments. Before they leave for the final conference

hang for them. He thought that the length of his purse would enable him to escape justice but he should now—if he had been living have known this and I ought to tell you that a person must remember that money may cover a multitude of sins but money will not help to save one's life. It did not do with Hirralal.

My next reason is the most distressed and diseased condition of Rajkumari who was rolling in pain and agony in her sick bed where I used to visit her sometimes alone, sometimes with Mr Giri to give her medicine and what comfort and consolation it was in our power to give.

BLACKMAIL STORY DENIED

These were the main factors which determined the course of my action. Here I may also add that Hirralal in his statement said that I wanted to extort from him a lakh of rupees and that he saw me going about his house a couple of months before. This is the blackest of lies and he did it simply to blacken me. I have never seen this man before. I never knew his house. I never heard of his name. I saw him for the first and last time on the 26th February when he met his death in my hands.

MORALLY RIGHT

From what I have stated just now it would be evident that the woes and miseries heaped on that poor girl the aspersions cast upon our entire women folk were so great an insult to our womanhood so deliberate a challenge to our nationhood so defiant that I could not take it lying down. I accepted it and it is for you gentlemen of the jury to say how far I have acquitted myself creditably in the matter. For my part, I am convinced that what I have done is morally right and could not be legally wrong for if I understand aright, law exists and primarily exists for the suppression of evil, for the punishment of wrong-doers for the protection of the person and property of the public, and law expects further every person to do his duty towards society and the State by helping in carrying out these objects and I could not think of any duty more clear and more imminent than that the wicked should be punished and taught to respect the motherhood of women that society be made aware of cancerous evil corroding its very vital parts and that the State be made aware of the existence of a very widespread organisation carrying on under its very nose and ever eluding its keen eyes the beastly human traffic, a relic of the barbarous times and a disgrace to any civilised government and more so to the British Government which prides itself in season and out of season as being the very embodiment of law and order.

SHALL MOUNT THE SCAFFOLD

I fully believe that I have done no wrong either legally or morally and I therefore repeat this day what I repeated yesterday that I did strike Hirralal but I am not guilty at all. But if your lordship and gentlemen of the jury think that it was not my duty to defend the honour and chastity of my sister if they further think that my duty was rather to sit quietly and look at the shame and sorrows of my sister and that I should sit and whine about it and mourn my miseries if they further think that I have done a greater disservice

to the society by exposing these weak and dangerous points which Hirralal and his friends have created, that I was a greater danger to the society or to the State or to the domestic peace and happiness of homes than Hirralal then I take my stand here to take the fullest consequences of my act. Inflict upon me the utmost punishment. I anxiously look to the day when I shall mount the scaffold and fly towards Heaven to appear before the Almighty a throne and plead for a reign on earth when persons will be allowed to defend the honour and chastity of women folk when women will be virtuous and men will be chivalrous when women will be Goddess Shakti and bloody tyrants will learn to tremble and respect them.

After the prosecution and defence counsel had had their say, the Judge charged the jury, who found the accused unanimously 'not guilty' of murder but guilty of attempt to murder to the proportion of six to three and unanimously 'guilty' of causing grievous hurt. His lordship sentenced the accused to 8 years' rigorous imprisonment on the charge of grievous hurt but passed no separate sentence on the charge of attempt to murder.

Taking a common sense view of the law as it stands we cannot say that it has not been rightly administered. But all the same, we are distinctly of the opinion that the prisoner ought to be pardoned and set free. And in this we only reflect the public sentiment. If he cannot be pardoned he should at least be spared the company of criminals in jail.

Khadga means 'Sword', 'Bahadur' means 'Brave', and 'Singh' means 'Lion'. The young man has proved true to the name his parents gave him and has earned the respect of all right thinking men.

It was only to be expected that movements would be set on foot to obtain his pardon. We read in the dailies that:

Hon Mr A N Moberly Home Member Bengal Government today received a deputation of representative Indian and European ladies at the Bengal Secretariat in connection with the appeal for commutation of sentence passed on Bahadur Singh at the High Court Session. The deputation consisted of Miss Lloyd Assistant Secretary European Association, Mrs Lathia Bose niece of Anandindo Ghose of Saroj Nalini Association, Miss Jyotirmayee Ganguly of Women's Protection League, Mrs Lathia Ghose and Mrs K C Roy Chaudhuri. Mr Moberly while pointing out the difficulty in reversing the High Court decision, promised to represent to His Excellency the Governor the case for reconsidering the matter.

A public meeting has also been held already under the auspices of the All Bengal Young Men's Association to organise public opinion on the question of protection of

rence at Geneva in ten days' time, they will visit various sanitary organisations in the metropolis and will inspect the London County Council's schemes for housing and slum clearance.

The League's party of foreign medical officers have toured in England in preference to India because in the British Empire England is the most insensitise and unhealthy country, far more so than India. In fact, Englishmen, being consistent and logical altruists, have made a paradise of India in respect of public health and neglected the health problems of their own country. Hence they had to call in the aid of the party of foreign medical officers selected by the League of Nations. India will no doubt benefit greatly by their visit to England. If the health of England improves, we shall have good cricketers and other athletes and necessarily ideal men as rulers, instead of dyspeptics.

The Case of Khadga Bahadur Singh

A Nepalese girl of the name of Rajkumari was made over by her grandmother or grand aunt to one Padam Prasad. This man sold her to a rich trader of Calcutta named Hiralal Agarwala. This man, with his companions, who were all vile debauchees treated Rajkumari in unspeakable ways. She escaped from Hiralal's house and sought the help of the police to obtain justice which she did not get. Hiralal and others were responsible for her diseased condition, which necessitated her resort to a woman's hospital. A Nepalese young man named Khadga Bahadur Singh, who is a graduate came to know of her sufferings. His blood boiled. He resolved to make an example of Hiralal. He went to his office and gave him several blows with his *Kukri*. The man died. Khadga Bahadur Singh was arrested or rather he himself surrendered, for he could have cut his way through those who wanted to arrest him. He was brought to trial before Mr. Justice Gregory of the Calcutta High Court. At the close of the evidence against him, his Lordship asked whether he wished to make a statement. Thereupon he said—

To-day I stand here on a charge of the murder of the Hiralal Agarwala of Calcutta. Strange and incredible it may be that a person like myself who so early as 1918 at the age of only 13 turned an absolute vegetarian who since his childhood had been trying to practise non violence and who naturally gravitated into following the

doctrine of non violence preached by Mahatma Gandhi—strange it is that such a person should be called upon this day to defend himself on a charge of murder. It will no longer be strange if you hear the causes which led me to travel so long a distance from Ahimsa to the so-called Himsa in so short a time. Before I deal with these causes I may be allowed to briefly refer to my past career and present activities.

Born of a high Gurkha family at Dehra Dun in the United Provinces I passed my Matriculation Examination from Dehra Dun. I passed my Intermediate Examination in Commerce standing first at Dacca and I graduated last year—I took my B.A. in Commerce last year from the Calcutta University standing first also.

I was acting as Honorary Secretary of the Calcutta Gurkha Association when I committed this act which has provided me with an opportunity to state my humble opinion as to what should be the duty of every self respecting person towards the race of his mother.

A HIDEOUS STORY

Now when the Rajkumari case appeared in the local press it attracted the attention of my Association and I as Secretary started enquiring into the matter searched out the girl and heard from her own lips—rather I should say gradually heard from her lips—a story of shame and sorrow so revolting so hideous and so outrageous in all its details that when I think of that even now it startles me in my sleep and I lose control over my temper.

GANG OF RICH MEN

Only a small part of that brutal story has been brought to the notice of the Court but I shall not supplement the rest. A sense of decency and propriety forbids me from doing so. But I should only add for the enlightenment of the general public that there exists in Calcutta and elsewhere a gang of rich and respectable persons who are so highly placed in society as to be beyond the slightest breath of suspicion and who are active accomplices of Hiralal in this diabolical deed and who must not think that we do not know them. We know them fully. Let them not chuckle over their escape in the present case. Let them remember a time will come when the just indignation and the fury of our community will be on them when proper enquiry will reveal their names to the public.

WHY HE STRUCK HIRALAL

Now I come to the causes which led me to do this act. Briefly they are. (1) The forcible abduction and the outrages on the person of the girl. (2) her relationship to me as a distant sister and her descent from the illustrious Rana family of Nepal the ruling family of Nepal. The English gentlemen of the Jury will at once understand the shock to my feelings of loyalty and devotion to the throne if they are placed in the same circumstances. The third reason was the deceased Hiralal's public slandering of Nepalese women folk and ridiculing their sense of virtue and honour, his calling of Rajkumari a street woman and his boasting that he would continue his game like a lion and let the Nepali dogs bark, he cared not a

hang for them. He thought that the length of his purse would enable him to escape justice but he should now—if he had been living, have known this and I ought to tell you that a person must remember that money may cover a multitude of sins but money will not help to save one's life. It did not do with Hirala!

My next reason is the most distressed and diseased condition of Rajkumari who was rolling in pain and agony in her sick bed where I used to visit her sometimes alone, sometimes with Mr. Giri, to give her medicine and what comfort and consolation it was in our power to give.

BLACKMAIL STORY DENIED

These were the main factors which determined the course of my action here. I may also add that Hirala in his statement said that I wanted to extort from him a lakh of rupees and that he saw me going about his house a couple of months before. This is the blackest of lies and he did it simply to blacken me. I have never seen this man before, I never knew his house, I never heard of his name. I saw him for the first and last time on the 26th February when he met his death in my hands.

MORALLY RIGHT.

From what I have stated just now, it would be evident that the woes and miseries heaped on that poor girl, the aspersions cast upon our entire women folk were so great an insult to our womanhood so deliberate a challenge to our nationhood so defiant that I could not take it lying down. I accepted it and it is for you gentlemen of the jury to say how far I have acquitted myself creditably in the matter. For my part, I am convinced that what I have done is morally right and could not be legally wrong for if I understand right law exists and primarily exists for the oppression of evil, for the punishment of wrong-doers, for the protection of the person and property of the public, and law expects further every person to do his duty towards society and the State by helping in carrying out these objects and I could not think of any duty more clear and more imminent than that the wicked should be punished and taught to respect the motherhood of women, that society be made aware of cancerous evil corroding its very vital parts and that the State be made aware of the existence of a very widespread organisation carrying on under its very nose and ever eluding its keen eyes the beastly human traffic, a relic of the barbarous times and a disgrace to any civilised government and more so to the British Government which prides itself in reason and out of season as being the very embodiment of law and order.

SHALL MOUNT THE SCAFFOLD

I fully believe that I have done no wrong either legally or morally and I therefore repeat the day what I repeated yesterday that I did strike Hirala but I am not guilty at all. But if your lordship and gentlemen of the jury think that it was not my duty to defend the honour and chastity of my sister if they further think that my duty was rather to sit quietly and look at the shame and sorrows of my sister and that I should sit and whine about it and mourn my miseries if they further think that I have done a greater disservice

to the society by exposing these weak and dangerous points which Hirala and his friends have created, that I was a greater danger to the society or to the State or to the domestic peace and happiness of homes than Hirala, then I take my stand here to take the fullest consequences of my act. Inflict upon me the utmost punishment. I anxiously look to the day when I shall mount the scaffold and fly towards Heaven to appear before the Almighty's throne and plead for a reign on earth when persons will be allowed to defend the honour and chastity of women folk when women will be virtuous and men will be chivalrous when women will be Goddess Shakti and bloody tyrants will learn to tremble and respect them.

After the prosecution and defence counsel had had their say, the Judge charged the jury, who found the accused unanimously 'not guilty' of murder but 'guilty' of attempt to murder in the proportion of six to three and unanimously 'guilty' of causing grievous hurt. His lordship sentenced the accused to 8 years' rigorous imprisonment on the charge of grievous hurt but passed no separate sentence on the charge of attempt to murder.

Taking a common-sense view of the law as it stands, we cannot say that it has not been rightly administered. But all the same, we are distinctly of the opinion that the prisoner ought to be pardoned and set free. And in this we only reflect the public sentiment. If he cannot be pardoned, he should at least be spared the company of criminals in jail.

"Khadga" means "Sword", "Bahadur" means "Brave", and "Singh" means "Lion". The young man has proved true to the name his parents gave him and has earned the respect of all right-thinking men.

It was only to be expected that movements would be set on foot to obtain his pardon. We read in the dailies that

Hon Mr A N Moberly, Home Member, Bengal Government, today received a deputation of representative Indian and European ladies at the Bengal Secretariat in connection with the appeal for commutation of sentence passed on Khag Bahadur Singh at the High Court Session. The deputation consisted of Miss Lloyd, Assistant Secretary, European Association, Mrs. Lakshmi Bose, niece of Anandindro Ghose of Saroj Nabin Association, Miss Jyotirmayee Ganguly of Women's Protection League, Mrs. Lakshmi Ghose, and Mrs K C Roy Chaudhuri. Mr. Moberly, while pointing out the difficulty in reversing the High Court decision, promised to represent to His Excellency the Governor the case for reconsidering the matter.

A public meeting has also been held already under the auspices of the All-Bengal Young Men's Association to organise public opinion on the question of protection of

helpless women and to consider the duties of the young men of Bengal in view of the putrid condition of a section of Calcutta society brought to light by the case of Khadga Bahadur Singh. The chair was fittingly taken by Srimati Sarala Devi.

Opening the proceedings Mr. Krishnakumar Mitter the energetic septuagenarian secretary of the Women's Protection Society, said that he was so much impressed with the heroism of Kharag Bahadur Singh that his desire was that a statue should be erected in Calcutta to instil into the hearts of young men his idealism and to urge them to emulate his noble example. He knew what the punishment would be for the mission that he undertook and this had been proved by the statement he made in Court. Proceeding Mr. Mitter said that Kharag Bahadur sacrificed his life for protecting the honour of the womanhood of Bengal. They had assembled there to worship him who was decried as the hero of the struggle and whose action had been an eye-opener to goad them to action.

Rev B. A. Nag reminded the audience that the object of the meeting was to organise public opinion against the wicked traffic in minor girls, exhorted the young men and the press to help the organisation and appealed to people of all nationalities to exert their utmost to get the release of the noble hero Khadga Bahadur Singh.

Mr. K. Nairuodia, a classmate of Singh, paid a high tribute to his friend, characterizing him as an idealist of the highest order. He appealed to the audience to organise rescue homes for helpless girls.

Mr. Bipin Chandra Pal said that Kharag Bahadur was a moral and invaluable asset of society. It was for the Government now to intervene and judge between the order of the court and the conscience of the people. If this thing had happened in England the Royal pardon would have been declared immediately. He said that this was a fit case to exercise the Royal prerogative. Rajkumar he said sought the protection of the police, but as she did not get redress of the wrong done to her, the present position had been brought about, and if any one was morally responsible for the murder of Himmlal it was the police and none else. It was the clear duty of the head of the Government and the representative of the Crown to intervene in the matter to extend the prerogative not as an act of mercy or a favour but as a tribute to the heroism and nobility of mind and character of Kharag Bahadur.

The president in conclusion made an eloquent appeal to the young men to purify their character first before they thought of combating social evils in the country. She exhorted the young men and women to organise themselves and, with unified action, strive hard to eradicate the evil so common in their country.

The following resolutions were passed —

That this meeting of the citizens of Calcutta places on record its high admiration and deep sense of appreciation of the heroism and the noble spirit of self sacrifice displayed by Kharag Bahadur Singh in vindicating the honour of the trampled womanhood.

That this meeting places on record its considered opinion that His Excellency the Governor of Bengal should exercise the Royal prerogative of pardon in the case of Kharag Bahadur Singh.

That this meeting expresses its indignation and abhorrence of the social evils prominently brought to the public eye in connection with the case of Kharag Bahadur Singh and calls upon all men and women particularly the youngmen of Bengal, to do their utmost to combat these evils.

That this meeting appoints a Sub-committee to take necessary steps for securing the pardon of Kharag Bahadur Singh.

—

The Eighteen Pence Rupee

The Eighteen Pence Rupee is now legally an accomplished fact. It was a well fought battle and the opposers of the new ratio lost by a very small majority only. Still the victory of the eighteen pencers does not prove that they have been right. Those who opposed the new ratio argued that it was an unnatural arrangement and that it would only increase the trade of foreign exporters. Sir Basil has, of course, explained that the rupee having nothing to do with silver and being only a token, the question of natural and unnatural ratios did not arise at all. Firmly the rupee represented a certain quantity of gold, now it will represent a little more of that metal. And he would see that the rupee *does in fact* buy and sell for this quantity of gold. Boldly on this ground Sir Basil would not have been justified in changing the value of the currency, for when the rupee is not actually a gold coin but is merely a token (a note printed on silver) he could of course make it represent any quantity of gold at any time by manipulating its quantity and by exchanging gold for rupees at any ratio. But what was the occasion to do so? Supposing one could increase the gold value of the rupee by effecting deflation and by sale of gold, would one be justified in so doing unless there were any expectations of social good through the procedure? Most certainly not. The thing would be all the more unjustifiable if there were any risks of social loss involved in it.

Sir Basil has doubtless explained the gold-rupee idea very clearly and shows how we should be paying the same quantity in gold for the pound sterling now as before. His explanation suggests as if the most important item on the programme was the paying of a certain quantity of gold for a certain number of pence. As a matter of fact the most important items were the (1) Contraction of the volume of the rupee currency, (2) the artificial Check to our exports and (3) stimulus to our imports, the (4) redistribution of wealth and income involved in putting up the purchasing power of the rupee and the various corollaries to the above. Had Sir Basil attempted, with his attempt to revalue the rupee in terms of pence and gold a revaluation in terms of the *new rupee* of all properties and incomes we would have had less to put forward as grievance. But even then the contraction of the volume of the currency would have brought in a period of falling prices—something very bad for the economic health of society.

But as things stand now, the widely circulated and distributed rupees will assume a new power (value) all of a sudden. Holders of money bonds (Government papers etc.) and money incomes will now be entitled to a larger share of the social wealth and income at the cost of those who hold actual property (not claims put down in terms of money) and live by selling goods.

Sir Basil is a great financier. With favourable monsoons to back him up he has found it easy to hold that the *de facto* ratio now has been for some time nearer 18d. than 16d by a good margin. Quite true, but with a couple of bad years it would be just the other way about. Shall we then (may that time be far off!) have a further change?

In our opinion the time was not yet ripe for any fixing of the exchange. If the *de facto* ratio was really 18d to the rupee (was it so without tampering?) there was no hurry to fix it legally at that. The test of time is not carried out in a few months. As to the discussion about price levels changing and assuming stability at 18d to the rupee, we must say the argument has all along appeared unsupported by proper statistics and hence, we have nothing to say on the point.

Altogether the whole affair reminds one of the well known saying 'Marry in a hurry, repent at leisure'.

A C

E B R Demonstration Trains

A public meeting was recently held in Calcutta at which the work done by the Eastern Bengal Railway Demonstration Train was explained by Mr A. K. Sen, Publicity Superintendent of that Railway. He said in part—

The primary object of the undertaking was to assist in the publicity work of the nation building departments. Industrial schools, Government agricultural farms, co-operative institutions of different kinds, veterinary hospitals and malarial organisations all exist at different centres but their spheres of influence are altogether restricted. The Industries Department are ready to indicate half a score different ways by which any able-bodied man can easily earn from Rs. 30 upwards per month by his own unaided effort, and yet the corridors of our Traffic Managers' offices are thronged daily by crowds of unemployed young men clamouring for jobs worth Rs. 20 to 30 a month. More propaganda work is required by all these nation building departments. Having realised this the Traffic Manager of the E B R conceived the idea of inviting the Public Health, Agriculture, Industries, Co-operative, Veterinary and Education Departments of the Government of Bengal and the Indian Tea Cess Committee to join in arranging a train fitted up as a moving exhibition and manned by competent demonstrators and lecturers. The train started on the 22nd February and returned to Calcutta on the 23rd March. During this time it visited 30 stations at each of which it drew large crowds. A day was spent at each station the train remaining in view from the morning till the afternoon after which an open air meeting was held at which lectures were delivered and educative cinematograph films and lantern slides shown to the public. Much enthusiasm was created among the local population as a result of which donations of land and money were promised by public-spirited men at several stations for establishing veterinary hospitals and similar institutions. At a conservative estimate 150,000 people have seen the train and attended the evening lectures. We believe that it is the first effort of its kind in India and in a sense the first effort of its kind anywhere.

A pleasing feature of the work was the interest taken by ladies at all the larger stations.

The experiment has been successful. The example of the E B R should be followed by the other railways, and demonstration trains should be a regular feature of all of them.

Indian Legislators and "Nishkama Karma"

During the present budget season, the Indian provincial and central legislators have inflicted many defeats on the provincial and central Governments. But these victories have been generally fruitless. The Govern-

ments continue to go on as usual as if nothing has happened to disturb the even tenor of their way. Our victorious legislators also go on with their work from year to year as if nothing has happened to ruffle their equanimity. This shows that the legislatures have enabled them thoroughly to master the doctrine of 'nishkama karma', or work without desire for fruit, which is taught in the *Gita*, which lays down "*Karmanyeva adhikars te ma phaleshu kadachana*", "You have only the right to work, but never to its fruits."

We have been critics of the 'Reforms' all along. The time has come now to perceive our mistake and retrace our steps. The legislatures were instituted as schools of 'nishkama karma,' for the elect of our people. We venture, therefore, humbly to point out that Mahatma Gandhi should not have included in his programme of Non-co-operation the boycott of the Councils.

The Budget Debates

It would of course be mathematically inaccurate to say that the cuts and amendments proposed in the provincial legislative councils and the central legislature have been *absolutely* without any result. But the provincial and central Governments have given effect to the proposals of their opponents only when these did not run counter to their policy and interests. They remain masters of the situation as before. This is very humiliating and discouraging to our elected representatives. For years have they and their electors consoled themselves with the 'moral effect' of the victories gained, though no substantial results have followed. But to be satisfied with the 'moral effect' for ever would be to live in a fool's paradise. Let those who can and like, go on with debating, moving amendments, carrying resolutions, inflicting defeats on the Government, and so on. But there should certainly be an organised body of capable men who are to concentrate their efforts on securing the one thing needful, which is the essence of self government, namely, a change in the constitution which will enable the voice of the representatives of the people inevitably to prevail. If we can have a new constitution making this provision along with other improvements on the present constitution, so much the better. If not, let the present

constitution be amended in the direction desired. Without such a change, all our efforts in the legislatures practically become valueless.

Government's Reliance on the Army

The reply given by Earl Winterton to a question asked in Parliament, to the effect that the Government of India would, if necessary, increase military expenditure whatever the political consequences of such a step might be, shows the British rulers' contempt for Indian public opinion. The elected Indian legislators and Indian newspapers have been insisting year after year that military expenditure should be curtailed. The reply to this public demand is that it would be increased, if thought necessary, whatever the political consequences might be. Whether it would be necessary to do so, would, of course, be decided by the British bureaucrats who govern India; and from the statement made officially in the Legislative Assembly that the expenditure on the army had reached almost the lowest point and the almost sneering tone in which the Inchcape Committee's maximum figure of fifty crores was referred to, it is clear that there would be little hesitation felt in spending more money on the army in years to come. The meaning of the 'political consequences' referred to by Earl Winterton is also plain. British bureaucrats like himself are not afraid of political discontent in India. For they know that a few Indian leaders are against armed rebellion from political, moral and spiritual considerations and all the foremost leaders consider such rebellion impracticable. These British rulers have also taken note of the Civil Disobedience Committee's conclusion that mass civil disobedience in the whole of India or any province 'was impracticable. Communal dissensions and riots are also secretly felt to be one of the hulkworks of British rule in India. And if the worst comes to the worst, there is the army officered by Britishers to deal drastically with all symptoms of discontent and unrest.

"The Fellowship"

A new organisation, named "the Fellowship" has been brought into existence to fight the evil of communalism and racial conflict.

It is so timely as to have come in the course of natural evolution. Its objects are —

"Cultivation of a spirit of reverence for all religions and cultures, through sympathetic study and understanding and spiritual appreciation of their special contributions to the religious life and evolution of universal humanity, and

"Co-operation among members of different faiths and cultures in the pursuit of the universal religious ideal of love of God and service of man"

We are in full sympathy with these objects.

The new organisation counts among its adherents distinguished followers of all the historic faiths, including men like Rabindranath Tagore, J. C. Bose, Abul Kalam Azad, Harendra Nath Datta, Bipin Chandra Pal, Akram Khan, S. K. Datta, Wabed Hosain, Father Shore, Professor Tarapurwala, D. P. Khastan, Anagarika Dharmapala, etc. In addition to the inaugural meeting another has been already held at which appropriate speeches were made by followers of different faiths. Other means will also be adopted for promoting the objects of the new society

Joint Electorates

If representative government is to bear full fruit in India, there should be no communal electorates, no communal representatives. The next best arrangement is to reserve a number of seats for particular religious communities who want communal representation, with the proviso that their representatives are to be elected by electorates consisting of voters belonging to all communities. This would necessitate the cultivation of the goodwill and friendship of all communities on the part of the communal candidates. Some Muslim leaders, assembled in conference at Delhi, have tentatively decided in favour of such mixed electorates on certain conditions, e.g., Sind is to be made a separate province with a legislative council, etc., the Reforms are to be introduced in the N-W F Province, in Bengal and the Punjab seats are to be given to the Muslims and the Hindus in proportion to their population, and in the other provinces minorities, whether Hindu or Moslem are to have equal concessions as regards the number of seats.

We would support the idea of joint

electorates, as lessening the evil of communal representation, on one of two conditions: namely either that majorities and all minorities demanding the same are to have seats allotted them in all provinces in proportion to their numbers without any concession anywhere to any community or that concessions are to be made to all minorities in all provinces including the Punjab, Bengal, Sind (if made a separate province) and N. W. F. Province (if the Reforms be introduced there and there be in consequence a legislative council created there).

In the provinces where there are legislative councils are at present constituted Hindus are in a minority only in Bengal and the Punjab and the Muslims are in a minority everywhere else. Therefore the condition that seats are to be allotted in proportion to the numerical strength of the communities in Bengal and the Punjab without any concession to minorities, and that concessions are to be made to the minorities in all the other provinces means that where Hindus are in a minority, they are to have no concession, but where Muslims are in a minority, they are to have concessions.

It is also to be noted that the present voting strength of the Muslims in Bengal is not greater than that of the Hindus. If literacy were made a qualification for the franchise, the voting strength of Muslims would be very much less than that of Hindus in Bengal. And Mr. Ashoke Chatterjee has shown in this review from census statistics, that if universal adult suffrage were introduced in this province, Muslims would not have a greater voting strength than the other communities combined the reason being the higher mortality among Moslems of certain ages. For all these reasons, it would be very unjust if in Bengal Moslems were given a majority of seats, solely on the ground that they have among them a larger number of infants, children, and boys and girls.

The N-W. F. Province may have all the paraphernalia of the Reforms, including a legislative council, ministers, etc. if it can meet the expense involved without assistance from the Central Government, which in the long run means assistance from the other provinces, which all require more money than they can at present raise by taxation.

Sind may also be made a separate province on the same condition. But important classes

of Sindhis have already raised their voice against the proposed separation from Bombay.

One of the reasons why Moslems want the changes for the N-W F Province and Sind is that in both the regions Moslems are in a decided majority

—

Physically Defective Children

We read in *The Inquirer* of London

The Duchess of Atholl in reply to a question in the House of Commons, stated that there are now not more than 35 areas in which the local authorities appear to have made no provision for physically defective children."

Here in India one should ask in how many areas the local authorities have made provision for physically defective children. Are there a dozen such areas in this vast country, which is equal to Europe minus Russia?

—

The Shivaji Tercentenary

The celebration in the Bombay Presidency of the tercentenary of Shivaji the founder of the Maratha Empire, reminds us how not many years ago such celebrations would have been looked upon as seditious. He is no longer looked upon as a free-booter.

His genius shone not only in military and naval affairs but also in civil administration. In religious toleration and in his chivalrous treatment of women prisoners, he was far in advance of his age. For all these reasons, he is entitled to our homage

—

Austria, Belgium, Czechoslovakia, Bolivia, Brazil, British Empire, Bulgaria, Cuba, Denmark, Esthonia, Finland, France, Greece, Hungary, Italy, Japan, Lettonia, Lithuania, Luxemburg, Netherlands, Norway, Poland, Portugal, Roumania, Salvador, Kingdom of the Serbs, Croates and Slovenes, Spain, Sweden, Switzerland, and the United States of America. The last is not a member of the League of Nations and does not contribute anything towards its expenses.

The following countries have appointed National Delegates to the International Institute of Intellectual Co operation, *India has not* —

Argentina, Austria, Belgium, Brazil, Bulgaria, Canada, Chile, Cuba, Czechoslovakia, Denmark, Equador, Esthonia, Finland, France, Greece, Guatemala, Haiti, Hungary, Irish Free State, Luxemburg, Nicaragua, Paraguay, Netherlands, Poland, Portugal, Roumania, Salvador, Sweden, Switzerland, Venezuela.

The British Government of India cannot and will not appoint truly 'National' Indian Committees of Intellectual co-operation, nor can it or will it appoint truly 'National' Indian Delegates to the International Institute of Intellectual Co operation.

expenditure of 11 10 62,000 rupees the police department absorbs Rs 188 57 000 which is nearly one-fifth that whereas for fighting malaria in the whole of Bengal Rs 80 000 has been provided Rs 60 000 are to be spent for constructing a residence for the magistrate in Pabna that for providing potable water in the whole of Bengal two and a half lakhs are to be spent but four and a half lakhs are to be spent for the five divisional commissionership which were recommended to be abolished by the Re-trenchment Committee

What is of greater importance than these detailed criticisms is the fact that even if the wisest and most patriotic Bengali had full control over public expenditure in Bengal he could not, with the present revenues of the province have made decent allotments for all the nation building departments

This is more or less true of all the provinces, but perhaps truer of Bengal than of any of the other major provinces. This will be plain from the following statement of the population of some of the provinces and their estimated income for 1927-8

Province	Population in 1921	Income or 1927-8 in Rs
Bengal	40 690 536	107339000
Madras	42 318 985	105480000
Bombay	19 348 710	150800000
U P	45 375 787	129450000
Punjab	20 685 074	111300000
C P Berar	13 912 760	56376000

Bengal has a larger population than any other province. With less than half its population Bombay has about 50 per cent. more income. With less than half its population the Punjab has a larger income. With less population Madras has 50 per cent. more income. With less population the U P has a larger income. With less than one-third its population C P and Berar have more than half its income. The comparison is made only for the purpose of showing that Bengal, with her present income could not under any circumstance spend per head of her population as much on the nation building departments like sanitation education industries agriculture etc., as the other major provinces. We neither say nor suggest that any province has been grasping or unjust to Bengal. Every province is fully entitled to more than its present income.

The comparative smallness of Bengal's public income is not due to infertility or any such similar cause. A region where agriculture and other industries and trade cannot flourish cannot be so thickly populated as Bengal is. The reason why the public exchequer of Bengal has not got enough money for her purposes is to be found in the main recommendations of the authors of the Reforms that land revenue irrigation excise and judicial stamps should be completely provincialized and that income tax and general stamps should become central heads of revenue.

Now Bengal pays a far larger amount as income-tax than any other province. It was Rs 54 73 933 in 1924-25 the latest year for which figures are given in latest Statistical Abstract, as against Rs 403 17 094 paid by Bombay Rs 17 43 879 paid by Burma and Rs 129 99 555 paid by Madras. But income tax goes to the Central Government. On the other hand the total land revenue paid by Bengal is much less than that paid by Madras Bombay U P Punjab and Burma and land revenue is a provincial head of income. As for the other sources of provincial income there is little irrigation in Bengal compared with some other provinces and the total excise receipts of Bengal are less than half of those of Bombay and of Madras being for the year 1924-25 Madras Rs 490 64 413, Bombay Rs 426 84 896 and Bengal Rs 201 17 030. As matters stand the people of Bengal can add to the income of their Government by (i) drinking more liquor and consuming more drugs like ganja, opium etc. and (ii) by becoming more litigious and thereby increasing the income from judicial stamps. We are not sure whether the bureaucracy want us to take these steps. Probably they do. For income tax we cannot appropriate the revenue from jute we cannot appropriate the land revenue we cannot increase owing to the Government's Permanent Settlement. There remains irrigation. Many districts of Bengal such as Birbhum Bankura etc. people require irrigation. But, badly not having control over their Government they cannot compel it to provide means of irrigation. So unluckily we can fill the Bengal public treasury to overflowing mainly by becoming drunkards opium eaters opium smokers ganja smokers and litigants.

According to a recent Calcutta High Court full bench (majority) judgment agri-

such activities to the best of their ability, with due caution and by selecting honest and capable workers. This is the first and most important thing to be done. It is difficult but not beyond the power of Allahabad.

The second thing is to give accurate and unexaggerated but adequate publicity to all Allahabad happenings and doings. It is years ago that we used to see the *Pioneer* daily. One difference which we noted between it and the Madras and Calcutta Indian-owned dailies was that it was the exception rather than the rule for the issues of the former to have a local column and to publish local news, etc. Perhaps in this respect, its practice remains unchanged. The other English daily of Allahabad is *The Leader*. It is very rarely that we see its daily edition, but we do so during our annual or six monthly visits to that city. On a recent visit we were glad to see that the paper had got offices specially constructed for it. But its local column and its local news service and publicity arrangements for local doings appear to remain unchanged. Surely a long-standing prosperous concern which can build premises for itself can also keep a few news gatherers, reporters, etc. That would be good business too. But what we are here concerned with is that Allahabad should convince the outside public by proper publicity arrangements that she is no mean city, that she is not a sleepy hollow. Ancient historic claims are good in their way. But ancient history alone cannot convince anybody that, *eg.*, the capital of the Indian Empire should be transferred to Pataliputra or that the greatest Indian Universities ought to be removed to the ancient sites of Nalanda and Taxila.

Beethoven Centenary

In our March issue we announced the centenary of the great musical hero Beethoven. We are glad to find that in Calcutta the students of the University were the first to express their sincere and enthusiastic admiration for the noble life of Beethoven and attempted to organise a fitting celebration in his honour. But they had rather a cruel surprise in store for them. While they could find a hall for holding its memorial meeting and could enlist several names of persons—Indian ladies and gentlemen of culture, to take part in the

celebration, they could not discover any individual or group of Europeans, sufficiently enthusiastic about the great musical genius, to take the initiative in arranging a symbolical music ritual giving an idea of the phenomenal creations of the master composer. This brings painfully to our mind how very poorly European culture and art are represented by the colonial English with their colossal philistinism.

We learn with great pleasure that M. Romain Rolland is going to participate in the grand centenary celebration of his hero to be held in Vienna in the last week of March and that he has been honoured by a request from the organisers to deliver a message personally on the occasion. We hope to give details of the celebration later on. Meanwhile we print M. Rolland's tribute to "Beethoven the spiritual hero."

Canada's Chinese Policy

AN OBJECT LESSON FOR INDIA

Though the Chinese situation has changed since February yet the following clipping from the *New York Times* will show that Canada did not think it necessary to send troops to China though India was forced to do so.

Ottawa, Ont. Feb. 10.—Premier Mackenzie King does not think that the situation calls for the sending of Canadian forces to Shanghai, he told Parliament today. Should the situation change, he said, he will consult Parliament before taking action.

His statement follows:

The protection of life and property in any country, whether of nationals or of aliens is primarily the duty of the Government of that country. Of late civil war in China now of several years' duration has included the difficulty of insuring that protection and the evacuation of certain interior areas by foreign residents has been considered an advisable precaution. At the same time it must be recognized that the loss of life by foreigners in these years of disturbance has been extraordinarily small. So far as is known only one citizen has been killed. The existence of a political motive in that case which occurred in June, 1936 was not fully established and the murderer was shot immediately by Chinese soldiers.

Canada is in full sympathy with the desire of the Chinese people to secure control of their own destiny, having due regard to the safety of the life and property of foreign residents. While there are extremist elements in the situation, it is clear that as regards the responsible leaders and great majority of the Chinese people the present nationalist movement is directed, not against the lives

or private rights of foreign residents but against the special privileges or the measure of control over Chinese affairs exercised by foreign countries as regards extraterritoriality, customs concessions and other matters.

Canada has not in the past had any part in shaping or maintaining the policy of acquiring such rights or privileges in China and has had no part in the recent negotiations for their adjustment. The Canadian Government is however in full sympathy with the British Foreign Secretary's announced policy of going as far as possible to meet the legitimate aspirations of the Chinese nation and believes that this course is both just and best adapted to insure protection of life and of religious and business interests.

Under these circumstances it is not considered that it would serve any useful purpose to propose dispatching Canadian forces to China. If the situation should change the Government will take the earliest opportunity of consulting with Parliament as to the appropriate course to pursue.

It is to be noted that neither before nor after the sending of Indian troops to China was the so called parliament of India given any opportunity to pronounce any opinion on the subject.

India's Representation in the League of Nations

We read in the new edition of *Chambers's Encyclopaedia*, Vol vi, p 5712 —

'The creation of the League marked an important development in the constitutional relationship of the British Empire in that the four self-governing dominions of Canada, Australia, South Africa, and New Zealand and also India, were admitted as full members of the League with complete liberty to act and vote if they chose in opposition to the British delegation' [Italics ours]

Falsehood becomes more dangerous when it is adulterated with a little truth. It is theoretically true that India has been admitted as a full member of the League, but it is absolutely false that the delegates sent in her name by the British Government of India have complete liberty to act and vote if they choose in opposition to the British delegates. What makes the falsehood more glaring is that a British servant of the British Government is chosen to lead the "Indian" delegation and our elected representatives do not have even an indirect voice in the choice of the delegates. The main ground on which Mr. S R Das, the Law Member, has hitherto opposed the appointment of an Indian to lead the "Indian" delegation, is that Indians are not sufficiently conversant with the foreign policy of British Imperial Government. This

gives the lie to the statement of *Chambers's Encyclopaedia* so far as it relates to India. For, it plainly means that the "Indian" delegation must adopt such an attitude as would promote British interests abroad and that the advancement of the cause of India is not its sole or main concern. It is to be hoped, Mr. S R Das appreciates the compliment paid to his country by the selection of himself by the Government to make known this humiliating truth to the Legislative Assembly and the public.

Are the "Indian" delegates to the International Economic Conference and other similar League conferences appointed on the understanding that they are to consult British interests? We have heard at Geneva from a reliable source that the "Indian" delegates to the League Assembly are supplied with certain instructions by the Government of India.

'Oppressed Nations' Congress

The Searchlight of Patna has printed an account of the first session of the International Congress against Colonial Oppression and Imperialism which was held at Brussels from 10th to 15th February. It appears to have been a great success.

Amongst the important personalities who took part in the deliberation and proceedings of the Congress were Messrs S O Davis (Miners' Federation), George Lansbury, M P, Fenner Brookway, M P, Becket, M P, Bridgeman, M P, Miss Wilkinson, M P, and many other members of the Independent Labour Party, Henri Barbusse (France), Edin Fimmen, Secretary of the International Transport Workers (Holland), Dr Helene Stocker, Prof Gold Schmidt, Prof Theodor Lessing, Ledebour, M R, Mironzenburg, M R, J Vasconcelos, ex-Minister of Public Instruction, Mexico, Muglioni, Member of the Chamber of Deputies, Italy, Dr. Marteanx, Member of the Chamber of Deputies, Belgium, Hsiung Kwang Suan (Official Representative Canton Government), Liao Kuo Min Tang Party, Canton) and several others. India was represented by Pandit Jawahar Lal Nehru (Delegate of I N Congress) and Prof Barkatulla, V. Chattopadhyaya, T Sinha and A. C N Nambiar, representing various Indian organisations in Europe and America.

Amongst prominent persons who sent their greetings to the Congress can be mentioned Prof Einstein (Germany), Roman Rolland (France), Mahatma Gandhi and Mme. Cama (the aged leader of the Indian Freedom Movement, Paris). The telegraphic greetings of Mrs. Sun-Yat Sen and Shrinivas Ajangar were received with tremendous

cheers and applause as they were read out in the meeting

Important items on the agenda of the Congress were —

1 Opening addresses 2 Imperialism and its consequences in the colonial and semi colonial countries. 3 Imperialism and the dangers of wars 4. Co-operation between the national liberation movements in the oppressed countries and the labour anti imperialist movements in the imperialist countries 5 Co-ordination of the national emancipation movements with the labour movements of all countries, colonial as well as imperialist. 6 Establishment of a permanent world wide organisation linking up all forces against imperialism and colonial oppression

So far as India is concerned Pandit Jawahar Lal Nehru in his opening speech narrated a brief history of British rule in India and concluded with the remark —

I do submit that the exploitation of India by the British is a barrier for other countries that are being oppressed and exploited (Applause) It is an urgent necessity for you that we gain our freedom. The noble example of the Chinese nationalists has filled us with hope and we earnestly want, as soon as we can, to be able to emulate them and follow in their footsteps (Applause) We desire the fullest freedom internally for our country not only of course, internally but the freedom to develop such relations with our neighbours and other countries as we may desire. It is because we think that this International Congress affords us a chance of this co-operation that we welcome it and greet it.

Again at the third days sitting

Pandit Jawahar Lal Nehru, in the name of the Indian delegation moved a resolution demanding complete freedom for and withdrawal of the British army of occupation from India as well as withdrawal of Indian troops from China, which was unanimously proposed by the Executive Committee of the Congress. In support of it he made a short and forceful speech and cited the example of Egypt which had not got real independence as long as the British army of occupation was stationed there

The resolution was unanimously accepted

Mr Becket M P read out a resolution formed in a combined meeting of the Chinese Indian and British delegates, in which fight for complete independence where national forces so desire withdrawal of troops from China, refusal of war credits recognition of Canton Government direct action including strikes and the imposition of the embargo against transport of troops and munitions, have been demanded. This resolution is signed by Lansbury Brockway Davis Manu, Pollit, Miss Wilkinson Becket, Crawford Stocks, Nehru and Lian.

Further a combined declaration signed by Indian and Chinese delegates to renew old cultural ties between the two countries and to carry on

a common fight against English imperialism was read out by Mr Lian

The formation of a 'League against Imperialism and for National Independence' is said to be one of the most important achievements of the congress.

According to its constitution all organisations parties trade unions and persons who lead an earnest struggle against capitalist and imperialist domination for the self determination of all nations for the national liberty of all peoples for the equal right of all classes and all persons shall be allowed to be affiliated to the League. The headquarters of the League will now be situated in Paris in the Working Committee of the League Lansbury Emmen Muenzenberg Barbusse, Nehru, Lian Senghor (V Africa) Hatta (Indonesia) and one delegate from Latin America, have been elected as permanent members

We value the proceedings of this congress, but value them only so far as they may help in molding world opinion. That certainly would be no mean gain. We write in this unenthusiastic tone because no sympathy from abroad should make us forget that, if we would be free, it is we who must honestly do the most difficult portion of the work that we must make the utmost sacrifice that we must make use of all the wisdom and capacity we possess and that we must never relax our efforts

—

State Expenditure on Indian Education

An American authority has calculated on the basis of figures taken from the Indian educational report for 1924-25 that the Indian Government's educational expenditure is less than ten cents or about five annas per head of the population per annum for all grades and sorts of education against 16 1/4 dollars or about rupees fifty per capita per annum in the United States of America for public school education alone

—

An Attack on Prof J Sarkar

In the Bengal Legislative Council there was recently a venomous attack on Prof Jadunath Sarkar Vice-Chancellor of the Calcutta University by Mr M N Ray Mr W C Wordsworth, late Principal of the Presidency College and later officiating

Director of Public Instruction, who attacked the "massing of official opinion" in the Senate, said nevertheless that

he had no sympathy with Mr. Roy's attack on the Vice-Chancellor. When a distinguished gentleman of Bengal whose fame was known far beyond the limits of India was prepared to use his leisure to serve the University, he thought, he was entitled to their gratitude.

Mr. Jitendra Lal Banerjee gave a crushing reply to Mr. M. N. Ray. To be appreciated, his speech should be read as a whole. The main points of his speech, summarised in tame language, are—Prof. Sarkar has been accused of officialising the University. But 90 percent of Calcutta University Fellows are nominated by Government: how can anybody further "officialise" it? The University has its present constitution according to an Act passed in the teeth of a fierce agitation led by Surendranath Banerjee, but with the help of Sir Asutosh Mukherjee. Mr. Roy and his party now wanted a democratic constitution, but what were they doing during the ten years of Sir Asutosh's Vice-Chancellorship and the years following when they were in power?

What happened was this. So long as a particular party was in power, so long as this party could get its own nominees accepted by the Government, so long we never heard the least whisper of democratic constitution for the Calcutta University Senate. But now that another party is in power and that one clique has given place to another, there is a fierce and sudden outburst of democratic zeal and fervour on the part of all and sundry.

Mr. Banerjee forgot to mention that Sir Asutosh and his followers opposed even the partial democratisation of the University by Mr. J. N. Basu's Bill.

It has been said that the present Vice-Chancellor is not eminent at all, but I cast my glance over the length and breadth of India and I ask, where else shall we find such ripe scholarship, such massive industry and erudition, such keen critical and historical insight as we find in the present Vice-Chancellor?

As for his being an official (he is no longer an official strictly speaking, as he has retired from Government service), Mr. Banerjee pointed out that Sir Asutosh, Sir E. Greaves and most other Vice-Chancellors were officials. As for the charge of officialising the University, Mr. Banerjee

proved to the hilt, in detail, that "the charge was as base as it was baseless". "Mr. Sarkar has taken care to see that every rotting fellow should be replaced by another belonging to the same category". Moreover, four Europeans have been replaced by four Indians. The Syndicate now contains a smaller number of officials than before. As for Mr. Sarkar being a nominated Vice-Chancellor, so has been every previous Vice-Chancellor. Mr. Banerjee concluded by saying

Do not let us stultify ourselves by heaping foul abuse upon one who is of us, and for us, who belongs to our very own and who is a credit and glory to this university of ours.

Rangoon Ramakrishna Mission Sevagram

During our recent visit to Rangoon we were glad to visit this excellent institution. It deserves to be helped very liberally by

Rangoon Ramakrishna Mission Sevagram workers and Editor, *The Modern Review*

all, as it is a philanthropic institution, and by us Indians in particular, as the Indian labourers in and about Rangoon, when they fall ill, are treated and taken care of here alone practically.

A FESTIVAL OF FLOWERS

THE STUDY OF ZOOLOGY IN INDIA IN THE FUTURE *

By MAJOR R B SEYMOUR SEWELL I M S

Director of the Zoological Survey of India

IT is the custom in this Congress that the Presidents of the various Sections should deliver a Presidential address dealing with some aspect of the subject with which the Section deals that is of interest and importance to all those who are members of the Section and I have found the choice of a subject for my address to you to-day a matter of some difficulty. In most cases an address such as this consists of a review of the work done or of advances in our knowledge made during the past year or series of years. Some of you however may remember that in his Presidential address to this Section in 1921 Dr Gravelly, of the Madras Museum gave an admirable review of the history of zoological research in India in the past and as recently as 1923 Dr G Matthalai of Lahore University chose as the subject of his address that branch of Zoology that for many years has been my particular study namely Oceanographic Research in Indian Waters. It is true that he limited his summary to the period prior to the outbreak of war in 1914 and that during the last few years considerable work has been carried out especially on board the RIMN Investigator that has resulted in I think I may justly claim a not insignificant contribution to our knowledge but in dealing in my Presidential address to you to-day with this branch of research would inevitably result in my address becoming in the main a

summary of my own work some of the results of which have already been published and the remainder will I hope before long appear in print in the Memoirs of the Asiatic Society of Bengal. The results obtained will thus shortly be available to you all *in extenso* and a summary and discussion of them now would be merely to anticipate what I shall hope to tell you later. Moreover an outline or summary of any one branch of Zoological research can of necessity only have any very great interest for and appeal to comparatively few namely to those who may for one reason or other be interested in that particular branch of learning or who may be engaged in research of a cognate nature and I feel that a Presidential address should deal with some aspect of zoological work that has a profound interest for you all. Now there is one topic that is of the very greatest importance to us whether our interest in Zoology is confined to the research side or to the academic branch, and this is the very vital question of the study of Zoology in India not in the past, but in the future. To-day I purpose to direct your attention to this most important problem a problem that is so important and is so vast that it will inevitably affect, not only us trained zoologists or those who in the future may take up the study of Zoology as a profession and as their life's work, it is a subject that will eventually affect the whole of this great country from end to end although the application of zoology in the every day needs of the population is at present in its infancy and the importance of

* The greater part of this article formed the Presidential address to the Zoological Section of the Indian Science Congress 1927.

a knowledge of zoology has hitherto been but little realized.

Zoology can roughly be divided like the territory of ancient Gaul into three parts. The first of these is Taxonomy and Morphology and along with these goes the study of Zoological physiology, for, as you know, the physiology of an animal is often as specific in its character as is the actual structure. The second branch of Zoology is the study of Embryology and Genetics and the third great line of study is that of Ecology and Bionomics. In my opinion it is this third branch that is the greatest of the three but its study can only successfully follow on a correct taxonomy. The first essential then of Zoology is a study of Taxonomy, and in order to form a true estimate of the position of any species in our scheme of classification of the animal kingdom taxonomy must be combined with the study of embryology and morphology and in certain cases and possibly far more often than has been the case in the past, with the study of the animal's physiology and biochemistry. Now it is in this sphere of taxonomic research that the Zoological Survey of India both can be and is only too willing to be of assistance to every zoologist throughout the whole of India. It has been whispered to me that certain zoologists in this country thought I hope that none such are present among you to day hold or at least held the opinion that the Zoological Survey of India is jealous of other zoological institutions. I would beg you if any of you still retain this belief to rid your minds of it once and for all. We are and I speak for my colleagues just as much as for myself not only willing but desirous of doing all that we can to help the *bona fide* students of zoology in this country and to improve as far as lies within our power, the various institutions that have grown up and I am glad to see are still growing up in India. The facilities that we can at the present time offer to research workers in our laboratories in Calcutta are limited, but I have room for at least six research workers for four Zoologists and two Anthropologists and I should like to see these places occupied the whole year round. The number of my colleagues in the Survey is but small and it is therefore only in certain groups of animals that we are at present able to assist research workers directly by identifying for them specimens that they may have collected, but the Zoological Survey

of India is in a position to be able to arrange with experts not only in India but all over the world for the identification of any animal that may be sent to us, and in this way we can honestly claim that we are both able and willing to give very material assistance. The study of taxonomy will as the fauna of this country becomes more and more known, cease sooner or later, to have any very great attraction for the research worker, at the present time most of us have *willily nilly* to become taxonomists since in almost every group of animals that we may wish to study our knowledge of the various species is still meagre, but I would impress on you that the study of this particular branch should never be considered an end in itself. It should be regarded merely as the necessary preparation for wider, more interesting and frequently more important studies.

The study of Morphology and Comparative Anatomy in this country is in its infancy. As some of you may know, there have from time to time appeared in the "Records of the Indian Museum" papers dealing with this branch of study and I am glad to see that there is in existence in India a movement for the production by what I may term a Committee of Professors in the various colleges of a series of monographs dealing with the detailed structure of some of the commoner and most typical animals in the various phyla though the idea underlying the inception of this series appears to have been the necessity of having standard works for the purpose of teaching rather than any special interest that the members of this Committee took in the subject. In England and Europe as well as in America the study of Morphology appears to be at the present time out of fashion and its place in zoological research has been taken to a great extent by the study of Genetics a movement that in England can be traced very largely to the influence and enthusiasm of the late Professor Bateson. The study of Genetics is, doubtless important and it is apparently regarded as of particular importance by those who are engaged in such researches, indeed some naturalists go so far as to suggest if not actually to state in so many words that they and they only are real zoologists. But it appears to me though I may be underrating the full importance of the subject that this branch of research at any rate as it is conducted at the present time can only

serve to explain the mechanism of the inheritance of discontinuous variation, and no results, however startling they may appear to be, can explain the mechanism of the inheritance of continuous variation, which, as most, if not all field naturalists are convinced, is the main thing along which the evolution of the animal kingdom has taken and still is taking place.

In India, as I have already remarked we are still in the stage in which Taxonomy must be our first line of research but what of the future? Is there any reason why we in this country should adopt the outlook or the fashion as regards research of any or every other country? We have in India our own fauna and our own problems and I would like to see Indians building up their own type of Zoology and of Zoological research work. My own outlook has doubtless, been largely influenced by and is the outcome of my experience as Surgeon Naturalist on the "Investigator" and I would put before you to-day a very strong plea for the field worker and would impress upon you the paramount importance to this country of the study of Ecology and Bionomics. When once we have succeeded in identifying the various composite factors in the fauna of any given area, the next step in our line of research should take us out of the laboratory into the open country. We must go out and study the animals in their own surroundings, and not only should we do so ourselves but we must encourage our students to do likewise. If we do this we shall at once find that the interest our students take in their studies will be increased tenfold. Dr. Gravelly recently told me of his experience when he took a party of students from the Madras University down to Annamalai Island in the Gulf of Mannar where there is a small field laboratory. (It cannot as yet be said to be a Marine Biological Station for it has no permanent equipment but it serves an important purpose as a site where the study of marine animals in their natural surroundings can be carried out) as soon as these students found themselves able to observe the living animals in the open in contrast to the study of preserved organisms in the laboratory they exclaimed "Oh Sir we did not know that Zoology could be so interesting. The study of the animal in its natural habitat is more than interesting it is fascinating and it is along these lines

that zoologists not only can and will find the most interesting work it is on these lines that they can help to raise zoology in the ideal position to which it may in the future attain of being the greatest philanthropic agent in the world. Zoology has up to the present time been all too rarely called upon to assist in the solution of some of the greatest problems that confront us in India, whether we are concerned with the food supply of the millions of inhabitants or with their health and disease. In other countries the absolute necessity of carrying out systematic investigations regarding the Ecology and Bionomics of the marine fauna has resulted in the establishment of numerous Marine Biological Stations and the appointment of a large staff of marine Biologists. Even in the little island of Ceylon this necessity has been recognised and the work carried out under the Ceylon Government has resulted in the formation of a company to exploit, by means of sea-going trawlers the fish supply of the Ceylon and of our Indian coasts. In India the maintenance and improvement of our fish supplies, whether from the coast or from inland waters or even the improvement of our cattle under the direction of the Veterinary Departments are all problems in Zoology and can only be solved by the application of Zoological research and Zoological methods. The question of pisciculture is one of very considerable importance both on the ground of the provision of food supplies or of extra income for the agriculturists and from the additional standpoint of the question of the health of the cultivators in areas where natural waters such as tanks and wells, exist in areas where pisciculture is carried out or where tanks suitable for pisciculture, are in existence or can be constructed it is essential that the agriculturist should have the benefit of expert advice. Pisciculture demands amongst other things (a) the identification of the fish fry and a careful control of fry distribution in order that only the best kind of fish for instance, those belonging to the carp tribe are introduced into the tanks (b) the eradication from tanks of carnivorous fish such as the murret (*Ophiocephalus*) in which the flesh is inferior and which are therefore of less value as the price such fish fetch on the market is comparatively small (c) in order that fish culture in tanks may be a success, it is not sufficient merely to put in a

number of fry and hope that a corresponding number of good sized marketable fish will be obtained. Such tanks require careful watching and should be stocked with suitable water plants in order to maintain a copious food supply for the fish, the better class of which are herbivorous, and to ensure that there is a proper supply of oxygen maintained in the water. Allied to this is the question of planting round such tanks suitable shrubs or plants which can from time to time be cut and the leaves thrown into the tanks to act as a further food supply. I understand that investigations with regard to this latter procedure are at the present time being conducted under the direction of the Director of Fisheries, Madras and that the results obtained are extremely hopeful and (d) the introduction into such tanks of small fish which will feed on and destroy all mosquito larvae. Mosquito destruction by means of such fish is a line that has been but little practised or attempted in India, though its possibilities were indicated as long ago as 1912. So far as I know the only area where it has been systematically carried out is in the tea growing districts of the Wynad, where it was applied, along with other methods of mosquito eradication and quinine prophylaxis, and where a very considerable improvement in the health of the cultivators was effected. Far more work on these lines has been done in Egypt and the Sudan than in India. The introduction into tanks of mosquito destroying fish will, however, be futile without corresponding attention to item (b) above, since these small fish would only act as a further food supply for the larger carnivorous ones, if these latter were allowed to remain in the tank.

In order that pisciculture can be adequately controlled and properly supervised, it is essential that each Province should have a fishery department for research and for advisory purposes.

In Madras there is already a flourishing fishery department there is also a second in the Punjab and I understand that there is a fishery officer in the United Provinces. Formerly there was also a fishery department attached to the Board of Agriculture in Bengal, but for some reason or other this appears to have been allowed to die and, I believe, is now no longer in existence. In the event of a problem becoming urgent or of such a wide nature that its application extends beyond the bounds of any one pro-

vince, the Zoological Survey of India is willing to assist these fishery departments as far as it lies in our power. With our present staff it is impossible for us to undertake to do anything more than this.

During the mollusc survey, that was conducted in recent years by the Zoological Survey of India in order to discover whether or not certain parasite worms can live and be transmitted from man to man in India, it became clear that throughout this whole country there are large numbers of such worms that infest sheep, goats, cattle and other animals. In every case these parasite Trematode worms pass through a part of their life-history in a fresh-water snail. At present in this country the life history of only a single species, *Schistosomum spindalis*, which infests goats and cattle, has had its life-history thoroughly traced and much research is still necessary in order to trace the life-histories of others and to control and prevent their development. The full investigation of this problem requires the co-operation of a number of experts and a careful study not only of the worms themselves, but also of their mollusc hosts and the chemical composition and physical characters of the streams and other areas of water in the region in which the parasite occurs, since all these factors have a profound influence upon each other and upon the development of the parasite.

The medical research worker may, as a result of his studies in laboratories and hospitals, be able to incriminate certain animals as the carriers of disease; but from that stage on the eradication of the disease from the country becomes a problem in field zoology, and I am convinced that, though we may know that the *Anopheles* mosquito can transmit Malaria and the Sand fly Kala-Azar, it is only by the application of biological methods that we shall ever succeed in controlling and eradicating these pests and in freeing the population of India from two of the great curses under which we at present suffer and the same may be said of many of the diseases of plants that affect the food supply.

In India research, and particularly research along lines which will be beneficial to agriculture, is in its infancy. The possibilities of such research are almost boundless, and it is only possible here to indicate certain lines along which results of the highest value might be obtained. The eradication of insect pests by means of chemical action such as

by drugs, poisonous gases, etc., is in the long run bound to be unsatisfactory, inasmuch as its effect is only temporary the cost is very considerable and though temporarily effective, the final result may even be worse than useless, inasmuch as one is unable to discriminate between harmful or beneficial insects. The control of plant pests in the future will, in my opinion, be by means of biological methods and the application of such methods has already been strongly advocated in New Zealand, and, I believe, also in Australia. With the exception of the work that is being carried out on economic entomology, but little research, so far as I am aware, has been done in this country with regard to plant pests and plant diseases. Plants are not only infested by insects they are also attacked by worms and protozoa and cases of destruction of crops have even been brought to the notice of the Zoological Survey where the agent has been found to be a crab, as, for instance, the case of the destruction of rice crops by crabs in Konkan. Again, so far as I know, no investigation in this country has been carried out regarding, on one hand, the damage done by molluscs, such as slugs and snails, by birds or mammals on either growing crops or crops that have been stacked or stored. In certain parts of the country parrots do an enormous amount of damage to stacked grain and the havoc wrought by rats to the coconut crops in certain areas is well known, but no attempt has been made to control these pests by biological methods. On the other hand, the advantage to be derived from the presence of other birds, etc., who feed on insects and therefore might be useful in eradicating an insect pest, has never been investigated.

In other countries a certain amount of work has been done on the influence of the soil on the fauna, but little if any work has been done, at any rate in India on the influence of the fauna on the soil, and yet it is more than probable that the fauna, both macroscopic and microscopic, of the soil has a very profound influence both on the soil itself and on the crop that is grown on it. I do not here mean the bacteriological investigation of soil, but the effect and influence of the unicellular animals (Protozoa) and the larger earth dwelling forms, such as worms, insect larvae, termites, etc. The pioneer work of Darwin on the influence of earthworms is sufficient to indicate how

great the effect of the fauna may be, and research along similar lines might yield results of the very highest value.

For the correct application of our knowledge of zoology to economic problems it is essential that the animals concerned should be studied, firstly, from a systematic point of view, in order correctly to determine their species and, secondly, a careful study must be made of their ecology and bionomics, and it is only when these studies are completed that one can usefully apply one's knowledge to economic purposes. There are, I admit, difficulties in the way of carrying out such field researches as I have indicated and the greatest of these is finance—or rather the lack of it. But I believe that if the matter is sufficiently strongly urged by us one and all, the Authorities of the various institutions, to which we belong, can and will be ready to meet our requirements in this line as far as they are able, and here we have another line of assistance that we to the Zoological Survey of India, can render. The officers of the Survey can and I am sure will be willing to take with them when they go out on tour, one or two selected students from the Colleges and Universities, in this way these students would, at a comparatively small cost, be able to study the fauna of this country in its natural surroundings and would further have the benefit of the experience of a trained field worker.

Now the moment that we commence our studies of the Ecology and Bionomics of the fauna of this country we discover that we need a far wider knowledge than that of zoology alone. To quote from the late Dr Annandale,

Zoology is so closely connected with other branches of biology and so dependent in the last resort on Geology, Chemistry, Physics and Mathematics that in my own work I find it frequently necessary to apply to members of other departments for special information. My experience has been that such information is always given in a most ungrudging and generous spirit when applied for personally."

I can most emphatically corroborate this statement, but are we zoologists justified in continually demanding from others that they should undertake on our behalf researches that we ought to be in a position to carry out for ourselves? We must remember that they have their own interests and their own studies and that every time they so kindly undertake to assist us, they have

to give up time which they value every bit as much as we do in order to carry out some piece of research work that for them has little or no interest. To the field zoologist or naturalist it is of the greatest importance that he should be able to investigate, not only the fauna but the associate flora, the chemical composition the hydrogen ion concentration and the amount of oxygen and carbon dioxide present in the soil or water, in which the animals that he is studying live, for every one of these factors has a most profound bearing on the animal life and furthermore, every one of these factors is continually changing with the change of the seasons. In certain cases we do undoubtedly require a knowledge that we ourselves are not in a position to obtain. The late Dr Annandale, in one of the last papers that he published showed to how great an extent the character of the Mollusc inhabitants of any given area of water depends on the amount of lime salts present, it is, therefore, of the utmost importance to us that we should know the chemical composition of the water, and here we certainly require the services of a trained chemist, for it is beyond the scope of work of a zoologist to carry out elaborate analyses of a highly technical character and, moreover, these analyses must be conducted repeatedly throughout the different seasons of the year, for it has clearly been shown that in such large rivers as the Nile in Egypt and the Ganges in this country there is an actual chemical change in the composition of the water, following and dependent on the change from the dry to the rainy season. Dr Hora's studies of the inhabitants of the hill streams of India has equally shown the manner in which the surroundings can mechanically influence the structure of the various animal inhabitants, whether they be Fish, Amphibia or Insects. For those of us whose researches lie in the sea the problem will I have no doubt, prove to be just as complicated. In European and Temperate seas there is undoubtedly a very considerable seasonal variation in the chemical composition of the water that affects the amount of Silicates and Phosphates present in solution, and this variation can be traced directly to the activity of the Fauna and Flora, and, *vice versa*, changes in the Fauna and Flora are due to the alteration in the chemical composition. Almost certainly similar changes are going on in the waters of the Indian seas and sooner or later we

must attempt to elucidate these changes. At first sight then it appears to be essential that we should, at the least, have the assistance of both a botanist and a chemist to help us, and here I may take the opportunity of impressing on you the great advantage that can be derived from team work. Such collaboration should be particularly easy to attain in your Colleges and Universities, where Zoology and Botany, as well as Chemistry, are being taught side by side. But, failing such collaboration, there is a very great deal that a zoologist can do and should be able to do for himself. The study of the hydrogen ion concentration, the amount of dissolved gases and the salinity of the sea water require but little technical knowledge, for the methods of estimation have now-a-days been so simplified and standardised that we can with very little experience carry out our own investigations, provided that we possess the necessary apparatus. Every student should be taught in your advanced classes to estimate the hydrogen ion concentration of both soil and water and every student of our marine fauna should be able to carry out titration with silver nitrate solution and so estimate for himself the degree of salinity of the sea, this latter process has been most carefully standardised by the "Conseil Permanent pour l'Exploration de la Mer" and the technique is one that is easily learned. Every observation on our marine fauna should, therefore, be accompanied by observations on the temperature and salinity of the sea water itself.

As one gains wider experience one finds, however, that our researches must be carried even further afield. Let me cite a couple of examples. During the past year I have had occasion to investigate an epidemic of mortality among the fauna of the tank in the compound of the Indian Museum. On the morning of the 17th of February last it was discovered that many of the fish in the tank were dying with all the symptoms of asphyxia, nor were the fish the only inhabitants that were affected. In varying degrees it was found that both the Molluscs and the Crustacea were also suffering from the same condition. It is probably well known to you that at about this season of the year, that is to say from March to June, there is annually a very heavy mortality in the tank fauna throughout India. Annandale noticed the occurrence of this phenomenon and called attention to it, particularly among the Sponges

and Polyzoa, and I have myself called attention to it in the Mollusca. Annandale put forward the view that this mortality was due to imperfect acclimatisation the animals being unable to withstand the high temperatures that prevail during the dry season of the year. In view, however, of the wide distribution and the continued survival of the fauna in spite of this mortality, this conclusion can, I think, hardly be justified and we must look for some other cause of it. One of the problems that I had to consider when dealing with the mortality in the Museum tank was, whether this mortality was merely a part of this annual phase or was it due to a local specific cause? An examination of the water, that was carried out for me by the Chemical Examiner to the Government of Bengal, showed that no known poison had been introduced into the tank. Further examination showed that there was no reason to think that the hydrogen-ion concentration was abnormal, though it must be owned that our knowledge of the changes in this feature during the course of the year is practically nil. An examination of the dissolved gases revealed that the amount of oxygen in the water was, although somewhat less than that usually present in other countries, not so greatly diminished as to be actually harmful, the carbon dioxide present in solution was, however, abnormally great in amount and it seemed certain that this was the actual cause of death. I was then faced with another problem, namely what was the cause of this great increase in the amount of the carbon dioxide? A careful study of all the known data revealed that it was almost certainly attributable to the meteorological conditions that were at the time and had been for some days previously prevailing over Calcutta. During a short period prior to the outbreak the air temperature had been steadily rising, and not only was the maximum temperature some degrees above normal, but so also was the minimum temperature and this condition of affairs reached its climax on the day prior to the epidemic. At the same time there had been no rain fall, there had been a steady rise in the humidity of the atmosphere and an almost complete absence of wind. The result of these combined meteorological conditions had been to completely inhibit the normal circulation in the tank on which the oxy-

genation of the water and the removal from it of the excess carbon-dioxide very largely depends, there was no 'change over' between the surface and the bottom waters since all surface currents due to wind had ceased nor was there any change due to convection currents, since the raised temperature of the water combined with the increased humidity of the air and the consequent decrease in the rate of evaporation, had prevented the surface layer becoming much denser than the underlying stratum. There had thus been a complete stagnation of the water in the tank, and a consequent increase in the amount of carbon dioxide, especially in the lower levels, till it had reached a lethal concentration and so had poisoned the inhabitants. It is clear then that at any rate in this instance, the ultimate cause of the mortality of the fauna of the tank must be laid at the door of the meteorological conditions and it seems not improbable that the annual mortality, to which I have referred above is to be attributed to the same cause.

I have found that a study of the meteorological conditions is equally essential in any investigation into the conditions under which the marine fauna lives in Indian seas. As a result of several years work regarding the conditions of the surface water throughout the whole width of Indian seas from the Maldivé Islands on the West to the coast of Burma on the East I have found that continual changes are taking place, especially as regards the salinity. In addition to the seasonal changes that are due to the alternation of the wet and dry seasons and the effects of the two monsoons there is evidence that long period oscillations of the nature of 'seiches', the time period depending on the size and shape of the sea basin and the salinity of the sea water, are, at any rate at certain seasons of the year present in the deeper layers of the ocean and that these are continually bringing up from considerable depths to near the surface masses of water that have a higher salinity than the normal surface water. These long period oscillations in the surface salinity have time periods of approximately 28 days in the Arabian Sea, 10 days in the Laccadive Sea, 15 to 16 days in the Bay of Bengal, in which the type of 'seiche' appears to be a nodal one 18 to 19 days in the Andaman Sea and $2\frac{1}{2}$ days in the Gulf

of Mannar. These are almost certainly due to seiches and in addition there is evidence of a transverse seiche, also binodal in character across the Bay of Bengal having a time period of $5\frac{1}{2}$ days. At the culminating phase of each swing there is a mixture of surface water with deeper and more saline water and this causes a rise in the salinity of the surface water itself that has a profound effect on the fauna. Corresponding to the rise and fall of salinity we get the appearance on the surface of shoals of organisms sometimes of the one kind and sometimes of another in some instances the shoals consist almost entirely of Salps in others of small crustacea such as *Lucifer* while in yet others we get enormous numbers of a large Rhizostomous Medusa Superposed on these long period oscillations of salinity we get a double diurnal oscillation in the salinity that also appears to be brought about by an upwelling from some depth below the surface probably from as great a depth as 50 to 100 fathoms of water that is usually more saline than the surface water itself and accompanying this double oscillation in the salinity during the course of the day I find that there is evidence pointing to very definite changes in the Plankton of the surface levels. Many of you are doubtless familiar with the so called vertical migration of the Plankton that has been shown to occur in European waters and in other Temperate seas a migration that is usually attributed to the activity of these minute animals themselves. Personally I am profoundly sceptical regarding the possibility of these small organisms being able to make their way in the time available through the immense columns of water between the levels from and to which they are said to migrate in some cases as much as 200 fathoms. In Indian waters so far as my experience goes this alteration of level at which the planktonic organisms occur appears to take place not as in temperate waters at periods corresponding to day and night but twice a day at times that correspond roughly to the changes in the barometric pressure. In the case of the small Crustacea and especially the Copepoda small crustacean larvae *Sagitta* and similar small animals, we get their appearance on the surface in large numbers at about 10 a.m. and again at 5 to 6 p.m. in the evening while there is a marked diminution

in their numbers or even a complete absence at 1 to 2 p.m. This appearance and disappearance of these organisms shows little or no relationship to the rise and fall of the tide but appears to agree with the times of upwelling of the water from the deeper strata. Now the ultimate causation of this oscillation in the sea water in both the case of the long period seiche and the diurnal upwelling is to be found in the meteorological conditions that prevail over the open waters. With each succeeding monsoon there is an alteration in the direction of the wind during the south west monsoon the wind blows steadily towards the north east and during the north east monsoon it blows in exactly the opposite direction in consequence of this alternation the surface waters are piled up first on one side of the various basins and then on the other and as soon as the wind ceases the water tends to flow back to its proper level and thus the to and fro swing of the deeper stratum is set in motion. Similarly during each twenty four hours the rise and fall of the barometer is accompanied by a fall and rise of the strength of the wind in consequence of which the surface water at the times of low barometric pressure is blown away and water from below wells up to the surface to take its place. We thus have large masses of water constantly in a state of movement and with each period of upwelling planktonic organisms from below make their appearance on the surface only to disappear again as the wind drops and the water again sinks back to its normal level. In Indian waters it seems highly probable that the migration of the plankton is in reality at any rate in the main a translation and is not an active process.

I think I need go no further in emphasising the extreme importance therefore of carrying our researches far beyond the hard and fast limits of strict zoology and it is clear that in order to complete our investigations regarding the Indian Fauna we must each one of us take a wide view and carry on researches simultaneously into the fauna and the general conditions under which it lives even to the extent of taking observations on meteorology. Whether in the future such researches will be carried out and it is only such researches that should be considered adequate will depend

on you who are listening to me to day It behoves us, therefore, to pause for a moment and consider what is to come in the future, and I ask you the age long question "Qoo vadis?" for, it is to you, the Professors, Lecturers, Demonstrators and Advanced Students of Zoology in our Universities and Colleges throughout India, that we must look for an answer The teaching of Zoology throughout this country now rests absolutely in the hands of you Indians yourselves, in most, if not in all, the numerous colleges there is a department of Zoology, more or less well equipped and with an ever increasing number of students, and I ask you 'what type of trained zoologist are you

turning out? Are your students being trained by you in the broadest principles of Zoology such as I have indicated? As the late Dr Annandale remarked before this session of the Indian Science Congress in 1922, Applied Zoology should be and perhaps some day may become the great philanthropic agent of the world', but this great ideal will never be attained in this country unless your students are learning at your hands an enthusiasm for their subject that will enable them throughout their whole life to devote themselves whole heartedly to its study Only by so doing can you and they hope to raise Zoology to the high level at which we all wish to see it.

SOME CELEBRITIES

BY NAGENDRANATH GUPTA

RAMKRISHNA PARAMHANS

IN 1881 Keshub Chandra Sen, accompanied by a fairly large party, went on board a steam yacht belonging to his son in law, Maharaja Nripendra Narayao Bhanu of Kuch Behar, to Dakshineswar to meet Ramkrishna Paramhansa. I had the good fortune to be included in that party We did not land, but the Paramhansa, accompanied by his nephew Hriday, who brought a basket of parched rice (अन्न) and some *sandesh* for us, boarded the steamer which steamed up the river towards Sonra The Paramhansa was wearing a red bordered *dhota* and a shirt which was not buttoned. We all stood up as he came on board and Keshub took the Paramhansa by the hand and made him sit close to him Keshub then beckoned to me to come and sit near them and I sat down almost touching their feet The Paramhansa was dark complexioned kept a beard and his eyes never opened very wide and were introspective. He was of medium height, slender almost to leanness and very frail-looking As a matter of fact, he had an exceptionally nervous temperament, and was extremely sensitive to the slightest physical pain He spoke with a very slight but

charming stammer in very plain Bengali, mixing the two yous" (আমি and তুমি frequently All the talking was practically done by the Paramhansa, and the rest, including Keshub himself, were respectful and eager listeners. It is now more than forty five years ago that this happened and yet almost everything that the Paramhansa said is indelibly impressed on my memory I have never heard any other man speak as he did It was an unbroken flow of profound spiritual truths and experiences welling up from the perennial spring of his own devotion and wisdom The smiles and metaphors, the apt illustrations, were as striking as they were original At times as he spoke he would draw a little closer to Keshub until part of his body was unconsciously resting in Keshub's lap, but Keshub sat perfectly still and made no movement to withdraw himself

After he had sat down the Paramhansa glanced round him and expressed his approval of the company sitting around by saying "বের বের! বের সব পটলচোরা চোরা (Good, good They have all good large eyes)." Then he peered at a young man wearing English clothes and sitting at a distance on

a capstan 'উনি কে? তঁকে সাহেব সাহেব দেবহি'। (Who is that? He looks like a Sahab)" Keshub smilingly explained that it was a young Bengali who had just returned from England. The Paramhansa laughed, "ভাই বল মশাই, সাহেব দেবলে ভয় করে কি না। (That's right One feels afraid of a Sahab)." The young man was Kumar Gayendra Narayan of Kuch Behar, who shortly afterwards married Keshub's second daughter. The next moment he lost all interest in the people present and began to speak of the various ways in which he used to perform his *sadhana*. 'Sometimes I would fancy myself the Brahminy duck calling for its mate (আমি ডাক্তুন চকি শার অমনি আমার ভিতর থেকে বা আস্ত চকি)।'

There is a poetic tradition in Sanscrit that the male and female of a brace of Brahminy ducks spend the night on the opposite shores of a river and keep calling to each other. Again, "I would be the kitten calling for the mother cat and there would be the response of the mother (আমি বলতুম মিউ আর দেন খাড়ি বেয়াল বলত মায়ে)'. After speaking in this strain for some time he suddenly pulled himself up and said with the smile of a child, "কিন মশাই, গোপন সাধনার সব কথা বলত নেই। (Everything about secret *sadhana* should not be told)". He explained that it was impossible to express in language the ecstasy of divine communion when the human soul loses itself in the contemplation of the deity. Then he looked at some of the faces around him and spoke at length on the indications of character by physiognomy. Every feature of the human face was expressive of some particular trait of character. The eyes were the most important but all other features, the forehead, the ears, the nose, the lips and the teeth were helpful in the reading of character. And so the marvellous monologue went on until the Paramhansa began to speak of the Nirakara (formless) Brahman "ওই যে নিরাকার রূপ তাইই শব্দ, চিহ্ন (the manifestation of the Formless has to be realised)". He repeated the word Nirakara two or three times and then quietly passed into *samadhi* as the diver slips into the fathomless deep. While the Paramhansa remained unconscious Keshub Chunder Sen explained that recently there

had been some conversation between himself and the Paramhansa about the Nirakara. Brahman and the Paramhansa appeared to be profoundly moved.

We intently watched Ramkrishna Paramhansa in *samadhi*. The whole body relaxed and then became slightly rigid. There was no twitching of the muscles or nerves, no movement of any limb. Both his hands lay in his lap with the fingers lightly interlocked. The sitting posture of the body (আসন) was easy, but absolutely motionless. The face was slightly tilted up and in repose. The eyes were nearly but not wholly closed. The eyeballs were not turned up nor otherwise deflected, but they were fixed and conveyed no message of outer objects to the brain. The lips were parted in a beatific and indescribable smile disclosing the gleam of the white teeth. There was something in that wonderful smile which no photograph was ever able to reproduce.

We gazed in silence for several minutes at the motionless form of the Paramhansa and then Trailokya Nath Sanyal the singing apostle of Keshub Chunder Sen's church, sang a hymn to the accompaniment of a drum and cymbals (খোল করতাল). As the music swelled in volume the Paramhansa opened his eyes and looked around him as if he were in a strange place. The music stopped. The Paramhansa looking at us said, "এরা সব কারা? (Who are these people)?" And then he vigorously slapped the top of his head several times, and cried out, "নেবে যা! নেবে যা! (Go down, go down)!" No one made any mention of the trance. The Paramhansa became fully conscious and sang in a pleasant voice, "আমি বা কি কল করেছে, কালী মা কি কল করেছে। (What a wonderful machine Kali the Mother has made)". After the song the Paramhansa gave a luminous exposition as to how the voice should be trained to singing and the characteristics of a good voice.

It was fairly late in the evening when we returned to Calcutta after landing the Paramhansa at Dakshineswar. No carriages could be had at Abiritoila Ghat and Keshub had to walk all the way to Musjidhari Street to the house of Kali Charan Banerji, who had invited him to dinner.

It has to be mentioned that some time

after this incident I went to see "M", a devout disciple and follower of Ramkrishna Paramhansa and the well known compiler of the sayings and teachings of the Paramhansa. I am related to "M" and I urged him to go and see the remarkable holy man at Dakshineswar. "M" first saw the Paramhansa in 1882, and he reminded me the other day in Calcutta how this came about at my suggestion.

The Paramhansa died in 1886. That was the third year of my stay at Karachi, but just about that time I happened to be in Calcutta. I followed the bier of the Paramhansa to the burning ghat. All the disciples, including Vivekananda, were there and Trailokya Nath Sanyal was also present.

THE KUCH BEHAR MARRIAGE

Keshub Chunder Sen's eldest daughter was married to the Maharaja of Kuch Behar in 1878, and I well remember the ferment that the event created in Calcutta among the members of the Brahma Samaj. Some of the leading members of the Samaj and the majority of the members of the Brahma Samaj of India protested against the marriage on the ground that Keshub's daughter had not attained the age of fourteen the minimum marriageable age for Brahma guls. The Bengal Government which had arranged the marriage would not agree to the ceremony being deferred, and Keshub in spite of all protests, agreed to the proposal of the Government. In justification of the step he was taking Keshub declared that he had received an *adesh*, or an express commandment from God. Between the oppositionists and the remnant of the followers of Keshub there was a keen struggle for the possession of the *Mandir* on Mechnabazar Street.

Keshub's followers retained possession of the building by calling in the police to their assistance and shortly afterwards the Sadharan Brahma Samaj house of prayer was erected on Cornwallis Street. I remember quite well the building of the Sadharan Brahma Samaj Mandir after the split in the Indian Brahma Samaj following the Kuch Behar marriage. Nearly fifty years have gone by since the Kuch Behar Marriage, and the world may judge for itself whether the marriage with its harvest and aftermath had direct divine sanction.

KESHUB CHUNDER SEN

Of Keshub Chunder Sen's greatness, of his graciousness and charm of manner all who

had the privilege of coming in contact with him had only one opinion. He was a strikingly handsome man with a fairly tall and full figure and he could never be mistaken for an ordinary man. As an orator I have never met his peer, and I have heard many Indian, English and American orators. The characteristic feature of his oratory was that he held himself always in easy command; there was hardly any gesticulation and he would sometimes thrill his audience by lifting a finger. His voice was of such power and compass, albeit smooth and silvery in its flow that it filled the Town Hall of Calcutta almost without an effort. He rarely gave way to emotion, but on one occasion tears streamed from his eyes while delivering one of his annual addresses at the Town Hall. The subject was 'Am I an inspired Prophet?' As an orator in Bengal I have heard no one else sway his hearers as he did. In the last Bengali address that he delivered in the Beadon Garden in Calcutta I noticed a hostile element, consisting of a number of Vaishnavas, who were scoffing at him loudly before he began to speak, and yet these very men were so carried away by the orator's appeal that they shouted 'Hari Bol' and rolled on the grass in an ecstasy of emotion and admiration.

Keshub had a fine sense of humour. For some time he used to hold a theological class in the Albert Hall on Saturdays, and the audience was composed of advanced college students, professors, and others, with a sprinkling of Europeans. A glass of water was usually placed before the speaker. One day a young man who had been sitting in front of Keshub close to the table and had been looking up with rapt admiration at the speaker quietly raised the glass of water and drank it off as soon as Keshub had finished his lecture and resumed his seat. Keshub quietly smiled and said in Bengali, 'I thought speaking for a long time made a man rather thirsty but I now see that listening to a speech is also thirsty work.'

Whether Keshub Chunder Sen will take high and permanent rank among the religious reformers of India time alone will determine. In spite of his great powers he was considerably hampered by the cares and burden of a large family. After his death I wrote a booklet in English which attracted the favourable attention of some men of note and was considered worthy of notice by the Bengal Government, but a young

literature and poetry His *Saradamangal* will find a permanent place in Bengali literature and the lyrical cry and the lilt of his verse will appeal to cultured readers We became very intimate and met frequently With the eccentricity characteristic of genius Behari Lal would sometimes come in our house at a late hour at night and remain chatting till nearly midnight His interests were not wide and he did not concern himself with public affairs but he was a genial open hearted man hearty and bluff of manner and full of an old world courtesy

PREO NATH SEN

Preo Nath Sen was some years older than myself but he strongly attracted young people interested in literature I met him first in 1891 and retained his valued friendship to the end of his life He should have become a solicitor but he was so deeply absorbed in literature that he never passed the examination necessary to qualify him for that profession He did not do much creative work and has left no literary works behind him but literature was to him the very breath of life He was a bibliophile in the best sense of the word and his literary judgment was wonderfully keen and accurate He had one of the finest libraries I have seen and not a week passed in which he did not add to his collection of books And he read every book that he bought As a linguist I have not met his equal not because of the number of languages he knew but the ease with which he acquired a new language A biglot dictionary a grammar of the new language and in a few months Preo Nath would be reading books in a new language Of course the correct enunciation of the words of a new language cannot be learned in this manner but this is a small detail when the object is to read books and not to speak the language When I first saw him Preo Nath could read French and Italian in the original and subsequently learned other European languages Persian he learned last and I horrified from him a splendid edition of Hafiz's poems with an English translation His books had encroached upon every available space in his house Besides the almirahs and shelves in the inner portion of the house his sitting room which contained no furniture was full of books which were stacked under the windows and over-

flowed into the verandah With all his great love for books he readily lent them not only to his friends but even to slight acquaintances I must have read hundreds of books from his library and this gave him great pleasure Among his constant visitors were Rabindranath Tagore Behari Lal Chakravarti Devendranath Sen and many others It was in deference to his unfavorable opinion that Rabindranath Tagore withdrew one of his early works from circulation and it has never been reprinted In almost every case Preo Nath's literary judgment was sound and he was invariably candid and outspoken His favourite author was Swinburne and he carefully collected every line of prose and verse that the English poet ever wrote

Most of the men who used to meet at the house of Preo Nath Sen to discuss literature have passed away Rabindranath Tagore and myself are still left to cherish his memory and recall his fine character

A SHAKESPEARE PLAY

It was some time in the early eighties that Herr Bandmann a well known actor visited Calcutta accompanied by a troupe of artists As the name indicates Bandmann was a German naturalised in England and spoke English without an accent He had the reputation of being a clever Shakespeare actor and though not an interpreter of the rank of Sir Henry Irving he drew crowded houses in Calcutta by staging some Shakespeare plays at the Corinthian Theatre on Dhurrumtollah Street I went to see *Macbeth* performed by his company The cream of Calcutta society was there and I saw Keshub Chunder Sen and Bankim Chandra Chatterji in the audience keenly following the play Herr Bandmann himself appeared in the role of *Macbeth* He was a splendid looking man big and blond as a Viking with a finely modulated voice and a consummate power of producing stage effect In the murder scene in which *Macbeth* appears trembling and shrinking holding in his shaking hand the poniard red with the life blood of King Duncan and Lady *Macbeth* reproaches him for his fearfulness, the whole house was thrilled by the realism of the acting and the intensity of the horror The footlights had been turned down leaving stage in comparative darkness, but a

stream of light from the wings was skilfully turned upon the two figures on the stage, Macbeth and Lady Macbeth, and played upon their features with a startling effect. The poniard in the hand of Macbeth had a hollow handle filled with a few metal pellets and tinkled faintly as the hand of the actor shook. The eyes, wide and wild with terror were roving in every direction, while the hands and the whole body quivered as an aspen leaf.

Lady Macbeth stood at a little distance, cool and cynical, flashing contempt from her magnificent eyes at her husband, unmanned by the bloody deed he had done. We realised to the full the penetrative power of a stage whisper when Macbeth said —

Glamis hath murdered sleep and therefore
Shall sleep no more Macbeth shall sleep no more.
Cawdor more

The voice was no louder than a quaking whisper, but it ran like a long drawn sibilant hiss through the remotest parts of the theatre and every word was as distinctly heard as if it had been shouted out. Again, when the actor cried,

Will all great Neptune's ocean wash this blood
Clean from my hand? No this my hand will rather

The multitudinous seas incarnadine
Making the green one red."

and spread out his palm with utter hopelessness stamped on his face it was a great gesture of tragic despair.

In the sleep walking scene Lady Macbeth, lighted taper in hand, somnambulist, with her eyes wide open, glassy and without a flicker of the eyelids, was very dramatic. As she put down the light and rubbed her hands as if washing them, she declaimed

Here's the smell of the blood still
All the perfumes of Arabia will not sweeten
this little hand

Oh! Oh! Oh!

The opening words were uttered in the colourless monotone of a person talking in

sleep, but when the final exclamation was reached and repeated three times, the voice of the actress rose to a crescendo of agonised despair and brought down the house in repeated rounds of tempestuous applause.

AMATEUR THEATRICALS

A few months later some of us decided to stage the Merchant of Venice. Among the young enthusiasts who took part in the play were Karuna, the eldest son of Keshub Chunder Sen, Sarat, the youngest son of Tarak Chandra Sircar, the well-known leading partner of the firm of Messrs Kerr Tarneck & Co, a son of Peary Charan Sircar, and several others. The double parts of Shylock and Lancelot Gobbo were assigned to me. We zealously memorised our parts and vigorously rehearsed and attitudinized at home before our astonished and scandalised young relations. One evening we were having a rehearsal at the house of Tarak Chandra Sircar in Beadon Street in Sarat's room. Some one was declaiming his part with appropriate gesticulation when the door was quietly opened and in came Bankim Chandra Chatterji accompanied by the master of the house. The actors' voice and hand were arrested abruptly at full speed, and the rest of us stood promptly at attention looking sheepish and scared. Bankim smiled and said, "তোমাদের কি দকে আশ্রয় কি একটু ভদ্রে পাইনে ? (Cannot we hear a little of what you are doing)? We stammered and became apologetic and tongue-tied. Bankim passed out of the room with a word of encouragement. We produced the play at Lily Cottage, Keshub Chunder Sen's house on the Upper Circular Road, on a stage which had been prepared for নব ব্রিন্দাবন (Nava Brindavan) a play written in connection with the New Dispensation and in which Keshub himself had played a leading part. There was a fairly large audience and our presentation of the play was well received.

WHY MODERN CHRISTIANITY IS ABANDONING MIRACLES

By J T SUNDERLAND

WHEN Christianity came into the world, and for sixteen or seventeen hundred years thereafter that is until the birth of modern science, there seemed nothing essentially unreasonable about a miracle, because it

was not known that the world was governed by orderly processes. With the discovery of Kepler's laws of planetary motion, however, and Newton's law of gravity, and all the other revelations of modern science which

the Indian Civil Service by the partially open door of limited competition in England, but unlike other Bengali Civilians he never took to the English costume and always put on the headdress known as the *Pirolly pugree*. At the Parishad I found him always wearing the usual Bengali dress. He was very modest and unassuming. His hymns and his book on Bombay bear evidence of his literary gifts.

JYOTIRINDRANATH TAGORE

The fifth brother, Jyotirindranath Tagore was one of the handsomest men of his time. Jyotirindranath was a man of many accomplishments. He was a linguist of a high order and was deeply versed in French literature. He was a fine musician and could play admirably upon several instruments. As a dramatist he takes high rank in Bengali literature and there was a time when his classical and historical plays attracted crowded houses in Bengali theatres in Calcutta and his songs were sung everywhere. As mentioned already, he was greatly interested in phonology at the time when I first knew him and it was not long before I had personal experience of his skill. My cousin Jnanendranath and myself were at the Jorasanko house one morning when Jyotirindranath invited us to give him a sitting. He first made a rapid and accurate pencil sketch of our heads and then proceeded to feel our bumps, jotting down the result of his examination in a note book. His reading of the propensities of our minds by the help of the protuberances on our skulls was exceedingly gratifying to ourselves, though the philosophic vein that he detected in my cousin's cranium must have had reference to his equalness of temper and simplicity of character. Latterly Jyotirindranath used to live at Ranchi where one of my sons interviewed him and was received with great cordiality. Jyotirindranath retained his literary activities up to the end of his life.

SWARNA KUMARI DEVI

Along with her gifted brothers Swarna Kumari Devi has achieved considerable distinction as a writer of fiction and poetry. She edited the *Bharati* magazine for a number of years and her output of literary work has been considerable. I sometimes visited her and her husband J. Ghosal at the Kashnabagan garden house and she came to

us when I was staying with my people in Calcutta in 1894. I have seen her recently, and though well advanced in years she still keeps a bright outlook on life. Her daughter Sarala Devi, who was married to the late Pundit Rambhuj Dutt Chaudhuri of Lahore, is well known both in literature and politics, and is intimately known to us and we have met frequently in Calcutta, Lahore and Bombay.

RAHINDRANATH TAGORE

Rabindranath Tagore was just twenty years old when I first met him and we have been friends ever since. It was the beautiful bond of literature that cemented our friendship. His figure and features are now familiar to the whole world. At that time he was a tall, slender young man with finely chiselled features. He wore his hair long, curled down his back and had a short beard. He had been to England and had read for some time with Henry Morley, who formed a high opinion of his English prose, but on his return to India Rabindranath occupied himself entirely with literary work in Bengali and as he himself has said, he wrote nothing in English for many years afterwards. But his reading of English literature covered a wide range. Two of his early lyrical works, *Sondhya Songit* and *Prabhat Sangit*, had just been published. He was doing all the editorial work of the Bengali magazine *Bharati* though the name of his eldest brother, Dwijendranath Tagore, appeared as Editor. I met Rabindranath frequently at the house of Preo Nath Sen, at his own house in Jorasanko and at our house in Grey Street. When Surendranath Banerjee came out of jail on meeting to welcome him was held in the grounds of Free Church College as it was then called, on Nilotola Ghat Street. One of the speakers was Asutosh Mukerji, at that time a student in the Presidency College and afterwards famous as a Judge of the Calcutta High Court and Vice Chancellor of the Calcutta University. With the enthusiasm which is becoming in a student, Asutosh spoke of Surendranath as our illustrious leader. Rabindranath was also present by invitation and after the speech making was over had to sing a song in response to persistent calls. Who in that gathering of students and others could have then dreamed that the young singer of that afternoon would in

the years to come make more than a royal progress through the world and every capital in Asia and Europe would listen to his spoken word with the reverence due a prophet ?

Rabindranath frequently read out his freshly composed poems to me. Once he brought one of his best known dramas, which he had just written, and we read it together. The final incident in the play did not seem to me to be in keeping with the spirit of the drama and I told him so. He said his Bara Dada was of the same opinion and he changed the concluding part before sending the book to the press. We had a sort of a friendly Literary Society which met occasionally at the houses of friends. We met once at Akur Dutt Street in the house in which the Savitri Library was located and there was another meeting at Rabindranath's house. We used to have animated discussions on literary subjects but the inner man was not neglected and ample refreshments were always provided.

Rabindranath was very generous, though at this time he had no independent income of his own and only received an allowance from his father. One evening while we were sitting together in his house a visitor was announced. Rabindranath was greatly put out and explained to me that the visitor was related to a collateral branch of the family. He was in the habit of pestering Rabindranath for help and had been helped with money on various occasions. The man was a wastrel and Rabindranath was unwilling to meet him. He made a movement as if to leave the room, but I told him that the best way to meet the situation was to tell the importunate visitor that he could not expect any further help. Rabindranath accepted my suggestion and the visitor was shown in. Finding a third person present in the room he did not venture to ask for money and left after a few minutes.

Men of genius have their eccentricities, but Rabindranath, brought up in an atmosphere of an admirable discipline, was free from all vagaries. His abstemiousness was almost Spartan. He has been all his life a very small eater and has never smoked. The ways of Bohemia had no attractions for him. For some months he would not wear a shirt and came several times to my house wearing only a dhoti and covering himself with a *chadar* of long cloth. He wore shoes very rarely and mostly went

about in slippers, which he liked the better the quainter they were. I remember having sent him some Sindhi slippers from Karachi, but these proved to be so attractive that some one else deprived him of them.

Only once Bohemia tugged at him fiercely. Rabindranath conceived an idea of walking all the way from Calcutta to Peshwar by the Grand Trunk Road. He was quite excited and earnest about it. He said two or three friends would join him, they would travel very light, carry very little money with them and would march all day and take their chance for a resting place at night. The idea never actually materialised and gradually fizzled out, and the proposed great hike remained an unwritten epic.

Rabindranath's fine humour is frequently apparent in his writings, but I remember one incident which he used to relate as a young man. Rabindranath had criticised some book or some writer and shortly afterwards some one came and told him with portentous gravity that another man, who was a B.A. of the Calcutta University, was preparing a crushing rejoinder to Rabindranath. As the poet himself was neither a graduate nor even an undergraduate, this tremendous announcement was calculated to overwhelm him, and it certainly did, but not quite in the manner his informant had expected. I once took Rabindranath to the house of Bahu Ramtannu Lahiri in Calcutta. Rabindranath sang a few songs and Ramtannu Bahu was highly delighted and thanked the young poet earnestly.

I was present at Rabindranath's marriage. He sent me a characteristic invitation in which he wrote that his intimate relative Rabindranath Tagore was to be married—
“স্বামীর পূর্ব স্বাক্ষর শ্রীমান রবীন্দ্রনাথ ঠাকুরের ভদ্র
বিবাহ ইত্যদে।” The marriage took place in Rabindranath's own house and was a very quiet affair, only a few friends being present.

BEHARI LAL CHAKRAVARTI

Behari Lal Chakravarti, the well-known Bengali poet, never had a large circle of admirers though his verse was mellifluous and the language was finely chiselled. When I first met him I had just passed my teens and he was well advanced in middle age. Behari Lal did not know much of English but he had read a good deal of

followed, the universe came to assume to men an entirely new aspect. It was not only vastly enlarged, but into it was brought a unity which previously men had known nothing about, namely, the unity of all-pervading all governing law. The coming in of this new conception of necessity gave a staggering blow to miracles, although previously few had thought of doubting them.

Indeed in the ages before the scientific conception of nature came on the scene, why should men have doubted? Their fathers before them believed. They had a vast amount of evidence, which in those unscientific and uncritical ages seemed to them good, to prove that the miracles occurred. The existence of miracles perfectly accorded with what they supposed to be God's method of governing the universe, namely by direct personal arbitrary volition. Why therefore should not the men of those times have believed in miracles? For them not to have done so would itself have been a miracle.

But, with the rise of the new conception of the universe which modern science and knowledge have brought about, all has changed. When it is understood that God works everywhere according to law, miracles disappear,—there is no longer any place for them. They would be breaks, interferences with established order, the coming of discord into a great harmony. Hence the phenomenon which we see in Christian lands today,—namely, much distrust of miracles among intelligent minds even in the most orthodox churches, while outside such churches, especially among scientists, scholars, and men of reading and independent thinking there is almost universal relegation of them to a place among the superstitions of the past.

But, if thoughtful men are coming more and more to look upon miracles as not credible they are also coming to see that they are not necessary to religion.

The claim has been stoutly made in the past that the miracles of the Bible are a proof of the truth of Christianity. That claim is fast weakening. Thoughtful minds are seeing that there is no necessary connection between physical miracles and moral truth. If it were demonstrated that every miracle reported in the Old Testament or the New actually happened, or a hundred times as many, that fact would not prove the truth or the untruth of any ethical or

spiritual teaching found in the Bible. If the religious teachings of Jesus are true, they are true, if we grant that he wrought miracles, that does not make them any more true, nor, if we think he did not work miracles, that does not make them any less true. Suppose I should say to you that hate is better than love, and then should work a miracle,—for instance, the turning of this pencil into a serpent,—would that prove it true that hate is better than love? Or suppose I should turn a thousand pencils into serpents, or work a thousand other miracles, would they all combined have anything whatever to do with proving that hate is better than love? Jesus said, "It is more blessed to give than to receive." Was that true? Why? Because he wrought miracles? Suppose he had not wrought miracles, would it not have been just as true that it is more blessed to give than to receive? Do the Beatitudes rest upon miracles? Does the Lord's Prayer? Does the Golden Rule? Those illustrations help us to see that moral and religious teachings, whether in the Bible or outside of it, in the very nature of the case are unaffected by any supposed miracles.

The abler and fairer minded of the theologians themselves see this absence of connection between physical marvel-working and the establishment of moral or spiritual truth, and try to bridge over the chasm in this way. They say that he who works miracles must get his power so to do from God. But God would not give a man such power unless the man were good and truthful. When therefore the men of the Bible come to us teaching certain things and at the same time working miracles, we are obliged to believe what they teach, because the miracles are, as it were, God's credentials—God's indorsement of their truthfulness.

This reasoning might have some plausibility were it not for the fact that it is founded altogether upon assumptions. In the first place, it is an assumption to say that he who works miracles must get his power to do so from God. Our friends who make this argument themselves believe both in a devil and in angels. How, then, do they know but that this super-human power through which the miracle working is done comes from either the devil or else from some good or bad angel? When Moses and Aaron went before Pharaoh and performed

the miracle of turning Aaron's rod into a serpent, hoping thus to influence the monarch to let the children of Israel go, we read that Pharaoh called in his wise men and magicians, and they did exactly the same miracle they throw down their rods as Aaron had thrown down his, and their rods, too, became every one a serpent. Our theological friends would hardly claim this to have proved that these Egyptian miracle-workers were good and truthful men to whose religious teachings God gave sanction or indorsement by thus empowering them to work their miracles.

Balaam was not a very good or truthful person, nor one on whose utterance it would be safe to put much dependence though he is represented as uttering one of the most miraculous predictions in the Bible. Both in the Old Testament and in the New we have accounts of miracles wrought by men who are anything but good or truthful. Jesus himself says (Matt. xxiv. 24) 'There shall arise false Christs and false prophets and they shall show great signs and wonders to deceive men.' Again he says (Matt. vii. 23) 'Many shall say unto me in that day Lord Lord have we not prophesied in thy name and in thy name have cast out devils and in thy name done many wonderful works? And then will I profess unto them I never knew you. Depart from me ye that work iniquity.' The Apocrypho or Book of Revelation contains many accounts of miracles some of them very great and startling, wrought by the enemies of God on the earth (Rev. xiii. 13-14, xvi. 13-14, xix. 20) for the express purpose of deceiving men and making them believe falsehood. Thus you see that by the teaching of the Bible itself the power to work miracles does not prove that the one who possesses it is good or truthful or from God or is necessarily in any way commissioned or sent or indorsed by God. The miracles may be wrought for the express purpose of making the people believe that he is from God when he is not, and that he is speaking the truth when in fact he is speaking falsehood.

It is very suggestive to notice the attitude of Jesus toward miracles. We read again and again of his drawing the attention of the people away from the things done by him which had a miraculous look. He refuses to work miracles to convince persons of the divine character of his mission. He even

shows positive distress sometimes because the people care for these things so much instead of for the things of real importance, for we read, 'Jesus groaned in his spirit, and said, why doth this generation ask for a sign (a miracle)?'

Thus it is that he chides, over and over again the desire of his followers for miracles as a proof of his teaching and insists that the teaching is its own proof. Truth is truth, and falsehood is falsehood all the same whether it be associated with miracles or not. The Old Testament books of Job Isaiah, and the Psalms, and the New Testament Gospels and Epistle do not owe their beauty and truth and helpfulness to the fact that they are bound in a volume that contains records of miracles. These books would be just as full of beauty and moral power and inspiration if no man on the earth had ever dreamed of a miracle. The Twenty-third Psalm the Sermon on the Mount, Paul's matchless chapter on charity need no proof of miracles. Trying to prop them up or to prove them true by miracles is about as reasonable as trying to prop up the Rocky Mountains with sticks or to prove their existence by syllogism.

So that I say, even if we granted the genuineness and historic character of all the miracles of the Bible or of a thousand times as many we should not thus furnish any proof whatever of the truth of Christianity. The great life giving moral and spiritual teachings of Jesus and Paul lie in a different continent, may a different world, from that of prodigies and miracles and rely upon a wholly different kind of evidence. This our modern age is coming to see. Thus we need not be alarmed at the tendency of thinking persons to reject the miraculous. It does not necessarily mean that they are losing their belief in religion or their sense of its value but only that they are finding their evidence of its truth and worth in a direction which seem to them more reliable than the old. The question of the miraculous presents itself to day to scientists and men imbued with the modern spirit somewhat as follows —

1. If miracles have ever happened, in Bible times or any other, why do they not happen to day? But can any one point to a miracle within our generation which has been established by so carefully guarded scientific tests that there is no room for doubt about it? For example the raising to life of a body which had been so long dead that a

commission of scientific experts examining it had found it to have entered upon the process of decomposition or the restoring of a new sound arm to a man whose arm had been amputated? Is there any case on record as occurring within our day of a miracle such as one of these—or any other equally well authenticated so that the scientific men would have no doubt about it? If not, why not? If veritable miracles—miracles which would have stood the test of the light of our modern civilization and science—actually occurred in the old times of two thousand or three thousand years ago, why do not miracles capable of standing the same test occur now?

It is true that we do have reports of miracles occurring to day. Such reports come to us in great numbers, from Roman Catholic shrines in different parts of the world, from faith healers from prayer healers, from men and women who with one theory or another and under one name or another claim to cure human bodies of their many infirmities by some sort of supernatural agency. But under a very little careful examination by unprejudiced men and by scientific methods the miraculous element always takes wing.

Doubtless there are things occurring now a days that are not fully explained—things which to us with our present degree of knowledge are shrouded in mystery. But mystery is not necessarily miracle. To say that anything really miraculous—that is anything contrary to well established laws of nature—occurs to day is what at least our scientists and men best qualified to judge, ninety nine in a hundred of them, deny.

And now is it any wonder if this absence of present time miracles, or at least their doubtful character, throws doubt upon those of the past? If what is supposed to be miraculous to day fades away in the light of scientific examination is it strange that multitudes of minds find themselves compelled to believe that the so called miracles of the old time continue to keep their places as miracles only because we are unable to reach and test them but that, if we could get to them and examine them carefully and scientifically as we do the so called miracles of the present, we should find them too, quickly losing their miraculous character?

If Another thing which with many persons casts suspicion upon miracles is the fact that, as we look over the history of the world, we find them always seeming to have a sort

of affinity for superstitious ages and low states of civilization. Almost invariably in those ages in the history of any people in which civilization and popular intelligence rise highest, we find not only the fewest miracles reported but the least belief in those which are reported. Why is this? If miracles are facts capable of verification why do they not flourish as much in light as in darkness, in ages of intelligence and science as in ages of credulity, and among the intelligent as among the ignorant?

III. A third thing that stands in the way of belief in miracles is the fact that the very classes of persons who contend most stoutly for their own miracles usually deny most vehemently the truth of all miracles outside of their own. Miracles are not peculiar to Christianity nearly all religions have them in great numbers. Yet the followers of each religion deny the miracles of all religions except their own. They examine the proofs of the miracles of other faiths and pronounce them weak and inconclusive. It is only the proofs of the miracles of their own faith in favor of which we may reasonably suppose them to be prejudiced, that they conceive to be adequate. This being the case, what wonder if men who occupying the position simply of scientists and scholars, and not caring to bolster up any, but simply to judge impartially of all alike conclude that the proofs of miracles of all the religions of the world are equally inadequate? In other words, what wonder if with the Christians they conclude that the proofs of the Mohammedan miracles are inconclusive, and with the Mohammedans that the proofs of the Brahman miracles are inconclusive, and with the Brahmans and Mohammedans that the proofs of the Christian miracles are equally inconclusive?

IV. Again, another objection to miracles lies in the fact that the moment we have accepted any of them there seems to be absolutely no place to stop. We have entered upon a road that has no end and leads into all sorts of superstitions and credulities. Suppose we say we will accept a few miracles, but not many. What shall these few be? And what shall be the test by which to decide what to accept and what to reject? If we determine to cast out all except those which are corroborated by strong proofs certainly we shall have to cast out more or less of those found in the Bible. How strong proofs do you think we

bave, for instance, that Eve was made out of a rib of Adam, or that the ass of the prophet Balaam spoke in human language, or that Jonab lived three days in the great fish and then was cast up alive and well on the shore of the sea, or that the sun stood still at the command of Joshua, or that the walls of the city of Jericho fell down as the result of the blowing of the rams' horns of the children of Israel? If, however, we do not cast out any of the Bible miracles, but accept them all, surely we ought to be consistent, and accept also the multitudes of miracles outside of the Bible, which present themselves to us based on quite as good evidence. As a result, there would seem to be no end to the miracles which we should find ourselves called upon to accept. The moment we begin to believe miraculous stories or anything else, without good evidence—evidence that will stand the test of the most thorough investigation,—we are lost, we are in a path that leads no stopping place this side of the credulity, superstition and fanaticism which have ever been the curse of all unenlightened religion.

V It is felt by many that to admit miracles is to degrade the character of God. It makes him changeable and arbitrary. His government is no longer a perfect government, conducted according to a wise method and a regular order set in operation in the beginning, but it is a government that requires to be interfered with mended, supplemented from time to time. At best a miracle seems to be a patch. Does God's plan of things need perpetual patching?

VI Still farther, it seems impossible to reconcile the idea of miracle with belief in the goodness of God. If God's plan of governing the world admits of miracles wherever and whenever he may choose, why is it that he does not work them oftener? We read in the Bible about God working miracles from time to time for the benefit of this person and that. But why so few? If he was good, why did he not work them for the benefit of everybody? And to-day, if God is at liberty to set aside his laws and work miracles at any time why does he allow any pain or suffering in the world? Why does he not cure all the sick instead of letting them linger on in misery? Why does he not furnish food to all the starving? A great steamer goes down at sea with all on board, a great river overflows its banks and destroys millions of property and

hundreds of lives, a fire in a great city renders thousands of persons homeless. Why does not God interfere and prevent these awful calamities? If he is at liberty to interfere, is he kind when he does not? Thus it seems impossible to see how we can keep any ground for belief in the goodness of God on the theory that he can work miracles when he pleases. But if he rules the world by law and if law is good, then is God good, in spite of calamities and pains that come to men as the result of their violations of law. The science of our time has learned that all is law. The religion of our time is beginning to learn that all is love because law itself is love. We had feared to admit that we are environed by law lest that might mean that God does not care for us. But we are learning that it is through his laws that he manifests his care. His laws are his encompassing arms and in those arms of care of love of eternal security he bears us as a mother her child.

VII A difficulty in the way of believing in miracles which is serious is the famous objection of Hume, that miracles are a contradiction of human experience. Human experience is, that nature's laws are uniform, constant, not subject to suspensions. If we accept the miracles of the Bible or of any past time it must be upon the testimony of others. Which is the more credible, that human testimony should sometimes err, or that nature at times should forget her uniformity and become irregular? We have experience every day of human testimony being fallible but none that nature's laws are fickle. When therefore the Bible, or the Vedas or the Koran or any other book of the past, comes to us with accounts of miracles, we are bound to test it by this principle. For example we read in the New Testament that on a certain occasion Jesus turned water into wine. Our experience is (and so far as we can learn the experience of the world is the same) that water cannot be changed to wine except through the slow summer long processes of nature in the grape vine. Therefore, we can more easily believe that those who reported this miracle were in some way mistaken than we can believe that what was said to have occurred actually did occur. Or, to take an Old Testament illustration we read that the three Hebrews, Shadrach, Meshach, and

and, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, in Babylon were cast

burning furnace, walked in the midst of the fierce flames, and at the end came not unharmed. Now we know that it is the nature of flame to consume organized bodies placed in the midst of it. When, therefore, we read that, when kindled to its very hottest, it did not burn these men, we find ourselves obliged by the very laws of our mind to conclude that there is a mistake somewhere. When it comes to the alternative either to believe that fire did not consume where it is its nature to consume, and what since the world began it always has consumed, or that somebody has erred,—observing improperly, or reporting incorrectly, or mistaking a legend for a true story, or something of the kind,—there is no room left us for choice: we are simply obliged to believe the latter, and cannot believe the former. This is a way of looking at the subject of miracles that prevails widely to-day, and that tends to prevail more and more, especially among scientists.

Such, then, are some of the modern difficulties in the way of the acceptance of miracles.

Some persons say to me: If we do not accept the miracles of the Bible as historic, what shall we say about them? Are we not compelled to declare them falsehoods, written and palmed off on a credulous humanity for the purpose of deceiving?

I answer: There seems no ground for setting up any such alternative. For now to suppose that such an alternative exists is to show either that he knows little about the origin of the Bible or else that he only very superficially understands human nature.

The true explanation of the miracles of the Bible clearly is that they are a natural and an inevitable product of a period in the world's history before the birth of science, and before men had found out that they lived in a universe governed by law. Given a devout people living in such an age, and you will as certainly have belief in miracles as you will have any other necessary form of activity of the human mind.

To the child everything is miracle; to the unscientific mind everything is miracle. Up to the point where the scientific conception of the uniformity of nature's operation arises, men believe in miracles as inevitably as in the rising of the sun, and because they believe in miracles and expect them to occur, and none have learned to apply accurate tests, of course they find them, and,

when they write books, of course, the books will contain accounts of them. This is the explanation of the miracles of the Bible. Coming from the times and the people it did, it was impossible but that the Bible should have contained records of miracles, and records made in all honesty and good faith.

We all know how great is the power of the human imagination to invent,—to convince us that things are external realities which really have no existence except in the mind. We know, too, on how slight foundations stories spring up, even in our age of incredulosity and open eyes. So also we understand how stories grow by repetition, until often they can scarcely be recognized as the same things they were when they started on their rounds.

We must not forget that these so-called miraculous events of the Bible were very few, if any, of them written down at the time of their occurrence. Instead of being recorded then, as it was indispensable that they should be if accuracy were to be ensured, they were carried in men's minds for years, or handed down from father to son for generations, before being committed to writing. Even the best-authenticated of the miracles of Jesus seem not to have been written down for well nigh a generation after his death, while some bear evidence of a much later date. Now is it credible that stories of any kind, but particularly stories supposed to involve an element of the supernatural, and above all, stories which the persons telling them were interested to make appear as marvellous as possible, could thus continue to be told orally for a quarter or a half century or more without change, without material growth and embellishment?

That the narrators and recorders of these stories were interested to make them out as marvellous as possible, becomes evident as soon as we remember that in the popular mind at that time, the working of miracles on the part of a religious teacher was regarded as the great proof that he was from God. The legends of Elijah and Elisha were full of miracles. It was the received opinion that the Messiah, when he came, would perform many miracles. Hence naturally, the disciples of Jesus after his death would emphasize everything in his life, which had in it any look at all of the miraculous. They would go forth telling the story of his life out of minds filled with belief in marvels, to other minds equally ready to believe in

marvels, and themselves interested in the deepest way to make the most possible out of everything in his life that had the least look of miracle or marvel about it. It would be easy to take up many of the individual miracles of both the New Testament and the Old, and trace the successive steps through which we may suppose them to have passed, from the first small germs of fact that probably in most cases lay at their beginning, up and on through growth and accretion and transformation, until at last we have the full grown, out-and-out miracles, as they stand recorded in the Bible.

From all that I have been saying it is clear that the time has gone by when every body can accept miracles. If a belief in miracles is essential to Christianity, then Christianity has already begun to wane and from this time forward the best minds of the world in greater and greater numbers are certain to take their place outside of it. But is belief in miracles essential to Christianity? We have already found our answer in the teaching of Jesus himself. Miracles may be necessary to certain theological systems which have long called themselves Christianity. They are not necessary to that moral and spiritual Christianity whose soul is found in the Sermon on the Mount and the other teachings of Jesus.

The best religious thought of our time is coming to see that miracles instead of being a help are actually hindrance to religion; they are about the heaviest weight that religion in our day has to carry.

Wrote John Quincy Adams: "The miracles in the Bible furnish the most powerful of all the objections against its authenticity both historical and doctrinal, and were it possible to take its sublime morals, its unparalleled conceptions of the nature of God and its irresistible power over the heart, with the simple narrative of the life and death of Jesus stripped of all the supernatural agency and all the marvellous incidents connected with it, I should receive it without any of those misgivings of unwilling incredulity as to the miracles which I find it impossible altogether to cast off."

John Quincy Adams voices the feeling and judgment of thousands of the most intelligent and devout minds of our age. Sooner or later it must come to what he suggests, the better part of the Christian world will yet take "the sublime morals of the New Testament, its unparalleled concep-

tions of the nature of God, and its irresistible power over the heart, with the simple narrative of the life and death of Jesus," these and these alone, as the essentials of Christianity, leaving all questions as to interferences with the laws of nature, and the credibility or incredibility of wonder stories found in the Bible or elsewhere, to be settled by each man for himself as being things purely speculative and not touching at all the real heart of religion. If a man thinks he has grounds for believing these things let him believe them; that is his affair. On the other hand, if a man cannot believe them because the evidence seems to him to be against them it is not for me or for anybody else to say that he must believe them, or that he is irreligious or not a Christian because he does not. If Jesus treated all such things as non-essentials, it is not for me to treat them as essentials. To love God and man and to do to others as I would have them do to me, that is true Christianity. To reverence God and work righteousness, that is true religion. Compared with these, all questions of belief or non-belief in miracles are of weight as light as the mote that floats in the sunbeam.

It is strange and sad that the religious teachings of the past have so largely been such as to make us look for God only in events which are extraordinary and out of the usual course of nature. Our best modern religious thinkers are coming to see that this is not the direction at all in which to look for God. The place where God really reveals himself is not in a sun which stands still a little while on a particular afternoon in Palestine, but in that sun which never stands still in any land—which moves on eternally in tireless strength and in obedience to law, carrying day and night and summer and winter for ever round the earth. The place where God really reveals himself is not in a miracle wrought through any single man or on any single occasion, to multiply loaves of bread so as to feed a company gathered on the shore of a Galilean lake. God's true revelation of himself, where our eyes only not too blind to see it, is in that ceaseless multiplying of loaves in the cornfields of a thousand valleys which gives the whole world its food.

It is a mistake, it is all wrong, to think that miracles, even granting their reality, can reveal God better than what is not a abnormal better.

reasonable people and will appreciate and properly treasure such reciprocity. If this action is delayed it should not cause surprise if the Chinese nation, following the recent example of Turkey, should, by their own unilateral act, declare those treaties at an end and justify this action by referring to the inherent and inalienable right under international law, of every sovereign State to release itself from obligations which whatever may have been their operation at the time they were assumed or imposed have come to endanger its existence or the attainment of its essential and legitimate national interests. Should the powers anticipate this action by themselves surrendering their special and unequal treaty rights, they could be assured that it would benefit both the powers and China.

The Chinese people have that same desire and determination to establish and preserve their national existence that the other peoples of the world have and when they deem the occasion appropriate they will take the necessary action to that end. The experience of the last eighty five years convinces them that they cannot secure for themselves that combination of order and progress to which they are justly entitled so long as they are restrained and humiliated by the conditions which the existing unequal treaties impose.

They are farther convinced that it is entirely a futile attempt to procure for themselves the new and just order of relationship by patiently acquiescing in the old order of diplomacy—that is, the powers' insistence in the necessity of their unanimity of consent before any change in the treaties can be put into effect. To secure the unanimous consent of a dozen and more sovereign and independent nations at the same time is an extremely difficult if not entirely impossible task, some of the powers at some time are bound to feel that the best course for their own interest is the course of procrastination. The Chinese people are firmly convinced of the essential justice of the demands they are making and they are ready to make such sacrifices as may be required in order that the satisfaction of these demands may be secured. As is well known to all, during recent years and especially during the last two years the feelings of the Chinese in these respects have become more articulate and more emphatic in their manifestations. It is a matter of portentous moment that a nation which includes within its members nearly a

quarter of the entire human race, should be convinced with practical unanimity, that the treaties which determine its obligations as vis à vis the other powers, are essentially unequal in character, and offensive in their operation, and that they must be at once terminated. The handwriting is on the wall and should be read.

The world does not realize the seriousness of the limitations the foreign powers have imposed upon China's sovereignty which greatly militate against the success of the efforts of the Chinese Nation to establish a strong and united government. The experience of Turkey has proved conclusively that so long as these limitations remained, the problem of domestic reconstruction would be very difficult.

Great Britain allows full tariff autonomy to Ireland and her Dominions, but the powers deprive China of tariff autonomy, thus she has a status even inferior to that of the British Dominions.

As to extra territoriality, the late Dr Sun Yat sen said that as it now is, the Chinese in China, though in their own country, are less favoured than are the natives of an autocratically governed British Crown Colony. In the Crown Colony, though governed by an official sent by the British Colonial Office, the native has the same rights as those enjoyed by every one else in the Colony, whereas in China the Chinese because of the possession of extra-territorial rights by the foreigners, are discriminated against.

How would the Americans feel if the foreign nations should impose upon them a fiscal regime inferior even to Britain's Dominions depriving them of the right of raising revenues according to their own judgment and needs? Furthermore, how would the Americans feel if the various foreign settlements in their big cities, for example say Chinatown should claim an almost independent status with their own laws, courts and police? What would the Americans say if as a result of extra territorial rights held by foreigners in this country, the Americans in their own country were thus discriminated against?

Ramsay MacDonald has shown the way to a right solution of placing the relations of China and the other powers on a firm and friendly basis when he said recently before a British Labour Party meeting

We must also turn to our own government

and say 'Face the facts', treat China as you do Japan, get out of your entanglement of imposed treaties. Your Christmas Memorandum was good. Your Foreign Declaration on the 22nd of January was excellent. We admit you have the problem of the protection of life still on your hands. Whenever you decided to send that much advertised Defence Force you began to play with fire.

"That is the position the Labor Party occupies to day, and it is only on these lines and with those considerations that we can hope to solve the Chinese problem, and,

when the end has come, to be in a position of friendship with China so that China can help us with our trade of affairs and we can help China with its political and moral affairs."

The world may rest assured that the Chinese Nation will not rest until her independence and territorial and administrative integrity shall become realities. She will not be satisfied with mere assurances in the form of high sounding and pious declarations as the powers have been doing since the beginning of this century.
U S A February 1927

THE CONGRESS AGAINST IMPERIALISM

By BAKAR ALI MIRZA

THE first 'International Congress of Oppressed peoples of the World met in Brussels Belgium from the 9th to the 16th February of this year with some 200 delegates representing over a billion subjected or enslaved peoples. The character of the Congress was unique, for it was the first time in history that the representatives of the working class and of subject peoples assembled under the same roof to express the message of the enslaved. Brothers! Your suffering is my suffering. Let us unite, for we have nothing more to lose but our chains and a world to gain. Yet, not only was it a Congress in which the spirit of brotherhood and unity made itself felt, but it built a permanent organisation a "League Against Colonial Oppression and Imperialism". And it could be called a League of Nations in a much truer sense than the one that deliberates on behalf of the Great Powers at Geneva.

Considering the short time the Congress took for its preparations and the whole-hearted response it met with from all parts of the world we are struck by the intensity of unity that exists all the world over for the basic purpose of freedom, and we are left with no doubts about the urgent need or the future of the League. The Congress had been called with the active support and sympathy of such personalities as Bertrand Russell,

Professor Albert Einstein, Henri Barbusse, Romain Rolland, Mrs Sun Yet Sen, and Mahatma Gandhi—to mention only a few of those whose intellectual integrity and honesty of humanitarian purpose is beyond question.

One of the many maps that hung on the walls demonstrating the effects of Imperialism. This shows India, and Indian mercenaries as the centre for the subjugation of Asia and Africa.

Because of its value to India and Indians, I shall quote only the message of Mahatma Gandhi, although it was but one of the many received.

"Dear Friends, I thank you very cordially for your invitation to the Brussels."

Congress against Colonial Oppression and Imperialism I regret that my work here in India prevents my taking part in the Congress. I wish you, however, from the depths of my heart, every success in your deliberations."

There were 174 mandated delegates, representing 31 different countries, and a number of interested guests not mandated, present in the Congress. What this means cannot be expressed in figures alone, for most of these had come under great difficulties from vast distances. Many had come on money that had been collected from organisations and individuals. And there were still many other delegates who had informed the Congress they would be coming, but could not because of lack of funds or the refusal of passports. But despite this delegates came from Africa and Mexico, Indonesia and Indo China, Egypt and India, Korea and the Philippines, China and Persia,

their spokesmen. Among them were many members of Parliament of the various Euro-

M Bakri the Arabio delegate from Syria

Lu Tsung Lun Chinese General representing the Canton Army

Algeria, Tunis, Morocco and Arabia. Besides, the workers' organisations of England, France, Germany, Belgium, Holland, Czechoslovakia, Austria, the United States and Japan had

pean countries, England alone having sent some twenty delegates—from the British Labour Party, the Independent Labour Party, the London Trade Union Council, and so on. China had sent thirty delegates, representing the Kun Min Tang (the National People's Party) the Canton Government, the Canton Army, various labour students, and women's organisations. India was represented by Mr Jawaharlal Nehru, the official delegate of the Indian National Congress, and also delegates from the Hindustan Association of Central Europe, the Oxford Majlis, the Hindustan Gadar Party of America, as well as journalists from the Association of Indian Journalists of Europe, 'The Hindu' of Madras, 'the Kesari' of Poona, and the Indian Bureau of the Independent Labour Party in London. The Indian Students' Union of Edinburgh, the Indian Majlis of London, the Ceylon Trade Union Council, and two or three other Indian organisations

bad appointed delegates to attend also but for one reason or another had been unable to send them. The delegate from Ceylon had been refused a passport. There were

Jawaharlal Nehru, representative of the All India National Congress

among the delegates representatives from 17 different trade union organisations representing over 7½ million organised workers. And if we should estimate the number of people represented by all the delegates the number would amount to more than a billion souls.

The agenda of the Congress had been arranged under five different headings. Space does not permit a full survey of all of them or of the Congress proceedings. I shall confine myself to a general description dealing with points of particular interest to India from the Indian point of view.

1 *Introductory Addresses* In the introductory addresses Henri Barbusse the noted French writer and socialist, in his rhythmic French as well as other speakers following him dealt chiefly with the conditions under which we live and the need

of a Congress and a League of all oppressed peoples. All stressed the fact that the nations of the world are realizing more and more that they are one people and that any system of society which has parasitism of one group of people on another group as its life principle carries within itself the seeds of its own destruction. They showed that the majority of peoples today are either living under slavish subjection at the point of the bayonet of a foreign power or are slaves of a system whose two corollaries are unemployment and low wages. The moment these people realize the wrong of the system under which they exist and recognize their power as a united people that moment will be one of victory. It was for the cause of humanity and for the realisation of a common ideal as well as the recognition of our

Mohamed Hatta
delegate from Indonesia

ability to achieve our freedom as a united people that the Brussels Congress was held.

2 *The Consequences of Imperialist Exploitation* We Indians do not need much enlightenment on this subject. The universality of

the theme was significant. Whether the voices raised were those of Negroes from Africa or

disease—slavery enforced by Imperialism—everywhere. Had the delegates not come from the ends of the earth and met for the first time, a stranger from the outside would have really concluded that they had some way or other all met before and agreed to say the same thing; in the stories told in a dozen different languages, in the reports or facts and conditions, we saw that Imperialism is the most deadly enemy of human life. Is there any wonder, then, that at palace Egmont, peoples with different languages and culture, different shades of opinion, found themselves amongst men and women who instinctively understood, and that they could work in such harmony? And work they certainly did, unsparringly. The sessions lasted practically day and night, many of them closing only at three in the morning. The Right press had tried during the first two days to laugh at the gathering.

G. Ledebour, the heroic veteran labour leader of Germany, 76 years of age and still young; he says he wants to be in the forefront of the fight for the destruction of Imperialism

America, or from struggling China, whether the cry was from Mexico or the plains of Korea, it had the same bitterness, the same pain and pathos, and with modifications, had the same sad tale to tell. All had had their 1857's and their Amritsars—many times over. All had their Ordinance Laws and Penal Codes, their suppression of speech, press and assembly; their 300% dividends and forced labour, the exploitation of little children, child mortality, the 16 hour day, the subjection and exploitation of woman and famine. All had their untouchables—as Coloured Bills or as reserved subjects; their exiles, and their mercenaries. All had been forced into the "war for the emancipation of weaker nations", and afterwards all had begged for food and freedom—but had received stones labelled "Reforms". All had their opium and their "law and order." In short—symptoms and results of the same

V. Chattopadhyaya, one of the organizers of the Congress, and representative, Assn. of Indian Journalists in Europe but after that a new note crept in all reports; there was close observance, full reports, respect not unmixed with fear at times, and the Congress was called variously the

'League of the Oppressed' the Coloured International the League of Asiatic Peoples, and so on. Leading Continental dimes both left and right gave long first page accounts of the proceedings, and some gave full pages to it.

As said before, Mr Jawaharlal Nehru was the representative of the All India National Congress. The Indian delegation was so organised that all reports resolutions or discussions were placed before the Congress through him. The appreciation of Nehru's work at Brussels as well as his broad national and international vision must be here recorded. In his speech he pointed out the significance and necessity of the freedom of India if mankind is to be emancipated. Great Britain by keeping India in subjection keeps the whole of the East in chains. Not only has Great Britain waged wars to keep India in subjection but she has exploited India's men and money to subdue other countries like Egypt, Tibet, Borneo, Africa, etc.—not to speak of the recent dispatch of Indian troops to China—an action deeply resented by India. The freedom of India is a world problem. Freedom he said is the first essential demand of every country. Nationalism after all is a first and a necessary step to internationalism. Extracts from his speech follow.

Having dinned us they tell us that we are not capable of defending our country. Having brought in a system of education which killed all our old education and substituted something which was ridiculously small and ridiculously inadequate, having taught us false history and attempted to teach us to despise our own country and to glorify England, they now tell us we are not sufficiently educated to be a free country.

You all know of the way Indian troops have been sent against China. They were sent in spite of the fact that the National Congress of India expressed its strongest opposition. I shall read to you the names of a number of countries where Indian troops have been utilised by the British for the purposes of imperialism—in China they first went in 1910 in 1927 they are still going and they have been actively engaged there innumerable times during these 87 years. They have been to Egypt, to Abyssinia, in the Persian Gulf to Mesopotamia, Arabia, Syria, Georgia, Tibet, Afghanistan and Burma.

We in India cannot go on merely because freedom is good and slavery bad but because it is a matter of life and death for us and our country. The exploitation of India by the British is a barrier for other countries that are being exploited and oppressed. It is an urgent necessity for you that we gain our freedom. We desire the fullest freedom for our country not only internally but the freedom to develop such relations with our neighbours and other countries as we may desire.

It is because we think that this International Congress affords us a chance of this co-operation that we welcome and greet it.

Mr Fenner Brockway then made a speech full of noble words. He said that the Independent Labour Party of England believes in the equality of races and workers. He added:

H Lian (left) delegate from the Kuo Min Tang Party of Canton Chen Chuen (right) delegate from Canton Labour Federation and Canton Hong Kong Strike Comm. Hien

I would tell my Indian comrades that we are at one with them in their struggle against Imperialism. The spirit of Kier Hardie is our spirit. We admit with shame that the Labour Government spoke to India as a capitalist Government, and it was responsible for the Ordinance Laws. The I L P then opposed and still opposes that policy. In the future we will do the utmost to wipe out that shame. To my Chinese comrades I would add that if hostility ensue between England and China, our sympathies will be with the latter.

After his speech Mr Brockway and Mr H Lian (Executive Member of the Kuo Min Tang) shook hands amidst a scene of great

enthusiasm But, as for ourselves we can only say as regards the I. L. P.'s good will to India, we shall await deeds before we express the full measure of our gratitude If we had always honoured deeds more and beautiful words, spoken by our own countrymen and by Englishmen, less, we should be nearer Swaraj than we are today

3 *The Dangers of War* China was repeatedly mentioned by speakers In fact, throughout the Congress proceedings, China was the focus of all attention, for it was recognised by everyone that it is China that is today fighting the great historic fight for the freedom not only of herself, but of all

Hansien Lau representative of the Kuo Min Tang and George Lansbury M. P. of England

Asia. A Chinese General from Canton, and member of the Kuo Min Tang, spoke with great feeling, telling how the Imperialist Powers had forced several wars on an unwilling and badly armed China Indian readers too well know the history of the opium wars against China, and we need not repeat any facts here The General spoke with confidence saying that the Kuo Min Tang, which stood for the "triple principles" of the people, as laid down by Dr Sun Yat Sen,

a peasant's son, will emerge triumphant in the present struggle, and this in spite of all Imperialist interventions and designs of war The Chinese delegates spoke in their own language, throughout they were noticeable for their earnestness, their simplicity, their few but significant words, and what may be called an unspoken passion for any kind of work to forward the cause of the Congress.

The speakers that followed the Chinese delegates showed how the rivalry for colonization and markets amongst the Imperialist Powers is the cause of War, and how the schemes of colonization and of haying up virgin lands such as those of Central and South America—to be exploited 100 years hence by American trusts—has produced a state of hostility between the different countries. The policy of Imperialism today by which a whole people may be bought up or crushed, so long as the Imperialist Power has the arms and money, cannot, in face of the opposition of the masses, continue endlessly The masses are beginning to realize that they are human beings and not commodities The Wars urged by Imperialist Powers leave the workers not one iota better off than they were before—it matters not if they belong to the victorious or to the vanquished nation The exploitation and oppression go on more vigorously than ever

We cannot give more than this of a subject so vast as this We recognize its great importance but our own struggle is so urgent that we can do little else than mention it It was the viewpoint of Central and South American and Mexican delegates that the centre of the world conflict is not in Asia 'You must remember,' the Mexican delegate (Minister of Education, Mexico City) said that Asia is already full Imperialist countries seek actual profit for the future The most important efforts of Imperialism are at present directed towards South America

Mr George Lansbury, member of the British Parliament and Vice President of the British Labour Party, spoke on the same subject. He said

Those who say to us that British troops are going to China to defend British lives lie, and they know they lie They are going there to defend capitalist interests, only for the purpose of safeguarding money making and for my part I say to those who want to raise the standard of life of the workers the world over there is no way of doing it but by getting rid of capitalism and substituting for it Socialism There is no other way We

Presidium of the Brussel Congress. Read o left to right Jawaharlal Nehru (India) George Lansbury (England) Edo Kono (Holland) Li Tsung Jan (Canton National Army) and H. L. Lau (Canton Kuai Min Tang)

think of China today because she is in the forefront of the picture but I think also of my African comrades the men and women in Africa who are just the same brothers and sisters as those in India and Japan—they are all exposed to the same sort of attack as those in China. Friends we freed many people from the bonds of chattel slavery. We have now got to free them all from the bonds of economic servitude. You will win this fight, but I believe this week while you have been meeting here you have been doing one of those things that come only occasionally in the history of our race that is you are proclaiming the union of the black yellow brown and white. Therefore comrades, I will go back to Britain and do what one man can do to carry out the resolutions we have carried here. I do not mind who stands with me or who apart. I shall still hold up the banner—the right of the Indian, the right of the Chinese, the right of every single human being to equal treatment throughout the world. If the white races have anything to give to the other races, let them give it. I am sure the other races have given much to them already.

Finally I would like to bid my comrades from Africa and Asia to be of good cheer. Neither British American nor Japanese Imperialism have the power to hold the workers in thrall forever. It is as certain as the sun shines that Imperialism is doomed, it is doomed because with the rising of working class intelligence this Imperialism with all its power and its discomfiting armaments, cannot overcome the boycott which it is with a the power of the workers to enforce. The millions in China and India need not buy any British goods. A few

of them may be killed or injured in the coming struggle but this will avail the imperialistic capitalists nothing at all. They want trade they want markets and these they will never obtain by the measures they are adopting at the present moment. Greater empires than any of those which rule the world today have gone down in blood and ruin because they were founded on robbery and spoliation and plunder. And the empires which boast their military and naval strength, which create their great air forces these too will go down in a welter of confusion unless the workers of all countries unite and put an end to war. Every war is a capitalist war we must teach the workers not to enlist in National armies, not to manufacture armaments. Teach them that wars are the means for keeping the workers in subjection and when this is done I for one am certain that we shall establish a true International.

The subjects of the danger of war in the Pacific, and of war against Mexico were also dealt with and in view of this danger, especially in view of the very probable rupture between the Imperialist Power and Soviet Russia Mr Lansbury's speech was a timely warning. Since the Congress met more and darker clouds have gathered, and the spectre of war is growing more and more sinister and real. At the request of Great Britain Mussolini has sent a cruiser to China to "defend" a couple of dozen precious

Italian souls! Great Britain is concentrating her forces in the Pacific, and has sent a warship full of sympathy for the United States to the Mexican waters evidently in the hope that America will co-operate in a possible war against China. England is trying by every means to induce European nations to take active steps against China, and yet at the same time she is attempting to break off diplomatic relations with Russia because Russia sympathizes with China. For years the public has been fed on the poison of a Russian menace. The year 1927 is blacker than the year 1914. The badly concealed warships of Mars are displaying themselves in full procession carrying the image of their god.

Lam ne Senghor Negro delegate from Senegal, Africa. A brilliant speaker whose address was filled with ironic humour.

4. *The Need of Co-operation and Co-ordination of the Nationalist and Workers Movements* Mr Edo Fimmen (Hollander and General Secretary of the International Transport Workers) made a very valuable contribution to the Congress when in his clear concise speech he showed the great necessity for co-operation among not only the workers of

the world but also between the nationalist and workers' movements in all countries. Nobility of sentiment alone is not sufficient, he said what is needed is to give that sentiment a realistic shape and this requires organisation and the creation of a united front.

In the Imperialist countries—the so called Mother countries—competition is set up among the different organisations of the working class and this to the great disadvantage of the whole movement. A casual and temporary gain by the workers of one country is used as a handle in breaking up a struggle of the working class in another. A united working class would have produced a different result during the English coal strike. While this division amongst the workers exists the machine of Imperialism and exploitation grinds on.

The consequences of the aloofness of the working class from the nationalist struggles of the oppressed nations are graver still. There was a time when land and cheap labour in the Colonies served to produce commodities which the Mother Countries did not produce. This is no longer so. Competition has set in between the Colonies and the Mother Countries—to the advantage of the capitalists and to the disadvantage of the workers in the Mother Countries. Textile industries for example are shifting from England to India. Unemployment in the Mother Countries was not the only consequence but over and above that the workers are taxed to keep a colossal army of occupation in the Colonies, and this army is able to enforce labour conditions upon the workers there conditions that are a disgrace to civilization.

To illustrate his thesis Mr Fimmen took the examples of China and India, and showed the dominant nature of foreign capital and also the inhuman conditions of work. Dividends in the jute industry for example went as high as 36 per cent. In China workers in some industries had to work 52 weeks a year with hardly a holiday. In India, men, women and children were working 60 hours a week on starvation wages. In the mines of India, women took their children with them underground deposited them on a piece of coal, and drugged them with opium to keep them quiet while they worked. Many hardly saw the light of day. These conditions are not human. The workers of the world must realize that they must co-operate with

General view of the Brussels Congress against Imperialism. The Indian delegation is in the 2nd row left. Reading right to left they are: Jawaharlal Nehru (Indian National Congress), J. N. Nambiar (Hindustani Assn. of Central Europe), M. Barakatullah (Hindustani Gadar Party), A. C. N. Nambiar (representative of *The Hindu* of Madras and the Assn. of Indian Journalists in Europe), Bakur Ali Murza (representative of the Oxford Majlis *The Bharat* and the Assn. of Indian Journalists in Europe), V. Chattopadhyaya (representative Assn. of Indian Journalists in Europe—1st standing figure against wall to the left), J. V. Sinha (from Indian Information Bureau, London) and G. Hunkar (from *The Asatara*, Poona) are standing in the back.

all the workers of the world—whether black white yellow or brown.

It had been suggested that a general strike should be proclaimed in sympathy with China, but he continued. The sentiment was noble but he found it necessary to admit that the machinery for such a strike was not ready. The good will was there but it was necessary to create amongst the workers a consciousness that united they stand but divided they fall.

Ledebour, veteran German leader of the trade union movement in Germany, Member of the Reichstag and an Independent Socialist, made a remarkable speech urging the general strike. In part he said:

"I support the resolution for a general strike of all workmen in the imperialist countries against the suppression of movements for freedom in oppressed countries and colonies. This general strike should begin with a strike of the transport workers."

Comrades, when we here call upon the peoples of oppressed countries to throw off their slavery then we as Europeans are guilty parties in the suppression of these countries. We are bound to use every power within us and if necessary offer our lives, to help them.

He then gave example after example of the use of the partial or the general strike in Germany that finally began the break down of old monarchist Germany in 1918 and led to the establishment of the German Republic. He called upon all workers to organize for the general strike to help China and India in their struggle for freedom.

I call upon you, he said, if you are Europeans, Americans, Asians or Africans, to unite and to grasp this opportunity to carry the fight against imperialism to an end. Only if we are determined can we be victorious. I am in a hurry. I am now 66 years old but I am going to be in the midst of that fight. I am going to be in the front and offer my life in the struggle. (Violent applause.)

Harry Pollitt, M. P. of England, leader of the revolutionary minority in the British trade unions, delivered a remarkable speech a few words of which follow:

In my opinion the reason why the Indian troops were sent to China was not because they were necessary there, but because it was a test to see how much India would stand at the hands of the British Government. It was a test

of the strength of the Nationalist movement in India.

5 Establishment of the Permanent League For the purpose of linking up all forces against Imperialism and colonial oppression into a world wide organisation, and to further friendship and co-operation among all workers of liberation, a permanent League was established at the Congress. The Honorary Presidents of the League are Mrs Sun Yat Sen Jawaharlal Nehru George Lansbury, and Professor Albert Einstein. An executive was elected, and Nehru, representing India, was elected a member.

Henri Barbusse the noted French writer who, despite illness travelled to Brussels to deliver the opening address.

It was suggested that the organisation should have its head quarters in Paris. Up to the present time the head quarters are at Wilhelmstr 48 Berlin, Germany.

India and the Congress The Presidential speech in the All India National Congress in December last indicated that the Congress had a tendency to broaden its outlook and to co operate with other countries engaged in the fight for freedom. The unanimous

election of Jawaharlal Nehru to represent the Congress at Brussels confirmed the realistic nature of that trend toward internationalism. Jawaharlalji was a happy choice, for he is devoid of that narrow and criminal sectarianism which is an obsession with some of our leaders. He made a deep impression upon the delegates at Brussels, because he is not an eloquent speaker, but instead, an organizer and a man of action.

The Brussels Congress showed a profound sympathy with India's aspirations. As Mr Sriwasa Iyengars cable to the Congress, conveying India's greetings and condemnation of the use of Indian troops in China, was read, a thrill and a cheer went through the hall. Happily, the cable arrived soon after Jawaharlalji had moved a similar resolution.

The Chinese, British and Indian delegations passed a common resolution by which they bound themselves to make every effort to accomplish the tasks laid down by the Congress. The Chinese, appointed to sign for the Chinese delegation, were General Lei Tsung Lun and Hansin Lian of the Kuo Min Tang and Hsing Kwang Sen of the People's Government of Canton, for the British delegation, Mr Lansbury, Ellen Wilkinson, M.P., Mr Beckett, M.P. S.O. Davies of the Miners Federation, R. Bridgman, M.P., and Fenner Brockway, I.L.P. Jawaharlal Nehru signed for India. The resolution in full reads:

We the undersigned British Indian and Chinese delegations consider that the task of all working-class forces in Imperialist countries is

(1) To fight for full emancipation side by side with the national forces in oppressed countries, in order to secure complete independence wherever such national forces so desire.

(2) To oppose all forms of coercion against colonial peoples.

(3) To vote against all credits naval military and air for the maintenance of armed force to be used against oppressed nations.

(4) To expose the horrors of Imperialism to the civil and military populations.

(5) To expose imperialistic policy in the light of the working class struggle for freedom.

IN RELATION TO THE IMMEDIATE SITUATION IN CHINA

(1) We demand the immediate withdrawal of all armed forces from Chinese territory and waters.

(2) We urge the need of direct action including strikes and the imposition of the embargo to prevent movements of munitions and troops either to India or China and from India to China.

(3) That estimates relating either to war-like preparations or to war shall be voted against.

(4) That in the event of armed intervention or open war every weapon and effort shall be made within the labour movement in use every weapon possible in the working class struggle to be used to prevent hostilities.

(5) We demand the unconditional recognition of the Nationalist Government, the abolition of the unequal treaties and of extraterritorial rights and the surrender of foreign concessions.

(6) Finally in the interests of Trade Union and Labour Movements in Britain India, and China, we pledge ourselves to work for their immediate close and active co-operation.

Although the above resolution was signed by the English delegates present, we as Indians must remember that only the individual Englishmen present signed it and it cannot be said that their organisations are bound to approve of it. In fact before even the individuals would sign it there were long and heated debates with the Indians. Since the Congress ended and the delegates returned to their various homes we learn—but it is so far an unconfirmed rumour—that there are serious quarrels within the British Labour Party and the Independent Labour Party of England about this very resolution and that there is a likelihood that some of the signatories will either have to retract or withdraw from their parties, or that their parties may split on the issue. In any case we as Indians have to go our own way taking it for granted that we will get little or no help from British labour or if we do get any it will be from the extreme left wing of the labour movement—and even then we should not depend upon it.

The Indian and Chinese delegations also drew up a joint resolution to renew the old ties of culture friendship and co-operation that existed as a tradition before the British period. The resolution reads:

For more than three thousand years the people of India and China were united by the most intimate cultural ties. From the days of Buddha to the end of the Mughal period and the beginning of British domination in India this friendly intercourse continued uninterrupted.

After the East India Company had by intrigue and force secured its firm hold on the greater part of India, the English began looking for new sources of revenue and new markets. They not only introduced poppy cultivation into areas where food had previously been grown but also thrust Indian opium on the unwilling Chinese people by force of arms. Since that infamous Opium War of 1840-41 Indian mercenary troops have been sent again and again to China in support of British capitalist brigandage in that country. For 87 years Indian troops have been permanently stationed as policemen in Hongkong, Shanghai, etc. Time and again they have been used to shoot down Chinese workers and have

this created ill will in China against the people of India. Even as we make this declaration Indian troops are again on their way to China in an attempt to crush the Chinese revolution.

With the strengthening of British imperialism India was cut off more and more from intercourse with China, and in their cultural and intellectual isolation the Indian people have now become completely ignorant of the condition of China.

A group of delegates. M. Y. R. F. (Persia) Mohamed Barkatullah, (Illinois) Jan Galar, (Italy) Sen Katayama (Japan), L. Benghor (Africa) Harry Pollitt (England).

It is this extreme ignorance that makes it difficult today to organise effective means to prevent India a men and man power from being used for the enslavement of the Chinese people. We think it urgent and essential that active propaganda should be carried on in India to educate the people regarding China and to arouse them to the necessity of immediate action. We must now resume the ancient personal cultural and political relations between the two peoples. British imperialism which in the past has kept us apart and done us so much injury is now the very force that is uniting us in a common endeavour to overthrow it.

We trust that the leaders of the Indian movement will do all in their power to co-ordinate their struggle with that of the Chinese people so that by simultaneously engaging British imperialism on two of its most vital fronts China may receive active support in her present struggle and the final victory of both people may be secured.

As this is being written I learn that, as the British delegation has invited the Chinese delegation to tour England and speak to the people so has the Indian National Congress extended an invitation to the Chinese delegation to visit India and it is to be hoped that the British Government in India will not put any impediments in the way.

CONCLUSION

Resolutions dealing with almost all the oppressed countries were passed but space does not permit me to deal with them all. In passing I can but mention the very capable delegation of four men from Indonesia—the 'Dutch East Indies', also the very fine speech made by the Arabic delegate the intelligence and the ironic humour of the Negro, Lamine Senghor, from Central Africa the clear and uncompromising address of Professor Guio Mighoni, Member of the Italian Parliament and opponent of Mussolini—and consequently in exile, the untiring activity of the Korean nationalist delegation, the South African delegation consisting among others of a delegate from the South African Trade Union Congress, and a Negro delegate (a Communist)

who did not believe in the professions of his white colleagues. There were also Negro delegates from many different sections of Africa.

The student organisations represented in the Congress submitted to the Executive a request to have a student representative in the Executive and to aim at the unification of the youth and workers' movements of the world.

It is difficult to end this review without mentioning the silent and intense work of Messrs A. Gibati and Virendranath Chattopadhyaya, whose organisational work had been responsible for the success of the Congress. Especially the latter, our own countryman, who, an exile from India for over 25 years, is untiring in his work for India and unflinching in his optimism.

DR HELENA LANGE

By AGNES SMEDLEY

TO do justice to the long and creative life of Dr. Helena Lange would necessitate writing a social history of Germany for the past three quarters of a century. For not only is she a product of that period but she is one of the forces that gave it colouring and tendency. That social history, if written would reach down to the present and find her a woman of 78 sitting at her desk editing 'Die Frau' which she founded over thirty years ago, reading and reviewing books, receiving callers, granting interviews, and carrying on a large correspondence dealing with the woman's movement and with the education of women. In that three quarters of a century we would find her, one of the truest representatives of the German spirit, standing in her secure, uncompromising strength scanning the horizon for the oncoming generations of free educated women, a woman who as she today says, stands at the sunset of her life, and yet who is filled with a surging energy and idealism and with a marvellous, permeating humour seldom to be found in age.

Who and what she is may best be expressed in the words of the University of Tübingen when, after the War, it conferred upon her the honorary degree of Doctor of Political Economy "in honour of her services as leader and pioneer of woman's work in national economy."

She is further the woman who, as Dr. Gertrude Baumer, her biographer, has said, 'stepped out fearlessly upon land that had not been trod before, and cried into the emptiness not knowing if even an echo would answer.'

The courage it took to do this cannot be conceived by us today, with higher schools of learning and all professions open to us. But in the last quarter of the last century such a step called for not only courage, but also scientific knowledge and training that could compete with and defeat men on their own grounds. All this Helena Lange possessed. Just how and why it happened we do not know, for we never know what causes one woman to break through all bonds and impediments and rise to be a power while

girls brought up by her side and with the same opportunities blend with the generality and remain mediocre. It may be that a part of her elemental energy may be traced back to her peasant ancestry. We see her in her childhood in north eastern Germany, growing up and studying in the elementary schools with girls and boys alike, living a life somewhat freer than that of most German girls of the time. At the age of fourteen we see her reading voraciously, with the photographs of Garibaldi, Körner and Schiller over her study table. The atmosphere about her was vigorous, for she had been born in the historic year of the German Revolution, in 1818.

When she was fourteen her father sent her to Tübingen to the south to study for a year in the home of a pastor who was a Professor of Theology in the University there. In that home she learned a lesson which, she says, was the beginning of her life's work on behalf of women. She saw a home in which men had their afternoon coffee in the dining hall, the women waiting tables and then drinking their coffee in the kitchen in which no woman was permitted to participate in the conversations of the men in which no woman was entitled to study, converse or make any pretension to independent thought. The wife of the pastor even warned her young girl guest against letting it be known that she had read so much or that she held independent ideas. Such girls never found a husband! That was says Helena Lange in her 'Memoirs', a picture of German home life of that period, and one that forced her, at that young age to ask the women "but why do you permit it?"

Within a year after this experience in Tübingen she was left an orphan and forced to stand almost entirely on her own feet—no easy thing in those days, especially for a girl. We find her coaching little girls in their studies, and at the age of eighteen studying to be a teacher in an Alsatian Pension. The teachers' course lasted six months—such was the superficial training for women teachers in those days.

After teaching in southern Germany for five years Helena Lange came to Berlin and began the life that was eventually to place her at the head of the woman's movement. That was in 1871, when she was a young, energetic woman with the future before her. Academic study was impossible for a woman in those days, but she studied alone and with private teachers. Kant and Schopenhauer

were her guides in philosophy, Lotze and Wundt in psychology, and Lessing and Schiller were as friends to her mind. Goethe was for her, as for most Germans, the Bible. With an apple and a sandwich she stood for hours in a line before the Imperial Opera, waiting her turn to buy a fifty pfennig seat to hear good music. From her hard earned money she paid for lessons in Greek, Latin and Mathematics. Self discipline in her intellectual life, precision and fundamental thought and work were rules of life to her, and the time came later when Latin and Greek were as familiar to her as her mother-tongue, and when she was a master of mathematics.

Dr. Helena Lange

The position of women of Germany at that period is best summarized in her 'Memoirs'—a book which is a marvellous study of social forces from 1848 to the present day. She shows us a society in which the old home activities and industries of women were being destroyed by a new industrial civilization, girls were forced to make their own living, and yet they did not know how. She shows us, also, a large class of wealthier middle class girls, sick of the emptiness of their lives, seeking relief in dilettantism in music and art, in the conversation of the tea room or the salon, women who, by rigid social custom were prevented from doing any work.

outside the home, from seeking any creative outlet for their energies, or from earning any money. As in India today with so many women for a woman to earn her own living was regarded as a thing of shame although it is almost impossible to understand from what perverted psychological source such an attitude comes.

In any case it was upon this emptiness, this distress and this superficiality in women's lives that the woman's movement had declared relentless war. The General Association of German Women had been founded in 1865 and when Helena Lange came to Berlin she came into intimate contact with some of its leaders. By coincidence she also came into touch with a small group of liberal thinking men and women and their association was a food to a hungry soul. They not only had liberal educators and writers among themselves, but they were further fortified in their position by the appearance of John Stuart Mills book, 'The Subjection of Women', which had just been translated into German. Mill held as is well known, that the subjection of woman was not only an injustice in itself, but a serious handicap in the development of our race. Margaret Sanger a more modern writer, has expressed it more fundamentally in the phrase 'A woman enslaved cannot but help give a measure of bondage to her children'. Mill demanded that all economic, legal and political restrictions upon woman be removed, and that all schools, universities and professions be opened to them.

Helena Lange was deeply impressed, but she took a position that has run like a red thread through the years of her rich and varied life and without which it is impossible to think of her or of the German woman's movement. It was that not only is there certain public work that woman is quite as capable of doing as is man, but that there is much work that women and women alone are best able to do, for instance social welfare, certain educational activities, health work and so on. In other words, all work in which the spiritualized and sublimated mother instinct may be creatively expressed.

We can almost see her in those fresh early years of her life tall, blonde blue eyed, trim, restless with energy, teaching for hours to make enough money to live and study, studying ceaselessly to prepare herself for better service, questioning all things

from philosophy and religion to the social order of society—qualities that remain with her on her up grade to a Century.

She became a teacher in a Teachers' Seminar of a girls' school in Berlin and later she became the director of the entire school. She remained there for fifteen years, and this period of the school was marked by a lengthening of the course of study for both girls and for the teachers' seminar, to giving the instruction a sound scientific basis and the lives of the students a goal and a purpose.

During this same period she was active in the woman's movement, was one of its leaders and was executive of the Berlin Association of Women Teachers. The thing that brought her directly into the open battle field however, was a brochure known as the 'Yellow Pamphlet' which she wrote and addressed to the Ministry of Education. This was in 1887, when she was 39 years of age, a woman ripe in knowledge and experience. With this pamphlet began the public fight that lasted for many years and that made her name identical with a program and a central point of struggle in the woman's movement. In this pamphlet she demanded, among a number of other important reforms, that Gymnasiums for women, the same as those existing for men, be created. And that the direction of girls' schools be placed in the hands of women teachers. Furthermore, she demanded that the teaching of German and of religion be placed in the hands of women because men pervert the teaching of these subjects in so far as women are concerned.

Such a shock! The German men teachers especially, were horrified at such demands, Helena Lange was challenging the will of God (so many men get God and themselves confused) and was striking at the very foundations of morality, religion, the home and the purity of women. Volumes could be collected of the articles they wrote against her, and they formed an association for fighting the emancipation of women. One has to smile—for the Germans were so like so many Indian men of this year of our Lord, 1926. The Neanderthal mind is the same in all ages and under all suns.

Once having laid down a scientific program, Helena Lange with characteristic scientific thoroughness began to support it by facts and figures. With the help of the German Empress Viktoria she went to England and

studied at Newham and Girton Colleges, both of which were being conducted most successfully and under Woman management. Her book "The Education of women" appeared in the same year.

When she returned from her trip abroad she with a few other German women addressed a petition to the Humboldt Academy in Berlin asking that women be admitted to scientific courses. The Academy, under the direction of professors sympathetic to the woman's movement, granted the request, and Helena Lange was given the responsibility of building and directing the courses for women. This she did, and for the first time scientific courses of a higher nature were opened to German women. She carried on the work for five years. But there were no examinations at the end, and women who wished to get a university training had to go to Switzerland where they studied, took their degrees and then returned to Germany to practise their professions.

Helena Lange never rested. In 1890 she founded and was president of the German Women Teachers' Association an organisation whose purpose was to carry the fight further. Its foundation heralded the awakening of women teachers to their duties as educators and as leaders of women. Its demands covered, reform in elementary girls' schools, the founding of Gymnasiums (high schools) for women, an increasing influence of women in girls' schools and in school management, the placing of German and of religion in the hands of women, the admission of women to the universities, the establishment of institutions for the professional or trade training of women, the establishment of teachers' training schools on a sound educational basis instead of the two years then existing.

Apart from her intense activity in placing and supporting this program before the public, her next step of importance was to found "Die Frau" (The Woman) a monthly magazine which she, in cooperation with Dr. Gertrude Baumer still edits. It was then as now a magazine that embraces every phase of woman's activities in all lands, and is the most important source of information concerning women's activities that exists.

Although the point of attack for a large body of men she was yet a personality who was respected by many influential professors and officials. The Ministry of Education had held a number of conferences with her, and

her educational program was discussed at length. In the end she succeeded, and in the same year that she founded "Die Frau" the Ministry of Education sanctioned the founding of the first girls' gymnasium in Germany. She was made director of it as well as the instructor of Greek. She transformed her courses in the Humboldt Academy into Gymnasium courses, and began work with thirteen pupils. Of these few girls, six came from the Humboldt Academy and were advanced students prepared to study for the university matriculation examinations at the end of their course.

The propaganda against the Gymnasium was very great and few parents would permit their daughters to attend. Men teachers wrote that they bent double with laughter at the grotesque idea of the Gymnasium. But Helena Lange was clear visioned enough to expect this, and with the full burden of the historic experiment resting upon her shoulders, spared neither her body nor her mind. It was three years later—in 1896—that the first six girls formerly from the Humboldt Academy—appeared for the university examinations. When the results were known, each one had passed with honours, the examiners exclaiming that their work was superior to that of most of the men students. Whether the men teachers bent double with laughter again we do not know, but we do know that groups of men students from other universities telegraphed their congratulations to those first six girl pioneers. The Berlin university was opened to women, but it was not until 1899 that the medical profession was opened to them and only in 1906 that they were permitted to appear for the State's Examinations for teaching the highest subjects.

One would think she had enough to do with her educational work. Yet in those days the education of women was a problem intimately connected with women's advancement on the whole. To really place it upon a secure foundation, meant tireless and never ceasing work in the women's movement. The year after the first Gymnasium for girls was founded, the Council of German Woman Associations came into being, and shortly after that Helena Lange became, and for many years, remained its president. At the same time she was on the Executive Committee of the International Association of Women Suffrage attending their meetings in

Paris, The Hague, Geneva, Stockholm and Dresden. In 1904 in Berlin, and in 1914 in Rome. She headed the German delegations to the international congresses.

The German woman's movement on the whole has from the very beginning been characterized by its strong social tendency, in contrast to the strong political tendency of the woman's movement in such countries as England and America. It concerned itself chiefly with inner problems, such as social welfare, youth welfare, working mothers, unmarried mothers and illegitimate children, divorce, marriage and sexual ethics, and the education of women. Many of these problems were not even touched upon by American or English women until very recently as for example unmarried mothers and illegitimate children, marriage and sexual ethics. But even in the days when respectable women were not supposed to discuss such matters, German women had frankly and honestly faced them. It was their propaganda that spread over to the Scandinavian countries and caused the latter to pass the first legislation protecting illegitimate children and the unmarried mother.

Helena Lange's chief interest was always education, but as President of the Council of German Women's Associations her activities were broad. One of her books is entitled "The Woman and her Modern Problems," a work dealing with social problems such as mentioned above. And it was her philosophy, her Weltanschauung, that coloured the entire German woman's movement and distinguished it from the movements in other lands. It is because of this philosophy that she has become known as the theoretician of the woman's movement. This philosophy may be very briefly and incompletely summarized as follows:

There is a spiritual, as well as a physical, difference between the sexes, and although women may do many different kinds of public work as well as men, yet they are especially fitted and destined for different spheres of activity. The very essence of woman is motherhood and all that woman does in her cultural development or activities works through her as a woman and as a mother. This does not mean that every woman must be a mother, physically, to possess this quality. Instead, there is a psychic motherhood which in the cultured woman finds expression in all she does. A woman may express her mother instinct in

her own child or in work for the children of other women or in both. In fact, it is often the motherless woman who is the best mother, the best teacher. This mother instinct always lies in readiness in the being of woman, and all culture means its spiritualization. It is this power which gives such tremendous driving force to the social activities of women today, and it is this force that must be awakened and used in all branches of our life if our civilization is to become more than a mere brutalized machine in which hatred and war are ruling features.

FURTHER

Woman's "place" is, therefore, not an external, but an inner and spiritual experience, she says. Die Baumer, her biographer, says that 'God may be worshipped' not only in Jerusalem, but in all places and at all times." Or, we may say, God may be worshipped not only in Mecca or in Bezares. So it is with woman—her "place" is not just in the home, not just here or there, but wherever she can do good and use her powers and abilities best. Where that is, is for the woman herself to decide. There are many women who may wish to reach the same goal as men, for such the road lies through the Gymnasium and the University. There are others who will wish to pass through the women's schools, or the trade or special professional schools and enter work that is in the external form "woman's work." But wherever woman is, the effect of her work is and must be different from the work of men.

FURTHER STILL

In all this there is no place for antagonism between men and women when once women are free to choose their way of life. The bond between man and women must not only be that existing between husband and wife, but it lies also in their broader cooperation in the building of our cultural life and our civilization upon other foundations than they stand today. This civilization, as it is developing, is going to draw woman more and more into social life, for the old home activities of woman are being replaced, or have already been replaced, by modern inventions. Woman's life, as a consequence, is becoming narrower and emptier, and the only way of meeting and equalizing the situation is for them to

take part in all activities—in the professions, in social work, in education, and in politics. This new development is not evil just because it is new, on the contrary it is a valuable addition to our human history and marks the entrance of a new force in our external life that is capable of transforming the face of society.

Writing in her Memoirs, Dr. Lange says:

"Each spiritual movement has been called at one time a stupidity. So with the woman's movement. But whoever has known this movement that has become a force in modern life a force that has spread over all cultured lands cannot belittle it. Its foundations are those that will be deepened by time: they rest on the instinct that lies at the heart of woman—the instinct for the protection and care of the human race. It is this force that will make this movement endure and triumph over ambition and the hunger for power over hate and materialism. It is this merciful mother instinct in which lies buried the physical and spiritual being of mankind and which nourishes mankind with its blood that can build a new world. When we begin to build a new world upon this foundation—a foundation upon which all our historical development must rest—when our civilization in other words 'comes from God' it cannot be destroyed."

So it is that she at the sunset of her life works today, with this deep and unshakable conviction as the starting point from which she approaches all problems.

It is said by many today that her work is finished that the day of feminism is passed. They say that the pre-War period in Europe was the period of the emancipation of woman with Ibsen as its dramatic prophet, and that the woman's movement in those days coloured even the Socialist movement. They believe however that this problem is at an end because the chief problem since the War is the struggle of the working class for emancipation, that this is the period of the class struggle and not the sex struggle. They further hold that the working woman has nothing in common with the middle or upper class woman who only exploits her and that the problem of the higher education of woman never applied to the working woman.

All this the writer believes—in part. The philosophy of Socialism—whether Anarchism, Communism, or Socialism—recognizes class solidarity and not sex solidarity.

This is the outstanding problem of this period and it will not be solved until it is solved, whether it be within ten or within fifty years.

But granting all this, it cannot be forgotten that right within the revolutionary working class there is a woman's problem. All is not economic. Combined with the fundamental problem of the fight for food there are instincts as old as the first amoeba, to be dealt with. The members of the working or upper class have inherited the master and owner hip psychology regarding woman. Working class women do not have much better treatment at the hands of their husbands than do middle and upper class women neither in the intellectual or sexual meaning of the term. There are working class women who also wait on their husbands and his guests and then have their coffee in the kitchen. Or generally do without coffee because there is not enough to go round. They do not share in the conversations go to meetings nor do they study. They, as are middle and upper class women are regarded as convenient pieces of household furniture and they are often treated with as little respect.

Here it is that the philosophy of Helena Lange enters within the heart of the working class movement. Although not a Socialist her philosophy is so deep and universal that it applies to all classes at all times. And even with actual practical modern day problems she is not a force to be shored aside just because she happened to have been born 78 years ago. Through her magazine "Die Frau" she is today stepping out upon the open battle field for a problem that touches women it matters not what their class. She has but recently written that the sore spot of woman's freedom is not with the professional woman but, instead with married women and the mother in the home. She has many women friends who are physicians and she has documentary proof for the statement that much illness of women, nervous and otherwise is due to the sex treatment of the wife by the husband. The married woman is a sex slave, without autonomy over her own body, her husband takes it for granted that she is there for his personal use when he and he alone wishes it. If the woman resists, violence is used. The old emotion of ownership enters and it is not only intensified by marriage laws and by social custom but by woman's

economic dependence upon man and by the sanctity that society gives this dependence

Thus we find Helena Lange at her age, a woman whose life has been marked by a rigid sex morality tearing down the curtains before a problem that many people consider too sacred to discuss. It is not 'sacred' at all but is a secret shame that must be exposed. Not only in Germany, but it is understood India may turn its eyes inwards.

Helena Lange says the object of her life's work has by no means been achieved. She did what was before her to do. But the direction of girl's schools today does not yet lie in women's hands as it should. And there are many, many problems affecting the external and personal lives of women that must be solved. The woman's movement, she says, is in the beginning, not at the end. She continues to wield her pen with unrelenting clarity. This keeps her very busy, keeps her working, travelling when necessary, keeping in touch with the woman's movement. She has resigned as President of the woman's movement—and she has a touch of

that incomparable humour when she says 'Yes, I thought it best to get out early and have them say, Oh isn't it too bad', instead of waiting and having them say, 'Well at last she's resigned!'

As this is being written a fight is in progress in the Hamburg Senate because of the plan to call a girls' Gymnasium the 'Helena Lange Gymnasium.' Certain Neanderthal gentlemen say that the name 'Helena Lange' means a program that they are opposed to. But the replies given by the defenders of the plan, and by the press show that the plan will materialize, for the Germans to day realize at least in part, what Dr Helena Lange has meant in the cultural development of women. As one newspaper stated

'She was a woman who filled the empty lives of countless women with meaning and a high professional ethics. Her work was positive and constructive in the best meaning of the word. She belongs to those Germans who have represented Germany in the deepest and most scientific meaning of the word.'

AN ENQUIRY INTO THE EARLY HISTORY OF CHANDERNAGORE AND THE PROBLEM OF THE LOCATION OF THE FIRST FRENCH SETTLEMENT IN BENGAL

THE small town on the left bank of the Bhagirathi that goes by the name of Chandernagore has been known as such for the last two hundred and fifty years at the most. As regards its previous history or its possible antiquity no definite information is available. The name of the place began to be mentioned only after the advent of the French, and even then for the first fifty years or more its history is almost a blank.

THE ANTIQUITY OF THE PLACE AND THE ORIGIN OF THE NAME

There is no record from which we can clearly ascertain how old the name is, nor do we know of any reference to it that may carry us beyond the time of the arrival of the French. So far as it is known the very first mention of the name occurs in a letter dated the 21 November 1636 written by Martin Deslaurie and Pelle to the then Director (1). There is also a map prepared by Breuck somewhere previous to 1661 and published in 1726 which bears a flagmark indicating the place and also shows the factory there. But

this is supposed to be a later interpolation (2). Certain old mss. and printed books speaking of the locality mention other villages such as *Boro*, *Akalsani*, *Gondolpara* and adjoining the latter, *Paikpara* but not Chandernagore.

Thus *Manasa Malangal* written about 1495 A.D. by Vipradas speaks of *Boro* and *Paikpara* (3) and *Kavilankun Chand*, a work now almost three hundred years old in describing the places on either side of the Bhagirathi mentions *Gondolpara* (4). From the description it can be easily understood that *Boro* is the same place which goes by that name even today and is included within Chandernagore and which used to be called formerly *Borokishanpur* or *Krishnapur* and that *Gondolpara* is the locality of the same name that is now on the southern side of the town. Another work *Digvijaya Pralasa* narrates that in very ancient times a fisherman king lived at *Akalsani* (5). This *Akalsani* also can be no other than the village which bears the same name today and lies on the western outskirts of Chandernagore for the book mentions also in the same connexion names of other contiguous villages such as

Jazaddal Sngur and Haripal. The story of a fisherman being king may not be altogether a myth. For from prehistoric times the region covered by the modern district of Hugh has been mostly inhabited by fishermen (6). I have heard that there is an old ms dealing with the story of Srimanta and Chandni which contains the line "He installed Borachanli at Boro" (7).

I enquired of Pandit Hara Prasad Sa tri and also of Prof Jadunath Sarkar but neither of them could tell me of any work either in print or in ms. anterior to the 17th century which mentioned Chandernagore by name. From all this it is natural to conclude that at the time of the composition of the works which speak of Boro Gondolpara and khalasani and yet do not mention Chandernagore those villages were not grouped together under the common name of Chandernagore and possibly there was no place at all called as such. Otherwise we would expect the poets to have included that name also in their description of the locality.

In 1676 Streynsham Master Agent of the British East India Company who later on became Governor of Madras came to see the settlements in Hugh and in referring to the French settlement there he speaks of it as covering a large tract of land (8).

So we see that at the time when the locality was not yet called Chandernagore even then there existed the villages known as *Ahalasani Gondolpara Boro* and such others. The name *Boro* is said to have come from a variety of paddy called *Boro* that used to grow there formerly. This may or may not be true. However *Boro* was the chief station of the *Pargana* of the same name which formed part of Salgaon (9). The *Pargana* of *Boro* was itself a big *Pargana* in the Hugh district. Even now the name is used in legal transactions. *Gondolpara* was the property of the Nawal Khan Jehan Khan. It was given to the French Company on lease (10). Several other villages of the locality such as *Salaneria Chack Nasirabad Gany Sukralad* seem also to be old enough. At least the antiquity of *Ahalasani* is beyond doubt, since as I have already pointed out it is mentioned in a work a thousand years old. The few other villages that we speak of now do not figure in that book. This is because it may justly be advanced the book was concerned with the description of places only on either bank of the river and therefore those that were not exactly on the coast but lay somewhat in the interior did not naturally come within the poets purview. Furthermore it is to be noted that the entire country was under one government and there was no special need to select some particular villages and group them under a common name.

From these facts we can safely conclude that the name Chandernagore was given to the group of villages consisting principally of *Boro-khalasani* and *Gondolpara* when these came all together and at the same time into the possession of the French just as modern Calcutta was formed out of the villages *Butanali khalata* and *Gotnandapur* when they passed into the hands of the British. Besides those villages *Chandernagore* might have included two or three other villages also such as *Sabanara Chaknasirabad*. However there is sufficient reason to believe that the entire country covered by these villages and their neighbourhood on the left bank of the Bhagirathi was generally called Hugh (11).

It is difficult to determine how and by whom the name Chandernagore was first given. There are three legends current on the point. Firstly many have stated that Chandernagore comes either from *chandra* (moon) or from *chandani* (sandal wood) in the previous case the name is properly *Chandranagar* and in the latter case *Chandannagar* (12). But as for the reasons why *chandra* or *chandani* was chosen as the designation of the place no definite statement is found anywhere. Only a local newspaper *Prajalandhu* says that the name *chandra* was given because of the contour of the place which is similar to the low like crescent moon on the forehead of the Lord Shiva (13). A French work names the place as *Ville de la Lune* and in fact a look at the map of Chandernagore viewed from the Bhagirathi would seem to justify the epithet. But most of the writers favour the idea that Chandernagore was so named as it was a land of Sandal wood—*ville du bois de Santal*. Indeed a considerable trade in sandal wood was once carried on in this place and there is evidence to show that the article was even exported to foreign lands from here (14). We also find it mentioned that in later days a certain kind of red coloured wood used to be exported in large quantities from this place and this may be either *Bakia* or red sandal (15). Further more it is known that Rudra, the saintly king of Nadia, procured sandal wood from the vicinity of Hugh (16). Samih Chandra Das states authoritatively that once sandal wood used to grow plentifully in this locality (17). So we see that either of the reasons adduced to explain the origin of the name of Chandernagore may be valid but it seems more probable that the second one—that is to say the place having in it a sandal forest or its being a trade centre in sandal was what gave the name. This view gains confirmation from yet another source. Sir William Jones who was often invited to the festivities held in the palace at Gauri says in one place of his diary that he French used to decorate the town after the fashion of *Chandan* so *lipase dham* and hence the name (18). If this be a fact then it agrees with the view which holds the name Chandernagore to come from sandal or *chandani*.

As to who first gave the name no record expressly says anything. Some opine that the name was given by Deslande. The only proof I have been able to find in support of this opinion is that the name is mentioned by Deslande in 1696. However if the proposition that the name Chandernagore came into existence only with the French occupation happens to be true then on that basis it is reasonable to conclude that the name was first given by a Frenchman be it Deslande or somebody else.

Chandernagore is otherwise called *Parashidanga*. The origin and the age of this name also is no less uncertain. The locality was bounded on the East by the Bhagirathi and on the other sides mostly by marshes and low lands (19) so the name *tanga* (upland) is quite appropriate and as the French were occupying the place it was naturally *Parashidanga* (the Bengali word for French is *Parashi*) which later on corrupted into *Parashidanga*. This is all that can be said in the matter. I have seen a document in Bengali of the year 1775 (BS) with an indistinct Persian seal on it and with the signature in Persian of Muhammad Wazid Hassan which contains the word *Parash-*

danga (20) Clive used the word *France dongry* in a letter to the Nawab dated the 30th March, 1767 (21). This is also a corrupted form of *Farash danga* which name thus seems to be as old as the beginning of the French settlement.

WHEN AND WHY THE FACTORY WAS ESTABLISHED

AT CHANDERNAGORE

There is a difference of opinion as regards the time when the French established their first factory in India for the purpose of commerce and also as regards the original place whether it was Chandernagore or not. The reasons for establishing a business centre in Bengal are not less variously interpreted. It is, however, quite natural to suppose that the same reasons that is to say the same advantages which prompted other European nations to choose the banks of the river Hugli or places in and about the town of Hugli as trade centres made the French also establish a colony in the same locality. There can be no doubt that what tempted these foreigners to come and establish themselves here was the abundance of Bengal's natural and industrial products.

It was Caron the first director of the French Company who saw the possibility of exporting from this place valuable commodities and therefore sent Deslandes to establish a centre (22). We know from another source that samples of various articles had already been sent perhaps for the first time from Bengal to Pondichery in 1685 and in the following year Martin had despatched a ship and a man named Deltor with 40,000 ecus (23). Another year passed and Deslandes arrived with the commission to establish and organise a factory, which was first started at Hugli (24). Historian Keplin says that Deslandes in the beginning chose his place at Bandel near the Portucal se Factory (25).

One of the reasons for locating the factory here was without doubt to procure the beautiful Muslin of the place which was so much prized by the luxury loving French people. In old times Chandernagore produced Muslin in abundance and this article as well as many other varieties of cotton fabrics were exported in large quantities (26). Later records show that Chandernagore cloths could be sold at a greater profit than the cloths of other places (27).

According to English records the establishment of a factory in Bengal by the French East India Company was a matter of sheer accident. It is said that in 1673 a fleet despatched by de la Hève, while returning to San Thome was overtaken by a severe storm and one ship, *Flemen* by name, instead of heading towards the Coromandel was driven astray towards Baleswar. This vessel was then attacked and captured by three Dutch vessels and brought to Hugli. It is the crew of this ship who built a small house near the Dutch factory at Hugli and started the first business (28).

This bit of history is not found in French record and it does not explain the real reason for an organised effort at trade by the French Company. The story however may not be false on that account. For about 15 years before the Company's debut by established itself in Bengal that is to say in 1657 or 1674 Du Heris had secured a plot of land in Chandernagore about 1½ leagues (29) to the South of Hugli. We also know that in 1673 the French had bought for Rs 400 a village with an area of 20 arpents (30) which is situated now

in Chandernagore and to the South of Chinsura (31). A different record says, however, that the plot of land was not more than 20 arpents and was a part of Boro quichepouir (Borokishanpur) (32). The Factory Records of Hugli state that the French built a small house near the Dutch factory and that they were driven out from the place through the machinations of the Dutch who by presents and petitions won over the Musalman Nawab. This was however the excuse the French gave in quitting the place but the real reason was that they could not raise there any more loan. They departed with a debt of Rs 8,000 (33).

Streynsham Master who represented the British Company came to visit the Hugli factory in 1676. On his way back he is said to have crossed a garden belonging to the Dutch (called, Dutch Garden) about 2 miles away from Hugli a little farther on he saw a large plot of land where he himself says the French had formerly built a factory the gates of which were even then existent. The land was at that time occupied by the Dutch. On the way he passed by a few thatched houses (34). C. R. Wilson says that the Dutch Garden was within what is now called Chandernagore (35).

L. S. O'Malley identifies the factory described by Streynsham Master with the small house near the Dutch factory at Hugli referred to in the Hugli Factory Records. He says furthermore that this house was situated just to the South of Chinsura, along the northernmost boundary of Chandernagore (36). Mr Bradley Birt also supports the view and thinks this to be the original place occupied by the French on the bank of the Bhagirathi (37).

Thus two of the older writers agree in stating that the French factory or house was near the Dutch factory or garden. But one of them places it at a distance of two miles from Hugli while the other includes it within Hugli. It is difficult at the first view to regard both the statement as one. But there can be no doubt that the statements of the two later writers, O'Malley and Bradley are one and the same. The relation of Chandernagore to Hugli is a matter which often raises considerable amount of uncertainty in the minds of the enquirers into the early history of Chandernagore.

As a matter of fact, before they permanently settled in Chandernagore the French had a factory for some time at Bandel (38). Also it is true they had already commenced their trading business from there. But I have gone through many historical records both in English and in French, and I have nowhere come across anything to show that that concern lasted long. Some old French records use however the name Hugli instead of Chandernagore but the place referred to is evidently what is now-a-days designated as Chandernagore when they speak of Chandernagore as a dependency of Hugli—"ce lieu de Chandernagore do la dependance d'Hugli" or "ce lieu de Chandernagore dependance de cette ville et Gouvernement d'Orléans"—they do not mean that Chandernagore was within the jurisdiction of the factory at Hugli. Boro kishanpur which belongs to Chandernagore and is within the Pargana of Boro, is similarly described as being a dependency of Saigaon—"Borokichan pour capitale du paragonne du Boro, dependant de Saigaon" (39). Paul Macpherson a French historian says on this matter that for a very long time people used to call the French

colony by the name of the neighbouring place Hugi (40). Lurent Garcia also writes in support of this view in his journal that the entire re., on lying on the western bank of the Hugi and even Chansura was called Hugi (41). H. Weber also says that in all legal documents of that time Chandernagore was mentioned as Hugi as it was contiguous to the latter place (42).

The second time that the French came and established a Factory in Chandernagore was in 1683 A.D. Many historians assert that this was the time when the French founded their colony and town and received the grant from the Mogul Emperor (43). It is true that it was in 1683 that the French bought from Aurangzeb a plot of land measuring 912 hectares (44) for the sum of Rs. 4,000 and with the permission of the Emperor began their trade in a systematic manner (45).

This book mentions only the purchase of the plot but nothing about its extent. So far as I have been able to find out, the plot had no fixed area. Yet there can be no doubt also as to the fact that in 1673 or 1674 a man named Du Plessis had bought a plot of land and set up a factory and that this was the earliest and the first attempt (46). The name of this Du Plessis is not however found in any record but that the French first came to Chandernagore in 1673 or 1674 may be gathered from many historical sources (47). Taus S. C. Hill, Nicolas Maucci, James Grant, Charles Stuart and others fix the time of their arrival as 1676 while G. B. Maitland gives one to understand that this first batch came and did not at all return (48).

Steynsham Masters observations however lend support to the view that they came in 1673 or 1674. The year 1683 is usually taken as the time when the French got the farman from the Muzil Emperor. But in reality this was not the final farman but only a permit to set up a factory. The real farman was obtained only in January 1693 after a good deal of struggle involving much correspondence and much expenditure extending years since 1689 (49). Cordiers notes, however puts the year as 1693 (50).

The man who came on the second occasion as the chief representative of the Company was the reputed founder of the Factory at Baleswar Desai, by name. Although he was not the pioneer yet he it is who has appropriated till now all the glory of having laid the foundation of Chandernagore. The most curious thing here is that it was also the same Du Plessis who got no lease a plot of land at Baleswar from Ibrahim Khan Nawab of Bengal and established a factory there. None the less many historians consider Desai as the founder of the Baleswar Factory (51). Desai was born at Tours sometime between 1640 and 1650 as the son of a family of nobles. He came out to India in the reign of Louis XIV as a member of the French East India Company. He married subsequently a daughter of Francis Martin the founder of Pondicherry (52).

The story of the French settlement in Chandernagore, it is to say in Bengal told in brief stands thus. In 1673 or 1674 Du Plessis secured, with the permission of the Nawab Ibrahim Khan a plot of land lying on the northern side of what is now known as Chandernagore and about four miles to the South of Hugi and erected a factory there, which was fortified subsequently perhaps in 1674, for protection against enemies (53). Then

the Dutch managed to win over the Nawab by presents and persons and drive out the French or perhaps the French left the place of their own accord for reasons of convenience. In 1687 Desai created a small centre at Bandal and started trade business. Later on as he had discussions with the miss naries of the Augustinians (54) or perhaps owing to some other inconvenience (55) he left the place and tried to remove to Hugi (56). But he could not secure a suitable plot here and so petitioned to the Nawab asking permission to erect a separate factory in the same plot in Chandernagore which Du Plessis had bought. The Dutch came to know of this and once more wrote to the Governor of Hugi and the Nawab. As a result the Company was at first refused permission. Finally however through the intercession of Gregory Boulet the Company got the permission to trade free of duty on paying a sum of Rs. 40,000 to the Mogul government and on the same terms as accorded to the Dutch. A merchant named Maccarah rendered great help in this matter. It was settled that of the Rs. 40,000 a quarter should be paid immediately and the rest in instalments of Rs. 5,000 a year on an interest of 3½ p.c. The interest, however was subsequently reduced to 2½ p.c. The petition for the farman was submitted in the beginning of 1689 the acknowledgement of receipt came in November 1691 and it reached the Nawab through the Dewan in Jan. 1693 (57). It was from this time that the French East India Company possessed a large proprietary right in Chandernagore and this was, as all historians agree, how the first foundation was laid of the French rule in Chandernagore.

(To be concluded)

(1) La Compagnie des Indes Orientales.

(2) Diary of William Hedges Esq. Vol. III. Wilson in his Early annals of the English in Bengal Vol. I gives a map of the Hugi river in the 16th century which shows Chandernagore. But it seems certain that the place was not known as such at that time.

(3) On the right was Hugi and on the left Bhupara to the west was Boro and to the east Kankinada. Mulajode and Garula were also soon passed and to the west lay now Patipara and Bhadreswar. Manasa Mangal by Vipradas.

(4) Sadhu carried fresh water on to the boat. The chief shouted "How on row on." Sadhu rowed past Garula and then Gondolpara he rowed past Jagadil and reached Nara. *Harikanlan chandi* edited by Akshaya Ch. Sarker.

(5) *Khalasani mahagrame yatra raja cha dhu arah.* "Banglar puranika" Part I.

(6) Bengal District Gazetteer—Hooley Vol. XXIV. I had not the opportunity to see the work myself. Sreejit Jendendra Kumar Chattopadhyaya, asst. Editor of Hitabadi informed me of the ms. which he had seen at the house of the late Pandit Raghunath Vidyahusan of the village *Dhanyakhari*, near *Saigal* i.e. in the district of Bardwan.

(7) Diary of William Hedges Vols. II & III. The author mentions Hugi Baranagore and other places and would certainly have mentioned Chandernagore had he come across the name.

at Pondicherry

A PRAYER FOR FREEDOM

By SISTER NIVEDITA

Bethink thee how the world did wait
And search for thee through time and clime
Some gave up home and love of friends
And went in quest of thee self banished
O'er dreary oceans, through primeval forests
Each step a struggle for the life or death
Then came the day when work bore fruit
And worship love and sacrifice
Fulfilled accepted and complete
Then Thou propitious rose to shed
The light of FREEDOM on mankind

Move on Oh Lord in thy resistless path
Till thy high morn overspreads the world
Till every land reflects thy light,
Till men and women with uplifted head
Behold their shackles broken and
know in springing joy their life renewed

KASHINATH NARAYAN SANE (1851-1927)

By JADUNATH SARKAR

I

IT is said that when the old Emperor Wilhelm I and Prince Bismarck were standing bare-headed as mourners beside the unfilled grave of Von Moltke, one thought passed through the minds of both—“Which of us will be the next?” Similarly when the news of Rajwade's death on the last day of 1926 followed that of Parasnis in the preceding March the thoughts of all who care for Maratha history turned instinctively and silently to the venerable scholar whose tall taciturn and lonely figure until recently used to be seen walking the streets of Kalyan every morning though in his 76th year. The present writer made frequent inquiries about Sane's health from mutual friends in Bombay and was quite unprepared for the news that he had passed away on the 17th March last.

II

Kashinath Narayan Sane was born in a Chitpavan Brahman family in a village near Basseri in the Thana district of the Bombay Presidency in 1851. After receiving his early education in that locality he entered the Deccan College Puna from which he graduated in 1873. Soon afterwards he entered the Government education service where his strenuous habits of work and love of strict discipline found favour with his superiors and led in a few years, to his appointment as Principal of the Puna Training College which he organised and developed with great energy and success. Then for several years he was Headmaster of the Government High Schools at Puna and Belgaum in succession. While he was at Belgaum the post of Educational Inspector, Southern Division fell vacant and was given

to Raoji Balaji Karandikar Sane felt that his claims to this high office had been unjustly superseded but his appeal was rejected by the authorities* and Sane showed his sense of the injustice done to him by retiring on pension before his time.

Thereafter he devoted himself entirely to the promotion of Marathi literature, especially history. A knowledge of the Marathi language was not demanded by the Bombay University in those days, and Hari Narayan Apte (the novelist) started a scheme for encouraging the study of their mother tongue among College students by granting some scholarships as the result of an examination in Marathi prose and poetry. Sane helped Apte in this good work by acting as honorary examiner for some years. He was on the executive committee of the Historical Society (*Mandal*) of Pune from its foundation (1910) and latterly its President. Government conferred on him the title of Rao Bahadur.

III

Sane was at College with N J Kirtane (who was afterwards to print the *Chitnis Bakhar* of Shivaji) and Vishnu Krishna Chiplunkar and imbibed a strong love of history which continued all his life. After leaving College he found that the only materials for Marathi history till then published were four or five instalments of the *Chitnis Bakhar* which had appeared in a general literary magazine named *Vaidhyanatar*. He then began to think of bringing out a monthly paper to be specially devoted to the publication of old historical letters. Chiplunkar heard of the idea and urged that in the projected magazine in addition to historical letters old unpublished Sanskrit and Marathi poems ought to be included. After some discussion the idea materialised: a monthly magazine named *Kavyetihas Sangraha* came out in January 1878 the editors being Sane Chiplunkar and Janardan Balaji Modak who took charge respectively of the three sections: Marathi historical letters, Sanskrit poems and Marathi poems. The size was super royal octavo 48 pages a month—sixteen pages being devoted to each section concurrently from month to month.

The magazine continued for eleven years. Chiplunkar retired at the end of the fourth year but Modak carried it on to the end.

At the close of the first year the editors wrote "Our undertaking has been greatly liked by those who read Marathi from Goa to Karachi and from Hubli Dharwar to Gwalior and the Nizam's Dominions. We have received unexpected support from men of all classes,—from school masters on Rs. 10 a month to Rao Sahibs and Rao Bahadurs and rich merchants. True, the support has not been sufficiently liberal to enable us to conduct this work regularly and without anxiety. But it has filled us with the hope that it would increase."

Among the important helpers were 26 gentlemen at different centres who secured old materials or carried on local investigations, sent old manuscripts or copied and annotated them for publication in the *Kavyetihas Sangraha*. But delay in the payment of subscriptions led to delay in publication till the number for December 1883 came out exactly twelve months later. Then the paper ceased.

But the *Kavyetihas Sangraha* could be proud of its achievement. In eleven years it had given to the world 6300 pages consisting of 22 historical works (great and small), 501 historical letters, petitions etc. 19 large Sanskrit books and 10 collections of Marathi poems. As the editor rightly boasts, "This work marked the revival of the national spirit in Maharashtra after the set back and despair following the disaster of 1817. A feeling of national pride was kindled. Every where there was awakened the desire to publish old historical works and letters."

Dr Ramkrishna Gopal Bhandarkar a very sober and fastidious critic gave it high-praise saying that this magazine had been a revelation to him of how vast an amount of historical material lay unknown in Maharashtra. So also Dadoba. The *Kavyetihas Sangraha* has died but its spirit liveth. As Ramdas said—True my body is gone away but I still exist in the world! Its best title to fame was the long array of its children: e.g. the *Kavya mala* series of Bombay (which printed Sanskrit mss only), the *Bharatavarsha* magazine of Parasnis (two years 1896-1897), Khare's *Atithash Lekh Sangraha* (1896-1906, 13 vols.) Rajvade's *Marathanchya Itihasanchin Sadhan* (1898-1906, 2 vols.), Vade's *Peshvas Diaries* (11 vols.) Parasnis's *Itihas Sangraha* (6 years) Ramdas and Ramdas and

* A writer in the *Kesari* suggests that Government had got an inkling of Sane's strength of character and silent but blazing patriotism and shelved him in that atmosphere of official excitement and suspicion.

Itihas aur Aitihasik, besides the publications of the Pona Mandal.*

IV

Besides the collection of Marathi historical letters (*Patren Yadi uaghaire*) which he published by instalments in the *Karyetihās Sangraha*, Sane separately printed the *Sabhasad Bakhar* of Shivaji (which went into six editions in his life time), the *Chitnis Bakhar* (of which the volumes dealing with Shivaji's successors were issued by him for the first time, while of the Shivaji volume he brought out a richly annotated second edition in 1924) *Bhanu Sahib's Bakhar* (three editions), the *Panipat Bakhar* and Ramchandra Pant Amatya's *Rojniti*. While his editions of the *Sabhasad* and *Chitnis bakhars* are marked by minute accuracy in giving variations of reading and scrupulous fidelity to the original he spoiled the *Bhanu Sahib's Bakhar* by modernising and simplifying the text for the benefit of schoolboy readers! This is opposed to the canons of scholarship. A diary which kept in his service days describing the topography and remains of many old places all over Maharashtra has been published anonymously in the *Vaidha-jnan-ristar*.

V

In his character, he was an example of the best type of Chitpavan Brahmins,—as G. K. Gokhale was. A stern disciplinarian with a strong and independent nature he was very tidy and punctual in his habits, and gave in his own life a fine illustration

of that orderliness, method and minute accuracy which he insisted on in others. In reading his works, as in conversation with him, one was impressed not by the depth of his scholarship but by his admirable precision, methodical habit and strength of mind. Indeed, Sane's sanity was a pleasing surprise among modern Marathi writers on history.

His private life was what one would expect from such a character. His grown up and distinguished son a vakil of the Bombay High Court, died of the terrible influenza epidemic which swept over the world just after the Great War. Sane's heart was made desolate, but his back was unbent. He kept up his regular habit of taking daily exercise by a morning walk. When, in 1924, I paid a visit to Kailan solely for the purpose of seeing him again I found the old man returning on foot from the Durgadi side, a slim, vigorous perfectly erect figure, who struck even a stranger as a commanding personality. Indeed he reminded one most of the late Justice Sir Chandra Madhav Ghosh, whose aged thin but stiff and dignified form could be seen taking his customary walk on the *mardan* of Calcutta every morning almost to the day of his death.

The end was worthy of the man. Sane retained his mental powers to the last. In extreme age, he began to languish, but his brain remained as fresh as ever, and he was ready to examine and accept any new idea. When doctors forbade him to leave his room he took his customary exercise on its floor. For the last fifteen days he gradually grew weaker and weaker and at last sank peacefully to rest in full consciousness, without pain and without repining, like a ripe fruit dropping from its stem.

* Pancham Sammelan Britta, pp 113 et seq.

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor *The Modern Review*]

Portrait of Guru Gobind Singh

I

The frontispiece of your *Modern Review* for March 1927 representing the portrait of Guru

Gobind Singh is the most unbecoming of its kind. It shows him with a shaved head and a trimmed beard. This is quite the reverse of what the Guru actually cleaved. He was never dressed like a Brahman (naked bodied) nor did he look

like a Mughal Emperor. On the other hand, he was always dressed as a hero and a saint, both combined.

SHAMSHER SINGH.

II

Please permit me to make a few observations on the portrait of Guru Gobind Singh published in the Modern Review March 1927.

I admit the artist drew this picture all in good spirit and never dreamt of injuring the feelings of the Sikhs. For all his honest efforts I cannot help saying that it was a great failure. It betrays total ignorance of the artist about the Sikh Gurus and their religion. It is very sad that the artist is ignorant of even the fundamental principles of the Sikhs. (1) You can see no Sikh without hair and beard except under special circumstances. He prefers death to the removal of hair. When Banda Bahadur a Sikh hero was asked by the Mughals in his prison to cut the hair of his son with his own hands the former could not bear such an idea and he preferred to see the head of his son cut off along with hair.

I therefore need not write that the Sikh

feelings have been greatly injured to see their great Guru represented without hair. It is quite apparent from the picture that his hair has been cut short.

(2) Secondly the great master always used to wear a crest on his head. And in Sikh history he is always represented with a hawk and indeed he is called the Lord of the white hawk.

(3) He never wore any ear ring and he preached against this custom of the Punjabis. Again the mechanical use of a thing has no place in Sikhism. The turning of the rosary is not a form of worship of the Sikhs and yet this master has been represented with a rosary round his neck.

He is shown here as wearing a type of moustache generally worn by the Mahomedans. One is sure to take this picture for one of a Musalman.

A person outside the Punjab can hardly distinguish a Sikh from a Mahomedan although a Sikh has quite a distinct look.

I wonder why the Bengalees otherwise so widely read, are ignorant of the Sikhs. Is it not indeed sad that they know all about England, Europe and America and very little about their own countrymen?

PHULA SINGH, B.A.

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed: Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sindhi, Spanish, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses etc. will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer etc. according to the language of the books. No criticism of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

THE DEPRESSED CLASSES AND CHRISTIANITY By Puthenveedu O Philip B. A. Published by the Christian Literature Society Madras. Pp. 52. Price four annas.

The author has described in this book let the condition of the depressed classes and also what Christianity has done and can do for them.

The author frankly admits that the admission of the depressed classes in large numbers acts as a downward pull on the Christian community and prevents Indian Christianity from coming to its own. Is a serious objection urged against mass movements (p. 49).

The booklet is worth reading.

THE HIDDEN POWER IN MAN By M. N. Ganesa Iyer. Published by P. A. Vinayag Mudathar & Co. Sivacarpal Madras. Pp. 482. Price Rs. 2.8.

Crude, doctrinal and irrational.

THE VISHNU PURANA. A SUMMARY WITH INTRODUCTION AND NOTES By J. M. Macfie. Published by the Christian Literature Society for India. Pp. 258.

It is a good and readable summary of the whole book. Some of the points discussed in the introduction are Pantheism plus Polytheism. The Hindu Triad, the development of Vishnu. Vishnu's incarnations, the story of Krishna's life, Heaven and Hell, Sins and Sorrows, Transmigration and Karma, Hindu Chronology, etc.

It is a different book from the Vishnu Purana published in the series called the 'Sacred Books of the East' described and examined.

WORSHIP IN ISLAM By Rev. E. E. Carter. Bay Ph. D. Published by the Christian Literature Society for India. Pp. 241. Price Rs. 2.8.

It is a translation of Al Ghazzali's book of the Ihya on the worship with commentary and introduction.

In the introduction the author deals with the following subjects —

- (1) The word sala and its meanings
 - (2) The performance of the worship
 - (3) The parts of the worship
 - (4) The kinds of the worship
 - (5) Other expressions of the divine life
- A useful publication

SELF REALIZATION By *Syamananda Brahma chary* Published by *Govinda Chandra Mukherjee Benares Cantt* Pp 288+2 Price Rs. 2 Paper bound Rs 2 8 (cloth)

In this book the author discusses the following points—condition of deluded people Deception of Maya, Maya Theory propounded the theory of opposites

How to get rid of Jivatwa Worship of Maya and Truth (Symbolization, Kali and Siva etc.) The Researcher Karma and Bhramti Rebirth Responsibility the Self the Realiser the Realisation

Written from the standpoint of Absolute Vedantism

MAHES CHANDRA GHOSE

INSURANCE VADE MECUM 1926 A Companion Book for the Agent and Manager Insurer and Insurant Published by the Insurance Publicity Company Lahore. Price with Accounts Supplement Rs 2 12

FINANCIAL SUPPLEMENT TO INSURANCE VADE MECUM 1926 Statistical Analysis of the Working of LIFE ASSURANCE COMPANIES IN INDIA together with summary of Accounts Price As 8 or 10 d net. In cloth As 12

Useful publications We recommend them to all interested in insurance. The get up might be improved.

THE SHADOW OF THE DEAD A PLAY IN FOUR ACTS By *J N Mitra M A* printed at the Anglo-Oriental Press Lucknow Pp 42 Price Rs 1

A drama, we are told and a tragedy in its ostentatious display of thunderstorms and wrecks the book has for its hero an orphan brought up in luxury by rich foster parents and married to their only beautiful daughter Love death piety devotion are sufficient materials for a tragic dramatist but this one a mixture of all these is only a jangle of confused scenes of a highly rot up pictorial effect. The characters are shadowy and the plot is evidently absent—the whole thing being shot with the proverbial frenzy of authorship

SHAKESPEARE AND THE ELIZABETHAN DRAMA By *P Bumanathan, M A* Published by *G Subbiah chetty & Co Book sellers* Trykancat Madras

The greatest mystery (though Mysteries there are in this book) is how it could run into a second edition. Written in the language of text book on notions it is a confused heap of informations, necessary and even otherwise Crammed in a dry unconstructive and mechanical way the study on Shakespeare is based upon that of Dowden Al though frequent references have been made to critics such as Wily names as Bradley and Munton seem to be almost unknown to the author The last chapter on Restoration and XVIII century drama

is an unmeaning, tail A rignmarole of scrappy and diffused treatment of loose and disjointed thoughts the book can hardly be of any use to those for whom it is intended

A BRIEF INTRODUCTION TO PUBLIC FINANCE By *Aesari Singh Panoholy B A LL B* Lately Indian Tutor to His Highness the Maharaja of Rewa Price Rs 5 Pp 106 To be had of the manager For Young Princes series Rewa C I

After expounding the general principles of his subject in a brief introductory chapter the author proceeds to examine and explain their working in the four following ones on Public Expenditure Public Income Public Debt and Budget Only the scantiest elements of the subject are given but the exposition is lucid and systematic Even the fact that it belongs to the For Young Princes series does not justify though perhaps it explains, the high price of the book which is prohibitive for those who are not princes

H S

GANDHI AND AUROBINDO By *B O Clatterjee* Published by the *Calcutta Publishers College Street Market Calcutta* Price not mentioned

The book under review appeared so far as we can remember by instalments in some noted daily in Calcutta and excited admiration from the public for its masterly handling of the two great figures of the present day India Gandhi and Aurobindo stand as two apostles of faith and of action in whom the consciousness of re-generation of a fallen race has taken a definite shape The author summarises that the non violent non-co-operation movement of Gandhi is not entirely a new theory and that a similar agitation of the form of passive resistance was inaugurated by Aurobindo in the Bengal Partition days which was soon followed by a revolutionary movement. And from behind the non co-operation movement also are already visible the flames of revolutionary fire The way to get rid of the calamity is to accept the almost prophetic doctrine of Mr Aurobindo Ghose, viz the use of partial *Swaraj* as a step and means towards complete *Swaraj* In recounting the lives of the two patriots the author has given us a nice vivid and genuine history of the renaissance of modern India His style is charming and vigorous The Right Honourable V S Srinivasa Sastri has added to the value of this brief history of Indian Nationalism by affixing to it a pithy and wise foreword

STORIES FROM VETALA PANCHAVINSATI By *Ramchandra Acharya B A* The Students Store Dornhampore (Gangam) Price As 2 1/2 1926

SEETA By *Godavarish Misra M A B T* The Students Store Dornhampore (Gangam) Price As 1 1926

Two little books intended for children The stories have been told in clear and simple English The books will please those for whom they are written

UPANISHADS (THE KATHA THE HEDA AND THE ISHA) By *Sureshchandra Das B A* Published by *Athanasia Library Book sellers and publishers, College Square Calcutta*

The book contains translations of some notable extracts from the *Isha Kena* and *Katha Upanishads*. The translations are not bad.

LEADERS OF THE BRAHMO SAMAJ Published by G. A. Natesan & Co. Madras Price Rs 18

It is a record of the lives and achievements of the pioneers of the Brahmo movement namely Ram Mohan Roy, Devendranath Tagore, Keshav Chandra Sen, Pratapchandra Mazumdar, Satspada Banerjee, Ananda Mohan Bose and Sivanath Sastri. Messrs. Natesan & Co. never lag behind the progress of the time. They are always up-to-date. The present volume like many others on different subjects bears testimony to the publishers' sagacity in bringing to the easy reach of the public world of information in a nutshell with a price admirably suiting the pockets of the poor Indian readers. The book is valuable.

RAMANATH TO RAM TIRATH Published by Messrs G. A. Natesan & Co. Madras Price Rs 18

The book contains the lives of the saints of Northern India and of the Sikh Gurus. They are Kabir, Gurm Nanak, Vallabhacharya, Tulsi Das, Guru Govind Swami, Virajananand, Swami Dayanand and Swami Ram Tirath. Several illustrations have made the book more interesting. It is a nice book on the evolution of religious thought in India.

INDIA AND HER PEOPLE By Swami Abhedananda. Published by Satish Chandra Mukherjee, Basumati, Off. c 166 Boubhazar Street Calcutta. Price Rs 2

The book is a compilation of a series of lectures delivered by the Swami before the Brooklyn Institute of Arts and Sciences during the season of 1903-1906. It is divided into seven chapters comprising seven lectures on the philosophy, religion, education, society, political institutions, etc. of India. To sum up the volume is an exposition of India, ancient and modern. It covers the Indian life not only in its religious aspects but also in its practical ways. So it is an all round account of India and her people. Those foreigners or Indians, who will feel an interest to know about India proper will be highly helped by this work of supreme importance. The book is completely devoid of exaggerations, which the writers of such accounts are prone to make. Every library and every educated man of India should possess a copy of this volume—it is so helpful, informative and instructive.

P. SENGUPTA

KENYA By Norman Leys M.B.E. Third Edition (1926) 4s 6d. The Hogarth Press London.

In the some four hundred pages of this book Dr. Leys has chosen to give us a picture of the life in Kenya. The author is eminently fitted for such a task for he has an intimate knowledge of the life and conditions in Kenya having spent years in medical service in various parts of Africa. We do not know of any earlier effort to record Kenya life on a scale like that attempted here and we therefore welcome this present effort.

The book may be roughly divided into two portions—one historical and the other topical or current. The historical survey begins from very early times and recording how Kenya came under British influence proceeds to modern times coming

down to practically 1923. The author next gives us a description of the industrial activities of the British people there, their economic and social conditions. There is also a chapter on Christian missions, one on the Masai and one on Black and White. The book has a note on the future of Kenya.

There is however one striking defect in the book. It is strong that in a book having the name of the whole extent of a country as its caption there is not much reference—barren of course casual—of the indigenous people and of those Indians who decades ago settled and still live in Kenya. As noted above there is a chapter on the African tribe known as Masai and some explanation is attempted there for the absence of description of other local tribes. But no explanation as to the omission of a chapter on those Indians who have largely helped to make Kenya an inviting country.

Nevertheless we feel constrained to say that the author has largely succeeded in his aim in this book which he has throughout written sympathetically and he deserves our congratulations. The book has an index, an appendix and an introduction by Professor Gilbert Murray and is bound to serve politicians and historians well.

R. C. G.

HINDI

GRAMA KA PHER Translated by Syamsundar Deved. Subrid. V.B. B.A. [?] Published by the Chand Office Allahabad 1925 Pp 109

An unknown Bengali novel by one Mr Jogendra Nath Chaudhuri M.A. is translated into Hindi.

ISVARIA, NYATA By Mr. Ramdas Gaur. Published by the Ganga Pustakmala Office Lucknow 1925 Pp 87

Mr. Gaur presents this drama which is as he says based on actual facts. The prologue in the form of old Sanskrit Nandi and the long poetical quotations are too much for the modern readers.

HINDI BALDYUT SARDYALI By Pandit Kesavprasad Mishra and Mr. Ramnath Singh. Published by R. N. Singh 232 Bhadani Benares 1925 Pp 60

The attempt of the authors to coin this Hindi Electrical Glossary will be found useful. Prof. B. C. Chatterjee, the well known Electrical Engineer recommends it in his Prologue.

SURYA SIDDHANTA PARTS I & II By Mahabharatprasad Srivastava B.Sc. LT. Published by the Vijnana Parishat Pp 321

The two chapters of the Sanskrit Surya Siddhanta called madhyamadhikara and apastadhikara are ably edited with a good commentary which is named Vijnana-bhasya. The maps, charts, diagrams and mathematical calculations will be found useful to the students of Indian Astronomy. The appendix gives a list of the technical terms.

SWADHINYATA KE PUJARI By Bhudev Vidya Iankara. Published by the Pratap Office, Cawnpur 1925 Pp 226

Short life sketches of the patriots of Russia who

stood against Czarism and suffered for their political convictions are given in this work. It may be noted that these facts of history are often stranger than fiction. There are several portraits.

KRISHNAJI RAJGURAR *Paramchitra Chitravali*
Published by the Prastip Office Coimbatore 1920
Pp 267

The autobiography of Prince Kropotkin who was exiled in Siberia is charming as a work of fiction. There is a portrait of the Prince on the cover.

MANOVUDANA B. Prof. Sudhakar M. A. The
Indian Printing Works Guadmandi Lahore. Pp
272

A very useful and popular treatise on Psychology. The author lightly touches upon the interesting topics of Educational Psychology, Experimental Psychology, Psycho-therapy, Sexology, Race Psychology and Industrial Psychology.

RAMES BASU

BENGALI

VISVA BHARATI PUBLICATIONS

GHARE BAIRE. 4th Edition Price Rs 2 8

GALPA GUCHCHA 1st 2nd and 3rd Part Price
Rs 18 each.

SAMAJ 4th Edition Price 14 As

RAJTA KARABI First Edition Price Re 1
12 As

GITDIALYA 4th Impression Price not mentioned

GITAMALIKA First Part First Edition Price
Rs. 1 8 As

KATHA O KAHINI 9th Edition Price Re. 1 4 As

With the exception of *Gitamalika* and *Rajta Karabi* all the above publications of the Visva Bharati are either new editions or reprints of some of Rabindranath Tagore's already published works.

The opening paragraph of *Ghare Baire* as it appeared in serial form in the Bengali monthly *Sahitya-Pitra* has been re-tored in this edition and it is a delight to read the splendid lines with which the heroine *Bimala* begins her story. We may mention also that an English translation of it appeared in the *Modern Poet* under the title of "At Home and Abroad".

If we leave aside the quadruplet, *Chaturanga*, which is more a novel than a collection of stories, with the short stories of Rabindranath are now presented for the first time within the compass of a single series in the *Galpa Guchcha*. Previous editions of *Galpa Guchcha*, were complete in five parts and even then they did not include all the stories, some of which were published in separate volumes. In the present edition the stories have been arranged chronologically with the year and month of writing mentioned at the bottom of each.

Gitdialya and *Katha O Kahini* mark no departure either in size or arrangement from previous editions.

Rajta Karabi a symbolic drama which first appeared in *Prabasi* over three years ago and

which has since been translated into English under the title of *Red Oleanders* is now offered to the public for the first time in book form as also is *Gitamalika* which contains some of the poet's latest songs (with music appended to each). We congratulate the Visva Bharati publication department on the decent get up of these volumes but we regret to note that there are occasional misprints which may puzzle the unfamiliar reader who may be deceived into ascribing to the author those vagaries of the text which are due to the pranks of the printer's devil.

H S

DESCRIPTIVE CATALOGUE OF BENGALI MANUSCRIPTS
Vol. I.—By Professor Basantaranjan Dey Vidyalalabha and Mr. Basantakumar Chatterjee M.A.
Published by the University of Calcutta 1926 pp.
XXVII+252+2

This volume of the Catalogue deals with 418 Ramayana MSS preserved in the Bengali MSS Library and the University of Calcutta of which specimens are given from 286. The descriptions are fairly complete and the peculiarities are noted. Professor Ray who is responsible for the text is the best authority on old Bengali. Besides the well known *Krittivasa* we have here a number of Bengali writers on the various episodes of the Ramayana. The MSS are mostly modern recensions the oldest is dated 1580 A.D. and several others belong to the 17th century. The *Raybara* poems which are composed in the so-called *Bhat* dialect are a class by themselves owing to their diction and metre. Mr. Chatterjee in his long Introduction has dealt with various topics such as the Ramayana poets, non-Valmikian elements in the Bengali Ramayanas etc. There is however no attempt at the filiation of the texts, which is so important a preliminary to scientific study.

RAMES BASU

GUJARATI

SWATANTRA NO DAVO By Pranshanakar
Someswar Joshi of Johannesburg Printed at the
Diamond Jubilee Press Ahmedabad,
paper cover Pp 56 Price Re 0 8 0 (1926)

A spirited translation of Rev C F Andrews' "Chim for Independence. We trust it will be read widely.

DAMPATI VARTALAP B. Jinaraj Karsanyi
Thakkar Printed at the Jnan Mandir Printing
Press, Ahmedabad, paper cover Pp 108. Price
Rs. 0 14 0 (1926)

In the shape of forty nightly dialogues between a rising young husband and his equally young bride the writer has elaborated principles of social and domestic uplift, interspersing them with humorous interludes.

VIHARINI B. Jinaraj Prabhakar printed
at the Akshaya Printing Press, Ahmedabad. Paper
Cover 1 p 71 Price Rs. 0 12 0 (1926)

Mr. Jinaraj is not a tyro in the field of versification. Many of the verses collected and printed in this little book have appeared in various monthlies, but the one feature of it that attracts attention is.

the foreword written by Mr. Khabardar which is of a practical nature and appraises the work at its proper value. He rightly says that the writer is not an epoch maker.

KANNAD DE PRABANDH by *Dalabhai Patilambar Das Derasari*. Bar at law. Printed at the *Vasant Press Ahmedabad* cloth bound Pp 24+24+253 Price Rs 3 8 (1926)

This is the second edition of an old Gujarati historical poem the text of which was edited by Mr. D. Dasari some years ago. We then acknowledged the great service done to our literature by him by the publication.

This second edition has added to its value by the further furnishing of many useful features: a scholarly and interesting observation as the poem by Mr. Narsinh Rao Divatia, a thorough revision of the notes, an outline map of the places mentioned in the poem, are some of them. Mr. Derasari has been so very saturated with the spirit of the old language as actually to be able to compose a poem in it!

BAL CHANDRA By *Giridhar Sharma of Jhalra Patan* printed at the *Aditya Press Ahmedabad* cover (illustrated) Pp 80 Price Re 10 (1926)

Kavi Giridhar Sharma is well known for his Hindi scholarship. He is equally at home in Gujarati in which he takes great interest which is testified to by this small book of verses which is a (verse) translation of Dr. Rabindranath Tagore's *The Crescent Moon*.

It gives pretty good idea of the original.

INDIA IN THE TIMES OF AURANZEB By *Nadji Printed at the Islam Press Bombay Paper Cover* Pp 183 (1926)

The history of this book is as follows. Mr. J. R. Roy wrote an article called 'India in the times of the Moguls'. To the Chief Justice of H. E. H. the Nizam's High Court, Mirza Yariang Samiullah Beg, it appeared to be unfair and he replied to it in Urdu under the above name and the present author has translated it from Urdu into Gujarati with a view to show that the last of the great Mogul Emperors has been thus judged and the adverse opinions passed on his administration and religious ideas are unfair. By means of quotations from the works of European writers of the times the other side of the shield is tried to be presented. The quotations are full of information and naturally provoke thought. We want the book to secure many readers.

K M J

MARATHI

MARATHI LITERATURE AND WRITERS OF BARODA By *G. R. Dadaaule* Publisher—*The Educational Dept. of the Baroda State* Price As eleven

This book gives an interesting account of Marathi writers past and present in Baroda and the service rendered by them to the Marathi Literature.

DEBARATHI C. R. DAS Published by *Goyate Company* Price As 8

A biographical sketch of the late C. R. Das with extracts from obituary notices in the Press.

THE HOME ENGLISH GUIDE By *G. S. Sardesai* Price As 8

The author has sufficiently long experience of teaching English to Indian boys and girls and has close acquaintance with the difficulties that Indian students have to face in acquiring a fair knowledge of a foreign language. This ought to be a sufficient guarantee for the usefulness of the new method he has devised for facilitating the teaching of English to Indian beginners. The method deserves a fair trial and from what I have seen of the book I feel no hesitation in saying that it will prove successful.

HINDU DHARMA SHIKSHANA BOOK II By *Mahadeo Shastri Dindar* Publisher—*Tilak Vidyapathi Poona*

This is an outcome of the resolution passed two years ago at the Teachers' Conference held under the auspices of the Tilak National University with regard to the preparation of suitable text books for religious instruction to be used in Primary and lower Secondary schools. The tone of the instruction conveyed is liberal and suited to the present times.

RAJ KUMARANJEN SANGOPANA A disciple of *Madhav* Pages 200 Price Rs Two

The author who belongs to an aristocratic family in Gwalior seems to be alive to the entirely wrong way in which Indian Princes are being brought up and educated under the influence of a foreign Government. These evils are vividly set forth in the book and the right lines on which their training must go are laid down. The author has freely drawn upon the General Policy—a monumental work by the late Maharaja Madhavarao Scindia—in the preparation of the book and has gratefully acknowledged the inspiration and the light received from His late Highness. The book ought to be read thought over and digested not only by Indian Princes but also their nobility who have the interests of their sons at heart.

V. G. APTE

SANSKRIT

RASAGRANTHAMALA Edited by *Rajavaidya Jinaraj Kallidasa Shastri Ayurvedacharya Rasashala Grantahabandana Gondal Kathiawar*

This is a series the object of which is to publish *rasa sastras* or works dealing with chemistry or alchemy as developed in India. The editor has in his library a good collection of very rare and valuable MSS of such works of which the following four have been published and sent to us.

1. **RASENDRAMANGALA** (Pp 68 Price Annas 12)

Its authorship is attributed to Nagaryuna, who is said to have been the author among others of the *Rudrayamala* a work on *dhatuvada* of which the first two parts *Dhatukalpa* and *Paradhalpa* have been secured by the editor. It has a few other parts not yet found. The present edition of the *Paser dramangala* is based on three MSS all of

them being very incorrect and incomplete. Consequently we could not have the entire work in the edition, there being only the first four chapters out of eight, as the author himself says in the beginning of his book.

2. *Rasakamadhurst of Cusumani* (Pp. 417. Price, Rs. 4.)

It is divided in four parts or parts, of which the present volume contains only the fourth (*Chakras* or treatment of diseases), prescribing various medicines according to this kind of disease. The first three parts, viz., *Upakarana*, *Dharmajalaka*, and *Risakirama*, may have come out by this time under the editorship of Vaidharaja Yalavaji Trkampi Acharya, Bombay.

3. *Mantrakhandas of Nityanatha* (Pp. 141. Price Rs. 2.)

It forms the fifth part of a work called *Risakirama* of which the first two parts, *Rasakhandas* and *Risendrakhandas* have already been published in Calcutta and Bombay and the fourth in Bombay edited by Vaidharaja Yalavaji Trkampi, while the third part *Mantrakhandas* is being published by the present editor in his monthly in Gujarati, *Paras*. The *Mantrakhandas* contains various kinds of *mantras* or formulas for charm-spell or magic. Those who want to get rid of troubles from bugs, mosquitoes, rats, snakes, flies or other such insects may try some of the remedies given in the book (Pp. 63-64).

4. *Rasaprakasasudhakar of Yasadhara* (Pp. 183. Price Rs. 2.)

It deals with alchemy, besides the purification etc. of such metals as quick-silver, gold, silver, copper, and so forth.

We welcome the series. Though the books are not so critically edited as could be desired yet they have much value which cannot be denied.

VINAYAKKAR BHATTACHARYA.

FRENCH

REACTIONS DE LA MATIÈRE VIVANTE ET SON VIVANT. PHYSIOLOGIE ET L'ACCÈS DE LA SEVE. PHYSIOLOGIE ET LA PHOTOSYNTHESE. Par Sir J. C. Bose—published by Gauthier-Villars, Paris.

The series of standard works on diverse activities of the life of plant by Sir J. C. Bose have roused keen and universal interest. The most important advances in physiology have hitherto been to a great extent the contributions made by German and French savants. The methods originated by them have been followed in other countries with success, it is only third hand knowledge, often antiquated that reached India.

It is a matter of much gratification that the tide has now turned and the original contributions made by Sir J. C. Bose by the initiation of perfectly novel methods have not only opened out new fields of exploration but also established a wider synthesis in the phenomena of life. His works have already been translated and published by some leading German publishers. There was still a large demand for them in the Latin Countries, and Messrs. Gauthier-Villars the

eminent scientific publisher of Paris, are bringing out French editions of Sir J. C. Bose's works, of which the three books under review have just been published.

The scope of these works will be understood from the Preface written by M. Menier, Minister of the Institute and Director of Natural History Museum of Paris, whose unique contributions in plant physiology are universally regarded as classical. We give below a free translation of the greater part of the preface.

Sir Jagadish Bose has for a long time been devoted to the detection and measurement of the most delicate phenomena of plant life such as gaseous interchange, growth, movements of the sap etc. As an inventor of rare ingenuity he has devised a whole series of apparatus which by their sensitiveness surpass all those known hitherto and which inscribe automatically the most delicate manifestations of the vegetable life thus avoiding errors which are inevitable in personal observations.

His work on the Physiology of Photosynthesis is most suggestive in this respect. The measurement of chlorophyll, gaseous exchanges, sources of stored energy on which depend the life of all beings etc. were attempted until now by tedious methods of analysis of too long a duration to secure the constancy of the numerous factors on which the accuracy of measurement of photosynthesis depends. Photosynthesis can be measured from the volume of carbonic acid gas absorbed or from the oxygen disengaged or from the increase of weight of the organs due to assimilation of carbon.

Sir Jagadish Bose has utilized the well known characteristic of aquatic plants which disengage series of bubbles of oxygen when subjected to isolation, these increasing or decreasing according to the intensity of illumination.

He has invented an apparatus "The Bubbles" for measurement of pure oxygen bubbles of constant volume emitted at regular intervals in proportion to the intensity of chlorophyll activity.

To this apparatus he has added an automatic recorder for the record of successive oxygen bubbles the automatic method being free from the errors of personal observation.

For a source of artificial light the author employs a special lamp the "Poincote" consisting of a luminous point making it possible to obtain variations of rigorously defined intensity of light.

With the aid of these instruments it is possible to complete experiments within a short time and thus avoid the fatigue of the plant which vitiates the results. The action of diverse factors which intervene in the photosynthesis can also be easily isolated these factors being temperature, luminous intensity and composition of the atmosphere.

The study of the assimilation in the natural conditions of illumination is difficult, because the intensity of sunlight, direct or diffuse undergoes variations which is not perceived by the human eye. The difficulty has been overcome by Sir J. C. Bose's invention of the electric photometer by which the most delicate variations of intensity can be measured with precision.

Numerous are the problems elucidated by the author which could not be solved by the existing methods. As it is impossible to give an account of all of them I shall content myself only with a short summary of the results obtained of the

action of formic aldehyde. It is known that this body is considered as the initial product of the synthesis of carbohydrates. This hypothesis seemed to be in contradiction to the well established fact of the toxicity of formic aldehyde in plants. Sir Jagadis has shown that an extremely small dose of this aldehyde far from being poisonous increases the activity of assimilation. This substance is immediately polymerised after formation, so that there is no toxic dose accumulated in the cells.

'It is already a magnificent achievement to be able to analyse with his instruments, with a precision hitherto unknown, the different factors which intervene in photosynthesis.

The clarity of the method of exposition adds further to the originality of the work and reveals Sir Jagadis Bose not only as an impeccable experimenter but also an incomparable professor.

X

LETTERS FROM THE EDITOR

VIII

The city of Geneva is the capital of the Swiss canton of the same name. It is situated at the south-western extremity of the beautiful lake of the same name which is also called Lake Lemman, and is the largest in central Europe. It is formed by the river Rhone which enters it at its east end near Villeneuve and quits it at its west end, flowing through the city of Geneva. The lake is crescent shaped the east end being broad and rounded and the west end tapering towards the city of Geneva, where consequently one recalls Byron's phrase "the blue rushing of the arrowy Rhone" (*Childs Harold* canto iii, stanza 71). The waters of this lake are as clear as glass and unusually blue. An idea of their transparency may be formed from the fact that the limit of visibility of a white disk is 33 feet in winter and 21½ feet in summer. A number of lake dwellings, of varying dates have been found on the shores of the lake. Mont Blanc is visible from it, and, although sixty miles distant, is often reflected in its waters. Mirages are sometimes observed on the lake.

Geneva is an old city, its history being traceable to the second century B.C. It was formerly surrounded by walls, and consisted of clusters of narrow and ill drained streets, but since the accession of the radical party to power in 1847 the town has been almost entirely rebuilt in modern style. The old walls have been removed, the streets widened and well paved, and new and commodious quays built along the

shores of the lake and river. The Rhone forms two islands in its course through the town. On one of these, laid out as a public pleasure ground is a statue of Rousseau in a sitting posture. I visited this spot several times in the company of friends.

The population of Geneva was 135,059 in 1920. Besides this it has a considerable floating population during the League Assembly meetings and the sessions of various international conferences. Geneva is famous as a theological, literary and scientific centre. It has given birth to the Casaubons, to Rousseau, to the physicist De Saussure, to the naturalists De Candolle, Charles Bonnet, and the Pictets, to Necker, to Amiex, etc. Other names connected with Geneva, either as natives or as residents, are Calvin, Bonivard, Scaliger, Sismondi, Alphonse Favre, etc. The principal edifices are the cathedral of St. Peter (1124), the town hall, where the Alabama arbitrators met in 1872, the academy, founded in 1559 by Calvin, and converted in 1873 into a university with a great library, the International Reformation Monument (1917) facing the University, the magnificent theatre, opened in 1879, the Salle de la Reformation, where the League Assembly meetings are held, the Russian Church, the new post office, and the Hotel des Nations (seat of the League of Nations). The principal museums are the Rath Museum, the Fol Museum with collections of Greek, Roman and Etruscan antiquities, the Athenaeum, devoted to the fine arts, and

the museum of natural history, containing De Saussure's geological collection, admirable collections of fossil plants, etc. The Rousseau Museum, though not large, is also worth a visit. I found there portraits of Rousseau of various kinds and sizes, and all the different editions of his works hitherto published, besides some of his manuscript.

Geneva boasts of a fine observatory, and of a number of technical schools where watch making, chemistry, medicine, commerce, fine arts, etc., are taught. It is well supplied with charitable institutions, hospitals, etc.

Fairs have been held periodically in the vicinity of Geneva since the thirteenth century, frequented by Italian, French, and Swiss merchants.

The city is divided into two portions by the lake, and by the river Rhone which flows westwards under the seven bridges by which the two halves of the town communicate with each other.

Many of the fashionable hotels of Geneva are situated on a road running parallel to the quay on the northern shore of the lake. These hotels command a view of the lake and mountain scenery. In the evenings the quay is frequented by large numbers of people of all ages and both sexes. On Sundays and other holidays, the steamers, motor launches, motor boats, and other water craft of various descriptions are so overcrowded with men and women and children of all ranks and classes that it appears as if the whole of Geneva were out on pleasure bent. Such outings conduce to the health and efficiency of the population. Both shores of the lake are dotted with cafes and restaurants at convenient points, where the water craft touch. Chairs and tables are to be found placed under shady trees and one can sit there with one's family or friends and order any kinds of refreshments, and have a game of cards, etc., if one likes. After spending almost the whole day in the open air, the excursionists return home late in the afternoon or in the evening. Besides water craft, some use the railway, too, and those who have their own automobiles use them for these excursions.

The soil of the canton of Geneva is not naturally fertile, but has been rendered so by the industry of the inhabitants. Consequently gardening and vine and fruit growing are pursued as industries very profitably. One afternoon, after taking tea and some refreshment's at a cafe on the southern shore

of the lake, I strolled along a rather narrow road bordered by orchards noted with admiration how by means of intensive cultivation a considerable number of pear, apple and peach trees had been grown on small plots of land measuring only a few square yards each, and how the branches of very small trees were almost overweighed with fruit. I also noticed with admiration how the branches of some fruit-trees which are not creepers had been trained to run along the wires of fences and bear an abundant crop of fruit. Wherever one might go in Switzerland, one would find the mountain slopes covered with vineyards, fruit trees, etc.

Besides being engaged in agricultural industries, the people manufacture watches, articles of *bijouterie*, musical boxes, chronometers, mathematical instruments, pottery, etc.

Geneva appeared to me on the whole free from dirt and dust. The buildings were also fine, though, as in many other towns of Europe, the architecture was rather monotonous and devoid of art. There are some well kept public gardens. Considering the size of the town, the number of hotels is rather large. That is no doubt due to Switzerland being a tourists' country and Geneva being a city of various international gatherings.

It was vacation time when I visited the University. So I saw only the buildings and some of the rooms. In a hall I saw the busts of professors, mostly dead and some, I presume, still alive. As was to be expected, the faces were all intelligent looking. But what at the time I was impressed with was the calm, passionless expression of self-control in them. Most of the Europeans in India are Britishers. As I have not seen all or most of them, I cannot say how all or most of them look. But from the Britishers and their real or would be relatives the Anglo-Indians whom I have seen, the general impression left on my mind is that they have an aggressive, overbearing, and somewhat fierce look, as if they wanted to frighten browbeat and cow down somebody and consequently always had their war paint on. During my brief stay in England, Switzerland and other European countries, I did not find many examples of this type of expression. If my observation has been correct, the explanation is quite simple. Here in India the Britisher feels that he can maintain his unnatural position

only by being always in a state of war as it were whereas in England and other European countries the natives live among their own people whom it is neither necessary nor easy to terrorise and cow down.

The International Reformation Monument which faces the University is an impressive structure. It takes the form of a long and high stone wall on the surface of which are the statues in relief of Protestant reformers of many European countries like Calvin John Knox Huss etc with appropriate texts from the Bible carved underneath. All along the front of the wall there is a reservoir of limpid flowing water with some aquatic flowers in full bloom. They seemed to symbolise the never-drying waters of life

Monument Filibert Berthelier

eternal bearing on their surface the flowers of spirituality. I should mention in this connection another monument in a different part of Geneva. It is the Monument Filibert Berthelier erected to the memory of a man of that name who was executed in the year 1519 for adhering firmly to the right of freedom of opinion and freedom of conscience. The statue is in relief on the walls of a building. Every year on the anniversary of the day of his execution the citizens of Geneva decorate the statue with floral wreaths and do him honour in other ways.

A large plot of land has been required for the League of Nations Secretariat buildings which are still to be erected. At present the Secretariat occupies buildings originally constructed for a different purpose. The International Labour Office occupies a building of its own which is large but has no pretensions to architectural beauty or grandeur. The stained glass window on the wall of a staircase did not appear to me as admirable a piece of work as I had seen even on the windows of many college chapels in Oxford and Cambridge.

I do not know how many clerks and other officials are employed in the International Labour Office. Not having paid it many long visits and gone the round of the different rooms several times I cannot vouch for the accuracy of my impression, but from what little I have seen of this office it seemed to me that, whilst some persons are overworked, many others have an easy time of it not having sufficient work to do. To compare great things with small it was in this respect somewhat like our Calcutta University.

By appointment one day I met M. Albert Thomas, Director of the International Labour Office, and Mr. Butler, Deputy Director in their rooms. M. Thomas is a Frenchman and is a socialist. I was told Mr. Butler is an Englishman. M. Thomas received me courteously in his room. We had only a very brief talk. As after a few minutes of general conversation he seemed to make a movement or a gesture of resigning his office work I bade him goodbye, observing that he was a busy man to which he assented. He did not speak English with ease.

With Mr. Butler, who also was polite, I had a longer conversation. In the course of it, I observed that so far as I desired and efforts for political emancipation were con-

cerned, the League of Nations would be of as much help to her as a college debating society. He did not say either yes or no I went on to add that, on the other hand, the International Labour Office might be able to do some good to the labouring population of India, if it did its work properly. As there were in India many women among factory labourers, I suggested that there should be an educated Indian lady to represent these women at the International Labour Conferences held under the auspices of the International Labour Office. For men are not always able or eager or willing to represent women's grievances. I said that an Indian woman like Mrs. Sarojini Naidu would be able to speak up as eloquently and courageously and with as much information for women workers as any male representative of male workers has hitherto spoken or may hereafter speak for both male and female labour. But I added, that it was not likely that the Government of India would nominate a woman like Mrs. Naidu. Thereupon Mr. Butler interposed the remark that the International Labour Office could independently and directly invite a woman delegate. But I see that this year at any rate no Indian lady has been invited. Whether any such person would be invited in any future year is more than I can say. And Mrs. Sarojini Naidu is not the only woman whose name could be suggested. There is for instance, Beben Anasuya Bai of Ahmedabad, whose active sympathy with and intimate knowledge of the conditions of work of female labourers in mills are unsurpassed by those of any other Indian woman. Our conversation drifted to the topic of the efficiency of labour in India. I suggested illiteracy and ignorance as among the principal causes of the comparative inefficiency of labour in India. I added that, far from the Government of India doing anything in the direction of free and compulsory elementary education it adopted a worse attitude than that of mere indifference to the late Mr. Gokhale's free primary education bill, which was thrown out. Other bills of a similar nature dealing piecemeal with rural and urban areas in some province or other, have sometimes been passed, but Government has not yet evinced any particularly unusual enthusiasm in this direction. I also said that during the last great world war, if not earlier, it has been proved that

the more educated the privates of an army are, the more efficient is the army. That being the case it goes without saying that in industrial pursuits the more educated the workers are the greater would be their efficiency and the better the quality of the manufactures. Mr. Butler spoke little. But on this topic he put the question, Is there a demand for universal free and compulsory education in India? I replied, 'Yes, there is.' I did not say anything more on this subject. But the question has not ceased to haunt my mind. I have often asked myself, 'Must there always be a demand for a good thing on the part of the people before it is supplied?' Take the case of Japan. When the Emperor Mutsuhito proclaimed that it was his desire that there should be no village in Japan without a school and no family with any illiterate member, did he do so in response to any popular demand? No. When elementary education was made free and compulsory in Japan in 1871, was that again due to any popular demand? No. Or take the case of England herself. When after the passing of a Reform Act, the number of voters greatly increased, and in consequence Robert Lowe, Viscount Sberbrooke said words to the effect, 'We must educate our masters,' and subsequently the first steps were taken towards providing national education in England was that done because of any universal demand?

Mr. Butler courteously offered to give me some reports and other literature published by the International Labour Office, for which I thanked him. These have been received. Mr. Albert Thomas having agreed to an exchange between *The International Labour Review* published by his office and *The Modern Review* and *Welfare*, the latter are regularly sent to him.

The Library of the International Labour Office is very valuable. It is a sort of depository of all sorts of information relating to labour and industries of all descriptions and allied subjects gathered from all quarters of the globe. Scholars who want to do research work about these subjects are likely to receive more facilities here easily than in any other single library.

This leads me to speak of the League of Nations Library. This also contains a good but not very large collection of books. It is growing, however, and is likely in course of time to assume respectable proportions. I do

not know on what principles books are purchased for it, or kept in it when presented. I sent the following historical and other works to it as presents by registered post on the 9th March 1926 but when I visited the library in September 1926, I did not find them there—*Rise of the Christian Power in India* complete set of five volumes, *Story of Satara*, *History of Education in India Under the Rule of the East India Company*, *Ruin of Indian Trade and Industries*, and *Colonization in India*—all by Major B. D. Basu, I.M.S. (Retired). Is the League library bound to discriminate according to some British *Index librorum prohibitorum*?

On the Library table I did not find a single Indian periodical conducted under purely Indian control. *The Modern Review* may or may not find favour with and be purchased by any organisation in which British bureaucratic influence predominates. But *The Hindustan Review* and *The Indian Review*, too, were conspicuous by their absence. The only monthly published in India which I found on the League Library table is *The Young Men of India*, the organ of the Y.M.C.A. The only Indian weekly which was on the table is *The Scent of India*, which is undoubtedly an ably conducted journal and has the right to be there. I told Mr. Cummings of the Information Section that the Indian press was very poorly represented in the League library. The most widely circulated periodicals of India were not there, and most shades of public opinion were entirely unrepresented. He said he got *Forward* (though it was not kept on the table) and that the League kept only those journals which were sent free by their publishers. I took the hint and have been sending to the League library *The Modern Review* and *Welfare*. But I do not know whether they are kept on the table.

I went to Villeneuve one day with some friends to pay a visit to M. Romain Rolland, the famous French author and intellectual leader, who lives there with his father and sister Villeneuve, some 56 miles by rail from Geneva and is some two hours' journey. Journey by steamer is more pleasant but takes more time. We had to change at Lausanne. We travelled third class. There were no cushions on the benches. Perhaps that was better, as it is difficult to keep cushions scrupulously clean. The benches were free from the least speck

of dust or stain. Otherwise, too, there was no inconvenience or trouble involved in travelling third class. It may be added here that there can be no comparison between third class carriages in India and in Europe. Travelling in third class, and some times in intermediate class, carriages in India gives one a foretaste of hell, or at least of purgatory. For this state of things our passengers are no doubt to blame to some extent. But if the railway management provided the public with clean carriages with plenty of water in the lavatories and insisted on their being kept clean, much improvement could at once be effected. Nowhere in Europe did I see such dirty and dusty third class carriages as in India. The smokers' carriages were no doubt not so clean as the non-smokers'.

After getting down from the railway train at Villeneuve station, we had to walk a little distance to reach Villa Olga, where M. Rolland lives. That part of the road which leads immediately to the Villa is shaded by an avenue of trees with broad large leaves growing thick on the branches. M. Rolland and his sister Mlle. Rolland, received us very courteously. Romain Rolland is past sixty and has the scholar's stoop. He did not appear to be in the best of health, having just recovered from an attack of influenza. His clear blue eyes beamed with intelligence, and love of man was writ on his looks. He does not speak English, his sister does. I was very glad to learn that she has some knowledge of Bengali also. I may be permitted to say here that I had the privilege of being known to the Rollands by name through my son-in-law Professor Kalidas Nag, who, while in Europe, helped M. Romain Rolland in writing his book on Mahatma Gandhi. I found the portraits of Kalidas and my daughter Santa on M. Rolland's study table, and expressed pleasure at finding them there. Mlle. Rolland observed with a smile, 'The portraits have not been placed there because you have come to see us, they are always there.' I had the honour of shaking hands with M. Rolland's venerable father, who is now past ninety. Considering his great age, the old gentleman appeared remarkably erect and healthy. I told him in English that I considered it a great honour and pleasure to shake hands with him. This was translated into French by his daughter. He, on his part, expressed pleasure at seeing visitors from India.

I was the only person in our party who was entirely ignorant of French. So what M. Rolland said in French was translated into English for me by his sister and what I said in English was translated by her for her brother into French. For this and other reasons there was no sustained conversation between us. Only a few points that came up may be mentioned here. The question arose as to how far M. Rolland's works were read in India. As only a small number of people in India know French some of his books are largely read in English translations. The English translation of his book on Gandhi has gone through several editions. Similarly his "John Christopher" is largely read in English translation. It was perhaps I who said that it was appearing serially in Bengali also. M. Rolland observed that it is appearing in *Kallol* whereupon some one of our party asked whether she knew Bengali and if so how did she learn it. She replied "Kaldas gave me some lessons." When the conversation turned on Rabindranath Tagore's visit to Italy we learned some details of the attempt that was made there to prevent the Poet's meeting with the famous Italian philosopher Croce. M. Rolland showed us photographs of Rabindranath and his party taken when they were at Villeneuve. We learnt that M. Rolland had read Sarat Chandra Chatterjee's *Srilata* in an Italian translation made from the English translation of that novel. The great French author remarked that Sarat Chandra was a novelist of the first order and enquired how many other novels he had written. I told him the names of some of them. When we were led to speak of Sir J. C. Bose's work, M. Rolland observed that the Indian scientist had also the imagination of a poet. Thereupon one of our party, Dr. Rajani Kanta Das, if I remember aright, dwelt briefly on the synthetic genius of India. M. Rolland wanted to know whether any Indian had written any work giving a synthetic view of the universe from the Indian point of view. I replied that I did not know that anyone had done so yet.

Mon Roman Rolland and Mr. Ramananda Chatterjee
Photo by S. C. Guha, M. Sc.

I asked whether there was no one capable of doing so. I mentioned the name of Dr. Brajendranath Seal. Then M. Rolland wanted to know why he had not done it yet. That was a question which Dr. Seal alone could have answered. But I ventured to suggest that perhaps he was diffident, perhaps according to his ideal of preparation for so great a task he was not yet ready, perhaps he was always learning or thinking out new things leading him to revise his previous ideas etc., etc.

I am sorry some inconvenience might have been caused to M. Roman Rolland's venerable father in getting him photographed. All of us, the hosts and the visitors were also photographed together. Previous to that, Mrs. R. K. Das put in order M. Rolland's hair which had been slightly disarranged by the wind. Thereupon M. Roman Rolland complained with a smile "you have not done my hair which was done immediately." I add this slight touch just to prevent my readers from drawing an ever so slightly serious looking mental picture of the great French intellectual.

The Rollands kindly asked me to see them again. I regret I was not able to do so.

The day before the meetings of the Seventh Annual Session of the Assembly of the League of Nations came to a close, the Indian Delegation gave a lunch to which along with some other Indians

Standing (from the left)—S. C. Guha, Mrs. Rajani K. Das, Dr. Das, Sitting (from the left)—Miss Rolland, Mr. Ramaswami Chatterjee and Mrs. Ramaswami Rolland. Photo by S. C. Guha, M. A.

I was invited. It was to begin at 1.15 P.M., but it was I believe nearer three than two o'clock when the guests began to be served. Before, during and after lunch there was much desultory talk on matters grave and gay which need not be recorded. Three items may however be noted without any names being mentioned. A certain person (not Indian) was awfully afraid of snakes and was perhaps partly for that reason prevented from visiting India though invited to do so. It seems therefore that some foreigners have the idea that India is so infested with snakes that even in cities snakes these creatures are to be found wriggling in all our drawing rooms and rooms etc. With reference to some of the speakers at the League Assembly Meetings who were evidently bores in the opinion of the speaker, a guest (not Indian) suggested with quiet humour that they should be taken in a boat to the middle of Lake Geneva and just dropped down there. A certain person (Indian) asked me what places I had seen in Switzerland. I said that I had gone to Villeneuve to see Dr. Romain Rolland. I was asked, "Who is Romain Rolland?" I said in reply that he was a great French author and intellectual who had won the Nobel Prize in

literature had become unpopular with his countrymen because he had opposed the last world war against Germany, and so on and so forth. Finding that all these pieces of information left him cold, I added that M. Rolland had written a book on Mahatma Gandhi in which the viewpoint and ideal of Rabindranath Tagore had also been discussed. I was asked if the book in English or in French. I said in French but translations had appeared in English both in America and in India and gone

through many editions. The last question was, "Has the book been published after you came to Geneva, and have you heard of it only since coming here?" I replied, "The book and its translations were published long before I left India. Evidently if India must send her so-called representatives abroad, they should have greater knowledge of things in general and of contemporary culture than this gentleman appeared to possess."

P. S. I have forgotten to mention in its proper place one little but perhaps significant incident. On the 9th September 1926 I despatched from the League post office at Geneva some Notes and photographs for this *Review* by registered packet. It was meant to reach Calcutta just in time for our October issue. The man in charge of receiving registered articles asked what the packet contained, and was told in reply absolutely truthfully that it contained MSS for the press and photographs. Apparently satisfied he accepted it and gave a receipt. Subsequently, however, it was opened at that post office (or elsewhere I do not know) and returned to me as containing a letter, which it did not. If the registration clerk had any doubt, he ought to have opened it before giving a receipt when he was told that

it contained only MSS and photographs. But his or someone else's peculiarly honorable conduct delayed the despatch of the packet by one full week, so that it

reached Calcutta in time only for the November issue, in which some of my Notes on the Leigne were published as the first article

Monster Lizards

Sir Alan Cobham the world's greatest sky taxi man in his last world flight saw on the little island of Komodo three live dragons—gigantic lizards which, from all appearance, were direct descendants of the prehistoric monsters of mythology. They were ten to twenty feet long and armed with great claws which enabled them to kill and devour animals as large as horses.

They used their powerful tails as lashing weapons, one blow from which could break a man. In movements they were exceedingly swift. From natives who lived in mortal terror of the monsters, Cobham learned that the creatures had been known to run down and kill half-wild island ponies, and that they had been seen fighting one another over the carcasses of wild boars.

Two of the dragons, the only ones in captivity, were brought recently to America. One of them died soon after its arrival. Scientists say their discovery and capture constitute one of the most

One Lash of Its Tail Will Kill a Man
The days of romance are not past in a world that still holds gigantic dragons for its young heroes to slay. Above is a type of monster Cobham met with on the island of Komodo.

important additions ever made to zoologica collections. Latest of all reptiles their ancestry dates back 4,000 years to the time of the pyramids.

Forty Thousand People within Four Walls!

When Thomas A. Edison speaks, everybody listens.

So it was that when the famous inventor a few weeks ago sounded the warning that "disaster

The projected Larkin Tower of New York City

must overtake us unless overcrowded American cities call a halt to the building of mighty skyscrapers the startled city dwellers and aroused a storm of controversy throughout the nation.

Almost simultaneously with Edison's warning came the amazing announcement that plans had been completed for a dizzy office spire of 110 stories to rise from the heart of New York City and to tower far above the world's tallest buildings. This colossal structure to be known as the Larkin Tower will climb 1208 feet above the street level—416 feet above the sixty story Woolworth Building.

From the rocks on which the feet of the new giant will rest to the tip of its flagpole the distance will be a quarter of a mile. Eight million bricks will go into the walls of its enormous body while the steel required for its backbone and ribs will amount to 40,000 tons—enough to load a train twenty-two miles long. Including the value of the 50,000 square feet of land on which it will rest this superskyscraper will cost in the neighbourhood of \$12,500,000.

Tractor Saws Logs and Fells Trees with New attachment

Making a sawmill out of a Fordson tractor is the feat accomplished by an ingenious new attachment, a circular saw swung from the front of the tractor. The device moves in the hands of the operator to cut in a horizontal vertical or slanting position. This is by virtue of its universal suspension, a further refinement enables the saw to be pushed forward along its shaft or drawn back without moving the tractor.

Power supplied through a belt to a series of geared shafts drives the saw at a high rate with a tooth speed or lineal velocity at the outer edge of 10000 feet a minute twice the speed of an express train. The fast cutting of this

mathematics and astronomy than any ancient people, and their builders stone carvers and artisans in precious metals and other craftsmen turned out work the equal of any produced under the Pharaohs.

Yet they died and their cities and marvelous temples fell into ruins. Their civilization was lost mainly because they could not cope with the high cost of living and their towns fell down largely for the reason that they had never learned to build an arch to hold up the roofs. The high cost of living for the Mayas was due to the fact that they possessed no draft animals to plow their fields and the agricultural methods they used eventually produced a turf so thick and heavy that their plants could not pierce it.

All the first Spaniards found were the decaying ruins of great stone cities, wonderful temples and enormous pyramids. For four hundred years or more the ruins have been pawed over by soldiers, priests, adventurers and later trained and amateur archaeologists. Now however they are not only to give up their last secrets but one of them which was once the Mecca of the Maya world is to be reconstructed as early as may be to what it was in its prime.

At Chichen Itza, the holy city of the Mayas a party of American archaeologists representing the Carnegie Institution of Washington has embarked on a ten year reconstruction program under agreement with

The new saw attachment for tractors felling a tree and left sawing up a stump. It will cut up down sidewise or endwise and will whittle up a log of wood as quickly as a man could whittle up a willow limb with a jackknife. With it the tractor can now be made to swing a saw in any direction.

saw is easy to understand when it is recalled that the old style drag saw moves at about the same velocity as your foot in walking.

The saw attachment fells trees, slashes brush and saws up limbs, poles, logs and stumps. It does not appear necessary to use a big saw to fell a large tree, says the inventor V. L. Holt of Portland, Ore., as the saw can be used as a woodman uses his axe. By taking advantage of its slanting adjustments the device can be employed to remove stumps to a depth of one foot below ground. A brush patch can be mowed with it. It is said as easily as grass with an old fashioned scythe. According to its inventor the attachment will fell and saw up twenty cords of oak a day at a great saving over usual costs. If logs are too large for this saw, they would have to be split in making cord wood any way so no time will be lost.

PESTALOZZI CENTENARY: (1827-1927)

By DR KALIDAS NAG MA D LITT (Paris)

I

THAT schoolmasters might occupy a permanent place in the Pantheon of Immortals was brought back to my mind by one of my friends of Switzerland—the Mecca of Pedagogues. It was Dr Martin Hurlmann of Zurich who kindly looked me up in the course of his pilgrimage through India in the company of Dr Wehrli the famous Swiss Anthropologist, who is building the Indian section of the Anthropological museum of

the Zurich University. It was such a joy to meet and talk with a true idealist like Dr Hurlmann. He easily centred my chronic enthusiasm for heroic souls and catching the infection he confessed that he was then full of a man—a Schoolmaster Hero—Heinrich Pestalozzi born in Zurich in 1746 a contemporary of Rousseau and Goethe and like them although in a humbler sphere a real pioneer. Dr Hurlmann has written a profound study on the great Swiss Education

Reformer (vide Pestalozzi Ideen published by Rascher & Co Zurich Leipzig) Moreover he belongs to the latest continental school of historians who consider history not simply as a chronological apparatus for catching the so-called events of nations but as a faithful recorder of the development of civilisation and of the march of Humanity along the path of deathless creations Hence his passion for art and his attempt to interpret life in and through the art of a people

But the most invaluable discipline ensuring the capacity of a people to create permanent things is a sound system of Education By discovering this basic principle and proving himself a martyr to it, Pestalozzi became immortal The facts of his life which I gathered from Dr Hurlmann I am bringing before my Indian friends who would join me in my sentiment of gratitude to Dr Hurlmann It was also due to him that I am able to present to the public a document of rare value—Pestalozzi's meditations on Education which I publish at the end of this tribute to the memory of this Educational Columbus of Switzerland

II

Pestalozzi came of a high family of Zurich His father died early and the whole education of the boy was in the hands of the mother—a remarkable woman Having the mother as a *Gertrude* Pestalozzi imbued a very high regard for womanhood as the maker of nations Hence we find in Pestalozzi's masterly romance *Leonard and Gertrude* the mother Gertrude to be the heroine who by her lofty womanly virtues and abilities purifies her family, then the village and ultimately leaves a mark on the history of her country The other education romance of the age the *Emile* of Rousseau also centres round the life of a woman Love and Nature came henceforth to be the guardian angels of Education when it was revolutionised by master spirits like Pestalozzi and Rousseau

SYMPATHY THE KEY NOTE OF PESTALOZZI SYSTEM

Sympathy was the very keynote of the life and system of Pestalozzi While in the University of Zurich he breathed the noble atmosphere of creative idealism which made Zurich a force not simply in Swiss educational life but also in German literature. This

was admitted by a German poet like Wieland A spirit of *adoration of Nature* and a love of Shakespeare were symptoms of the age The *back to Nature* cry of another Swiss prophet Rousseau was already in the air and a group of vigorous thinkers and critics like Bodmer and Bretinger were

Pestalozzi the initiator of Sympathy method

inaugurating a political revolution along with the literary and spiritual renovations The preachings of the great Swiss pastor Lavater engendered a spirit of national awakening and Pestalozzi wanted to devote his life to political reform with a view to ameliorating the condition of the common people

But De Troy smiled obliquely He would be a great reformer but not in politics He was hopelessly impractical so he left the difficult world of politics and attempted to build an agricultural settlement in Yverbois after his marriage (1799) From the economic point of view the experiment was a failure But the desire to help the poor and the helpless was insistent and the *back to the soil* idea was equally deep-rooted in him so we find Pestalozzi establishing another farm which was more an educational laboratory than a financial venture. For we find its author

more busy thinking how to make the *soul* and not the hand alone, free from the shackles of conventions. The work of the hand was considered as the *means* and not the end, which was to Pestalozzi the emancipation of the spirit. Thus he anticipated Tolstoy and Gandhi by insisting on manual work as a great corrective of purely intellectual education, as well as the most effective method of instilling true democracy, dignity of labour and sympathy for the majority of mankind, who are labourers. It is noteworthy that he had weaving and spinning as a part of his curriculum. He was busy with another of his great experiment for six years (1774-1780), during which he built his *Home school* for orphans who would never know what home is. He used to live and work with his pupils (and his wife was a great helper here) and kept a regular diary for each of his children. This silent and sublime service to the helpless and the deserted, this intensive study of the children from day to day, gave solidarity to his system and a universality to his outlook that would ever keep the memory of Pestalozzi sacred. This *lapsesya* produced fruits in the form of two of his famous works, the *Evening Hour of a Hermit* (1780), a book of meditations and the epoch-making novel *Lionard and Gertrude* (1831), a sister portrait to Rousseau's *Emile*. Pestalozzi was undoubtedly influenced by the works of Rousseau. *New Heloise* (1760), *Social Contract* (1762) and *Emile* (1762), which convulsed the whole of Europe. If the nineteenth century was a century of educational reforms, it was due to the works of the two great Swiss masters, Rousseau and Pestalozzi who had 'the honour of conceiving a method which is the corner stone of all sound theories of primary education.'

With the French Revolution, Switzerland was invaded by the French in 1798 and Pestalozzi opened a school at Stanz for the orphans of war. Himself homeless and penniless, he could not help gathering the helpless children around him! What a pathos in the noble struggle in which he warred desperately against the demon of war and even when failing to make his work successful, starting another educational work at Burgdorf. Here he joined a school but was driven out from the position of a subordinate teacher by the jealous and bigoted senior master. This was his reward at the ripe age of 55!

INFLUENCE OF PESTALOZZI

However, he was able to start and run a school of his own, aided by the Swiss government, at Burgdorf (1799-1804). Here he published his second social novel *How Gertrude educates her Children* (1801), in which he set forth that "the development of human nature should be in dependence upon *natural laws* with which it is the business of every good educationist to comply, in order to establish a good teaching method, learn first to understand nature, its general processes in man and its particular processes in each individual, observation, the result of which is a spontaneous perception of things, is the method by which all objects of knowledge are brought home to us." This is the outline of the *Intutitional Education* (*Anschaung*) of Pestalozzi which is the corner-stone of the German *Folkschule*. It led to a veritable revolution in the science of pedagogy and the reputation of Pestalozzi spread far and wide. In 1802 he was sent to Paris on deputation and he tried to convert Napoleon to his theory! The latter sympathised but with characteristic cynicism replied that he was a little too busy to think of the alphabet! Pestalozzi however was made an honorary citizen of France like Schiller and Washington.

In 1805 he moved his school to Yverdon and it attracted the attention of the whole of Europe. It was visited by Talleyrand, Madame de Staël and others, while Humboldt and Fichte praised the method followed in the institution. Amongst his pupils Pestalozzi claimed Delbrück, Carl Ritter, Zeller and last, though not the least, Froebel, the founder of the *Kindergarten* method. The Prussian government sent boys to be trained in Yverdon. When the Czar granted him an audience, Pestalozzi naively sermonised the emperor of Russia on his duty to educate the Russian mass! With each argument Pestalozzi, with his awkward yet vigorous gesture, stepped forward and the Czar was obliged to walk backwards, till at last the Emperor was not only cornered but actually pitched on the wall of the reception hall, and he burst out laughing while he embraced the divine fanatic of education.

A SAD END

Yet the last days of his life were very sad. His colleagues of the school rebelled against him and Pestalozzi, sick of perpetual conflict from 1815, retired from the school.

of *Yierdo* in 1825 He was as lofty in his ideals as he was hopeless in his practical sense Hence his actual work came to nothing although his vision of the true principles of education continues to inspire us down to this day He wrote his educational prayer—the *St an So g* and died in retirement at Brugg (17 Feb 1827) His own words now would speak for the greatness of the man

III

A VISION OF TRUE EDUCATION

We are warned as humanity has seldom been warned Thousands of bleeding wounds are calling out to us in a manner as they have not for centuries called out to the world It is urgently necessary that we should consider once the *force of the errors* of the Citizen and the Society giving rise to this mass of *corruptions of civilisation* Once more we should find in the improvement of our nature itself the means of escape from all the sufferings and all the miseries which we the higher and lower the rich and the poor should equally come forward to face not as frightened weaklings but as men who can face the *posterity* their children and their race with stern dignity

Let us become *men* (*mensch*) so that we may become citizens and statesmen *sag a n*

NATURE THE SOURCE OF REAL EDUCATION

The art of being man (*Mensch*) of becoming man of remaining man *the art of being a man* (*den Menschen menschlich*) as well as that of maintaining his human character—this art which thou deniest O fool is absurd, race and ridiculous, as something undiscussable, is, God be praised not yet discovered. It is ours, it has been ours and it will ever be ours Its principles lie inextinguishable

The Great helper of the helpless

guishable and unshakable in the human nature itself

CULTURE AND ANARCHY

But the world as it is, seems every day to become more detrimental to the pure basis of the happiness and culture "Building of man every day it is advancing towards the destruction of the life of the *alone* "Wobstabe This is against God and human nature it hardens the pure human spirit and renders it sensible only to its bestial and voluptuous existence and activity without manliness (*Menschlichkeit*) love or grace, in the private and public relations of life.

EDUCATION TO HUMANIZE MANKIND

Even in minor children we find the feeling of animal arrogance and animal violence fraud and cunning as they develop in a fox are found in all trained boys, apish vanity

and the pride of a peacock get possession of the nature of the girl before the tenderness of her developed maidenly character can expose to her this vanity and this pride as contemptible as compared with the innocence and simplicity of human feelings which are the products of human training

The Unfaltering Friend of Orphans

PROBLEMS OF OUR DAY

Fatherland! the problem of our day is not yet solved, it still stands before you and awaits solution. The spirit of the time is not favorable to its permanent solution. Thousands of our men who are living only for the day (*Lebensmenschen*) are active in tying and tightening all sorts of bonds, shackles and knots. But few fingers are refined and tender enough, bold and powerful enough to loosen these bonds, shackles and knots. If the ordinary man of the day is entrusted with the untangling of such knots he would always (and how unhappily!) rush to seize the sword (in order to cut the Gordian knots!)

Fatherland! teach your children not to consider this means (of the sword) to be the highest. Highly estimated, the sword easily degenerates into a means of paralyzing in you the old and essential things which you need today, and leave you a cripple. No Fatherland not the sword, no not Light more Light upon yourself,—deep knowledge of the evils which lie within you, against your own self, knowledge of the real condition of yourself, that is what you want.

FROM VIOLENCE TO NON VIOLENCE

The elevation of our race to true manhood (*Menschlichkeit*) to real culture—is its essence a *transformation of the bestial and lawless violence into a human non violence* (*Gewaltlosigkeit*) brought about by law and justice and protected by the same,—a subordination of the demands of our sensuous nature to the demands of the human spirit and the human heart

THE DISEASE OF CIVILISATION

Look at the whole society of man, sunk deep in the corruption of civilisation look at those whom you should consider to be the noblest and the purest. Look at the mother! No I do not call her mother—look at the woman of the day who is sunk in the corruption of civilisation. She cannot give her children what she herself has not and does not know. Her life, her maternal life as it is today is, for her child, an actual death. She does not know what maternal anxiety is she does not know what maternal strength is she does not know what maternal faith is. She has no anxiety, no strength, no faith for her child. Her anxiety, her energy, her faith is all for worldly dalliance, of which she does not wish to put one single card out of her hand—not even for a moment—for the sake of her child!

Imagine now also a father of today—I cannot call him father, imagine a man of the world sunk deep in the corruption of civilisation. You will find in him the same effect of the corruption of civilisation, you will find in him regarding his son the same error of mind, the same desolation of heart as we found in the woman of the day. He is nothing but a business man and he treats the education of his children just as any other business.

WORLD RELIGIOUS GOD

Without regard for the will of God, the parents want to educate their children for the world only and to represent to them the world as their God. The talents of human nature are for them nothing but means to get as much power and honour and enjoyment of life as possible for themselves only against all others. The intellect, which has been wedded by God in their children, to innocence, is separated by them from their heart and made entirely the means of self-interest.

And almost all creatures sunk into the corruption of civilization think and act and feel just as the man of the world and the woman of the world.

BANKRUPTCY OF POLITICS

The faults of the official people—"Behorden menschen, who are more bloodless forms than living people—are fundamentally the same as those of the woman of the day and of the business-man. The civil and corrupt magistracy are found as waiting at the home—(Wohnstube) of the common people. No elemental knowledge and fundamental strength for what they should do and what they would be are lacking in the magistracy just as in the homes dreams are dreamt about things which are unknown and sleepless nights are spent in researches for something which if it would be known it would not be worth wishing. This state of complete hardening of mind which I would call the wickedness of statesmen changes the *Vatersinn* (the feeling of a father) of the government into mere economic principles of property.

THE SILENT HIDDEN VIRTUE OF THE
LIFE IN THE HUT

O my fellowmen! who have attained to a rare height in the cultureless arts of civilization and its blind delusive strength. O my fellowmen come for a moment out of this dazzling delusion of yourself and look at the life strength of silent hidden virtue which is still alive in the hidden lowly goat huts of the country. Look at the recrudescence of morals and good habits which still express in your rural areas the national strength and the national character of your ancestors.

FREEDOM AND NON FREEDOM

The idle and deceptive talk of the time about human and social freedom and equality and about non freedom and non equality of men would be carried away with the noise of its straggly and its social delusiveness. The diffusion of diverse freedom and equality which has been given us from eternity is not apparent for it has been seldom acknowledged with sincerity and love, freedom and equality in the nature of human virtues and the equally necessary non freedom and non equality would resist the wild waves of barbarism as an eternal rock resists the waves of a violent torrent.

TENDERNESS THE HIGHEST HUMAN STRENGTH

Friends of humanity! The sublime claim of holy tenderness for the weak of our race, this tenderness which is really the highest human strength—this is the exalted or eternal sign of the inner sanctity of a sovereign power.

Fatherland! beneath the thousand voices that have through the terrors of the past years, come up to the wisdom of a mature self help there is only one supreme voice. We must educate our children better and with more strength and earnestness than they have been educated until now.

If we are able to enliven humanity in its better individuals for the recovery of themselves and to strengthen the pure enthusiasm of the human nature for this purpose—then our race would raise itself to the farthest, to the highest and to the most sublime of what human nature is capable of. The powerful arm of the nation will then be unchained. From single action to a common action. Life will be stirred up. Each single action of wisdom and virtue will act upon the common strength common wisdom and common virtue. These acts may then be done by the highest and the greatest as well as by the poorest of men they will disappear as single actions. They will be actions of and for the whole humanity actions of the higher human nature, noble exploits of our race dedicated to humanity and to the fatherland and to the most urgent needs of our time.

PESTALOZZI THE PROPHET OF OPTIMISM

It must, it will, become better ! There will be a common power for the creation of a general improvement of things

There will be a cry in the world Up ! Arise to the arms of wisdom and virtue ! Up ! Arise to the arms of innocence and love

Down, down with false honour which, puffs up human nature and thus destroys its Morale and its Spirit

Down, down with false honour, which going out from the barbaric weakness of our corrupt civilisation, proud of its stupidity and arrogance and unkindness, wants to usurp the holy heights of civilisation Down, down with the first source of the evils of the world—down, down with false honour, but only *by means of wisdom and love*. No evil force, no weapon of barbarism The developed Understanding and the burning Love of a better race—may it smile upon all !

INDIAN PERIODICALS

[EDITOR'S NOTE.—In this section we try to give extracts from the Indian periodicals we receive But as our space is limited, those periodicals which are published regularly and punctually have the first claim on our attention]

—

Bengal's New Governor

The editor of *Welfare* observes

Sir Stanley Jackson is very fond of cricket and has already talked once or twice in terms of cricket about his plans with regard to his governorship. Once he reminded us that if we played cricket (i.e. played fair), he too would reciprocate by playing fair with us. We, no doubt, believe in playing fair, but Sir Stanley was not quite doing justice to the spirit of cricket when he thus made fair play a conditional thing. Moreover, Sir Stanley forgot his captain the Government of India. How can it be cricket at all when we are holding eternally with shackles on our feet and they are hitting and scoring as they like ? Whenever we talk about declaring the innings and taking up the bat ourselves, we are told that our bats will be only 2 x 6 and that we must play with leaden leg guards and with bandaged eyes. And to crown all, our stumps must be a mile wide and a mile high while the ball will be fired at us from a field gun ! We own up our defeat right at the beginning

—

Our Faults

We read in the same monthly —

Our up-bringing is steadily playing havoc with our social and other institutions. The order of the

day is weakness lack of energy, disunion and neglect of duty. We need ten men where other nations put up only one man to do something. Our energy oozes out three times as fast as that of others, our labour is wasted because we pull not together but against one another and we always devote far more attention to the subtle art of shirking duties than to learn to do things better. Take, for example, any industry and study conditions in it. Our brick layers lay 150 bricks per hour or less where the Americans lay 800 and the amount of *Co-Oping* encountered by our employers makes normal business a dangerous speculation in any other society where people are better brought up and disciplined one man turns a thief where a thousand work wholeheartedly. But here eighty per cent of the men would directly or indirectly attempt to acquire what they have not earned and consider the whole procedure perfectly legitimate. The law of distribution makes every man poor where few work and far too many steal (i.e. acquire the product of others' labour) and the poverty of India is largely explainable by this. By a lucrative job in India we mean a job in which there is much unearned income coming one's way and not one in which one can do a lot and earn accordingly.

One of the main causes why Indian business does not expand is the lack of persons who can be trusted fully to carry out orders and not to abuse power. The picture of the Western business man running his vast organisation from a sort of observation station fitted up with a hundred telephones and a hundred thousand charts and abstracts, has remained so far an unreality in India. For the available human element cannot fit into such a picture. It may be different hereafter but that will depend entirely on whether we can better bring up and train the future generations of Indians in law, in the services and elsewhere progressive improvement is obstructed by corrupt practices, jobbery and a total disregard for truth

and real merit and their claims. What one hears of the disgusting morale of the Moghul Court, one can see now in practice everywhere, the unfortunate part being that even the so-called Nationalists are ardent wallowers in the filth. If we are hoping for a new and better state of affairs in India, we must give up all self-deception, acknowledge the truth about ourselves and then proceed to build right from the bottom with a clear conscience, for build we must from the bottom in order to achieve any real and lasting good.

Ancient Centres of Indian Emigration

According to Mr. C. F. Andrews, in ancient times,

There were three centres of Indian emigration. First of all, the kingdom of Kalinga, which is now Orissa and Andhra Desa, sent its ships over the sea as far as the coast of China and the furthest islands of the Malay Archipelago.

At the South West of India, along the Malabar Sea-border, another great and adventurous people sent its ships far abroad, especially towards the shores of Africa, Madagascar, the Persian Gulf and the Arabian ports.

A third centre of emigration was the Gujarat coast, including Uchch Kathiawar and Sind.

As Mr. Andrews is not a specialist in this and many other subjects on which he writes, he would do well to read up the latest literature on them. On the subject under notice, he might, for instance, read Dr. Prashadchandra Bagchi's article on India and China in the *Modern Review*.

Cultural Unity of India

Pandit Chamupati writes in the *Vedic Magazine*—

The Temple of India's culture knows no distinction of sect or creed or colour. It stands on the bed rock of unity. The religious movements that take their birth in this temple have an inclusive instead of exclusive outlook. Ram Mohan Roy saw oneness in all religions. Vivekananda raised the cry of the Vedanta in materialistic West. Ram Tirtha of the Punjab joined his voice to the voice of his predecessor and his conception of mystic religion was clearer though not so rich. And Dayananda who spoke in the voice of thunder and storm recognised all religions to be the offshoots of the Veda. He united all cultures at the root.

Strange, as it may seem, even in the struggles of to-day that are being waged between different sects and communities of India, bloody and barbarous as some of these conflicts are, I see a vision of unity—of oneness passing through the throes of a new birth. India is rising. She is already awake. Through the mist of the morn the first rays of the

rising sun, of a new day, are visible. Blessed are they who recognise the rising sun, and set their house in order to welcome him!

The temporary decay to which Bharat was subject, in the course of which instead of assimilation, disintegration was the rule of its life instead of association and absorption, isolation was its motto appears to be coming to an end. As in past ages unity will once again prevail over forces of disunion. It has already prevailed. For the heart of India is sound. Only the externals had degenerated. For through the songs of Tagore and the paintings of Avanimdra in the scientific researches of Bose and the humanitarian messages of Gandhi, the same old vision of "one in many" is manifesting itself. The religions of the world are rehashing themselves in accordance with the latest religious voice of India, the voice of Dayananda. Thus, while politically we lie low, we are making again a spiritual conquest of the world.

Rescue Homes

Str. Dharma observes —

The appeal by Lord Lytton for liberal public support to the Rescue Home, at Cossipore, is touching in its earnestness for the suppression of the social evil in our midst. Speaking of Calcutta, he said that 2000 minor girls (who can say what numbers have yet evaded the vigilance of the police?) were kept for immoral purposes, whereas the present Home could accommodate only 32. Lord Lytton has suggested various means by which public sympathy could be secured for enlarging the institution, the most significant of which is for every father and mother in Calcutta to subscribe a rupee for each of their own daughters to the central fund to save other children from a life of shame. He highly commended the labours of the Bengal Vigilance Society and also referred to the success of the Suppression of Immoral Traffic Act, 1923.

Education of Girls in Bengal

In Lady Abala Bose's paper on girls' education in Bengal, published in the same magazine, it is stated that

Of the total number of girls in the different educational institutions of Bengal, nearly 95 per cent. are in the primary grade, the remaining 5 per cent. being distributed in the Middle and High schools and the colleges for general or professional studies. So the problem of female education in Bengal is mainly the problem of primary education.

The combined effect of these and allied causes is that, although Bengal can boast of about 12,000 primary schools for girls with about two lakhs and seventy-eight thousand of pupils—these being, by the way, the highest figures of all the provinces in India—only the fringe of the vast pro-

of primary education that has been touched, because among the girls of school going age, only 7½ per cent ever join any school at all, the rest of them remaining beyond the reach of all educational influence.

I venture to lay great stress on the point that primary education should be left to the initiative of non official organisations national in character subject of course, to Government supervision. Official organisation must necessarily be rigid and inflexible and unable to adjust itself to varying circumstances.

The Telegraph Services for Indians

What just and generous treatment Indian employees receive in the Indian Telegraph Department will appear from the following sentences taken from *The Telegraph Review*

The main grievance is that this General Scale service has been an exclusive monopoly of one section of the Indian population and that is the Anglo-Indian community. We feel that this is a gross injustice and that this anomalous and invidious distinction should be forthwith removed and that openings be offered to all irrespective of caste, colour or community and that merit should be the only basis which alone can increase greater service with better efficiency to the public, such as is demanded of them.

Alas! there is yet another class to mention—the so-called menials. These Telegraph peons, who are no less important from the point of view of essential imperativeness are paid wages or subsistence allowance, as it is called, of a varying degree from Rs 8 to Rs 10 a month and the rest are to be made up from the mileage pies by the delivery of telegrams. The breathless hurry with which deliveries are made at the risk of health and even life can better be imagined than described. In about 10 to 15 years of their ceaseless activities, they become mercilessly spent-up and yet they continue till the far end of their officially recognised period when they are doled out a magnificent pension of Rs 4 a month! It is said that this meagre pension is not sufficient enough today to feed even a country dog for a month.

revenue Provincial Governments with the exception of Bombay and the C Provinces accept the Government of India's policy. The spirit of antagonism to prohibition has markedly grown in official circles. The steady annual rise in Revenue receipts in Provincial and the Imperial Government is a disheartening factor in present conditions. In this respect Excise Departments are making the drink and drug traffics a necessary part of the fiscal arrangements of the country. Meanwhile discussions in Legislative Councils continue to show that the large majority of the representatives of the people of India repudiate this policy of regulation and control of consumption. A demand is made and reiterated for more sympathetic compliance with the expressed convictions of the great majority of the Indian people asking for eventual prohibition.

The "Friendly Handshake"

According to the *Oriental Watchman*.

The "friendly handshake" is now charged with being very unfriendly. According to Dr John Sundwall, University of Michigan this age-old custom spreads diseases especially respiratory infections such as influenza. The infectious organisms of this group of diseases, he says, are present in the discharges from the mouth and nose and the average person's hands are always contaminated with these secretions. A man who has the infection and whose hands are contaminated, meets and shakes hands with his friend. The friend's hands are contaminated by this contact, and when his fingers go to his mouth shortly after the meeting, the route of transmission of the disease is completed. Persons suffering from respiratory infections frequently use their hand to check a cough or violent sneeze, and almost immediately extend the same hand for a friendly shake with an old acquaintance. In many cases the result of such "shakes" is that the friend is made to suffer. Dr. Sundwall blames this form of greeting for influenza epidemics.

religion of the Buddha, in the light of which all Christianity pales like moonlight in the glow of the sun

This also is the duty of every friend of the Buddha in Asia. For the fully Awakened One has expressly enjoined that his disciples should carry his Teaching to all men. For, whoever helps to spread the Buddha's teaching brings to his fellowmen the highest of bestowals. "The Gift of the Teaching excels all other Gifts." Can it be that to-day there no longer are any disciples of the Buddha who obey this his command? Can it be that especially in Eastern Asia, there are no longer any friends of the Buddha's Teaching who are blessed with this world's goods and are willing to place at disposal the means necessary for the spreading of the Buddha's Teaching in Europe? Are the rich friends of the Buddha in Asia going to let themselves be put to shame by the rich Christians of Europe? No that cannot be! that shall not be! All the less shall that be in that no very extraordinary amount is required. Five thousand pounds sterling would suffice to carry out a plan which indicates the most promising method for the spreading of the Buddha's Teaching in Europe

Leadership without Apprenticeship

India abounds with leaders of all descriptions, political, religious, social educational etc. They will find the following portion of Swami Turiyaananda's talks published in *Prabuddha Bharata*, interesting —

A man went to a Sadhu to become his disciple. The Sadhu, before accepting him informed him of all the hardships of a disciple's life. The man replied, 'Sire make me a Guru directly.' For then he will be saved from the hard austerities. If you always spare yourself you cannot hope to accomplish anything."

The South African Settlement

The National Christian Council Review observes

We have had in the reception that India has given to the news of the South African settlement a distressing revelation of her present mood of scepticism. It seems as if in this matter a miracle had happened but miracles do not happen. The change of heart that we speak so much of has come to be reckoned a phrase to which no meaning can ever be attached. India needs in the region of political expectation to be begotten again to a living hope. Perhaps the gradual persuasion that a change has indeed come about in South Africa may be the beginning of a return to faith. The exposition of the whole India South African contention that Mr. Sinivasa Sastri gave in Poona, an exposition as candid as it was luminous and masterly made it plain that through this agreement things have been attained that may be of very far-

reaching consequence in India's forward march among the peoples. The agreement restores India's self respect, frees even her coolies from humiliation. If they leave Africa, they leave it as emigrants seeking of their own will a better place of settlement and free, if they choose to return. If they remain in Africa they remain as fellow citizens and not as aliens and interlopers. And further, as Mr. Sastri pointed out these notable achievements were obtained by the direct negotiation of an Indian Commission under Indian leadership speaking face to face with the representatives of their sister nation and unencumbered by the tutelage of foreign guides or governments. There is ground for profound satisfaction in all this and we trust that it may help to cast out the spirit of suspicion and distrust that have of late ruled so lamentably in this land

Humour in Sikhism

Mr Teja Singh contributes to *The Calcutta Review* a readable article on humour in Sikhism in the course of which he says

The most striking example of Humour playing a prominent part in Sikhism is the fact that there exists a regular order of Humourists called *Sutras*, who have carried on religious propaganda in the name of Guru Nanak mainly through Humour.

Guru Govind Singh also realized the value of humour and made full use of it in his religious work. Once he dressed up a donkey like a lion and set it roaming about the fields. The Sikhs began to laugh when they heard it baying in spite of the lion's coat, and asked their leader what it meant. The Guru told them that they too would look as foolish as the donkey, if with the Singh's (lion's) name and uniform they still remained as ignorant and cowardly as before. The same love of the dramatic is exhibited by the way he exposed the futility of the belief in Durga, the goddess of power. When all the *ghes* and *tancess* had been burnt and Pandit Kesho had tired himself out by mumbling mantras by the billion without being able to produce the goddess the Guru came forward with a naked sword and flashing it before the assembly declared, "This is the Goddess of power." The same grim humour was shown to him when one spring morning, in the midst of hymns and recitations he appeared before his Sikhs and demanded a man who would sacrifice himself then and there for his faith. He wanted to see whether the people dared to do anything beyond mere singing of hymns and reading of texts

Veterinary Education in India

Mr C J Fernandes G B V O, writes in *The Indian Veterinary Journal*

Veterinary education has been the Cinderella of Government educational departments in India. After forty years of existence it is still in its infancy and its growth and progress has been retarded by a parsimonious policy. It originated as a halfhearted attempt at imitating the veterinary arrangements of civilized European countries but

has remained in its original conception through lack of encouragement and neglect of the persons responsible for the progress of agricultural welfare in India.

Indeed much elaboration is not needed to prove the immense benefits that accrue to a country through veterinary science. The veterinarian does not merely relieve the sufferings and prolong the existence of our dumb servitors but he helps materially to conserve the vast wealth of the nation invested in its flocks and herds. Moreover the benefit to the general public by the State control through its veterinarians of the chief infectious diseases of animals some of them communicable to man cannot be overestimated. Reports from towns and cities where meat and milk inspection are carried out show what service is rendered by the veterinarian in safeguarding the health of the population. Veterinary research has also proved of great benefit to its sister science medicine and the help rendered to medicine by experiments conducted on animals by both medical men and veterinarians is too well known to need more than passing mention.

India is an enormous country chiefly agricultural. Agriculture in the main may be said to mean the art of raising plants and animals that are best suited for the supply of food for man. If this is so then the importance to India of maintaining the health of the live stock in the country which is chiefly in the hands of veterinarians may be appreciated when we consider that the total live-stock in 1924-25 in India was 213 millions.

Indian Posts and Telegraphs

In *Labour* Srijit Tarapada Mukherjee gives the following comparative statements of expenses of the Indian Postal and Telegraph Departments

1 Postal Expenses	
(a) Expenditure for—	
192-425	Rs 556 95003
(b) Do Estimated for—	
1927-28	Rs. 600 31 000
An increase of	Rs 43 35 007
	or a little over 9 percent
2 Telegraph Traffic Expenses	
(a) Expenditure for—	
1924-25	Rs 122 56 030
(b) Do Estimated—	
1927-28	Rs 148 42 000
An increase of	Rs 25 85 970
	or over 20 percent

The expenditure of the Telegraph Traffic Department has increased by over 20 percent while the expenditure of the Post office has increased by only 9 percent during the same period. The Telegraph Department is working at a loss and in the year 1927-28 the loss estimated is Rs. 27 00 000 on the Telegraph side and Rs 174 00 00 on the telephone side. On the other hand a net surplus of Rs. 24 57 000 is estimated in the Post office department.

The Hon'ble Member is probably aware that since 1924-25 the telegraph traffic has not increased in the same rates as the post office work. It was naturally to be expected that there should be a higher percentage of increase of expenditure

in the Post office department than in the Telegraph department specially when Post office services in the subordinate ranks are so much underpaid. But quite the reverse is the case. The Telegraph service has received increases at rates more than double that of the Post office service. We do not grudge our brother workers in the Telegraph department. We congratulate them on their good luck. But what we lament is that the poor hard worked Post office men should not receive at least equal consideration from such a sympathetic officer as Sir Bhupendra Nath Mitra. There is a surplus shown in the Post office Budget and money is therefore not wanting to do justice to the subordinate staff in the Post office. If the Hon'ble Member could manage to secure for the Telegraph service an increase of over 20 percent in the expenditure when the department is working at a loss why could he not do likewise with the Post office service when the Post office department is showing surplus year after year?

Mr D N Dikshit observes in the same issue of the same magazine —

My contention is that Government have no moral right to annex for general financial purposes any surplus of Postal revenue. Indeed the Government of India since the days of the East India Company are committed to the principle that the Postal Department is to be administered without any consideration for the general revenue interests. In 1866, the Right Hon'ble Mr Massey, the then Finance Member of the Government of India, went so far as to declare that the Post Office was so potent an engine of civilisation that no Government would be justified in allowing fiscal considerations to stand in the way of any improvement. The only consideration that seemed to weigh with him whether or not the postal rates did act as a check on correspondence and if they did they must be made liberal no matter what the financial effect was. And Sir Malcolm Hailey was out to demolish the generous principles established by this broad minded predecessor of his. I maintain that the Post office need not always be even self supporting. The Post Office is a public utility department, and any check on its usefulness must be condemned. The recent increase in Postal rates has already resulted in a great shrinkage in the volume of correspondence. A similar circumstance was considered sufficient to justify a reduction in the rates in the British Isles in Sir Robert Hornes budget though it involves the imposition of the financial burden on the general tax payer. The rates for carrying a letter to London is two annas while that of London to India is 1½ annas. Does any body look to this anomaly?

The Age of Consent

In the opinion of Mr N Sri Ram, as expressed in *The Bharata Dharma*,

The Madras public deserves to be most heartily congratulated for the meeting held in Gokhale Hall on March 23 at which the following resolution was passed with but one dissident. "This meeting is in favour of marriage taking place only after sixteen years for girls and eighteen for

boys, it is in favour of the Age of Consent being raised to fourteen years as an immediate step towards the prevention of child motherhood and wholeheartedly supports Sir Hari Singh Gour's Bill to raise the Age of Consent for married girls from thirteen to fourteen. It will be noticed that Sir Hari Singh's modest proposal which he is bringing up for the second time before the Assembly has not only the very strong support of public spirited citizens, who have emphatically voiced their opinion in other places also besides Madras but falls considerably short of the proper age acceptable to them. There can be no reasonable doubt whatever that if the women of the country were allowed to settle the question it would be decided at once in accordance with the demand of the Reformers. It is because they have not yet come to their own and are still in many ways like dumb driven cattle, that man-made law continues to exercise its blightful ascendancy.

Ancient Tamik

We read in *The Beagal Nagpur Railway Magazine*

Ten miles to the south west of Kolachat station and 16 miles from Panchkura station on the main line to Bombay on the banks of the Rupnarayan river is the ancient port of Tamralipti now modernized to Tamuk.

The date of this port is lost in the mists of centuries but the fact that coins have been unearthed near its vicinity proves it to have existed during the days of the Roman Empire, for the coins bear the face of the Emperor Justinian. It is obvious from this fact that the port was one of call for the Phoenicians in their journeys to the east. As far as we are concerned, besides being one of the most ancient ports in India, Tamuk was the only inlet of merchandise into the "country of Bengal." To ascertain approximately the date of this seaport, a reference to the Sanskrit works of the Jains, Buddhists and Brahmans is necessary and they show frequent mention of the name Tamralipta, a name which was given to the port as well as to the kingdom of which it was the capital as also to the people. In fact from these works it is surmised that the seaport was in existence long before the birth of Christ.

Ptolemy notices it in his geography giving the place the name of Tamalites and this was in the year 150 A.D. The situation of the town in his maps places it on the banks of the Ganges.

It really first merges into history by being several times referred to by mediaeval Buddhists as a port at which merchants and others embarked for Ceylon and the Far East. Fa-Hien (A.D. 405-411 A.D.) describes it as being on the sea front, and the earliest Hindu tradition places the sea 8 miles off to-day the town is 60 miles inland.

Fa-Hien took up his abode for two years in one of the Buddh at monasteries. It was again visited by another Chinese pilgrim Hsuen Tsang (in the 7th century A.D.) whose description of the place shows it to be near an inlet of the sea, 10 li (about 2 miles in circuit) with ten Buddhist monasteries and 1000 monks, and near by was a pillar erected by King Asoka, 200 feet high. Indigo, silk and copper (tamra) were the trading

articles of export and he concludes by thinking that the port got its name from the copper exports. Still another Chinese pilgrim—I tsing landed at the port from China at the close of the same century and Hsuei Lun the Korean remarked—
This is the place for embarking for China from the East India and close to the sea.

The town also finds mention in the Story of the ten princes written by Mitrugupta in which it is said to be close to the sea and not far from the Ganges and frequented by sea going boats of the Yavanas and others, and on the whole prosperous.

Again on the Dudhpani rock inscription which is not later than the 8th or 9th century A.D. there is a reference to Tamralipta, but after this period no mention of the port can be found in any subsequent works.

Fault-finding

In the Calcutta Presidency College Magazine Mr J C Ghosh humorously lays down the definition

Faults are what one finds in others, that is why fault finding has ever been a highly fascinating pursuit. As a characteristic intellectual attitude it is the recognised privilege of all civilised men and women and can be engaged in with considerable impunity. Laughter which according to its most modern and brilliant analyst is purely critical corrective and devoid of feeling is the gesture of highly sophisticated societies. The wit the humourist, the satirist and the caricaturist find their natural quarry in the follies and foibles of men and women, and we unloosen our purse strings in order to view ourselves in the distorting mirror of their art. We enjoy being grieved and bullied by them and call those great who really pull our ears while apparently pulling our legs. Even personal jealousy malice and spleen may run into many editions and in the hands of a master achieve immortality.

The sun and the moon would not be what they are if they did not have spots. It is at least some fun to discover that votive offerings are too often poured at feet that are of clay and that the ample mantles shed shoulders that are too narrow. Men are of course, great not because of their failings but in spite of them. But no picture is complete without the necessary shade. The dark spots are not only so many foils setting off by contrast the general brilliance they also supply the requisite human touch for it is the way of all flesh to err. Humanity is a necessary human quality and nothing would be more faulty than faultlessness even if it were possible—rapid drab and inhuman.

Hindu Moslem Quarrels

Mr Vasudeo B Mehta writes in *The Indian Review*

The many and regrettable Hindu Mahomedan riots that have recently taken place in India, have set people thinking as to what should be done to prevent their recurrence in future. Religion has been a source of bitter quarrels in most if not all

countries of the world at some time or other in history Europe was torn to pieces by the religious wars of the Reformation. But as time passed the followers of the different sects understood each other's point of view better and so the wars became less and less frequent and finally disappeared. In the same way the Hindu Mohammedan quarrels in India will disappear when the two communities understand each other's point of view better.

The situation is not hopeless. The different communities can be brought together again and made to work harmoniously as in the past. This can be done by one method—and that is by giving the right kind of education. Whether the different communities have separate schools or common schools, the education imparted in these schools should be of a national and not of a communal character. All Indian children should be taught to take pride in their country and her history and work for her improvement—as is being done in Turkish and Persian schools.

That a certain amount of friction for position and power between different Indian communities will always remain cannot be denied that kind of rivalry exists between different groups all over the world. But if the right kind of national education were given Indians will certainly be able to unite and work for the improvement of their country—and not waste their energies in irritating each other and flying at each other's throats as they are doing at present.

The Caves of India

Roughly speaking says Dr K N Sitaram in *Shama*, a

The cave districts in India comprise about fifty different and distinct groups though the majority of them are to be found within the limits of the Presidency of Bombay. All told the caves both those which were only natural formation ones and those specially hewed from out of the sides of the living mountains or detached rocks big enough for the same purpose number easily more than a thousand although some of these are no bigger than mere manholes which house some of the slum population in the least sanitary parts of the City of Bombay while others like those of the chaitya Halls that lend dignity and charm to Karla, Kachri Ajanta, Hedra and Bhaja, are structural excavations of whose Tour d'force any man on the world might be proud of.

There are others which were Viharas once and housed either a college or only a community of meditating monks which though secondarily for architecture but still primarily are now invaluable for the students as well as connoisseurs of art, throughout the world, because of the precious fragments of fresco which still adhere to their walls, ceilings and pillars in some of which the colours are still as fresh as when they left the hands of their masters nearly two thousand years ago.

If the caves in the Ramgarh Hills can claim priority because of their antiquity and as the earliest to delineate in colour the joy in life which

the ancient Indian felt, then the caves of Sittan and twelve miles from Pallavur near Trichinopoly contain some of the loveliest cave paintings which the hands of the Jain masters of the brush has as yet given to us. Ajanta contains the largest number of paintings executed in honour of the Mahavira form of the Buddhist faith though some of the paintings are far from being either religious or Buddhist. One may say that the paintings of Bamiyan (Gwalior) are more or less contemporary with the latest of the wall paintings at Ajanta even though from the point of technical achievement and the colour scheme some of them may be said to be superior and rarer even to those at Ajanta, especially the scenes in the Ramgarh which depict Indian dancing.

Value of Historical Training

Mr G A Naidu observes in *Morris College Magazine*

A historical training teaches one to be critical in his study of the various aspects of human affairs. The student is to read history actively and not passively says Emerson to esteem his own life, the text, and books the commentary. Thus compelled, the Muse of History will utter oracles. "A sound historical morality (or training) says Goldwin Smith will sanction strong measures in evil times selfish ambition treachery murder or perjury it will never sanction in the worst of times for these are the things that make times evil."

If you wish to profit by your reading" says Lord Bryce in one of his addresses, do not forget to scrutinise each maxim delivered to see if it be justified by facts. Sound criticism (or historical training) seeks rather to discover and appreciate merits than to note faults. In short true historical training teaches to judge of events correctly it fosters right thinking and favours the formation of a wholesome public opinion. Let my son of ten read and reflect on history this is the only true philosophy were Napoleon's last instructions for the king of Rome And it is this habit of reflection which a sound historical training aims at cultivating in the average citizen for a right understanding and proper guidance of the affairs of the society and of the country in which he lives.

Another way in which a historical training is of practical value to the average citizen is that it enables him to make a fairly correct estimate of the future from the study of the past. If history says Sir John Seeley ought surely in some degree, if it is worth anything to anticipate the lessons of time. We shall all no doubt be wiser after the event we study history, that we may be wise before the event.

Engineering

L N Dev Esq L M T writes in *Progress*—

Engineering is now recognised as one of the sciences. It is really the science of applying the

older sciences to the ordinary affairs of mankind. It is the practical application of information gathered by the abstract scientist, the chemist, the physicist, the mathematician and so forth. It is also defined as the science and art of adapting, converting and applying the great sources of power in nature to the use and convenience of man.

Some Indian Artists

N Vyasa Ram Esq. BHAVACHITRA LEKHANA SIROMANI (which we suppose is a brief honou-
rific title) read a paper before the Bangalore Mythic Society in which as published in its quarterly journal we find the following:

The works of Ravi Varma may be roughly divided into three main groups: portraits, scenes from life (contemporary) and mythological representations. I am of opinion that his best works are to be found among the portraits, examples of which can still be seen at Mysore. Though he was not a portrait painter like Rembrandt who could see through his sitters, Ravi Varma must certainly be accepted as one of the best portrait painters of modern India. The huge portraits of Their Highnesses the Maharaja and the Yuvaraja of Mysore are among his best productions in the line.

While Ravi Varma, through his art created in the people a certain amount of appreciation for scientific colouring of light and shade, he has also on the other hand stimulated the grosser tastes in them for jarring colour effects and pleasant lusty womanhood in painting to such an extent that the path of the sincere well-wisher and reformer in the line has become very steep and beset with thorns on every side. India became in consequence of the activities of Ravi Varma and his followers, a suburb of London and Paris in art, as she is a suburb of Manchester and Sheffield in commerce. As the art of Ravi Varma was a lifeless imitation and hybrid combination, similar features dominated the life of the average Indian of the period, making it too prosaic and devoid of imagination.

The swing in Indian artistic thought towards the western ideal had reached far enough to create a reaction. And this originated on the other extreme of India. Ravi Varma's prosaic art spread its influences from the west end of India, commercial Bombay. The reactionary influences began their work from the east end of India—emotional and poetic Bengal. This movement stimulated and patronized by E. B. Havell, the principal of the Calcutta School of Arts gathered round it a strong band of relentless workers like Abanindranath Tagore and Nandalal Bose and began a counter activity in art.

The members of this reactionary school saw that the beauty of Indian life was fading away in a mad pursuit of a foreign civilization and concluded that the only method of purging Indian art of its newly acquired evils and purifying it once again was to look back to the past for inspiration and guidance. Consequently they based their styles on the art of Ajanta, and the Mohenjo and Rajput schools of the medieval period. Without

doubt this movement produced some excellent artists who have won world wide fame for their country through their productions. Abanindranath Tagore, Nandalal Bose, Surendranath Kar, Asit Kumar Haldar, Gogonendranath Tagore and Mukul Chandra Dey are among the foremost of them in Bengal. These artists developed different styles of their own, each specializing in his own way. Gogonendranath Tagore specialized in the ironical aspect of art and produced a series of extremely humorous and instructive cartoons illustrating the degeneration of Bengali life. He has now become an exponent of the new theory of cubism.

As the fashion of Indian art grew more and more common on the spirit of fanaticism found itself gradually entering the minds of the later artists. Among the ideals of the new school one was to copy and revive the style of Ajanta. But the new artists forgot that the hand can never imitate the style of Ajanta unless the heart is inspired by the ideal of Ajanta artists. If the ideal was there the style would come by itself.

It is with a certain feeling of pride however that we have to consider the effect of the activities of the new school of thought on South Indian artists who came under its influence. While Bengal always emotional soared beyond its normal limits and reached the extent of fanaticism in her art, South India, though represented by a handful of her artists in this new wave of artists' renaissance brought her reason and intellect to bear upon these problems and struck out a new line for herself.

Two names appear before me in outstanding prominence in South India. Venkatappa of Mysore and Natesan of Hyderabad. These two artists evolved a style of their own which particularly reflected the ideals of the part of the country they lived in.

as sent by the employers. Only when the workers have an income adequate to maintain a decent standard of living can higher ideals of social life be discussed. The economic phase of the fight should precede any other consideration in a programme of social reconstruction for present day China. Thirdly unsoned practices should be avoided. A general tendency to-day is to imitate the tactics of the labour movement in the west. Certain practices may have been successful for the struggle between capital and labour in Europe or America but may yet be ineffective in China. Regulations or policies of trade unions may be sufficient for one society but unsuitable for another. Certain aspects of the Chinese labour movement to-day are still too foreign in spirit. Trade union methods and practices of western countries should be modified as to suit economic and social conditions in China. The 8-hour work day should not be blindly advocated when the 10-hour day would in many cases be a blessing to the workers. It is useless to agitate blindly for labour co-partnership in industry when the majority of the workers are still illiterate and care little for such privileges. What is presently needed then is a programme of practical reforms, based upon existing social conditions which shall truly serve to promote the welfare and happiness of the workers. Some fundamental work must be done to build up an intelligent proletariat capable of appreciation and

using wisely its just rights and privileges. Gradually its social standards should be raised so as to ensure industrial peace in the nation and so ultimately throughout the world

Japan's Foreign Relations

The *Japan Magazine* contains the following opinion of Baron Shidehara, minister for foreign affairs, Japan, on Japan's foreign policy

Our policy covering all questions in the relations between Japan and China may then be summarized as follows

- 1 To respect the sovereignty and territorial integrity of China, and scrupulously to avoid all interference in her domestic strife
- 2 To promote solidarity and economic rapprochement between the two nations.
- 3 To entertain sympathetically and helpfully the just aspirations of the Chinese people and to co-operate in the efforts for the realization of such aspirations.
- 4 To maintain an attitude of patience and toleration in the present situation of China, and at the same time to protect Japan's legitimate and essential rights and interests by all reasonable means at the disposal of the Government.

Difference Between the Nationalist and Anti Nationalist Armies in China

The *New Republic* observes

It looks more and more as if the national impulse to which the Canton government is giving an effective military and political expression will in the course of the present year subdue the whole of China. The Nationalist victories according to all accounts, are won quite as much by propaganda as by the discipline and the valor of the Cantonese armies. The troops which oppose them are merely mercenaries, or at best provincial levies and their loyalty and the loyalty of the communities which they are supposed to defend are easily undermined by armies which are fighting on behalf of the Chinese national idea. For the first time in centuries the Canton government is offering to the Chinese peoples the prospect of participating in the life of an orderly independent state which will at least try to govern in their interests. Propaganda to this effect ought to work as well in the north of China as it has in the south. Chang Tso-lin stands, it is true, for an idea. He, like many another apprehensive official, is proclaiming himself to the world as the arch-enemy of Bolshevism but this kind of preaching is intended not for the benefit of the Chinese, but to carry favour and support from foreign powers. The anti Nationalists can for the time being, place armies in the field against the Cantonese armies, but they cannot place ideas in the field against the Cantonese ideas. These ideas will continue to

March ahead of the Cantonese troops and pave the way for their victories. The most serious obstacles which the Chinese Nationalists will encounter in winning over their fellow-countrymen will not be created by their present active opponents, who appear already to be beaten. They will arise after the fighting is over and when they will have to redeem their pledge to provide the Chinese with an orderly and progressive national government

Financial Interests and the Use of Violence

In the opinion of the editor of *The World Tomorrow*

The use of violence by nations to protect their financial interests abroad is proving to be less and less effective. The policy of armed coercion is rapidly breaking down in China, India and Egypt and has already been abandoned in Turkey, Ireland and the Ruhr. The economic boycott, the industrial strike, the policy of non-violent non-cooperation and national armies are being widely used to administer disastrous blows to the commercial and financial interests of foreigners. It is supremely folly to think that western powers can successfully safeguard their economic interests in the Near East or in the Orient by the use of violence.

'Colour' Problem of the British Empire

Writing on the above subject in *The Labour Magazine*, Major D. Graham Pole asks

Are our Statesmen big enough to settle the Eastern problem in a big way? If not they are going to unite the whole of the coloured races against the dominion of their white overlords. Not only shall we lose the Indian Empire because of the lack of imagination of our Statesmen, but we shall go far to unite the whole of Asia, and possibly the whole of the coloured peoples of the world in a determination to overthrow the white races who seem unable to see the signs that even he who runs may read

Middle and Bombay

Mr B. Shiva Rao writes to *Fortyfour* Affairs (British)

Dr. Besant has been a severe critic of British rule in India, which may be efficient in administration but has shown a criminal neglect of all that concerns the life of the people—education, health, food and decent housing.

Even this bubble of efficiency was burst recently by a Committee appointed by the Government itself. Lord Lloyd, when he was in Bombay

as Governor launched a scheme for reclaiming a portion of the sea for greater Bombay. The scheme is a colossal failure and the protests of the people became so loud that the Government appointed a Committee. How the work was done is best told in its own words.

The organization and arrangements made for the conduct of the scheme were a most unworkable responsibility was not clearly defined. Much of the technical work was left to an over-worked Chief Executive Engineer or was not done at all. Nobody believed himself responsible for the due execution of the work. No real effort was made to secure competitive tenders.

Every word in the above paragraph is from the Committee's report. The scheme failed because the clay at the bottom of the sea was hard and the dredger ordered from England could only work on soft clay. Lord Lloyd's defence is that the distinction between hard and soft clay was too technical for him to appreciate. Sir George Buchanan, the expert gave such "manifest underestimates" that the Committee said, "it cannot understand how they found acceptance at Bombay and Delhi." When Sir George was questioned by the Committee about his figures "he preferred not to answer those questions." Sir Lawrence Hepper was Director of the Department, on a salary of over £5,000 a year. If a annual reports, says the Committee, cannot be justified. They do not present a true picture of progress of the work and concealed material circumstances.

Now comes the best part of the story. The misadventure of the public for over six years by false reports, the sanction of a scheme on figures deliberately altered and equally deliberately overlooked by the Bombay Government and the Government of India, the ordering of a soft clay dredger to do operations on hard clay, the breakdown of the scheme, involving a loss of several millions of pounds—none of this is denied. But the men concerned in this were all honest, says the Committee, "actuated by the highest motives. They perpetrated—well, only errors of judgment."

A Union of English-speaking Peoples

On Mr Hearst's advocacy of a Union of English-speaking peoples Mr J. Krishna-murti makes many just observations some of which are quoted below.

What, in Heaven's name is the fundamental difference between a non-English speaking person and an English speaking person between a Hindu and a Christian or between a Chinese and an American that they cannot peacefully enjoy the world together? Is it because of the difference in colour in traditions, in customs that we should be regarded as superior or inferior? The highest Brahmin of India regards the white man or anyone outside his own caste, as beyond the pale. He is as instrumental in causing a division as the man who is convinced of the superiority of the English race.

A Union of English-speaking races alone, while it might undoubtedly increase the material wealth and prosperity of those races would not make for

the well-being of the world because it would leave out of the new civilization the wisdom the culture the beauty of the East and of the non-English speaking races. The English-speaking races, while they have been distinguished for their power of organization of government and of law, while they have produced great literature, and works of art have never given birth to a religion or to a great spiritual teacher. The spiritual wealth of the world lies in the East and the material wealth of the world lies in the West, and the union of both is the guarantee of the world's happiness.

"China Must Arm"

The following is taken from the London *Inquirer*

One of the saddest things said to me whilst I was in China," writes Dr. Charles E. J. Johnson (D.S.A.) as quoted in *The Christian Inquirer* was said by the President of Amoy University, one of the noblest men it has ever been my privilege to meet. We were sitting on the deck of a vessel on our way to Hong Kong and we were discussing the present and the future of China. He said China must arm. No Oriental nation can have the respect of the Christian nations of the West unless it is armed. No Oriental nation can expect justice at the hands of any Christian nation unless it is armed. There is nothing then, for us to do but to arm. We must go contrary to the traditions of our people and to the principles of the greatest of our sages in order to secure justice at the hands of the nations of the West. And I sat there in his presence shamefaced and dumb.

Awakened China

We read in *The Modern World*

Seventeen years ago the break-up of China was taken for granted by the chancelleries of the world.

Today China can no longer be regarded as one of the stakes for which imperialist diplomacy can play.

Four hundred million people representing the oldest—and in many ways the most civilized—race the world has known have taunted in 17 years as no one would have anticipated they could have taunted in a century.

Every close student of Chinese history recognizes that beneath the surface differences China's diverse populations display there is a psychic unity represented by a myriad manifestations which the casual tourist, the jaded imperialist or diplomatist can never see.

Devices and outside oppression—railroads, telegraphs and airplanes on the one hand and arrogant bullying on the other hand—have served to make this psychic unity potent even in the gross terms which alone, Occidental imperialism can understand.

From China emerges a voice which will increasingly influence the future. It is the voice of a

truly civilized rational ethical *kultur* made vibrant and threatening by enforced self protection against the merely animalistic brutish activities representing that mythical superiority of the predatory Orient exalting the physical while blind to the more subtle ideals to which the Orient has given allegiance

A Polish View of English speaking Peoples

We have received from Warsaw a journal named *Zycie Wolne* in which the only things that we could read were the following lines in English addressed To English speaking Peoples —

How now?

For the others only You have the moral command of disarmament in order to be able to keep easier Your uncontrolled armed dominance over the world?

From the others only You require to give full rights to racial and speech minorities and for Yourself You guard the right of oppressing enormous peoples whose culture is by many millennia older than Your own?

For others You have pulpits to preach the sublime words of Christ but for Yourself You preserve the Molochs and Mammon's altars?

Ireland Mexico Nicaragua

The Negroes The Boers

India China

And the affair of the Mayor of Cork

And the process of Mahatma Gandhi

Still You are not ashamed. You mighty powers?

Still do You not regret this sublime role of a

Great Arbitrer of the World that the cruel War has awarded to You?

O' Anglo-Saxons!

Every Anglo Saxon is not like this

Beating Politicals in Soviet Russia

In a Bulletin published in Paris and Berlin in March there are some frightful and disgusting details of the treatment received by political prisoners in Soviet Russia, some of which we print below. The more disgusting portions have been left out.

In a cell occupied by 4 Georgian Social Democrats was placed the non partisan working man Beliankin. The Georgians speaking Russian imperfectly used to converse among themselves in their native tongue. In consequence Beliankin felt himself entirely isolated and requested to be transferred into another cell or into solitary. His demand refused Beliankin declared a hunger strike. He was entirely ignored by the prison management, till the 17th day of his strike, when he was removed from his cell for the purpose of administering forcible feeding. The other politicals protested against this by creating an obstruction for about five to ten minutes during which time they beat with their tables and stools against the doors.

Within a few minutes the prison was filled with the special guards of the G P U who immediately forced themelves into the cells and began throwing their contents into the corridor. The politicals did not resist not wishing to precipitate any bloodshed in view of the fact that the Tchekists were all armed some of them being drunk. But the activities of the G P U guards did not stop there. After the contents of the cells were all thrown out the Tchekists attacked the prisoners. They began forcibly undressing them the while beating the victims. Not only the men but the Women prisoners were similarly treated. The proceedings in the female cells were accompanied with terrible scenes of brutality. They would kick up a woman bodily onto guard tearing off her things, another pulling off her stockings while the other Tchekists indulged in market vulgarity and cynicism.

One of the women the S R. Ksheshnerskaya was knocked down and beaten into unconsciousness for daring to protest. The Zionist Socialist woman Holtzman and several others suffered similar treatment. The Social Democrat Dalinsky was badly beaten up for trying to protect his wife. Also Dichter and his wife Venger. Even the sick politicals did not escape brutal handling.

During three days the Tchekists continued the beatings.

The use of the toilet is allowed for only 20 minutes—for the occupants of each cell collectively. The guards actually force themselves into the toilet, even when occupied by women and drag the occupant to his cell irrespective of his or her condition. The women in particular have been brought to such a pass that they now refuse to go to the toilet to wash up.

For some time past the authorities of the Tobolsk political isolator have been making the lives of the politicals unbearably miserable. The Anarchist prisoners occupy Cell No. 6 and one morning about 10-30 the usual time for being permitted to go to the lavatory the men were informed that the lavatory was engaged. They waited patiently repeatedly reminding the keepers about their need. This continued till 3 in the afternoon though never on previous occasions was the toilet engaged by one person for more than 15 minutes.

Prohibition in America

We read in *The International Student of America*

At the moment prohibition as a national policy is supported by the business community by all the Protestant churches by the women's organizations by the farmers and probably by the boot leggers altogether a very powerful combination for any political party to challenge successfully. In Europe we are constantly told that American labor desires to re-establish the liquor interests. Even if this were true labor is not so universally organized in America as in Britain and does not take the same part in politics. But it is not true. Manual workers in the United States belong in great measure to what is called the middle class. They belong to labor but not to the lower classes.

These men are often associated with church and chapel. These would be against drink. Then also too many wives of manual workers attribute to prohibition the comforts of their homes to make at all universal the pro-liquor views of a limited number of labor leaders in districts where there are foreign home workers.

This journal shows how owing to prohibition health has improved, crime decreased, drunkenness decreased, drinking in colleges decreased and economic conditions improved. Consequently there are more homes better homes, less poverty, and more food (not wine and beer), milk and meat.

The Soul of China

Writing in *The Review of Nations* on the Soul of China Professor Richard Wilhelm observes, impart —

The East does not form one indivisible whole. It is true that there are some common traits—some things that are characteristic of all civilisations from Constantinople to Calcutta and Tokyo if they are contrasted with Western Europe and America. The common characteristic may be briefly defined as a holding fast to the natural profundities of the soul as against the Western tendency to make life consistently mechanical and rational. But within this unity we find a variety of forms of expression.

Chinese civilisation has already passed through one crisis about 2400 years ago. At that period it passed through its mechanical stage. Technical discoveries were made and something like capitalism and industrialism came into existence. The old orders fell into decay and a new aristocracy of wealth and power sprang up. A process of atomisation took place in thought. The philosophy of Yang Chu was a glorification of the individual who would not give up one jot or one tittle even to benefit the whole world and on the other hand would not accept one jot or one tittle which was not his just due. Mo Ti on the other hand taught a rationalistic faith in an anthropomorphically conceived personal God, whose will it was that all men should love one another. He hoped to build up the fabric of society on the basis of this universal human love organised in the form of a church and on a rationalistic system of pragmatism and utilitarianism. In his view that is true which has prevailed historically, that which is practically useful, and that which corresponds to the dictates of common sense.

As far as China's attitude towards the West is concerned it has gone too far in the reception of the mechanical civilisation of the West for retreat to be possible. The Chinese want the advantages of mechanical industry. This however means that capitalism and the uprooting of the factory workers and their reduction to the status of a proletariat, must also be accepted. What is more the improvement of means of communication, the development of mining and the industrialisation of large tracts of territory cannot fail to have its effects on the structure of Chinese society. The organisation of the Confucian family State will necessarily break

down and the atomisation of society will be the result.

There is no intention in China of passing through all the phases of capitalistic industrialism, which caused so much misery in Europe, in the same way that Europe was obliged to pass through them. China benefits by the historical moment at which industrialism comes to it. Since the Russian Revolution it is no longer a moral possibility for the proletariat to be treated in so inhuman a fashion as in Europe in the Nineteenth Century. Again the Chinese worker is not so defenceless against exploitation by the employers as the European worker was when there came without warning the sudden development of machinery and its consequences. China has inherited from its past the power to organise. The system of guilds of traders and craftsmen in the towns is still full of vitality. These organisations are a further development of the administrative organisations of the villages which are based upon combinations of families. They constitute the germ of trade unions. Besides the workers in China are not struggling without defence of help in inarticulate misery. They receive guidance, assistance and moral support from the students who feel their solidarity with the struggling proletariat and stand shoulder to shoulder with it.

A solution for all the problems with which China is faced is to be found in the spirit of the old traditions. The more the Chinese have become sceptical that the only salvation is to be found in the gospel of Europe the more they have realised how much benefit is to be derived from their own past and have tended to go back to it. The representatives of Young China have undertaken the gigantic task of impartially investigating and sifting what national and what foreign elements are good and useful and can be amalgamated to form a new synthesis of cultures.

Let us sum up what has been said above. If mankind is to set itself free from the bonds of the temporal and the local it needs two things. The first is profound penetration into its own subconscious until from that beginning the way is opened to all those living experiences to which access is gained intuitively in mystical contemplation. This is the contribution of the East. On the other side mankind needs the bringing of the free individuality to the utmost pitch of intensity until it gains sufficient strength to bear the full pressure of the external world. This is the contribution of the West. On this ground East and West meet as twin brothers, each of which is the necessary complement to the other.

Wiping Out Illiteracy in China

Current History for April has an interesting article on this subject by Lenning Sweet, in the course of which he says —

What Socrates did for the thought of Greece, what Pasteur did for medical science, Y. C. James Yen is doing for democracy in Asia.

Yen who conceived and founded the Popular Education Movement is gradually teaching 320,000,000 people to read and write at the rate of a

million a year at a cost to each pupil of ninety six hours time and to the community of the equivalent of 60 cents per scholar. This has been done almost entirely by volunteer help in a country in which there is no semblance of central Government and which has sunk into poverty and anarchy through fifteen years of civil war and brigandage.

Never before has it been possible for a Manchurian coolie to learn at first hand the thoughts of his countryman in Canton or for him to read what is happening in Paris or Vienna in New York. Now millions are learning to understand the meaning of "China." For the three million text books which Yen has sold do not merely teach the pupils to recognize the puzzling Chinese characters; they also carry lessons concerning love of country, veneration of the heroes of old, the solidarity of the labouring classes, the imperialism of foreigners and the meaning of citizenship in a republic.

Afghanistan's "Modern" Ruler

We read in the same magazine —

Amannullah Khan is an ambitious man. He has two objects in view to become the Caliph or religious head of all the Sunni Mohammedans in the world and to modernize his country.

The Amir has already taken many steps to realise his second object, viz. to modernize his country. He has taken Japan as his model and like the late Mikado Mutsu Hito he is introducing all sorts of reforms in the country.

The Amir is rapidly progressing. He has employed a large number of Turks to bring Afghanistan into line with Western countries. The Turks are also put in charge of the Finance Department. But though the Amir prefers Turks who as Mohammedans are more agreeable to his people as introducers of Western civilization it must not be supposed that he employs no Western peoples. There are some American and German experts appointed to guide the industrial and commercial activity of the country. No British or Russians are employed because the Amir is afraid of both Great Britain and Russia. Non-official Western peoples are also taking part in the development of Afghanistan. A German firm called *Shirkat Aliman* (The German Cooperative Company) has recently secured monopoly of the whole export and import trade of the country. Another German firm has applied for the monopoly of valuable minerals in Afghanistan and the application is being considered by the Amir. French archaeologists under M. A. Foucher have obtained a thirty year monopoly for excavating the remains of the Greco-Bactrian civilization in the country.

The Amir is a strong protectionist. With the exception of the Koran and other religious books also war material there is a heavy duty on all imports into the kingdom. Powders, cosmetics, collars and handkerchiefs are charged 100 per cent duty.

The Government of Afghanistan has been considerably improved. The Amir sees that no tyranny is practised in any of the five provinces

into which his kingdom is divided—Kabul, Kandahar, Afghan Turkestan, Herat and Badakshan which are ruled each by a Governor. He has created a *Khilwat* (cabinet) which is composed of Sardars (hereditary noblemen) and Khans (representatives of the people). He has also created two assemblies: the *Durhar Shahi* (the Senate) and *Khawann Mulkhi* (Congress). Justice is administered by the *kazi* (the District Judge) and under the *kazi* comes the *Kotwal* (Magistrate). The Amir himself is the Supreme Court of Appeal. Amannullah Khan like Oriental monarchs of old has also set apart a day in the week on which the humblest of the subjects can approach him and pour their grievances into his ears.

He is something of a linguist, because, besides *Pustu* (the people's language) and Persian (the court language) he speaks English and French. He dresses in a half Oriental and half Western style but he takes good care that the cloth from which his garments are made is manufactured in Afghanistan.

Increasing Duration of Life

Mr Watson Davis writes in the same monthly —

One of the most notable achievements in the eventful half century since Pasteur has been the increase in the average duration of life in the United States. At present the average length of life is 58 years. Public health experts predict that the average years of man will continue to lengthen as time goes on. At the recent convention of the American Public Health Association Professor Irving Fisher of Yale gave a schedule of how the duration of life should increase in the years to come assuming that a hundred year average duration is the attainable limit. In 1930 the average length of life will be 61, in 1940 63, 1950 69, 1960 72, 1970 75, 1980 78, 1990 80, 2000 82. In the distant time of 2100 nearly everybody should live until 94 years of age. Professor Fisher pointed out that increases in length of life were being made at an amazing rate at the present time. The pace for the quarter century just past was 40 years increase per century, whereas it was only 4 years per century in the seventeenth and eighteenth centuries. There will be a time perhaps when men will live if not for ever at least much longer than the century mark which is now practically the limit of the human life span. The time will come perhaps Professor Fisher said when the human being will have an indefinite life-span when his defective and worn out parts can be replaced and renewed like those of a watch.

A Swiss on Our Congress

A Swiss correspondent has contributed to the *Neue Zürcher Zeitung* an article on the Gauhati session of the Indian National

Congress, from which we make the following extracts —

People previously unknown to its members have enjoyed brief periods of amazing popularity only to be forgotten the following season. A classical example is Annie Besant the theosophist leader. As early as 1873 this lady attacked the British Government in India in a pamphlet entitled *England in India*. In 1916 she appeared, almost unannounced with a plan for immediate home rule which she persuaded the Congress to endorse by a heavy majority. At the session in Calcutta late in 1917 she was elected president. But she vanished from the stage as suddenly as she had appeared and no longer figures among the Congress leaders. The All brothers have had a somewhat similar experience.

This year's attendance which was about five thousand including spectators, was not as large as at some previous sessions but when we consider that the delegates had to make an exceptionally long journey at their own expense in order to attend it was most creditable. A number of those with whom I talked spent three days and three nights on the railway to reach Ganhati which is twenty hours railway journey north-east of Calcutta, the nearest large city.

A place was reserved for lady delegates and their children. These formed a bright and charming group. Many of the women were remarkably beautiful and, as they sat there on their mats there flowing bright garments made them seem like a veritable mosaic in the snow throng. The Assamese women, who were naturally out in force are among the loveliest in India.

Malimo Sarojini Vaidi the poetess, who like Gandhi has resided in that continent, followed Gandhi with one of the most brilliant and appealing addresses of the Congress. She pictured with vivid ardent words and a great wealth of literary figures the condition of the Indian settlers in Africa. Every sentence was perfectly rounded and complete. Her address was a gem of extemporaneous eloquence.

Heart Thundering by Loud speaker

The Literary Digest notes —

An electric stethoscope with radio loud speakers attached rumbled and roared recently with the noise of human heart-beats amplified 10,000,000,000 times in its first clinical demonstration at the University of Pennsylvania, says a Philadelphia dispatch to the New York *Herald Tribune*.

Two hundred members of the junior class of the Medical School took notes as the dull roaring of the hearts of eight patients of the university hospital one at a time reverberated throughout the hospital auditorium.

The patients all of whom are afflicted with some form of heart ailment, were wheeled one by one on their beds into the center of the amphitheater beside the huge apparatus flanked by two large, rectangular loud speakers and had the stethoscope placed on their chests.

As the first patient was hooked up with the

radio-like apparatus, a rumbling as of distant thunder filled the room.

"That's the heart beat," explained Dr. C. J. Gamble, a plant instructor in pharmacology, who with H. F. Hopkins, of the laboratories of the Bell Telephone Company, New York, in charge of the heart beat amplifier conducted the class.

"This is amplified 10,000,000,000 times," said Dr. Gamble.

The roaring was irregular as if a man were pounding on a barrel with a hammer, alternating the interval between the strokes.

Dr. Gamble explained that the machine was the result of seven years work in the Bell Company laboratories. It was devised especially to enable students to become familiar with heart sounds in diagnosis. The demonstration, Dr. Gamble said, was its debut in actual work. Heart beats have been heard over the radio before but this was the first time the beats have been amplified to such an extent.

Differences in the heart beats of the several patients were discernible to the lay auditor. Some hearts beat rapidly slowing up when the patient held his breath momentarily at the request of Dr. Gamble. Others were irregular.

The most interesting patient was a sixteen-year-old high school boy. He grinned when he heard his own heart beats pounding into his ears, watched the blackboard chart of his heart's functioning and waved his hand in a cheery goodbye as he was wheeled out.

Buddhism in Leningrad

The British Buddhist announces —

"Preparations are well under way for the opening in Leningrad of a special institution for the study of Buddhism. Its establishment with the status of an Academy will mark it out as the only institution of its kind in the world.

"It will be organized in four departments—Japanese, Indian, Chinese, Mongolian—at the head of which will be four eminent Sanskrit scholars, one from each of the nationalities mentioned. The Soviet Government has borne initial cost and guarantees the institution financially for the future."

Let us hope that the British people too will follow this grand example and study more carefully the Doctrine of Love and Compassion enunciated by the Buddha Gautam over 2,500 years ago.

A Resolution Urging Prohibition

According to *Ablari*, the Executive Committee of the Prohibition League of India has passed the following resolution —

The Executive Committee of the League passed a resolution placing on record its clear and considered judgment that the total prohibition of the traffic in alcoholic liquors and poisonous drugs,

except for medical and industrial purposes should be the goal of the Excise policy of the Imperial Government, all Provincial Governments and the Governments of Indian States. Keeping in view the difficulties of the introduction of national prohibition a period of ten years is sufficient for this purpose in the opinion of the Committee. The financial difficulty must be met partly by reduction

of expenditure and partly by alternative methods of taxation. The Imperial and Local Governments should be urged to recast as early as possible the present scheme of finance so as to eliminate Excise revenue from the country's financial system.

The resolution further demanded the immediate introduction of local option laws by which to ascertain the wishes of the people in this matter.

of a complete and self-contained kingdom seemed to have faded into a dim distant and almost forgotten memory. Thus, when in 1669-60, a poor, friendless, humbly born youth of thirty-two set himself to face at once the might of the Mughal empire (then in its noon-day splendour) and the nearer hostility of Bijapur (which had been the "Queen of the Deccan" for nearly a century, and whose internal decay was not yet visible to any human eye),—he seemed to be the maddest of all mad men. No one could foresee in 1660 what the Mughal empire would sink to in 1707, as yet it was resplendent with all the prestige of Shah Jahan's victorious and magnificent reign. Shivaji had no brother Hindu chieftain to help him nor even a Muhammadan Court which could have ventured to give him an asylum in case of defeat, from Mughal vengeance. In embarking on war in 1660 he, therefore, as the English saying is "burnt his boats" and made retreat impossible for himself.

The result in fourteen years was that he did found a State, he did make himself a fully independent sovereign (*Chhatrapati*). Therefore, there can be no denying the fact that he was as the ancient Greeks would have called him, "a king among men"—one endowed with the divine instinct or genius.

III

Shivaji founded and maintained a sovereign State in the face of unparalleled difficulties and the opposition of the three greatest Powers of India in that age—the Mughals, the Bijapuris and the Portuguese. But did he succeed in creating a nation? Let us appeal to history for the answer.

A century and a half after Shivaji the Maratha State fell before the impact of England. Its political condition is graphically described by an exceptionally talented and shrewd Scotch contemporary. Sir Thomas Munro writes

18 Dec 1817—"I have already got possession of a considerable number of places in this district entirely by the assistance of the inhabitants of whom nine-tenths at least are in our favour. All that the inhabitants had requested was that they should not be transferred to any [Maratha] jagirdar." [Gleig, II, 221.]

19 May, 1818—"No army was ever more completely destroyed than the Peshwa's infantry. Of the few who escaped [after the fall of Sholapur] with their arms the greater part were disarmed or killed by the country people." [Gleig, II, 256.]

Let us try to imagine a parallel in Europe. The Germans, provoked to war by the imbecile French Emperor Napoleon III, have invaded France. The French soldiers, after a disastrous defeat at Worth or Mars La Tour are escaping to their homes before the enemy, and they are "disarmed or killed by the country people." Is such an event conceivable? If not, then the conclusion is irresistible that the French are a nation, but the Marathas were not even after a century and a half of *Hindupat Padshahi*, or a purely national Government without any foreign admixture or control.

What was the attitude of the higher classes, the natural leaders of the people in Maharashtra, during the national disaster of 1818? Let Munro again speak

Most of the Southern jagirdars would I believe be well pleased to find a decent pretext for getting out of it [i.e. the war in which they were standing by the side of the Peshwa.] [Gleig, II, 301.]

We have in our favour with the exception of a few disbanded horsemen and the immediate servants of the late Government almost the whole body of the people. We have all the trading, manufacturing and agricultural classes. [Gleig, II, 270.]

IV

The Maratha failure to create a nation even among their own race and in their small corner of India, requires a searching analysis on the part of the Indian patriot no less than the earnest student of Indian history. And for such an analysis we have to go down to the roots, to the social condition of Shivaji's time.

A deep study of Maratha society, indeed of society throughout India,—reveals some facts which are popularly ignored. We realise that the greatest obstacles to Shivaji's success were not Mughals or Adil Shahis, Siddis or Feringis, but his own countrymen,—just as in his last year he could have truly said in the words of Tennyson's dying king Arthur

My house hath been my bane

First, we cannot blink the truth that the dominant factor in Indian life—even today, no less than in the 17th century,—is caste, and neither religion nor country. By caste must not be understood the four broad divisions of the Hindus,—which exist only in the text books and airy philosophical generalisations delivered from platforms. The caste

that really counts, the division that is a living force, is the sub division and sub sub-division into innumerable small groups called *shalhas* or branches (more correctly twigs, or I should say, *leaves*,—they are so many!)—into which each caste is split up and within which alone marrying and giving in marriage eating and drinking together take place. The more minute and parochial a caste subdivision, the more it is of a reality in society, while a generic caste name like *Brahman* or even a provincial section of it like *Dakshina Brahman* does not connote any united body or homogeneous group. Apart from every caste being divided into mutually exclusive sections by provincial differences, there are still further subdivisions (among the members of the same caste in each province) due to differences of districts, and even the two sides of the same hill or river! And each of these smallest subdivisions of the Brahman caste is separated from the other subdivisions as completely as it is from an altogether different caste like the *Vaishya* or *Shudra*. Eg the *Kanyakubja* and *Sarayu pari Brahmins* of Northern India, the *Konkarnastha* and *Deshastha* of *Maharashtra*.

These are live issues of Indian society. Where three *Karhars* Brahmins (to take only one example) meet together they begin to whisper about their disabilities under the *Chitpavans*. A *Prahlu* stranger to a far off town would at once be welcomed by the local *Prahlu* society of the town, ignoring the other members of the visiting party.

ancestor of a higher caste, society or learning than *Shabji*? No. Both families had gained wealth, power and social prestige by serving the same *Mubammadan* dynasty, but the *Mores* had been eight generations earlier in the field than the *Bhonsles**. It was exactly as if the grandson of a *Rao Bahadur* created by *Lord Cornwallis* were to sneer at a *Rao Bahadur* created by *Lord Reading* as an upstart.

Thus, even the smallest sub division of a caste was further subdivided, and a united nation was made one degree still less possible. The same forces, the same beliefs, the same false pride in blood, are operating among us to day. Without the completest freedom of marriage within a population—and not the much advertised *Aryan Brotherhood* *Inter-caste dinners* (on vegetables!)—that population can never form a nation. Englishmen of to day do not consider their blood as defiled when they say in the words of their late poet laureate

"SAXON AND NORMAN AND DANE ARE WE."

Where caste and kulinism reign, merit cannot have full and free recognition and the community cannot rise to its highest possible capacity of greatness. Democracy is inconceivable there, because the root principle of democracy is the absolute equality of every member of the *demos*.

The rank is but the guinea's stamp

A man's the gold for all that.

Without the abolition of all distinctions of caste, creed and kulinism, a nation cannot come into being. And further, without eternal vigilance in national education and moral uplift, no nation can continue on the face of the earth.

This duty the *Maratha* State never attempted to perform, nor did any voluntary agency undertake it.

Balaji Arji (of the Prabhu caste) invested his son with the sacred thread for which he was excommunicated by the Brahmans. Whichever side had the rights of the case one thing is certain namely, that this internally torn community had not the *sine qua non* of a nation.

Nor did Maharashtra acquire that *sine qua non* ever after. The Peshwas were Brahmans from Konkan and the Brahmans of the upland (Desh) despised them as less pure in blood. The result was that the State policy of Maharashtra, instead of being directed to national ends was now degraded into upholding the prestige of one family or social sub division.

Shivaji had besides almost to the end of his days to struggle against the jealousy, scorn, indifference and even opposition of Maratha families his equals in caste sub division and once in fortune and social position—whom he had now outdistanced. The Bhonsle Savants of Vadi the Yadavs of Sindhkhed the Mores of Javli and (to a lesser extent) the Nimbalkars despised and kept aloof from the upstart grandson of that Maloji whom some old men still living remembered to have seen tilling his field—like a *Kumbi* ! Shivaji's own brother Vyankoji fought against him in the invasion of Bijapur in 1666.

VII

Thirdly there was no national spirit, no patriotism in the true sense of the term among the Maratha people to assist Shivaji and hasten his success. Not to speak of the common people who patiently and blindly tilled a grudging soil all their lives,—many of the higher and middle class Maratha families were content to serve Muslim rulers as mercenaries throughout the Chhatrapati or royal period of their history, as their descendants did the English aliens by deserting Bajji Rao II. And why? Because in that troubled divided society with century after century of the clash of rival dynasties and rapid dissolution of kingdoms land was the only unchangeable thing in an ever changing world. The ownership of land—or what amounted to the same thing the legal right to a village headman's dues—was the only form of wealth that could not be quickly robbed or squandered away but could be left as a provision for unborn generations of descendants. Dynasties did change but the

conqueror usually respected the grants of his fallen predecessor.

It has been well said of the Scottish Highlanders that, after the Jacobite risings of the 18th century they could forgive to the Hanoverian Government the hanging of their fathers but not the taking away of their lands.

Such being the economic bed rock on which Maratha society rested it naturally followed that *fiel* (*watan*) was dearer than *patria sua desh* and a foreign Power which assured to the watan dar the possession of his land was preferred to a grasping national king who threatened to take away the watan or enhance his demand for revenue. As Munro writes—

The Patwardhans and the Desai of Kintoor will be secured in the enjoyment of their possessions (by the British conquerors), instead of being exposed to constant attempts to diminish them as when under the dominion of the Peshwa [in 267].

Even Sindur (of the Ghorpare family) was in danger of treacherous seizure by Bajji Rao II during his pilgrimages to the river [in 230].

The same clinging to land which was quite natural and justifiable in that age—drew many Deccani families to the Mughal standard against Shivaji and Shamshuji and kept them faithful to the alien so long as the Mughal Empire did not turn hopelessly bankrupt and weak as it did after 1707. There could therefore be no united Maharashtra under Shivaji as there was a united Scotland under Robert the Bruce. Shivaji had to build on a loose sandy soil.

VIII

But the indispensable bases of a sovereign State he did lay down and the fact would have been established beyond question if his life had not been cut short only six years after his coronation. He gave to his own dominions in Maharashtra peace and order at least for a time. Now order is the beginning of all good things as disorder is the enemy of civilisation progress and popular happiness.

But order is only a means to an end. The next duty of the State is to throw careers open to talent (the motto of the French Revolution of 1789) to give employment to the people by creating and expanding through State-effort the various fields for the exercise of their ability and energy—economic, administrative, diplomatic, military,

financial and even mechanical. In proportion as a State can educate the people and carry out this policy, it will endure. Competition with the prize for the worthiest,—modified partly by the inexorable rules of caste and status and the natural handicap of the mediæval conditions of the then society,—was introduced into Shivaji's State.

The third feature of a good State, viz. freedom in the exercise of religion, was realized in Shivaji's kingdom. He went further, and though himself a pious Hindu he gave his State bounty to Muslim saints and Hindu sādhus without distinction, and respected the *Quran* no less than his own Scriptures.

But his reign was too brief and his dynasty too short lived for the world to see the full development of his constructive statesmanship and political ideals. Thus it happened that on the downfall of the Hindu Śivaraṇ in Mabarashtra, a very acute foreign

observer could remark (evidently about its outlying parts and not the homeland) —

'The Mahratta Government, from its foundation has been one of devastation. It never relinquished the predatory habits of its founder. It was continually destroying all within its reach, and never repairing.'

[Munro's letter, 11 Sep 1818. Gleig in 276]

For this result Shivaji's blind successors at Satara and Poona were to blame, and not he. In that early epoch and in his short span of life, he could not humanly be expected to have done otherwise.

Today, after the lapse of three centuries from his birth a historian taking a broad survey of the diversified but ceaseless flow of Indian history, is bound to admit that though Shivaji's dynasty is extinct and his State has crumbled into dust, yet he set an example of innate Hindu capacity (superior to Ranjit Singh's in its rage) and left a name which would continue to fire the spirit and be aspired to as an ideal for ages yet unborn.

BINDU'S SON

By SARAT CHANDRA CHATTERJEE

6

ABOUT ten days after Bindu's return from her father's house, one afternoon Annapurna entered her room and called "Chhotobou!" Chhotobou was sitting silently in front of a pile of soiled linen.

Annapurna asked, "Has the washerman come?" Chhotobou did not speak. Annapurna now noticed the expression on her face and was frightened. Very much upset, she asked, "What has happened?"

Bindu pointed out with her finger two burnt cigarette ends and said, "They were in Amulya's coat pocket."

Annapurna stood speechless.

Bindu suddenly burst into tears and said, "Didi, I prostrate myself at your feet, either send them away or let us go and live elsewhere."

Annapurna could not say anything. She stood silently awhile, then went away.

In the evening Amulya returned from

school, had his bath and went out to play. Bindu did not say a word. Bhairab, the servant, came and complained that Naren-babu had slapped him without any cause.

Bindu got annoyed and said, "Go and tell Didi."

On his return from court Madhab attempted a little joke while chaoging, got scolded and reverted to silence. Only Annapurna of all the members of the family had any idea of the rage of the storm that was brewing unseen. She passed the whole evening tortured by suspense, then finding her alone, she caught Chhotobou by the hand and said in a voice of entreaty, "Whatever it might be, he is your son. After all, do pardon him this once! Or get him to one side and give him a good scolding."

Bindu said, "He is not my son. I know that, so do you. So what is the use of saying a lot of words for nothing, Didi?"

Annapurna insisted, "No, you are his

mother, not I, it is to you that I have given him."

"When he was young I have fed him and dressed him. Now he has grown up, he is your son; take him back, give me my freedom!" So saying Bindu went away.

At night Amulya came to sleep with Annapurna. He was on the verge of tears.

Annapurna understood the matter and was annoyed. She asked, "Why have you come here? Go away, I am telling you, go away!"

Amulya turned round and found his father asleep on the bed. He did not say another word and went away.

In the morning Kadam, the maid, went to clean the kitchen and found Amulya fast asleep at one corner of the verandah on a pile of cow-dung fire-lighters. She ran to Bindu and brought her to the place. Annapurna was also awake, she too came and stood there.

Bindu said sharply, "Did you drive him away at night, Bara Oriya? He spoils your sleep, doesn't he?"

Seeing her son in that condition, Annapurna was deeply pained and tears of remorse clouded her eyes, but Bindu's cruel rebuke made her lose her temper absolutely. She cried, "Nothing pleases you so much as shelling your own guilt on to others' shoulders."

Bindu lifted up the boy and found he had a temperature. She said, "If one lies out in the open the whole night at this time of the year, one is bound to get fever. It will be a blessing now, if he gets well."

Annapurna anxiously leant forward and said, "Fever, did you say? Let me see."

Bindu pushed her hand away roughly and said, "Leave him alone, you needn't see if he has got fever." So saying, she picked up the sleeping child with ease, cast a poisonous glance at Annapurna and went to her room.

Amulya got well in about five or six days, but Bindu did not pardon her sister in law her fault. She did not even speak to her nicely after this incident. Annapurna understood everything, but kept silent. Nor could she forget how Bindu had put all the blame upon her before the whole house. This she somehow blurted out one day to Elokeshi. "His fever was due to Chhotobon. It is his good fortune that he did not die."

Elokeshi did not delay a minute to hear the tale to Bindu. Bindu heard it but said nothing. That she had heard it was known

only to Elokeshi. Bindu now stopped all conversation with Annapurna. For the last few days things were being moved to the other house, to-morrow they would go over to the new house. Jadab was staying in that house with the boys, Madhab was away on a case. He too was not at home when something terrible happened. The teacher had come in the evening, Bindu suddenly had an idea and had him called before her. She said, "From to-morrow please go to the other house to teach the boys." The teacher was going away after a respectful, "All right," when Bindu asked him, "And how is your pupil getting on with his lessons now-a-days?"

The teacher answered, "He is always good at study, he stands first in his class every time."

Bindu agreed, "That is true. But he has learnt to smoke cigarettes these days."

The teacher was astonished, "Learnt to smoke cigarettes?"

The next moment he himself added, "Well, there is nothing surprising in that, children learn what they see."

"Whom has he seen to smoke?"

The teacher kept quiet. Bindu said, "Please inform his father about this."

The teacher agreed by nodding his head, and said, "Take, for instance, this other affair about a week ago, they entered the garden of an Orissa man near the school, plucked his mangoes untimely, thrashed him and created an end of a row."

Bindu held her breath and asked, "What happened then?"

"The Oriya complained to the headmaster; he fined them ten rupees and pacified the man with the money."

Bindu could not believe it. She asked, "Was my Amulya in it? Where could he have got the money?"

The teacher answered, "That I don't know, but he too was in it. Nandu babu of this house was there, as well as some three or four wicked boys of the school. I have heard all this from the headmaster."

Bindu asked, "And the money? Has it been realised?"

"Yes, madam, I have heard that also."

"All right you can go," Bindu sat down where she was, she could only utter in a whisper, "Who is so daring in this house as would give him the money without telling me!" She was already in a bad temper as a result of her

Annapurna. This fresh provocation drove her to desperation.

She got up and went straight to the kitchen. Annapurna was cutting up vegetables for the night's dinner. She looked up and into Chhotohou's clouded face.

Bindu asked, "Didi, have you given any money to Amulya recently?"

Annapurna was fearing this. Her tongue dried in her month. She asked, "When told you?"

Bindu said, "That is not so very important. The important point is how you could give the money and how he could take it from you."

Annapurna was silent.

Bindu continued, "You do not want it that I keep him in discipline that is why you have kept this secret from me. What-
ever he might do, Amulya would never go to his seniors. You gave the money knowing all, isn't it so?"

Annapurna said slowly, "Yes, it is so. But pardon him this time. I am begging it of you."

Bindu was burning within her heart. She cried, "This time! I am pardoning for ever. I shall not say anything more. I shall utter one final word. I would not suffer him go to the dogs like this, inch by inch, before my own eyes—let him go wrong altogether. But what audacity you have!"

The last word pricked Annapurna rather sharply, still she kept quiet. But the more Bindu talked, the more angry she was getting. Bindu cried again, "For every thing you have your own eternal pose of innocence and say, 'pardon him this time only', but the fault is not so much his as yours. I shall never pardon you."

The servants of the household were all listening to the battle of words from under cover. Annapurna could stand it no more. She cried, "What will you do? Hang me by the neck!"

The fire received added fuel. Bindu flared up like gun powder and said, "That is the right punishment for you."

"Isn't my crime this that I have given my own son a couple of rupees?"

Words brought in words, Bindu forgot the main issue and digressed, "Why should you give even that much? Where does the money come from to be wasted?"

Annapurna said, "And don't you waste money."

"I waste my own money, and whose money do you waste, may I know?"

At this Annapurna became fearfully angry. She was the daughter of a poor family and thought Bindu was referring to her poor origin. She got up and cried, "You may be the daughter of a rich man, but don't be conceited enough to think that other people could not even spend two rupees."

Bindu retorted, "I am not so conceited, but you had better think whose money you spend even if you give away a pice."

Annapurna shrieked, "Whose money I spend! How dare you say such things? Go away from my presence at once!"

Bindu said, "Go away I shall—in the morning, but can't you see whose money you spend? Don't you know whose income you live upon?"

Having blurted out this Bindu suddenly became silent.

Annapurna's face had gone deathly pale. She looked awhile, without a flicker of her eyelashes, at Bindu, then said, "We are living upon your husband's income. I am your bondmaid and servant and my husband is your slave and son. This is what is in your mind, isn't it? Why hadn't you said so before this?"

Her lips trembled. She hit her lips hard, and continued after a moment's silence, "Where were you Chhotohou when he (meaning her own husband) never even purchased two garments at a time so that his younger brother might go to school? Where were you, again, when he rebuilt this parental cottage after it was burnt down, cooking his meals and living under a tree?"

As she said this, her eyes overflowed with tears. She wiped her eyes with the end of her sari and continued, "If he had only known what you had in your mind, he would never have passed his days in ease like this—eating opium and dozing away with the pipe of his hooka in his mouth—he is not a man of that type! Your husband knows him, the gods in heaven know him! And you have insulted him to-day by making me an occasion!"

Annapurna's breast heaved at this insult to her husband. She said, "It is a good thing that you have told me how you feel about it. Sati killed herself when her husband was insulted by her father, I am taking this solemn oath that I would rather earn my living by working as a cook, than touch your food! What have you done—you have insulted him!"

Just at this moment Jadab came into the court yard and called, 'Barabou !' Her husband's voice roused her emotions to a storm. She rushed out and said, "Oh shame, shame, the man who cannot feed his own wife and child—why can't he get a rope to hang himself with !"

Jadab was thoroughly nonplussed. He enquired in a dazed voice, "Why, what has happened?"

"What has happened? Nothing at all. Chhotobon said it quite clearly to-day that I was her maid and you her servant."

Inside the room, Bindu hit her tongue and put her fingers in her ears in shame.

Annapurna wept as she said, "I have no right to give even a pice to anybody—and I have to bear all this while you are alive! I am taking this solemn oath in front of you, if I ever again eat their food may I eat the head of my own son."

To Bindu's stunned senses the fearful words came faintly, as if from a long distance. She uttered a half-articulate, "What have you done, Didi!" Then suddenly fainted and collapsed again after about twelve years.

(7)

Everybody had come to the new house except Jadab, Annapurna and Amulya. Among outsiders had come Bindu's aunt, her aunt's daughter and grand children, her parents, their servants etc., etc. The whole house was full up. Bindu appeared a bit upset on the day of their arrival, but it passed off from the day after. That Annapurna would come the moment her anger vanished, Bindu had not the least doubt about. She put herself wholeheartedly into making arrangements for the religious ceremony and the feast which would take place.

Her father asked, "How is it, little mother, that I don't see your son?"

Bindu answered laconically, "He is in the other house."

The mother enquired, "Your sister-in-law couldn't come, is it so?"

Bindu said, "No."

She then herself explained, "If everybody came away, who would stay over there? One could not very well shunt up one's ancestral home could one?"

Bindu quietly went after her own work.

Jadab used to come every evening these days, sit outside and make enquiries about everybody, but he never came inside.

The night before the sanctification ceremony (of the new house) he called Elokeshi and was enquiring about various things of her. Bindu witnessed all this from a safe corner. Her brother-in-law had been more than a father to her. He used to call her "mother" and not 'bouma' as is customary. How often had she carried her little complaints to him when she had quarrels with her sister-in-law. He had never decided against her. To-day she could not face him, for a great shame separated her from him. Jadab went away. Bindu wept bitterly in a secret corner gagging herself with her sari—the house was full of all sorts of people, they might hear her.

Next morning Bindu had her husband called in and, when he arrived, said, "It is getting late, the priest is waiting, why has not Bara Thakur (Jadab) come yet?"

Madhab was astonished, "Why, what do you want with him?" he asked.

Bindu was even more astonished, she said, "What do I want with him? Who else is going to conduct everything, if he doesn't come?"

Madhab said, "Either I or our brother-in-law Priyanath Babu will have to do it. Dada cannot come."

Bindu said angrily, "You can't say 'Dada cannot come' and have done with it. While he is present, who else has the right to take the lead in such things? No, no, it cannot be—I will not allow anyone else to perform the ceremony."

Madhab said, "Then the ceremony had better not take place. He is not at home, he has gone to work."

"All this is Bara Gionis doing! I see that still too will not come." So saying Bindu went away tearfully. To her the religious ceremony, the festivities the merry-making all became aimless and unreal in a moment. For three days it had been her only thought that Bara Thakur would come and so would Didi and Amulya. Only she knew how much she had built upon this hope of hers while she had been going through the days' labours. How secure she was in her faith! And now, at a word from her husband the whole thing vanished like a mirage and her fruitless labours rested on her shoulders like a burden of heavy stones.

Elokeshi came and said, "Give me the key of the store-room, Chhotobon, the confectioner has come with the sweets."

Bindu said wearily, "Keep them somewhere now Thakurji, I shall see to it later on."

"Where shall I keep them, the crows will be at them at once."

"Then throw them away", Bindu said and went elsewhere.

Aunt came and enquired, "Bindu, if you would just show them how much dough they should prepare for the morning."

Bindu answered with an expression of displeasure in her face, "What do I know about the quantity of dough required? You are experts in household work you ought to know."

Aunt exclaimed in surprise, "Just listen to her! How should I know how many persons will dine here?"

Bindu got angry, "Then go and ask him", (meaning her husband) You should have seen Didi at work—when Amulya was being given his holy thread, the whole town dined at our place during three whole days, but she never once said 'Chhotobou just do this, or arrange that'. Her one little bone contained more ability than that found in all the people in the house put together. So saying she went into mother room. Kadam came and said, "Didi, Jaiji Babu is saying the clothes for the ceremony—". Before she could finish Bindu cried out, slaughter me and eat me up all of you! Go away from here at once!" Kadam ran away promptly.

A little later Madhab came and called her several times, "I say, do you hear?" Bindu came up closer to him and said loudly, "No not a bit. I shall not. I won't! Won't! Will that do?"

Madhab gaped at her amazed. Bindu said, "What will you do to me? Hang me by the neck? Then do it. She began to cry and left the place at a run. The sun slowly mounted, the hours went on increasing. Bindu went about from room to room, restless, doing nothing and finding fault with others. Somebody in her hurry had put some plates and dishes on the floor. Bindu threw them all into the courtyard in order to demonstrate how plates and dishes should be kept. Somebody's clothes were drying on the line when they touched the passing form of Bindu. She tore them to ribbons to show how clothes should be dried. Whoever came before her hurriedly dodged her in a panic.

The priest himself came into the house and said, "Well, well, the hours are advancing

more and more, but I don't see any progress anywhere—"

Bindu stood behind a door and told him rather rudely, "It is usual for things to be a bit late where there is plenty to do." Then she kicked a plate to one corner and sat down on the floor like an inert mass. About ten minutes later a familiar voice made her jump up suddenly. She looked out and found Annapurna out in the courtyard.

Bindu wept in sorrow and wounded pride. She wiped her eyes, came noisily up to Annapurna, put her sari round her neck as a mark of submission and said, "It is nearly eleven Didi. What more would you do to show me your enmity? If it will please you to have me take poison, then go home and send me a cupful." She then dropped the bunch of keys at Annapurna's feet and went to her room to roll on the floor in tears.

Annapurna silently picked up the keys and went into the storeroom after opening its doors.

In the afternoon there was little crowd in the house. People had departed after enjoying the feast. Still Bindu kept going in and out of her room restlessly for some unknown reason.

Bhairab came and told her, "Amulya-babu is not in the school."

Bindu looked daggers at him and said, "Wretch! Do boys remain at school till late at night? Couldn't you go to the other house once and see?"

Bhairab said, "He is not there either."

Bindu cried, "He must be playing *gooli dang* somewhere with the children of low people. Has he any fears in his heart any longer? Now if he loses one of his eyes, I believe, Bara Ginni will be thoroughly pleased. She would then be really happy—Go and find him wherever he may be!"

Annapurna was conversing with some other elderly women sitting by the storeroom. She could hear the shrill voice of Chhotobou. About an hour later Bhairab came back and informed Bindu that Amulya was in the house, but would not come. Bindu could not believe it.

"Wouldn't come, did you say? Did you tell him that I was calling him?"

Bhairab nodded and said, "Yes, I did, but still he wouldn't come."

Bindu kept silent for a moment, then said, "It is not his fault. He is only his mother's

was talking about. Sba asked, 'Of what, mother?'

Bindu said, 'I am talking about what happened the other day.' What did I say? I only asked, 'Didi, have you been giving money to Amulya recently?' Who does not know that one should not give money to children? She could very well have told me that Amulya had been crying and she had therefore, to give him some money. That would have settled it. But where was the occasion for all this exchange of words and taking of oaths? If one keeps some plates and things together they knock against one another, and we are human beings. But what justification was there for such oaths. He is the sole descendant of the family—and the oaths were in his name! I am telling you daughter, I shall never even look at her face while I am living! I might turn to my enemies but never to her."

The Brahmin woman was by nature not a great talker. She kept silent, not knowing what to say. Bindu's eyes filled with tears. She wiped them hurriedly and said 'Who is there who does not take oaths occasionally when in a temper. But she wouldn't even touch a drop of water in this house! She wouldn't allow the boy to come here. Are these befitting an elder? I am after all her younger, I am not so wise. If I had been her own daughter what would she have done then? But I shall pay her back, I shall never even take her name, you can rely on me for that."

The Brahmin woman still kept quiet. Bindu continued, "And it is not she alone who can take oaths. Don't I know it too? What will she do if I went to her to-morrow and asked her to send me a cup of poison, and told her that she would cause the death of her own son if she did not do so? I am

keeping quiet for a few days, but later on I shall either do this or take some poison myself and tell people that Didi had sent it to me. I shall see if people don't cry shame on her! If she does not learn a lesson thereby!"

The Brahmin woman was frightened. She said in a soft voice, 'Oh, shame, mother—you must not have such ideas—quarrels do not last for ever—nor would she be able to live without you. Nor would Amulya. I do not know how he is passing his days without you.'

Bindu said eagerly, 'Say so daughter! She must be keeping him back by force and threats. May be, she is beating him. He could not sleep without me a single night and five whole nights have already gone by! One should not even see the face of that hag. Didn't I say, that I would rather look at my enemies than at her?' The cook showed her a black bruise mark on her own wrist and said 'See here, it is still all black and blue. That night you fainted you do not know. Amulyadhone rushed in from somewhere, threw himself on your bosom and cried such a lot! He had never seen you like that and said, Chhotoma was dead. He would neither let us sprinkle water on your face nor fan you—I tried to drag him off he hit me. He scratched, and bit Barama and tore her clothes, the ribbons. People forgot to attend to the patient in their vain attempts to pacify him. At last four or five people jointly dragged him away."

Bindu kept her eyes fixed steadfastly on the Brahmin woman's face and appeared to swallow every word. She said, then she heaved a deep sigh, got up, went to her own bed room and shut herself in.

(To be continued)

technique to the accomplishment of a thing, so that while the standard of the achievement might be maintained or even improved, there might be at the same time a saving of time and energy. In other words, efficiency is the ability to accomplish a thing by means of the best method known at a time and place.

The most significant connotations of efficiency are, therefore, that it is relative and dynamic. There is nothing absolute and static about it. It always implies that one method is better or more economical than another. It is always in the state of becoming. The efficiency of yesterday may appear to be the inefficiency of to-day, and what is most efficient to-day may prove to be most wasteful to-morrow. As soon as a new law is discovered or a new technique is invented, there arises an occasion for the appearance of a new standard of efficiency. The fundamental principle in the development of efficiency is, as in the case of organic evolution, adaptation or the constant adjustment of old methods to new conditions.

Efficiency is a general term which is applicable to all classes of activities namely social, political, and industrial. It refers to the means of achievement rather than to the achievement itself. One can thus speak of the efficiency of machines, industries, institutions and governments with reference to the function which they have to perform. Industrial efficiency simply refers to industrial activities or productive energies.

The industrial efficiency of an individual is the ability to mobilise all the physical, intellectual and moral forces at his command for achieving results in a productive process. It consists of several elements—First, health and vigor, which are the physical basis of efficiency. They depend partly upon the constitution, including the muscular and the nervous systems, and partly upon the proper development of the vital organs and their freedom from disease. Second, aptitude and adaptability, which are the psycho-physical features of efficiency and imply temperament and disposition. The former relates to one's liking for a particular kind of work in preference to others and the latter to the capability of adjustment to new conditions, including machines and surroundings. Third, application and perseverance, which, although psycho-physical in origin, refer to the moral qualities of efficiency inasmuch as they imply one's power to control the body and mind.

The former is the ability to concentrate one's energies on a particular work and the latter is the capability to sustain this concentration for a desired length of time. Fourth, skill and ingenuity, which relate to the intellectual aspects of efficiency. Skill is the combination of speed and precision, the former adding to the quantity and the latter to the quality of work. They are achieved through education and training and perfected through repetition and experience. Ingenuity is the ability to meet a new situation or to design a new method in a productive process and is, therefore, the basic quality in invention. Both skill and ingenuity are the highest qualities in industrial efficiency.

When applied to an entrepreneur, industrial efficiency may best be defined to be the ability to organise and manage a business for profitable purposes. In the case of self-sufficing economy it is the capability of producing the largest amount of commodities with the least expenditure of land, labour and capital. The efficiency of a housewife is similar to that of an individual engaged in household production. It is the power of economising or getting the highest amount of satisfaction out of the stock of goods and services at her disposal. But in this age of exchange economy, production takes place mainly for the market rather than for the household and efficiency in such cases may best be judged by the extent of profit, which in the final analysis is, however, nothing but one's command of other goods which one can obtain in exchange of one's own.

The organisation and management of a large business or corporate enterprise include several processes, such as location and installation of the plant, choice and utilisation of machinery and material, selection and organisation of workers and marketing of finished products, the object in each process being the decrease of cost and increase of productivity. The movement for the so-called scientific management of industries and business has also added some new phases to business organisation. The ability to co-ordinate land, labour and capital with a view to making the largest amount of profit in a given business enterprise constitutes the efficiency of an entrepreneur or business manager.

The industrial efficiency of a nation has, however, a much larger connotation. First of all, national efficiency generally refers to the production of social wealth, while to

dividual efficiency may imply merely acquisition for private gain. Second, a nation is more or less a permanent entity and its interest lies both in the present and future generations, while an individual is a temporary being, and his interest may end in himself or may at best continue for his immediate descendants. While making the best use of its resources for the present generation a nation must also conserve them for future generations.

Prosperity is of course the prime object of industrial efficiency. It is, however, more or less a relative term. There is no end to human wants. In this age of growing aims and aspirations and of consequent increasing wants it is hard to draw a line where poverty ends and prosperity begins. Beyond the supply of absolute necessities of life, the prosperity of a nation can best be judged from the viewpoint of its ability to maintain its economic standard among other advanced nations. But there is no necessary correlation between efficiency and prosperity. Wealth is the product of factors other than human energy or labour alone. The same amount of labour applied to two countries of varying natural resources would result differently in national wealth. In order to maintain its national standard a country of poorer resources will have to increase its labour power or capital resources. Since capital is the product of past industry, the accumulation of capital resources is also determined by labour power or industrial efficiency.

The welfare of a nation depends not only upon the creation of economic values, but also upon that of other values such as the ethical, esthetic and religious. While devoting itself to the pursuit of wealth, a nation must also pay attention to the moral and intellectual aspects of life. In fact, one of the principal aims of industrial efficiency is to release a part of national energy for activities other than industrial. Moreover, by facilitating the supply of the basic needs of life, industrial efficiency also creates opportunities for realising moral and intellectual ideals.

The industrial efficiency of a nation is, therefore, determined by several factors — First, utilisation and conservation of arable land, forests, fisheries and mines in the light of modern science and art. Second, encouragement to savings and transformation of these savings into productive instruments of

the latest discoveries and inventions. Third, development of the physical, intellectual and moral qualities of the people for productive purposes. Fourth, preservation of a high national standard among other advanced nations. Fifth, cultivation of the moral and intellectual aspects of life for the welfare of society. In short, the industrial efficiency of a nation is its ability to conserve and utilise, in the light of the latest progress in science and art, all its natural, human and capital resources for both the absolute and relative wealth and welfare of its people.

2. SIGNIFICANCE OF EFFICIENCY

Efficiency is the goal of all evolutionary processes. They all tend to the gradual differentiation and specialisation of the organism on the one hand, and the more and more interdependence and coordination of the parts to the whole on the other, resulting in increasing efficiency in functional process. While organic evolution furnishes one of the best examples of functional development, equally illustrative is social evolution, which, through the development of different institutions, such as the family and the state, has led to the progress of society. The function of industrial evolution is the augmentation of social wealth. The development of the factory system from hunting and pasturing, of the modern exchange from the primitive barter, and of international economy from the self-sufficing household or village have all tended towards the increase of national prosperity.

The significance of efficiency in national life is best indicated by its functions, which might be classified under two heads, namely, direct and indirect. The direct effect of industrial efficiency is threefold — First, supply of the basic needs of life in the face of the proportionately decreasing natural resources, especially food supply, as a result of increasing population. Second, supply of increasing requirements of the growing individuality in the process of social progress. Third, preservation of the prosperity and prestige of a nation as well as its economic independence in the growing competition among different nations.

The indirect effect of industrial efficiency upon a nation is also very great — First, the physical, intellectual and moral qualities constituting industrial efficiency also form the basis of national character. Second,

efficiency by saving time for the supply of necessities and requirements secures needed leisure for intellectual and moral activities. Third, both material prosperity and moral and intellectual development are essential for national liberty and social progress.

3 ESTIMATION OF EFFICIENCY

There is scarcely any standard by which the industrial efficiency of a nation can be measured with any degree of accuracy. Some rough idea may nevertheless be had from different systems of estimation. Since efficiency is a relative term, such estimates must be based upon comparison.

The per capita incomes of different countries might give some idea of comparative efficiency. But they refer to nominal or money income which differs in different countries, and not to real income. Moreover they give no idea of the relative importance of labour in productive processes, which forms the subject-matter of study in efficiency.

Attempts have been made to estimate efficiency by the productivity of an industrial unit. Thus the yield of crop per acre has been made the basis of relative efficiency. The defect of the system lies in the failure to take into consideration the relative importance of the other factors of production, namely labour and capital. Similarly defective is the system of estimating the efficiency of labour from the products of factories using the same kind of machine. Such estimates disregard the differences in the conditions of work, nature of raw materials, rates of wages, and similar other factors.*

The relative efficiency of labour may also be estimated by employing different groups or gangs of workers in the different branches of the same industrial plant, such as factory, mine, farm or orchard, or in the same plant at different times. Such a method is quite practicable in the United States, where workers of practically all nationalities are available. The weakness of the system is that the age, health, education and training of the workers of different nationalities are

often disregarded. But as most of the immigrants are in the prime of life and the experience of the workers, is also taken into consideration to some extent such a method offers a very fair basis of comparison. But it is hardly possible to apply this method to a nation as a whole.

Another method is the estimation of the potential productivity of a country with the probable application of the latest industrial technique including discoveries and inventions compared with the actual productivity. Such methods would include the effect of machinery in the technique or labour proper. But the inability of a nation to apply the best machinery to productive processes is also a sign of its industrial inefficiency. This system is however too theoretical to be of any practical use.

A practical method is to take as base the average productivity of various industries in several advanced countries, including as many commodities as possible, and to compare the efficiency of a particular nation by index number. But the difficulty arises in the fact that there is no common basis of collecting statistical data in different countries. Moreover exact data on a sufficiently large number of commodities are available only in a few countries. It must also be mentioned that a large number of commodities escape statistical calculation even in the most advanced countries.

There are several other methods by which the industrial efficiency of a country may be indicated. First, the general economic condition of a country. For example the starvation of the majority of the people in India cannot fail to indicate its industrial inefficiency. The presence of a few extremely rich people implies only a defective system in distribution rather than sufficiency in production. Second, absence of the latest technique and up-to-date machinery from the productive system of a country is another indication. Obsolete and antiquated tools and implements and century-old industrial system and methods in this age of world competition and international economy show that India is still far behind other nations in industrial development. Third, wastage of natural, human and capital resources is still another indication. In a country like the United States, where there is a superabundance of natural resources in comparison with man power, a private economy has necessarily

* This is the basis of calculation of the efficiency of India in labour as compared with the British. See Dr. R. A. Fildes, *Labour in India*, Berlin, 1923, pp. 10-11.

led to a certain amount of wastage. But in a country like India, where famine is constantly present in some part of the country or other and where the majority of the

people are always on the verge of starvation, the wastage of the resources in any form is the direct result of her industrial inefficiency.

INDIANS ABROAD

SEGREGATION IN MOMBASA

IT is well known how the Government of Kenya Colony have always tried to live well up to the principle of racial segregation in which they believe heart and soul. Last year they tried to sell 21 residential plots in Mombasa with the restrictive clause 'To Europeans only', but were frustrated in their noble effort by the opposition of the Indians there. This year they are again offering 12 plots on similar condition. A memorandum published by the Young Men's Union Mombasa, throws much light on matters as they stand. We are quoting from it below:

It seems the Local Government with the consent of the Colonial Office is determined to revive segregation in Mombasa Township.

It is contemplated by the Government to reserve the area bounded by Salim Road South Railway Line Triton Road and Golf course measuring about 160 acres for the European residence only. Owing to the policy of segregation contemplated to be followed by the Government before 1923, few plots were sold by the Government in the said area in 1913 allowing any person without distinction of race or colour to buy the plots but with a condition that no Asian could reside or stay in the houses erected thereon except as domestic servants. Later on in 1916 and 1918 few more plots were sold restricting the sales to Europeans only. The total area alienated thereby is approximately 30 acres.

It must be borne in mind that at the time of all the said sales the Indian Community strongly resented the unjust and arbitrary restrictions put on sales and carried on their fight against that invidious policy till July 1923 when the Imperial Government published the White Paper and while doing injustice to Indians on all the points at issue definitely abandoned segregation in townships without any qualification. It was then considered by all competent persons that non-segregation in townships was the only point decided with equity and justice. Following is the text of non-segregation clause from the White Paper of July 1923—

The next matter for consideration is the segregation of European and Non-European races. Following upon Prof. Simpson's report the policy of segregation was adopted in principle and it was

proposed by Lord Milner to retain this policy both on sanitary and social grounds. In so far as commercial segregation is concerned it has already been generally agreed that this should be discontinued but with regard to residential segregation matters have been in suspense for some time and all sales of township plots have been held up pending a final decision on the question of principle involved. It is now the view of competent medical authorities that as a sanitation measure the segregation of Europeans and Asiatics is not absolutely essential to the preservation of the health of the community, a rigid enforcement of sanitary police and building regulations without any racial discrimination by Colonial and Municipal authorities will suffice. It may well prove in practice that different races will by natural affinity keep together in separate quarters but to affect such separation by legislative enactments except on strongest sanitary grounds would not in the opinion of His Majesty's Government be justifiable. They have therefore decided that the policy of segregation between Europeans and Asiatics in Townships must be abandoned.

On 15th May 1926 a joint deputation of Indians and Arabs waited upon His Excellency Sir Edward Grigg who was then in Mombasa and submitted a memorandum representing to him how the proposed sale of plots was unjust, illegal and against the White Paper and requested His Excellency to do justice by abandoning the unjust restrictions upon sales. In reply to the deputation His Excellency expressed an opinion that the case of the signatories was strong but refused to discuss the legal aspect of the subject. His Excellency was very sympathetic to the case of the signatories of the memorandum. To explain why the restrictions on the sales were imposed he read the following extract from the letter of the Commissioner of Lands, Nairobi to the Land Officer Mombasa, "the Secretary of State for the Colonies has now agreed that the sale of plots in the area bounded by Cliff Avenue and Salim Road can not legally be unrestricted but must be confined to Europeans only" and stated that the proposed restrictions were due to the legal decision of the Secretary of State for the Colonies. His Excellency promised to supply a list of correspondence passed between the Government and Colonial Office and extend time of sales in order to allow signatories to put their case before the Colonial Office and he also promised to represent the views of the signatories to the Secretary of State for the Colonies.

Not only that the gist of the correspondence was never supplied but the Colonial Secretary never gave information to the Secretary of the Indian Association in spite of various requests. In short no definite ground on which the restrictions were based was ever disclosed by the Local Government to the Non European Communities and the representatives of the Non European Communities failed to understand what grounds they should meet by putting forward a further memorandum. But it could be safely presumed from the extract of the letter of the Commissioner of Lands and particularly the words has now agreed that the Secretary of State for the Colonies sanctioned restrictions after more than once representations were made by the Local Government to the Colonial Office and sanctions was asked for.

Though the Local Government has not disclosed the reason why the unjust policy is proposed to be followed it can be ascertained from the following extract from the reply of the Secretary of State for the Colonies given to Col. Wedgwood on the 10th June 1916 that the restrictive covenants entered into with previous landholders is the only ground given on which the present policy is based. The following is the reply. I have been asked to reply. The information in possession of my Rt Hon friend the Secretary of State for the Colonies does not enable him to identify the particular plots referred to in the question but the facts are very probably as stated. It should be borne in mind that the transition from the policy of segregation to one of non-segregation involved some difficulty and it was pointed out by the Government concerned that in certain cases the land was legally subject to restrictive covenants entered into under the former system. After careful consideration it was decided that where it was not possible to waive such covenants without incurring legal proceeding entailing the probability of an injunction against the Government it would be necessary to retain the restrictions. The sales mentioned by the Hon. member no doubt fall within this category.

But any one who would care to read the leases made between the Government and previous landholders and registered in Mombasa registry will find that no restrictive covenants are incorporated as regards unsold adjoining plots. Those leases only contained covenants that the leased premises cannot be transferred to nor can be used by Non Europeans but do not contain one word about adjoining unsold plots.

It is interesting to know that certain Japanese demands were occupying one building in the said area since 1914 and the Government has now given notice to the landlord asking him to eject his Japanese tenants from the premises otherwise proceedings for forfeiture of the lease will be taken by the Government against the landlord. It is also remarkable that the application by the Japan Cotton Trading Company Ltd. a well known Japanese firm to purchase a house in that area has been refused by the Government on the grounds of racial discrimination only.

From the minutes of the District Committee of February 1927 it could be seen that the Government has now definitely decided to enforce the restrictive covenants in the old leases and also to restrict the future sales in that area to Europeans only. It should be noted that that even now no

ground for adoption of such policy have been disclosed and the Government even does not care to define the area within which such restrictions will be extended.

It must be borne in mind that the said area is the healthiest part of Mombasa Township. It should also be understood that under the proposed policy Non British Europeans including ex enemy aliens and others will be given preference over British Indian subjects of His Majesty as regards the acquisition of property in a British Crown Colony.

We are not surprised at the conduct of the Kenya Government. We do not expect anything better from them but we expect our Indian brethren over there to put up as great a fight as possible against them and wrest from them what they will not give with good grace.

Indians in Fiji

We have received the following Communication from Fiji

Lautoka Fiji
19th November, 1920

The Editor
The Modern Review
Calcutta

Dear Sir

Seven years ago the Government of Fiji appointed a Commission to inquire into and suggest ways and means in respect of Indian franchise. Since then there have been numerous representations appealing the Government to grant the right and privileges promised to Indians as far back as in 189 by no less a person than the Secretary of State but all have been in vain and the Government remains as callous as ever.

The Government of India appointed and sent a Commission known as Raju Commission to Fiji in 1922 but so far its report have not seen the light of the day nor is it likely to. It is believed the Commission demanded equal representation in the Council which the Government of Fiji is not prepared to accede.

Mr. Shastri's resolution of Equal Status in the Imperial Conference, of 1923 and Dr. Saptur's subsequent proposal in the Imperial Conference of 1913 combined with the appointment of the Colonies Committee has set us on our feet.

The following correspondence has passed between the Young Men's Indian Association and the Fiji Government which throws a flood of light on the present situation and it would be read with interest.

LETTER FROM THE Y.M.I.A. TO COLONIAL SECRETARY

16th September 1926

Sir,

I am directed by my Association to write and respectfully ask you for information regarding the decision of Imperial Government on the momentous question of Franchise to Indians in Fiji and the intention of the Government of Fiji to nominate an Indian to the vacant seat in the Legislative Council.

NOTES

Mr Gandhi on Sister Nivedita

The following passage occurs in Mr M K Gandhi's 'Story of My Experiments with Truth' part iii, chapter xix —

I then ascertained the place of residence of Sister Nivedita, and saw her in a Chowringhee mansion. I was taken aback by the splendour that surrounded her and even in our conversation there was not much meeting ground. I spoke to Gokhale about this and he told me that he did not wonder that there could be no point of contact between me and a volatile person like her.

I met her again at Mr Pestonji Padshah's place. I happened to turn up just as she was talking to his old mother and so I became an interpreter between the two. In spite of my failure to find any agreement with her I could not but notice and admire her overflowing love for Hinduism. I came to know of her books later.

The mention of "the splendour that surrounded her" without any other details conveys a wrong idea of Sister Nivedita's mode of living. The fact is, at the time when Mr Gandhi saw her she was the guest of Mrs Ole Boll and Miss Josephine MacLeod at the American Consulate, and, as such was not responsible for the splendour. Her ascetic and very simple style of living in a tumbledown house in Bosepara Lane, Baghbazar is well known to all her friends and acquaintances.

We do not know whether Mr Gokhale spoke to Mr Gandhi in English and actually used the word 'volatile' to describe her,—for what has appeared in *Young India* is translated from the Gujarati *Nagaran*. But whoever may be responsible for the use of the word 'volatile' has wronged her memory. Sister Nivedita had her defects, as in fact even the greatest of mankind had and have, but volatile she was not in any sense of that word. As English is not our vernacular, we have consulted two dictionaries on our table to find out its exact meaning as applied to human beings. The Pocket Oxford Dictionary defines it to mean "of gay temperament, mercurial". In Webster's New International Dictionary the explanation given is, "light hearted, airy, lively, hence, changeable, fickle". Sister Nivedita was a very serious minded person, noted for her constancy and steadfast devotion to the cause of Hinduism and India.

The reference to "her overflowing love for Hinduism" is quite just and accurate.

Germans and the League of Nations Secretariat

A report of the proceedings of the Council of the League of Nations, December Session 1926 received from the League Secretariat contains the information that

The Council approved several appointments of German members of the Secretariat. The principal appointment is that of M Dufour Feronce from the German Embassy in London as Under Secretary-General. The British representative Sir Austen Chamberlain congratulated the Secretary General on his choice and Dr Stresmann expressed his appreciation of what Sir Austen said.

When the present writer was at Geneva in September last, he heard at the time of Germany's admission to the League that some good posts were to be created in the Secretariat for Germans and that Germany was also to have some mandates. The first part of the rumour proves to have been well founded. Mandates cannot be so easily created and given as posts. For no mandatory state is likely to give up its 'trust property' to accommodate Germany.

We have repeatedly pointed out that justice demands that there should be more Indians in the League Secretariat and the International Labour Office. But India, though one of the original members of the League, is a subject country and so there is nobody to fight for her. At the last plenary meeting of the League Assembly in 1926 M Hambro, Norwegian delegate urged, with reference to the Budget of the League

the necessity for all small and distant nations to foster a better representation on the Secretariat and on the International Labour Office. In appointing the new higher officials of the League and the Under secretaries and Chiefs of Section the Council must take care not to give the world at large the impression that only the citizens of great Powers should have an opportunity of filling them.

But Norway is not a great Power. Therefore no need has been felt by the bosses of the show to placate her. Do they act according to the 'spoils system'?

Persia and Opium Production

Another statement received from the League Secretariat contains the following paragraph

Connected with the general opium question was the report of the League's Commission which went to Persia to study the possibility of substituting poppy growing by other crops. This report is referred to the next Assembly. The Persian representative told the Council that his Government would agree after a delay of three years to reduce its opium production by 10 per cent a year for three years its policy after that would be governed by the general situation and by what other countries were doing. Poppy growing land diverted to other uses would be exempt from land taxes and the Government would make special loans to help cultivators who gave up poppy growing.

As India is an opium producing country like Persia it may be asked whether the League's Commission visited India also to study the possibility of substituting poppy growing in this country by other crops. If not why? If it did has the Government of India agreed to do anything similar to what Persia has agreed to do?

"A Mandate and Its Moral"

Under the above heading, *The Manchester Guardian Weekly* has the following paragraph —

There has just been published the texts of the Conventions ratified in July between the United Kingdom and the United States respecting national rights in the territories of Africa mandated to the former Power: the mandates are most explicit about the obligation to promote the material and moral well being and social progress of the inhabitants. One of the districts under mandate is Tanganyika Territory which is the immediate neighbour of Kenya Colony and the United Kingdom as mandator of the one and possessor of the other cannot logically impose one form of administration on one side of the border and another on the other. In Kenya there is the crushing hut tax which drives the native to leave his home and become a wage-earner in white employ and there is the use of forced labour for public works: thus the British record does not in the least conform with the duty to safeguard social progress. Is Tanganyika to become a model of administration to Kenya, or is Kenya to give a vicious example to Tanganyika? The mandate for the latter does it is true allow forced labour for essential public works and it is a serious evil that the authority of the League should be given to any trust containing a clause so liable to abuse. But in the last resort the mandator is responsible to the League for its administration of the trust so that there is some external check on the power to impose a modified form of slavery. In Tanganyika the native is encouraged to become a cultivator not for his own needs only but for the market in Kenya the opposite is the case. It is the business of the League to see that in Tanganyika the invasion of native rights in land and liberty which has gone so far in the neighbouring country of Kenya, is not imitated by the

white settlers. Kenya needs a preceptor rather than a accomplice at its side.

Good Examples Set By Public Men

When, four years ago, Mr. Ganesh Dutt Singh was one of the Ministers for Bihar and Orissa, he promised to devote three-fourths of his salary to a public cause. In fulfilment of that promise he has founded the Hindu orphanage at Patna with an endowment of one lakh of rupees.

Mr. Patel, president of the Legislative Assembly, has also promised to send Mr. Gandhi a specified portion of his salary to be spent by the latter for some public cause, and has already begun to make remittances.

These praiseworthy examples deserve to be followed by other public men.

Supply of News from China

What news we get from China through Reuter's agency is one-sided and cannot be depended upon. Many lies and half-truths are transmitted to all parts of the world through the cables which are entirely under non-Asiatic control. For these reasons there does not seem to be anything intrinsically wrong in the suggestion made by the honorary secretary to the Indian Journalists' Association in Calcutta that our Indian journals should combine to send one or more correspondents to China to gather correct information and send the same by telegraph or by post, whichever may be practicable. It may be that such correspondents would not be allowed to proceed to China, or that, even if so allowed, their cables would not be accepted for transmission. There may be other difficulties, too. But we should not allow the thought of such contingencies to paralyse our efforts. The attempt is worth making.

Seeing Things "Whole and Undivided"

Messrs. Kegan Paul, Trench Trubner and Co. have been publishing a series of small volumes under the general title of "To-day and To-morrow." Among the authors are some of the most distinguished English

thinkers, scientists, philosophers, doctors, critics and artists such as Bertrand Russell, J B S. Haldane F C S Schiller etc. One of the volumes is named *The Dance of Siva* by Collum. By the dance of Siva the author means the Indian conception of the continuous cosmic process which is both constructive and destructive at one and the same time. A considerable portion of this book is taken up with a critically appreciative interpretation of the scientific work done by Sir J C Bose. Says the author.

Let us turn to another department of human activity to the current tendencies of critical science. Here it is no longer a matter of tentative queries. A portent has appeared which is of the greatest significance. Shadows that we took for substantial barriers are being dissipated by the painstaking method of scientific experiment, and a whole collection of categories that we had come to accept as facts have been revealed as being but mere fictions born partly of our ignorance partly of the characteristically "Western" inability to see anything whole and undivided. The achievement has been a triumph for that Western intellectual curiosity and Western critical and experimental method which first became characteristic of Europe in the Renaissance—but it has not been achieved by the West. East and West had to come consciously together to achieve the result. An Eastern mind seeing Nature whole and working with the critical experimental science of the West was needed and in the fulness of time was forthcoming when Indian genius found itself in full and practised possession of Cambridge's scientific method in the person of Jagadis Bose, the Bengali physicist. Centuries hence men may point to Bose as a conveniently identifiable point from which to date the dawn of the new thought just as to-day we put our finger on Socrates when we wish to focus our view of the beginning of that new thought which inspired the West for centuries and to say "Here is our landmark here the new can be said to have been first recognizable as something that was characteristically different."

A brief glance at the significant results of this Indian researcher's discoveries will illustrate better than any attempt to define it what is implied in the Oriental conception of the Dance of Siva which I have taken as the symbolic title of this essay to discern the continuous thread running through the apparent tangle of to-day linking yesterday with to-morrow and to-morrow inevitably with yesterday—*The Dance of Siva* pp 59-61

These introductory observations are followed by page after page of eloquent interpretation and comment.

Chinese Cadets in Japanese Military College

A recent Tokio despatch says that the Japanese Government has decided that

admission of Chinese students to the Military College in Tokio must hereafter be limited, following an unprecedented number of applications for admission. There are now 20 Chinese students in the college and 140 more are seeking admission.

China has her own military colleges where thousands of officers are trained by efficient instructors. China is torn with Civil War. Yet the Chinese Government and people could make such arrangements that hundreds of Chinese students could secure admission into the military colleges of Japan and other countries. Under the benevolent British rulers who say that the Indians cannot be given self government because they are not competent to take charge of their national defence there is not a single well equipped military college for Indians in India and only a few Indians are annually admitted to Sandhurst. This is how Indians are trained to take charge of their national defence.

Latest News on Hindu Citizenship Fight in America

Dr Taraknath Das wrote to us from Baden Baden, on March 22 1927, that he had received cables from responsible Americans in Washington D C, to the effect that the United States Supreme Court has denied the application of the United States Solicitor General who petitioned that Court to review the decision rendered in favor of Mr Sahbaram Ganesh Pandit, Attorney at Law of Los Angeles by the circuit of appeals at San Francisco, California. This means that Mr Pandit, who was naturalized as an American citizen in 1914 and whose citizenship has been contested by the United States Department of Naturalization on the ground that he is not a "white person and is thus ineligible to citizenship and that he secured his citizenship illegally and fraudulently has won the case against the United States by the verdict of the Supreme Court.

Mr Pandit's victory in the contest has been secured purely on the legal ground of 'res adjudicata' and the Court has not decided that the Hindus are "white persons." This Pandit's victory would not establish any precedent for other Hindus to become citizens of the United States. But it will.

India has chosen only three men Experts though not entitled to speak or vote, could have been sent in addition but none it appears have been sent. According to the requirements laid down by the Economic and Financial Section of the League, the Members [who are to participate in the Conference] should not be spokesmen of the Official policy," i. e., they should be non-officials. But one of the three delegates, Sir Campbell Rhodes, is an official being a Member of the Council of the Secretary of State for India in London and a paid servant of the Government. The Indian Merchants Chamber points out in addition that

Sir Campbell Rhodes is not an Indian and can not therefore be expected to put before the Conference the Indian point of view upon the economic problems to be discussed by the Conference. The proper Indian representation at the Conference is thus reduced to less than half consisting as it now does of only two Indian Delegates as against the total of five delegates for India. The loss of India is, however, turned to the gain of England. The Englishman representing India naturally urges the English point of view and acts in concert with his English conferees thus leading to overrepresentation of England at the Conference. Such disregard by the Government of India of the wishes of the Indian public as also of the rules laid down for various Conferences either by the Treaty of Versailles or by the League of Nations has now become chronic.

In the matter of these meetings the Government of India appear to make their selections more with a view to British interests than to the interests of India. Last year this Chamber had to protest against the nomination by the Government of India of a representative of British ship-owning interests to represent India at the 8th and 9th International Labour Conferences. The composition of the Indian Delegation to the sittings of the League of Nations has so far never been satisfactory to Indian public opinion.

Some of the questions to be discussed at the Conference are

- (1) Liberty of trading including economic and fiscal treatment of foreigners and foreign companies
- (2) Indirect methods of protecting national commerce and shipping including discriminating legislation
- (3) International Commercial treaties
- (4) International agreement regarding national industries
- (5) International action in collaboration in agriculture.

In most of these subjects British interests clash with those of India. Hence a full quota of five well informed non official Indians, with expert advisers, ought to have been sent to the Conference which has not been done.

Bengali Homage and Tribute to Shivaji

As the tercentenary of the birth of Shivaji is to be celebrated all over India this month we should utilise the occasion to promote a study of his life and achievements as well as of the causes of the decline and fall of the Maratha confederacy. Such study is sure to help us in our efforts at national regeneration. Bengal has done something to draw attention to the greatness of Shivaji. There is the late Romesh Chunder Dutt's Bengali novel *Maharashtra Jivan Prabhat* or *The Dawn of Maratha Life*. There is the magnificent poem in Bengali by Rabindranath Tagore, in which occur the words

“জয়তু শিবাজী”

Victory be to Shivaji!

During the days of the anti-partition agitation there was a Shivaji festival in Calcutta in which Lokamanya Tilak participated. There is the standard biography of Shivaji in English by Professor Jadunath Sarkar whose timely article on the hero and statesman we are privileged to publish in this number. A considerable portion of that work appeared in this Review. There are at least three biographies of Shivaji in Bengali. There is an epic poem on Shivaji by the poet Jogindranath Basu. It is an illustrated volume. Recently Professor Surendranath Sen has contributed to *The Calcutta Review* an article on Shivaji being a translation of Portuguese materials. Shivaji and Ramdas Swami have furnished subjects to Bengali artists for some of their paintings. Dramatic pieces based on incidents in Shivaji's life are not infrequently staged in Bengal. All this shows that Bengalis have to some extent honoured Shivaji in several ways—mostly of course with the pen and the brush and sometimes with the voice on the stage.

We learn from *The Indian Social Reformer* that an appeal has been issued to the Hindu leaders in every province in India to organise in their own town or city a festival in memory of the great event, and in a manner worthy of the same. “signed by, among others, Lala Lajpat Rai, Pandit M. M. Malaviya, Sir Sankaran Nair, Messrs. M. R. Jayakar, N. C. Kelkar, J. M. Mehta, Harchandra Vishandas A. S. Asavale, S. N. Hazi, Raja Haradad Singh, Dr Moonjee and others.” We support this appeal whole-

edly, if we may. As we have not seen the appeal we do not know whether there is among these "others" persons belonging to Orissa, Bihar, Assam, Rajputana, the Central Provinces, Bengal, etc. Bengal may be ignored on this particular occasion, as being unwarlike but some of the other provinces have honoured Shivaji more than Bengal, not only with voice and pen and brush as Bengal has to a little extent done, but with Shivaji's favorite weapon also.

The Hindu Mahasabha

The definition of the word "Hindu" adopted by the Hindu Mahasabha is very wide. It would be in keeping with that definition if among its members and office-bearers and in its executive committee there were members of the Jaina, Buddhist, Sikh and Brahmo communities, and if the latter communities took increasing interest in its proceedings.

In the abstract, the Hindus have as much right to convert or re-convert people of other faiths to Hinduism as the followers of any other religion. But many people, while admitting this right in the abstract, raise the objection that the Hindus are making a new departure for political reasons. These men assume that Hinduism is not and never was a proselytising religion in any sense. This is not true. Its missionary methods differ from those of Semitic faiths. But it is a proselytising religion all the same. Apart from the absorption of numerous aboriginal tribes by the Hindu community, which is still going on and also from the inclusion in the Hindu fold of many invading peoples and tribes from beyond the bounds of India, even within recent historical times several groups of Musalmans have been converted or reconverted to Hinduism. This took place long before Shuddhi or Sangathan was heard of. More than once in some of our previous issues we gave details, which will be found in the Bombay Census Report for 1921. In still earlier times, after the Musalman conquest of Sindh, there was an active movement in existence in that province for the reconversion of Hindu converts to Islam. Those who were reconverted had to perform certain expiatory rites. These are to be found in the *Devina Smriti*.

Therefore the assumption that Hindus are now for the first time in history converting

or reconverting people of other faiths to their own is entirely unfounded. But supposing the Hindus had really made a new departure, why should that be objected to? Every body of men has the right to adopt whatever non-criminal and moral methods it considers necessary in its own interests, particularly when similar methods pursued by other bodies of men are considered legitimate and unobjectionable. Therefore, we strongly support the movement for the conversion or reconversion of non-Hindus to Hinduism, using the word Hindu in the sense accepted by the Hindu Mahasabha. We also equally strongly support the movement for the organisation of the Hindu community so that there may be greater solidarity in it. We are not, however, to be understood to support the name of the *Shuddhi* movement or to accept as unobjectionable the purificatory rites and all the tenets and practices to which the converts adhere. But we do not at all suggest that these are un-Hindu. What we say is that the kind of Hinduism which we follow is different.

This is not the first time that we criticise the name "Shuddhi". It means purification. But we do not believe that non-Hindus are necessarily impure or unclean because they are styled Jews, Christians, Muslims, etc. Similarly a Hindu is not necessarily pure because he is called a Hindu. It is the life and character of a man that make him pure or impure. There are many non-Hindus who are pure in their lives and there are many Hindus who are not. For this reason we would earnestly request all advocates of "Shuddhi" to adopt some other name for Hinduization which is not offensive. The resources of the Sanskrit language are sufficient to make the discovery or coinage of such a word feasible. It may be added here by way of illustration that the word "baptism" used by Christians has no offensive meaning or implication.

The present writer is a believer in strictly monotheistic, non-idolatrous Hinduism. He does not, moreover, believe in any infallible revealed scriptures as the orthodox followers of many religions do. He does not believe in *hnan*, in the worship of images, in animal sacrifice, and the like. At the same time he admits that some kinds of Hinduism recognise and enjoin these beliefs and practices. He does not call in question anybody's right to practice or propagate such kinds of Hinduism, though if he him-

self had the leisure and the inclination to preach Hinduism he would hold up before Hindus and non-Hindus alike the best that is to be found in its scriptures. That is what Rammohun Roy did. It is this kind of monotheistic Hinduism which we believe to be not only true but the most likely also to promote the cause of intercommunal unity in India. But, as we have indicated before, we have neither the desire nor the power to interfere with the right of other Hindus to follow their methods and doctrines.

Some persons talk of doing away with the present system of numerous castes and reverting to the ancient ideal of *Varnashrama Dharma*. Without trying to discuss historically the real character of ancient *Varnashrama* one may ask who has sufficient authority, impartiality and power of soul reading to assign to each Hindu man and woman, boy and girl a place in one or other of the four ancient castes according to his or her *guna* and *karma*. Let us avoid all loose talk. Caste may be gradually destroyed and Hindu society may certainly continue to exist and have a vigorous life without caste. But a reversion to the four ancient castes is a dream which will never be realised.

Some persons want that there should be intermarriages and intermingling in Hindu society. We have not the least objection. We advocate such social changes.

But those who think that there cannot be any progress towards what has been called Hindu Sangathan without intermingling and intermarriage seem to be unduly pessimistic. In orthodox Hindu Society there is no intermarriage in Bengal among the Brahmans, Vaidyas and Kayasthas, and no intermingling also among them on orthodox socio-religious occasions, except, perhaps in big cities. But in spite of that fact, there is no such cleavage or wide gulf between these three castes as there is, for instance, between Brahmans and Namasthras. We think, therefore, that for all practical purposes there may be sufficient solidarity in Hindu Society, if there be the same mutual feeling between, say, Namasthras and Brahmans as there is between Vaidyas and Kayasthas and between Brahmans and Vaidyas. For bringing about such a state of things, the economic condition of the backward classes should be improved and there should be wide diffusion of education among them. And of course, untouchability should be entirely done away with.

While saying all this we should also record our conviction that complete solidarity would be possible only when there is fusion of all castes by means of free intermingling and intermarriage.

Just treatment of women and just treatment of the backward classes are the two ideals that are most difficult to realize. In order that women may be able to command respect in society and lead useful lives, they should all be properly educated. The Hindu Mahasabha should do its utmost in a practical way for the cause of the education of girls and women. Orthodoxy will not offer much active opposition to such efforts, but great apathy and inertia will have to be overcome. Greater difficulty there will be in preventing child marriages and in raising the age of marriage of girls. If girls are married after the attainment of youth the problem of the child widow will be to some extent automatically solved. But years and decades may pass before child marriages become things of the past. In any case, girls who have become widows in childhood should be re-married. Their due protection, their proper education, etc., are good and necessary measures. But there is no reason why they should not also marry if they want to. Reason, justice, scriptural authority do not stand in the way. This year the Hindu Mahasabha has passed a resolution relating to widows, one part of which seems in a covert way to allow the remarriage of girl widows. It enjoins the adoption of all such steps as would prevent their going astray and indirectly swelling the number of non-Hindus. Their re-marriage is such a step. If our interpretation of the resolution in question be correct, the Hindu Mahasabha must be said to have made some progress towards adopting a social reform programme.

If untouchability had been attacked and *suddhi* and *sangathan* advocated before any political necessity had been felt for doing so, the leaders of the Hindu Community, including Mahatma Gandhi, could have been given credit for acting solely from considerations of humanity and justice. But better late than never. Every item in the programme of the Brahmans and other social reformers for which they have been criticised and reviled is being adopted one by one by their critics. That is a matter for satisfaction.

Bankura Medical School

The main building and grounds of the Bankura Medical School founded by the Bankura Sammilani were given to the institution by Mr Rishibar Mukherjee some

of water for the students and the hospital patients in summer when the wells dry up. It has been proposed therefore to dig a deep well in the sandy bed of the adjacent river and bring water from there by laying pipes. This has been estimated to cost

about six or seven thousand rupees. Seeing that Messrs. A. Milton and Co. have given the school an ambulance of about the same value we hope that some other benevolent person or persons will generously donate what is necessary for the adequate supply of water. Donations will be thankfully received by (1) Rai Bahadur H. K. Raha, Deputy Director General of Post Office Council Honso Street Calcutta who is honorary treasurer to the Bankura Sammilani or (2) by the editor of this Review who is Vice president of the same association.

Main Building of the Bankura Medical School
The building with 23 acres of land are
free gift of Mr R. Mukherjee ex
chief judge of cashmere

Nibaran Chandra Mukherjee

Babu Nibaran Chandra
Mukherjee of Bhagalpur who

time Governor of Kashmir. We are glad to learn that Messrs. A. Milton and Co. of Calcutta have recently given it a completely equipped motor ambulance. This will greatly facilitate the conveyance of patients from villages to its hospital which is being increasingly utilised by the people owing, among other things, to the provision of separate cottages for some patients on payment of a very small rent. The institution has recently been provisionally recognised by the State Medical Faculty up to its Intermediate standard.

This Medical School is situated on high and dry ground in a suburb of Bankura. While this is a great advantage from the sanitary point of view it increases the difficulty of obtaining a sufficient supply

The Ambulance Presented by Messrs A. Milton
& Co Ltd. for the use of the Hospital attached to
the Bankura Medical School

has passed away at the ripe old age of 81, was an entirely self-made man. He was born of very poor parents. In boyhood he was too poor to buy oil for a lamp when he wanted to read at night. So he used to prepare his lessons in the light of the street lamp in front of his house. He was a good student, and prosecuted his studies at college with the help of scholarships and the financial aid given by some relatives. He was an M. A. and B. L. of the Calcutta University. At first he took to the vocation of a teacher and became headmaster. When he found that as the head of an institution he was getting rather arrogant and power loving, he resigned his headmastership and joined the bar in 1874 so that he could practise just like an ordinary lawyer without enjoying any special privileges.

Nibaran Chandra Mukherjee

Later on he found that the legal profession was not congenial to his temperament. Consequently he had him giving up his profession as a lawyer and his lucrative practice in the year 1886.

He was a Brahmo, and was married according to Brahmo rites. The idea of true brotherhood among the new Brahmos of those days was so real that it inspired them to live up to it. With a view to realise this ideal, Julla Kothi in Bhagalpur, with its very

spacious grounds measuring several acres of land was purchased in the name of Nibaran Chandra, and was subdivided into plots, and several Brahmo families purchased them and built houses of their own on them."

He was prominently connected with the Tej Narain Jubilee College, Girls' School, Young Men's Theistic Association and Debating Society, the Band of Hope, the temperance movement, Bhagalpur Workingmen's Association, the Moral Training class and the Bangiya Sahitya Parishad. He was for some years the elected Vice chairman and, later, Chairman of the Bhagalpur Municipality and also of the District Board. He discharged the duties of these honorary offices to the entire satisfaction of the ratepayers.

Every day before beginning his day's work, he regularly performed his daily devotions.

Since the days of the partition of Bengal in 1905, he was a firm believer in Swadeshi enterprise and used Swadeshi articles as far as possible. His Bengali book *Manava-Jiban*, written for young men, has been made a text book in Assam. He has written other books also. Even on the eve of his death he had been revising a manuscript on comparative philosophy both in English and in Bengali.

Dr Moonje's Utterances

In a different note we have discussed some of the questions on which Dr Moonje has recently spoken. We need not, therefore repeat any of our observations with reference to his utterances. He has an original way of putting things which arouses and rivets attention. We are entirely at one with him in the firm attitude which he has taken up with regard to the bargaining *cum* dictatorial spirit perceptible in the terms proposed by some Musalman leaders for a united endeavour for the attainment of Swaraj. The limp and too yielding Hindu temperament requires stiffening up. Only, we may be permitted to observe that the Hindu cause and the Indian cause would perhaps be better served if he always spoke *suaviter in modo, fortiter in re*. We do not think he means any offence to the Musalmans or wants to irritate them. He does not want to encroach on their just rights or deprive them of any privilege of Indian citizenship. It is because we think so that we have

suggested more circumspection That is not synonymous with less firmness

Hindu Moslem Unity

We desire Hindu Moslem unity from the bottom of our heart, but not the show of such unity at any cost But so far as Bengal is concerned—we have no direct personal knowledge of the state of things in other provinces—real Hindu Moslem Unity would be utterly impossible in this province so long as outrages on women are not openly and actively discouraged condemned and put a stop to by the Musalman leaders and the Hindu Swarajist leaders These outrages are an unspeakable shame for both Hindu Bengal and Musalman Bengal Recently several Hindu leaders from outside Bengal have cried shame upon us for these in public meetings We should thank them for doing so though some of them may not have shown by their words and their manner that our shame was theirs too in more senses than one *Verb sap*

So far as Muslims are concerned Indian Swaraj may be of two kinds either it would be Hindu Moslem raj or it would be Moslem raj Those who want the latter and want our assent to it should prove practically that it would be better than British raj so far at least as the honour of women and Hindu temples and images are concerned Many Moslem publicists speak and write as if Hindus aimed at establishing a purely Hindu raj They have no such aim Moreover even where Hindus, as in Madras are in an overwhelming majority there are no such atrocities practised on Moslems by Hindus as have been perpetrated by Moslems on Hindus in East and North Bengal Sindh and N W F Province. Therefore the fear of an imaginary Hindu raj is entirely fictitious and groundless But the fear of the predominance of Moslems of the type to be found in large numbers in the aforesaid regions is very real and well founded

Some or most Moslems want the creation of at least one new administrative province where they are to be in a majority We cannot be consenting parties to such a proposal but as we have no political power we cannot prevent the Government from doing such a thing if it wants to But we may point out to those of our Musalman countrymen who support such a proposal

that two similar proposals could be made which if they had any regard for consistency, they would be bound to support One is the inclusion in the administrative province of Bengal of some adjoining areas which formerly formed part of Bengal thus reconstituting it This might be so done as to reduce the Moslems in Bengal to a minority The other is the inclusion in the Punjab of some adjoining districts of the United Provinces which are really parts of the Punjab This would reduce the Moslems in that province to a minority What have Mr Jinnah and his colleagues to say to such possible proposals? Two or more than two can play at the same game

As regards the introduction of the Reforms in (and consequently giving provincial autonomy in the long run to) the N-W Frontier Province there is great force in Dr Moonje's observation that such a proposal cannot be considered by the Hindus until the Army comes completely under Indian control and is also thoroughly Indianised Under the system of recruitment followed at present the people of the North western parts of India—the Musalmans in particular form a disproportionately large part of the army Any administrative arrangement which would be likely to place a still larger power of defence passivity or aggression in the hands of those people cannot be assented to by the Hindus who not only form the majority of the people of India but are also Indians first and last in all possible senses

As for leaving the Moslems severely alone, we do not think any sane person can propose a boycott of Moslems in the daily transactions of life or in ordinary neighborly intercourse But so far as political hargaining is concerned so far that is to say as the paying of any price to the Musalmans for purchasing their consent to a united struggle for Swaraj is concerned we are absolutely opposed to such transactions Swaraj would be good for Hindu Moslems, Christians, and all other inhabitants of India If a combined effort for its attainment cannot be made without practically giving the Moslems a stranglehold and converting them from a minority into practically something like a majority we are certain for each community pursuing its political goal separately in the best way it can There is an entirely unfounded belief prevalent among some people that, as soon as there is a united Hindu Moslem demand

Swaraaj however brought about, the British people will give it to us at once. But the truth is they are such adepts, in finding or inventing excuses, that they will never agree to our being self ruling unless they are driven to a corner. That would be possible only if there were *real* national unity not a patched up substitute for it.

The smallest of minorities in India are the Parsis. Yet by their capacity and public spirit, members of that small community have won the position of leaders. Such leadership is possible for Moslems and other communities too. But an artificial prominence or predominance ought not to be conceded to any community by any pact. That would be unjust to other communities and cause heart burning and jealousy.

Subhas Chandra Bose

The Government of Bengal and the Anglo Indian Press perhaps think that they have been able to convince the public that if Subhas Chandra Bose is still in jail it is his fault. But they are mistaken. The Indian public in any case think that the terms offered to Mr Bose are mean wily and waiting in common humanity. At present Mr Bose is interred within the walls of some jail or other. If the Government's offer were accepted, he would be exiled from India and interned in a larger area, named Switzerland or Europe or the world outside India. The loss of complete liberty of movement is common to both kinds of internment. At present Subhas Chandra obtains food and shelter and clothing at the expense of the Government. If he were to go outside of India he would have to presume to pay his own expenses. That is very generous of the Government. Government professes to believe that, even when Mr Bose is very seriously ill his release would be a danger to the State. Such profession cannot but excite laughter.

Mr Bose's rejection of the offer of the Government even at the risk of a lingering death, shows the stuff he is made of. It has heightened the respect felt for him.

We do not think his conduct would be misunderstood by any honourable persons—those of his enemies who are mean minded may be left out of account, if he were now to consider a possible request of his countrymen that he should go out of India

and place himself under the treatment of some eminent expert to get cured. We suggest that such a request should be sent to him without any avoidable delay, signed by as many of his countrymen as possible. Many patriotic men of countries other than India too banished from their countries or self exiled, have done good work abroad for their motherlands and the world. Subhas Chandra may also be able to do so in foreign countries undoubtedly.

The Kakori Conspiracy Case

At the trial of the Kakori 'Conspiracy' case which has resulted in so many staggering sentences the accused do not appear to have had sufficient legal help. If they appeal or have appealed it would be the duty of their relatives and friends and of the public to see that they are ably defended. Neither the guilt of any accused nor the enormity of his guilty should be taken for granted.

Trial of "Conspirators and Murders of Witnesses"

Though in the Press and in the Legislative Assembly it has been shown repeatedly that the plea, that Government is prevented from bringing alleged revolutionaries to public trial by the fear of the murder of prosecution witnesses, has no legs to stand upon yet it continues to be trotted out whenever the occasion demands it. But the Kakori "Conspiracy" case has proved once more the falsity of this plea. This case was one of the biggest conspiracy cases in India. Over 250 witnesses were produced on behalf of the prosecution before the Court of Sessions. The trial lasted more than a year. Yet not a single witness has been murdered or subjected even to a pin prick. It is to be hoped that the witnesses in this case will continue to be safe even after attention has been drawn to this fact.

Skeen Committee's Report

Indian self rule implies that Indians are to be completely free to decide whether they are to have any foreign employees, whether civil or military. Consequently it

also implies that the British garrison of white troops in India, officered by Brits, is not to remain, that the sepoys are to be led only by Indian officers, and that all arms of our military forces are to be open to Indians of all provinces, races, sects and castes, under only the necessary physical, moral and intellectual tests. The principle that national defence should be undertaken by the nation involves all the above mentioned conditions. Therefore, even if all the recommendations of the Sleen Committee were given effect to which is unlikely, we would not be a party to their acceptance. We want a scheme whose fruition within a measurable distance of time—say, not more than twenty five years would enable the Indian nation to undertake the defence of its country. And, of course, it would be optional for us to have foreign soldiers or officers or trainers if necessary.

Some countrymen of ours are for accepting whatever can be got, and pressing for more. But as acceptance or non acceptance does not lie with us, as the Government will carry out its plans whether we be a consenting party or not why be guilty of accepting anything which falls far short of our just demands?

The Sleen Committee leaves the white garrison entirely untouched, and makes recommendations which, if carried out, would under the best of circumstances make only 50 percent. Of the officers of the Sepoy army Indians in twenty five years. Nobody denies that that would give us more Indian officers than now. But as nothing is said as to when, if at all, the remaining 50 percent. would be Indianised, when if at all, the white garrison would be withdrawn, when, if at all, the air force, the artillery, etc., would be thoroughly Indianised, and whether the white garrison would not be increased *pari passu* with the increase in the number of Indian officers, and as the proposed dribble of military 'boons' would practically prevent the reopening and consideration of a complete scheme of national defence by the nation, we are against the acceptance of the recommendations of the Sleen Committee even in their entirety.

British politicians and publicists are masters of the trick of enhancing the value of their proposed "boons" by setting up a cry that they are overgenerous, that they would produce a revolution, that they would mean the end of British rule, and so on. We

should not for ever remain gullible. We should learn by experience. Whenever the above-mentioned cry is raised, we should not begin to demand that the 'boons' must be given to us in their entirety as recommended, that not a jot or tittle should be taken away from them, and so forth. On the contrary, we are for continually placing our full demand before the world and trying to get what we want, leaving the Government to do what it likes. Of course, if it wants to take away any right which we possess at present, we must oppose any such attempt with all our might.

Governors from the Indian Civil Service

So long as the system of government remains what it is in India and so long as at least full Home Rule is not won, it makes no substantial difference whether we have governors direct from England or from the ranks of sun dried white bureaucrats in India. Experience has not shown that the direct imports from Great Britain have all or in the majority of cases been better rulers than the Anglo Indian bureaucrats.

We must confess this protesting and petitioning in favour of a particular brand of foreign masters makes us ashamed.

Sir Charles Innes goes to Burma as its Governor. He knows much about commerce and railways, etc. Will he be able to connect Burma with India by rail and thus facilitate commerce or will he play into the hands of the British India Steam Navigation Company and leave to them the monopoly of the traffic between India and Burma?

Calcutta to Rangoon Steamer Service

A correspondent has described in a daily paper the abuse and insult to which he was subjected in Outram Ghat by an official of the B I S. N Co., and the assaults and insult which fell to the lot of some deck passengers when trying to board a steamer. We have ourselves witnessed such shameful things.

The Company ought to prevent such insults and assaults. No doubt, so long as they practically have a monopoly, they may not care to. But they should understand that politeness and humanity are sure to increase the traffic and bring them more money. The majority of the Company's passengers are Indians. But they do not provide Indian food. The bathrooms and

lavatories, too, are not such as Indians are accustomed to use

From the Indian side, the remedy for the insults and assaults lies in the growth of manliness. But the penal laws in India and their administration are not such as to promote such development. A 'European' assault on an Indian, even when the assault is fatal, is more likely to escape scot free or with a small fine than otherwise. But a price has to be paid for the growth of manliness.

Visvabharati Scholarships

The attention of our readers is drawn to the details of two scholarships offered by the Visvabharati, printed in our advertisement pages

Promotion of Some Allahabad Industries

The Allahabad Municipality is entitled to praise for trying to promote the copper, *phool*, an brass ware industries of that town

The Bengal Provincial Conference at Maju

The inhabitants of Maju which is a village in the Howrah district, arranged for the holding of this year's session of the Bengal Provincial Conference in their village. They sunk tube-wells for the supply of good water to the delegates and visitors and also made arrangements for electric lights and fans for their comfort and convenience. All the other arrangements were equally praise worthy. The pluck and public spirit shown by Maju are highly commendable. The attendance, though not as large as was expected, was not small. Had there not been personal jealousies and quarrels among the Swarajist leaders and had not one party of them dictatorially asked the Conference to be postponed, there would have been a record gathering. But as the people of Maju had done their best, they cannot be held responsible for the Conference not being a complete success in every respect. The President, Mr Jogindranath Chakrabarti also did his best for its success

The So-called Indian Navy

The so-called Indian Navy Bill has been passed by the British House of Commons

It is Indian only in the sense that India will have to pay for it. It is not at all officered by Indians. Great Britain would be able to use it in any waters for purposes other than India's defence, and even when so used the cost would fall on India. The Indian Legislature is not to have any voice in determining the strength of the Indian Navy or where and for what purpose it is to be used.

During the debate in the Commons on the third reading of the bill

The final spokesman for the Government was bold enough to suggest that this measure was really a concession of more self government to the Indian people who by means of it would be able to take more and more interest in their own affairs. This claim was derided by the Opposition, whose last speaker Mr Barker described it as the most hypocritical statement that could possibly be made. They were creating this navy he said because it was a long way from this country to Singapore. They had Japan in mind more than India when they brought in this Bill.

By passing this bill Great Britain has been able practically to increase her naval strength without breaking the letter of the international agreement by which the respective strength of the navies of Great Britain, USA, Japan, France, etc., was fixed. It is in this way that international conventions are respected.

The Hours of Labour Convention

The Hours of Labour convention agreed upon by the powers at Washington known as the Eight-Hour Day convention, has not yet been ratified by the foremost industrial countries Great Britain, the USA, Germany, France and Japan have not yet ratified it, Austria, Italy and Latvia have ratified it only conditionally. But the British Government of India ratified it for India so long ago as the year 1921.

The French Senate has adopted a Bill with an amendment (approved by the Government) providing that ratification shall take effect only when the convention has been ratified by Great Britain as well as Germany. Germany's declaration of social policy includes the following—

'The next step in this direction is to create an extensive body of law for the protection of the workers special consideration being given to miners. Such legislation while based on German conditions should fix hours of work including Sunday rest, in accordance with international

agreements. On the basis of such legislation the German Government is prepared to ratify the Washington convention at the same time as other industrial countries of Western Europe.

The states which have ratified the convention are as follows

State	Year	States	Year
Greece	1920	Austria	1924
Rumania	1921	Italy	1924
India	1921	Latvia	1925
Czechoslovakia	1921	Chili	1925
Bulgaria	1922	Belgium	1926

We read in the Calcutta *Guardian* —

The overtime abuse has increased so alarmingly of late in Germany that a general movement for the refusal of overtime work is necessary and has already been begun. In certain industries the number of hours of overtime worked runs into millions—and this in spite of the large unemployment! The resistance of employers and government to social reform is stronger than ever.

As for Britain the British Government is obstinately persisting in its policy of setting a bad example by refusing to ratify the Eight Hours Convention. This fact aroused the warm indignation of Poulton the British workers' representative at the recent meeting of the Governing Body of the I. L. O. Poulton, supported by Ordegoest and Joughaux, accused his government of having been trying for 7 years to find reasons for refusing to ratify and of having receded further and further from the conception of co-operation which inspired the Washington Conference of 1919.

The *Manchester Guardian* observes that

The Government's betrayal of the cause of the 15 at study Washington Convention on Eight Hours the moment one of the chief obstacles to reform all over the world.

We desire that our labourers should not be sweated and dehumanised. But if the sole or principal motive of the foremost Christian countries of the West in fixing the hours of labour be philanthropy, how is it that their hearts were filled with pity for Indian labourers so long ago without their own fellow Christians and fellow countrymen yet obtaining the benefit of that pity?

Servants of the People Society

The Servants of the People Society, founded by Lala Lajpat Rai in December, 1920, has been doing much good work. It was founded with two main objects —

To make provision for those interested in the Politics, Economics and other Social Sciences and to create an interest in such studies amongst young men in general and to start an order of Life Membership for those willing to devote their whole time to the political, social, educational and economic uplift of the country.

The Tilak School of Politics was started for achieving the first object. To it the founder gave his library and his residential bungalow, with attached lands, and made provision for scholarships of the value of Rs. 15 to 20 to be given to deserving students. It carried on regular teaching work for some time. When the National College came into existence, both teachers and students joined it.

The Society has at present six full members, five members under training, and four associates.

It is open to persons of all communities and all political parties whose aims and objects are identical with those of the society.

Besides propaganda, it has done relief work in Orissa and work for the backward classes among themselves as well as among the higher castes. It has its own organ in "The People," which is one of the best English weeklies in India. It is also a principal shareholder of the Punjab Newspapers and Press Company which owns the *Bande Mataram*. This is not an exhaustive enumeration of the activities of the Society. It has deserved well of the public. And, therefore its appeal for Rs. 50,000 for a Lecture and Library Hall ought to be responded to liberally and promptly.

Convocation Address at the Osmania University

In the course of his convocation address at the Osmania University, Hyderabad, Nawab Sadar Yr Jung Bahadur said

The word University has been translated into Urdu as Jamia. This little word exactly conveys the grandeur and extent of the conception of a university. A real university has a dual existence, or to be more explicit, it has two sides: external and internal. The external appearance of a university depends on its imposing buildings, vast libraries, well-equipped laboratories and an immense concourse of teachers and students. A university can be likened to a human body and as such can be as proud of its external appearance as a man of his strong and well-proportioned body. Then there is the internal or spiritual side, which is the only real one, in the same sense as the real existence of a man is bound up with his soul. If the soul is dead or dormant, his splendid body has no real existence. The real existence of a University is the accumulative result of the joint and ceaseless efforts of the teachers and the taught.

Calcutta's Old new Mayor

Mr J M Sen Gupta has been elected Mayor of Calcutta for a third term. His position gives him and his party the opportunity to do great good to the City and in directly to the country. But for right use of this opportunity he and his party would require to knock on the head anything smacking of a spoils system. Can they do it?

White Slave Traffic

Summaries of the first part of the report on the wicked international traffic in women and children which has been made to the League of Nations by a special committee of experts has appeared in the papers.

The inquiry it is stated was mainly concerned with the American Continent Europe the Near East and certain countries on the southern shores of the Mediterranean. The inquiry has also touched a large number of other countries such as those of the Far East. The Japanese member of the Committee prepared a special report on the conditions in the Far East. Owing however to differences of race religion and custom the problem appears in a different aspect.

The Council of the League has decided to refer the whole matter of this report to the Advisory Commission for the protection of the welfare of children and young people which meets on the 20th April.

A similar inquiry should be made in India. One of the points to which special attention should be directed is whether the abduction of women and girls in Bengal Sindh etc. has any business organisation behind it. As this is not a political or industrial or economic matter in which British and Indian interests may clash the Government of India should not hesitate to ask the League's special committee of experts to visit India and help in the inquiry.

The Sad Death of a Detenu

The case of Mr Subhas Chandra Bose has received great attention because of his personal distinction. But there are numerous other cases which are equally sad, if not sadder. Here is one—

Shub Shankar Chakrabarti died at the Campbell Hospital Calcutta on April 17 at 5 p.m. He was arrested at Pabna under the Bengal Ordinance in October 1930 and was interned first at Hanksah in the district of Nadia and subsequently in Jalpaiguri and Ranaghat. In January last he was transferred to a village in Midnapore where he had an attack of paralysis. Practically no steps were taken for his medical treatment at first, but

after repeated representations he was removed to Sankha Nath Pandit's hospital in March 13. There he had an attack of small pox and was transferred to the Campbell Hospital on the 14th instant. It is strange that although he had been suffering from paralysis for some time the police authorities did not think it worth their while to communicate the fact either to his friends or relatives and it was only four days before his death that they informed his father about his serious illness.

His dead body was carried by the members of the Congress Karmi Sangha in a procession with national flags flying to the Nimtola Ghat where the funeral ceremony was performed. His old father accompanied the procession and bore his bereavement wonderfully well.

The Condition of Two State Prisoners

The following appeared in some Calcutta Indian daily paper in the first week of April last, and has remained uncontradicted—

State prisoners Subhanga Das Gupta and Nabin Rajan B. confined in Fatehabad Central Jail (F. P.) are suffering from various ailments. Both are suffering from indigestion headache and dysentery accompanied by pain in the abdomen. Das Gupta is moreover down with fever since his coming and has lost by about 10 lbs. for want of any provision of physical exercises even that of walking the diseases are showing daily signs of aggravation. They have been confined in a small space where they are to remain all day and night in spite of their repeated appeals to the Superintendent for provision of physical exercises and fresh air in the Jail compound they have been refused permission on though there are quite a number of good open spaces in the Jail area. It is said that the local officials complain that their hands are tied by the order of the Government of Bengal which says that though provision is to be made to allow the prisoners free air games and exercises they should never be given except with the consent of the Government of Bengal and the consent is not forthcoming, though numerous petitions and reminders have been sent hitherto.

The passage relating to the Government of Bengal's order seems incredible. It is like passing an order that certain prisoners are to be given food and water, but not without the previous permission of the Government of Bengal and then withholding that permission! But his anybody who may arrogate to himself the authority of the Bengal Government really passed such a stupid and inhuman order like the one quoted above?

Outrages on Women in Bengal

We have not hitherto referred to this topic in this Review. What we have to say on the subject we do in our vernacular magazine *Prabasi*. But as from what we

have heard from some distinguished visitors to Calcutta from some other provinces of India we find that they do not know some facts relating to it, we shall mention some of them.

There are very many non-Swarajist Bengalis who are quite ashamed of the state of things in Bengal. Therefore, so far as they are concerned, the process of rubbing it in is unnecessary. We cannot speak for the Swarajists. It is probable that they, too, feel like others.

We told a very distinguished visitor from Madras that real Hindu Moslem unity in Bengal would be impossible so long as these outrages continued. To put a stop to them, all leading Moslems must openly and actively try to make them a thing of the past and the Hindu Swarajist leaders must do likewise. Our visitor enquired whether the outrages were appreciable in number. We told him that they were very much more than that. His very question made us suspect that some Swarajists, with whom he is most in touch, must have tried to convince him that the matter was of no importance. When the late Mr C R. Das was asked orally by a leading office bearer of the Women's Protection Society in Bengal to join it, he refused. Nor did he himself do anything for the protection of women from outrages. We have heard from more sources than one that Mr J. M. Sen Gupta said in the presence of Dr Kichlow and others that the women and girls who were alleged to have been molested were all or mostly of loose character. We do not know whether he really made such a shamefully false statement. It should be presumed that he did not. But we mention his name in order that he may contradict the rumour if he did not. Up till recently the leading Swarajist organ, and probably other Swarajist organs, too, paid very little attention to the subject. These are our reasons for suggesting that the Hindu Swarajist leaders should bestir themselves to put a stop to the outrages. The *Karni Sangha* should also do more than it has done.

Our vernacular papers, particularly the weekly *Sanyaman* and the daily *Ananda Bazar Patrika*, have shown greater earnestness, zeal and activity in this matter than the papers conducted in English. The *Sanyaman* has been publishing serially a statement, covering the period of the last five years, in which are given the names, religion and

civil condition (married, unmarried, or widowed) of the women and girls molested, the names and religion of the accused, and the result of the trial, if any. An analysis of these statements shows that only in a very few cases Hindus molested Muslim women, that some Hindus molested some Hindu women that in the majority of cases the offenders were Muslims and the women assaulted were Hindus, that in a few cases Hindu and Muslim ruffians combined to commit the offence that the cases of abduction or assault committed by Moslems on Moslem women are not negligible in number and that it is not merely widows who are treated in this brutal manner, but that a considerable number of unmarried girls and girls and women with their husbands living are also victimised.

The Society which has done most to rescue abducted women and girls and bring the offenders to trial is the Women's Protection Society. Mr. Krishna Kumar Mitter, the fearless, active and almost blind septuagenarian editor of the *Sanyaman*, has been the honorary secretary of this Society from the start. We have had occasion to criticise his politics, because in politics we differ, but we must give him credit where credit is due. When the Society was established, Mr S R. Das, then Advocate General of Bengal, was elected its president. He has always taken active interest in its work and has spent money for helping it forward. With his politics also we have not much in common. An old gentleman of the name of Mr Mahesh Chandra Atarshi goes about actively and fearlessly for propaganda and other work. Pandit Sitaoath Goswami, a Vaishnava gentleman, related to the saint Vijaya Krishna Goswami, is very active in the cause of women. He did most to get the accused punished in the Barada Sundari case. There are other active workers whose names we are unable now to mention. We have learnt from the honorary secretary that the Society is always in need of money and that poor men give more freely for its work than well-to-do people. It has several branches in North and East Bengal.

There is another society, *Shishu Sahay O Matru-Mangal Samiti*, with Srimati Sarala Devi as its president, which also does some work occasionally to help women and girls who are victimised.

There is a small book in Bengali, named

"Bharat Narir Sat Sahas O Biratra," "Moral Courage and Heroism of Indian Women", which describes actual incidents in which women have defended or tried to defend themselves. It is to be had of Mr A C Das Moradpur, Patna price five annas.

The re-marriage of Hindu girl widows is steadily increasing in number Comilla gives a list of ninety such marriages Midnapur district has shown much activity Elsewhere, too, the cause is making progress

Moslem Origins in Different Provinces

According to the Census of India 1921, the Muhammadans number nearly 69 millions and form about one-fifth of the population of India More than one-third of the community were enumerated in Bengal and rather less than one-fifth in the Punjab In each of these provinces they form over half of the population In the North West Frontier Province and Baluchistan about 90 per cent. of the population are Muhammadans in Kashmir over three-fourths in Sindh less than three-fourths and in Assam between one-fourth and one third Elsewhere the Muhammadans form only a small minority of the provincial population While the Muhammadans of the eastern tracts and of Madras were almost entirely descendants of converts from Hinduism, by no means a large proportion even of the Punjab are really of foreign blood, the estimate of the Punjab Superintendent being about 15 percent. The proportion advances of course as one proceeds further north west. (*Census of India, 1921, Vol. I, part I, p. 116*) In a recent speech delivered in the Calcutta Albert Hall, Lala Lajpat Rai said that the large proportion of Muhammadans in Bengal showed the existence of Hindu Moslem conflict in the province, thus proving that such a conflict was not imported into it by upcountrymen It is true so far as his interpretation of the facts go And in that sense there has been Hindu-Moslem conflict in the Punjab also Considering that, according to the official estimates 85 per cent. of the Punjabi Muslims are descendants of Hindu converts, it has perhaps to be admitted with regret by Hindus that, as in Bengal so in the Punjab, the Hindus came out second best in the conflict

Draper has stated in one of his works that one of the means by which the number

of Muslims increased in North Africa and some other regions was "the confiscation of women", by which is meant abduction and the like That in India Islam gained many converts by the life and character of some of its saints, is undoubted. What proportion of converts was made by force, and what additions were due to the abduction of Hindu women and indirectly to outrages on Hindu women who were outcasted by unrighteous, and shortsighted orthodoxy it is difficult to say But it is probable that all the processes and means of conversion have been at work, more or less, all over India, particularly in those provinces where the Muslims are in a majority

The Turks have found inspite of their independence and martial valor, that the oppression of women (Armenian and other) and the subjection of women do not in the long run pay It is for the enslaved Hindus of Bengal, Sindh, the Punjab etc., to convince the enslaved Muslims of India that under British subjection too, it does not pay That it is unrighteous and inhuman is of course a truism But even truisms may not be understood, realized and recognised by some people without some appropriate help

Wanted Institutes of Journalism

Some persons connected with the University of Madras have shown that they are wide awake by making a serious proposal that arrangements should be made in connection with it to teach journalism and grant diplomas and degrees in it As journalism is one of the most influential professions in the world and may be a most potent instrument of public good in the hands of competent men and women of high character, institutes of journalism should be founded in the principal university towns, either in connection with or independently of universities.

Democracy in some form or other has been established in many countries and it is likely to be the most widely prevalent system of government in the world Whether that be so or not, the two most effective and quick means of influencing people are public speaking and journalism Both the arts should, therefore, be cultivated Those regions or provinces where they are not, are sure to occupy back seats in public life

Sir Atul Chatterjee on the League of Nations

Among the Great Powers Great Britain exercises the greatest influence in the affairs of the League of Nations. Britishers held most of the appointments and some of the most responsible ones in the League Secretariat and in the International Labour Office. Sir Atul Chatterjee is a paid servant of such a Power and he has never indulged in the dangerous game of twisting the British Lion's tail or brushing its hairy coat the wrong way. He is, moreover, connected with the League's International Labour Organisation in an important capacity. When such a man criticises the League even in a very mild way the criticism has a significance of its own. In the course of a lecture delivered by him in London on March 12 last he is reported to have said —

India had not lagged behind other countries in taking an interest in world problems and in co-operating whole-heartedly with other parts of the world to give effect to the decisions reached from time to time at Geneva. But there was no denying the fact that in India there was a very distinct impression amongst the leaders of public opinion and also amongst the people who took an interest in subjects outside India that the League of Nations did not devote as much attention as they had every right to look for to questions which affected countries or parts of the world outside Europe. There was a feeling that the views and actions of the League were to a large extent coloured by European prepossessions, difficulties and problems and he could not say that this impression was always entirely unjustified. For instance, although the health organisation of the League was doing extremely useful work, very little attention was devoted until quite recently to questions that naturally arose regarding public health in countries outside Europe. He was glad to say, however, that the delegations from India had succeeded in interesting the health organisation of the League in Eastern problems.

has done in India to extirpate or combat epidemics and generally to improve public health.

Society for the Improvement of Backward Classes

There have been some pretentious and well-advertised schemes for doing good to village people, some of which have mainly furnished opportunities to some professional patriots to pilfer public money. No wonder, then, that so beneficent and honestly conducted a society as the Society for the Improvement of the Backward Classes of Bengal and Assam should not be adequately known and supported. Its *sixteenth* annual report, for 1925-6, is before us. The following facts may give some idea of its work.

On the 31st March 1926 the Society had 406 schools in 20 districts of Bengal and Assam. Most of these schools are intended for and are attended mainly by the backward classes. Of the total number of children, both boys and girls, receiving tuition in these schools, viz. 16,274, the largest number, 5,588, come from the Namasudra community and the next largest number, 2,561, from the Muhammadan community. This is a significant fact. The Muhammadan and Namasudra cultivators constitute the backbone of the village population of Bengal, especially in the Eastern districts of the province, and the Society always measures its success by the closeness of its contact with the real children of the soil. Amongst pupils from the so-called backward classes, the next in order of numerical strength are Podes (908), Muchis or Chamars (676) and Kapals (603).

The resources of the Society being limited its efforts have up to the present been directed almost solely towards the spread of education among village people, and possibly for many years to come this will continue to be its main work.

A Vice Chancellor on Varieties of Education

Rai Bahadur Lala Moti Sagar, Vice Chancellor of Delhi University, while recognising the need of technical and technological institutions does not join in the prevalent sweeping condemnation of our existing Universities. He observes in his convocation address —

It is high time to reconsider the entire scope of University education in India and to make it conform to the rapidly changing conditions of the country and the growing stress of competition in every path of life. There is a demand everywhere for vocational and technical education. It is true that a number of technical and technological institutions have been established in different parts of the country but it is felt that the scope is not sufficiently comprehensive and they have not materially helped in solving the problem of the unemployment of our educated young men.

At the same time, I have no sympathy with the sweeping condemnation of our existing Universities by a certain section of our critics. Whatever the defects of our Universities it cannot be denied for a moment that some of the greatest names in modern India stand on the rolls of Indian Universities. With no lack of famous men among the graduates of Indian Universities it is unfair to designate them as failures.

Racial Discrimination on Indian Railways

The presidential address delivered by Rai Sahab Chandrika Prasada at the seventh session of the All India Trade Union Congress held at Delhi is replete with information of absorbing interest. Justice cannot be done to it in a brief note. We intend to turn to it again. In the meantime we shall make a brief reference to the position of Indians in the state railway service as brought to light in it.

Europeans and Anglo-Indians who were 11.42 per cent among the total population of literates in the English language in India held 98.8 per cent of the appointments [of the upper subordinate staff drawing Rs. 50 and over on the twelve state railways] in 1914 and 73.46 per cent of the appointments in 1917, whereas Muslims and non-Muslims, who were 88.07 per cent in the same population of literates in English had 21.32 and 26.54 per cent of those appointments respectively in the two years.

The details of the Gazetted Officers on 31st March 1926, show that 73.1 per cent of them were Europeans 1.43 Hindus 2.7 Muslims, and 9.6 other classes. In India the minimum and maximum railway salaries are in the ratio 144 in Japan 123 in China 132, in Germany 111, in France 1

22 in Denmark 15 and so on. In no country do the lower officials get such cruelly inadequate salaries and the pampered high officials such fat pay as in India.

Number of High Schools in Bengal

In his report on public instruction in Bengal for the year 1925-26 the Director Mr Oaten observes. At the risk of being accused of being an opponent of educational expansion one must emphasise the fact that there are too many high schools in Bengal. We do not agree. It is not that the high schools are too many it is the primary schools which are too few. And money is required for improving both.

Mr G D Birla on Indian Mercantile Marine

In the course of the statement made to the Honble Sir George Ranney Commerce Member Government of India on behalf of the committee of the Indian Chamber of Commerce on 13th April Mr G D Birla said —

The Committee of the Chamber are grieved to find that no action has been taken by the Government of India to carry out the recommendations of the Indian Mercantile Marine Committee even though three long years have elapsed since the date of the publication of their report. The Committee are still more amazed at Earl Winterton's recent statement in the House of Commons to the effect that the Government of India are opposed to the recommendations of the Mercantile Marine Committee regarding the reservation of coastal trade to Indian Shipping. It has been urged on behalf of the Government that the reservation of the coasting trade introduces the principle of flag discrimination. But the International Shipping Conference which represents the leading shipowners of all the important maritime countries of the world recognised in clear terms that the principle of flag discrimination did not affect the right of any country to reserve its coasting trade to the national bottoms. It is therefore difficult to appreciate the objection levelled against a proposal of reservation of coastal trade to indigenous shipping on the ground of flag discrimination. The fact that the principle of flag discrimination is not applicable to the coasting trade of a country is further recognised by a recent treaty reported between Great Britain and Greece, admitting the right of Greece to reserve her coasting trade.

As a sharp contrast as it were to the dilatoriness on the part of the Government in encouraging water transport as above, we have of late witnessed the expedition with which the Government have taken steps in regard to the Road Transport problem. Committee of the Chamber see no

reason why a subject of such supreme national importance like this should be thus unnecessarily shelved any longer

Mr Birla's contention is unanswerable

Girls' Education in Bengal

Hindus in Bengal think that they are more progressive and enlightened than Musal mans. We are not going to examine this claim in all spheres of life. But so far as the education of girls and women particularly in the elementary stage is concerned, the following figures do not support the Hindu claim—

On the 31st of March 1926 the number of girls at school in Bengal were 332,099. Of this total 137,000 were Hindus and 187,977 Muhammadans the rest came from other communities. The Muhammadan pupils outnumbered the Hindu by 50,927. Unrecognised schools for girls which numbered 254 during the year under review had an enrolment of 6,583 pupils—2,876 being Hindus, 3,412 Muhammadans and 300 belonging to other communities. The number of Muhammadan pupils increased by 5½ per cent, that of the Hindu pupils by 3½ per cent.

Hindu parents and guardians are evidently not doing their duty to their daughters and girl wards properly.

League of Nations 'Intellectual Co-operation'

A pamphlet published by the Information Section of the League of Nations states—

A careful choice of work has been necessary within the limited funds of the Committee. One of its first steps was the institution of a general enquiry into the conditions of intellectual life in different countries and a series of monographs has been issued on the subject. Efforts were made to bring assistance to those nations whose intellectual life was especially affected through economic conditions. Suggestions were made to universities, academies, and learned societies throughout the world to organise the exchange of books and scientific instruments and a large number of institutions responded. Books were sent from America, England, India etc. to those in need of them and gifts made by the Japanese universities made it possible to award two scholarships to Austrian students. Certain publications have been obtained for the Polish Academy, the Budapest Observatory, the School of Mines at Sorbon, the universities in

Roumania etc. and exchanges have been organised between the Department of Scientific and Industrial Research in London and institutions at Athens, Dorna, Vienna etc.

The general organisation of intellectual life has been promoted by the formation of a number of national committees for intellectual co-operation working closely in touch with the International Committee, and twenty are now in existence.

We are not aware that any enquiry into the conditions of intellectual life in India has been made by the League or any monograph on India published. India's intellectual life has been affected through economic conditions brought about by British rule. But the League has not brought assistance to India. India needs books more than any Western countries. So it is a cruel joke that whilst books were sent from India none have been sent to India. Phenomenally illiterate as India is she requires scholarships more than Austria or any European country and she pays the League much more than Austria, much more in fact than any European country except Britain, France, Italy and, recently, Germany. But India has not been given any scholarly Publications too, of all descriptions. India requires more than the Polish Academy and the other institutions named but none have been given to her. No exchange has been organised with any department and institution in India. And, lastly, no national committee has been formed in India.

The Mandate System

The following information is supplied by the League of Nations pamphlet on mandates about the different classes of mandates—

I The A Mandates.—This type of Mandate is applied to certain communities formerly belonging to the Turkish Empire (Mesopotamia, Syria (1) and Palestine) which have reached a stage of development where their existence as independent nations can be provisionally recognised subject to the rendering of administrative advice and assistance by a Mandatory until they are able to stand alone. At present they are allowed a

(1) The word Syria is used throughout this pamphlet to designate the whole of the country under French mandate in the Near East (Syria and the Lebanon). These mandated territories comprise the "States of Aleppo, Damascus, Akko, Latakia, Hama, Hama, and Latakia" of which the four first mentioned are now combined in the Federation of Syrian States.

certain measure of self government while at the same time obliged to accept the assistance given to them by the Mandatory in the selection of which the wishes of the peoples must be the principal consideration

2 *The B Mandates*—For the territories in this category (comprising the Cameroons Togoland and former German East Africa) it is recognised that *self government would be impossible* and that the Mandatory must be responsible for their administration. This administration must however be carried out for the benefit of the native communities and with due respect for the interests of the other Members of the League of Nations. Article 22 imposes certain conditions which must be fulfilled by the Mandatory: freedom of conscience and religion, subject only to the maintenance of public order and morality to be guaranteed; abuses such as the slave trade, arms traffic, and the liquor traffic are to be prohibited. The establishment of fortifications or military or naval bases and of military training of the natives for other than police purposes and the defence of the territory are to be prevented. Equal opportunities for the trade and commerce of other Members of the League are to be secured.

3 *The C Mandates*—The third group of territories (South West Africa and the former German possessions in the Pacific) are to be administered under the laws of the Mandatory as integral portions of its territory subject to the same safeguards as apply to the B Mandates in the interests of the indigenous population. The distinction in the method of administration is made (in accordance with the Covenant) on account of the sparseness of the population or their small numbers, their remoteness from the centres of civilisation, their geographical contiguity to the territory of the Mandatory or other circumstances.

All the world except the mandatorys know how the existence of Syria for instance as an independent nation has been recognised and how administrative advice and assistance were showered on the Syrians from aeroplanes and machine guns etc in the shape of bombs bullets and shells.

Negro slaves and their descendants have produced in America distinguished men in all walks of life though they did not get full facilities for education and they enjoy the franchise too. In South Africa, in some regions the natives have some kinds of franchise. Those facts are enough to show that it is the height of racial arrogance and impertinence to assume and assert that self government would be impossible in any particular regions in Africa.

If the "C mandates are to be administered by a mandatory as integral portions of its territory why use the word mandate at all? Why not use the brutally frank but honest word "conquest"?

If the B and C class mandates are to be administered for the benefit of the native inhabitants of the territories the League ought to lay it down as one of the obligatory conditions that agricultural and industrial schools, along with those for general elementary education must be established and maintained in every village and town of the mandated territories.

Indians and the Air Force

Replying to a question from Mr George Lansbury Earl Winterton said in the British house of commons that Indians were not recruited for the commissioned ranks of the Royal Artillery or the Royal Air force wherever serving. What more just and natural? Here is free and compulsory universal education in *ahimsa*!

Professor Radhakrishnan's Presidential Address

Professor S. Radhakrishnan's address as president of the All Bengal College and University Teachers Association has deservedly received attention all over India. His criticism of the educational policy of the Government cannot be called unfair. Says he—

The educational policy of the Government has been restricted in aim and scope. While it has succeeded in training men into efficient but docile tools of an external authority, it has not helped them to become self respecting citizens of a free nation. Love of one's native land is the basis of all progress. This principle is recognised in all countries. But in our unfortunate country it is the other way. A conquered race feels its heart sink. It loses hope, courage and confidence. Our political subjection carries with it the suggestion that we cannot consider ourselves the equals of free nations. Indian history is taught to impress on us the one lesson that India has failed. The worst form of bondage is that of despair and dejection which creeps on defeated peoples, breeding in them loss of faith in themselves. The aim of true education should be to keep alive the spark of national pride and self respect in the midst of circumstances that tend to undermine them. If we lose our wealth and resources we may recover them to-morrow if not to-day, but if we lose our national consciousness, there is no hope for us. The debt cannot be raised but the poor can.

The difficulty of developing the idea of nationhood in the vast population of India including as it does a multitude of diverse races, castes and creeds is great but it is not impossible. It has not been tried. The American schools are highly successful in Americanising heterogeneous European elements that flock into the United States year after year. There is no reason why we should not succeed in this task if our schools and colleges focus the emotions of our youth on the national ideal if they imbue our young men with a fixed determination to be content with nothing less than control over their own destinies and a burning passion to remove the conditions which prevent the realisation of this ideal. They must sternly silence all sectional tendencies and foster opportunities for developing the sense of unity and feeling that we are all parts of a whole destined to swim or sink together. When we are all voyaging in one vessel we can not hope to keep afloat or win through to port if there is mutiny aboard or if one man's hand is turned against another's. Communal warfare is another name for national suicide.

His complaint that state support for scientific studies is meagre is true. Nor can it be said that, with a few exceptions, our rich men have given liberally for such studies. Yet, it cannot be denied that

Science was not neglected in the vigorous days of India. India was not backward in mathematics and astronomy, chemistry and medicine and the branches of physical knowledge practised in ancient times. The scientific achievements came to a halt somewhere about the thirteenth century. In recent years we have recovered much lost ground thanks to the workers of the University College of Science among others. May I in this connection offer our felicitations to Dr. Madan Mohan Malaviya who has been recommended by the President and the Executive Council of the Royal Society for admission to its Fellowship? That the Royal Society should have bestowed its highest award on Indian scientists means that in the making of new scientific knowledge the work of our men is deemed worthy of respect even by critics who are not ordinarily prone to enthusiasm for Indian talent. While much of the work that is being done in our University is of a high order the general level is low and the state support for scientific studies is by no means generous.

We are pleased that Prof. Radhakrishnan has declared himself in favour of University

reform. We do not make a grievance of it that his reforming zeal should have manifested itself now, instead of about half a dozen years ago. Philosophers have as much right to be prudent as other people.

On this subject, he is not in favour of slavishly following the recommendations of the Sadler Commission. Says he

While a great and progressive University should be in active touch with the life of the nation we have to remember that it exists primarily for the advancement of learning and research. It should therefore consist of a decided majority of academic representatives. They will be quite competent to deal with administrative questions. The idea that academic men are not suited for administrative work is peculiar to our country. So far as I know, the Universities of Great Britain and America are controlled by academic men. I am afraid that the Court, if constituted so as to include every important element of the public opinion of the areas which the University serves, will become a ceremonial body where discussions will be of an impractical character. While the Senate should include a few representatives of the public at large it should not be degraded into a durbar. Even in the present Senate there are some gentlemen for whom a university fellowship is a mark of distinction or recognition of public importance. They do not trouble themselves about academic affairs but attend annual meetings to favour a friend or resist a rival. As a corporation of learning the University should be under the authoritative direction of experts.

Prof. Radhakrishnan has put his case in as cogent a way as he could. What he has said of the claims of academic men is theoretically quite true. It is also true that a Senate should not be degraded into a durbar. We hope, therefore, that he will suggest some means by which academic men like those members of the Calcutta postgraduate department who on a recent occasion converted the Howrah station platform into a durbar hall may be excluded from his proposed senate. And is it the special failing of non-academic men alone to attend meetings to favour a friend or resist a rival?

RABINDRANATH TAGORE: THE MAN AND THE POET

By NAGENDRANATH GUPTA

STRONG in the human heart is the desire to claim kinship as between man and man, between the man standing in the rank and the man standing apart on an eminence which others may not share with him. It is this human feeling and not merely the spur of curiosity that stimulates the desire for knowledge about the personal peculiarities of great men and women. The baser form of curiosity is usually satisfied with the knowledge of such important events as the donning and doffing of a royal hat but men desire to know of the ways of men who are not great by the accident of birth but in their own personal right, the rare gift of a divine afflatus. Between all men there is the bond of a common humanity common frailties and a common mortality. And when some man towers above his fellows because he happens to have been touched by the magic wand of genius, men wish to assure themselves that he is still one of them, unlike them in some respects but very like them in others.

Of the millions that come and go in the never ending procession of life and death the world retains no trace a pinch of ashes here and a handful of dust there, dust unto dust. The earth covers the nameless legion with the mantle of oblivion. Not all for now and again, out of this mass of vanishing humanity, some one leaves behind him some living thought, some deathless message, some creation of beauty that does not die, that eludes the death grip of time, and pulses and throbs with life through the passing centuries. The two are easily detachable, the man who goes the way of all flesh and the achievement that does not depart. It is of such a man that we

wonderingly ask what manner of man was this that lived and died as other men, and yet is living still, deathless in death?

If it were not for the heritage left by such men humanity would be poor indeed, with the stark poverty of a barren and arid past, a flat and unstimulating present and a future without promise. Here in India millions who look upon Rama as an incarnation of God and utter his name living and dying are barely conscious of what they owe to the Rishi who composed the Ramayana. Those who speak of the principal characters in this sublimest of epics as mere myths do not understand that to a whole nation Rama is as real as the conception of the deity in many lands. History is a thing of yesterday and most of the great things happened long before history came to be written. The Ramayana is not merely a book to be read at leisure and to be put back on the shelf but it has been for more years than history can count an important part of the spiritual pabulum of one of the most ancient races of the world. Every stratum of Hindu society is penetrated through and through by the living influence of the story of the Ramayana. Rama, intensely human in his trials and sufferings, is an avatar whose divinity has never been questioned. Sita, whose life-story is a long-drawn tragedy is the ideal of all womanhood for all time. Year after year the passion play of the Ramayana brings home to the mind of the humblest Hindu its power and pathos, its idealism and its lofty teachings. And yet but for the Rishi bard Valmiki there would have been no Ramayana, none of the characters which are as immortal as the gods. Beyond what is mentioned in the epic itself,

we know nothing about this earliest and greatest of poets. What again does the world know about Kalidasa the master sieger who saw and depicted beauty as no other poet has done, before or since? The man however great, passes indistinguishable from the herd, his work if it bears the hall mark of immortality endures.

And hence this human and normal interest in the latest Indian poet whose fame encompasses the world to day whose name is on every lip and whose likeness is to be found in a hundred thousand homes in every country in the world. No modern poet has ever attained such fame as has come to Rabindranath Tagore. There is scarcely any language in the world in which some of his works have not been translated. There is hardly any important city in the world in which his figure has not been seen and his voice has not been heard. He has moved as a classic writer whose place among the immortals is already assured. And everywhere men and women have waxed enthusiastic over the dignity and fascination of his personality. This is the appeal of the man to his fellow men as distinguished from the impersonal appeal of genius apart from the man and unrestricted by limitations of time. A great man of genius may be physically unattractive but in the case of this Bengali poet nature has been bountiful. Inside and out, and the distinction of the man is as remarkable as the genius of the poet is great. As he appears to-day with the fine lineaments of his face and his silver locks, flowing beard and wonderful eyes he resembles a Rishi stepping out of a sylvan glade in ancient Aryavarta or a patriarch full of wisdom moving in the sight of God. I can recall him as he looked when he was just twenty years of age slender tall, with his black hair curling down to his waist. He was fairly famous even then as a poet and an elegant prose-writer. I remember an eminent Bengali writer* who died several years ago then wrote about Rabindranath Tagore predicting a great future for him but warning him against being carried away by the plaudits of the public. It was a rhetorical effusion addressed to Brother Handclap (এই হাণ্ডক্ল্যাপ) and entreating the said brother not to turn Rabindranath's head by excessive

demonstrations of goodwill. I wonder what this writer would have thought if he had been living to day and had been an eye-witness to the world wide homage that has been the guerdon of the poet. Brother Handclap has not succeeded in doing much damage to Rabindranath. As a matter of fact an answer to this writer was anticipated in one of the early songs of the poet —

এসেছি কি হেথা য শর কাঙালী

কথা গেছে গেঁড় নিতে কংকালি

কে দ্বারি ব আশ, কে করিবে বাস

কে ঘুগতে গাছে জননীর নাম

Have I come into the world as a beggar for fame to win handclaps by stringing words together? Who will awake to-day who will work who wants to wipe out the shame of the Mother?

A few years later Baekim Choudra Chatterji then the greatest writer in Bengali literature suggested to Rabindranath that he should write an epic poem to establish his reputation as a poet. The reply came after some time in some beautiful lines addressed to the poet's Muse as his beloved —

আদি বাবু যংকায়

ন মদনে

হিল বলে —

চৈক্ল কল্প তোমার কাকন —

কিহিনোতে

কল্যাণি পেল কটি

• বাবার গীত।

কথাকথ্য সেই লজা

হুগিনার

গায়ে কবে কবির লগে

কণির কণির।

I had a mind to enter the lists for the composition of an epic poem but I do not know when my fancy struck your jangling bangles and broke into a thousand songs. Owing to that unexpected accident the epic poem shattered into atoms is lying at your feet.

Nearly fifty years of comradeship may constitute some slight claim to an intimate knowledge of a man's nature though I am not so presumptuous as to imagine that it is of any advantage in measuring the poet's genius. His works are accessible to all readers and competent critics either in the original or in translations and are already a part of the literature of the world. Still I have the

memory of having listened to many poems and songs fresh from the pen of the poet and recited or sung in his matchless voice, of many intimate rambles in the flower strewn fields of literature, of wide ranges of conversation. Many of the friends who forgathered with us are no more, and as the sunset of life is coming on apace, the lengthening shadows of the past are receding to the distance behind us. The years that have brought much fame for Rabindranath have also brought him many sorrows, domestic bereavements of which the world knows nought.

Of school and university education Rabindranath has had no share. As a boy he attended school for a very short time but his delicate and sensitive nature rebelled against the thoughtless indiscriminate which passes for discipline, neither was the companionship of the average school boy to his liking. He shook the dust of the school from his feet after a brief experience but at home he was a careful and diligent student and he began composing poetry at a very early age. He went to England as a young lad, but he did not attempt to qualify either for the Indian Civil Service or the Bar. He read however, for some time with Mr Henry Morley, who was much struck by the elegance and accuracy of Rabindranath's English composition. During his sojourn in England Rabindranath used to write Bengali letters which were published descriptive of his English experiences. For a lad in his teens the descriptions were remarkably vivid and showed considerable powers of observation. On his return to India two things were noticeable: he was entirely unaffected by his visit to England in his ways of living. He never put on the European dress and acquired no European habits. The other thing was that in spite of his undoubted command over the English language and his extensive reading of English literature he rarely wrote English. All his literary work and even his correspondence was done in Bengali. Until he began translating his own poems he had made no serious attempt to write in English and now by his translations, his lectures and his letters he ranks as a great original English writer.

If genius is a capacity for taking infinite pains and hard and sustained work, the Indian poet has amply demonstrated it by his unswerving devotion to literature. Of course the original spark must be there, for it is absurd

to contend that genius is latent in every man and can be brought out by unremitting toil. You cannot delve down into the bowels of the earth anywhere at random to find a precious stone. Our poet has fed the flame of his genius steadily and loyally, and the light that he has kindled has penetrated as a gentle and illuminating radiance to the remotest corners of the earth. Poetry, drama and fiction have been enriched by his contributions and he has shed fresh lustre upon various departments of human thought. Nor has he been heedless to the call of his country, though his temperament is unsuited for the din and jar of practical politics. He presided once over a political conference and delivered a profoundly thoughtful address in Bengali. When Bengal was embittered by the partition of that Province and feeling ran high the heart of the poet patriot was deeply stirred and the songs he then composed were sung everywhere at public meetings and in processions by prisoners in prison vans and prison cells by women in the home and by boys in the streets. Two or three years later Rabindranath narrowly escaped having a signal political distinction conferred upon him by the Government of Bengal. He had read a certain paper in Bengali at a crowded meeting in Calcutta and it was published in the usual course. Shortly afterwards he received an official letter from Mr Chief Secretary Macpherson conveying the warning of the Bengal Government against what was considered a seditious speech. The Government stayed their hand so far that they did not forthrightly launch a prosecution. Rabindranath told me that he sent no reply to this letter but though this little incident is not generally known it is well worth being recorded as the first official appreciation in India of the Indian poet. For some time the school established and maintained by Rabindranath at Bolpur and now known all over the civilised world as Visvabharati was under grave suspicion as a hotbed of sedition. It was a fair and accurate index of the working of the official mind in India.

A few more years passed and the Nobel Prize for Literature was awarded to Rabindranath Tagore. How did this come about? The panels which make the selections for the award of the various Nobel prizes are constituted of men who know nothing about the language in which the works of the Indian poet are written. It is contemptuously designated an Indian provincial vernacular

language, as if every living language in the world is not the vernacular and the mother-tongue of some people. English may be a classical language, but we have not heard that the vernacular of England is Hebrew! All that the judges had before them was a thin volume in which the poet had rendered into English a few of his original poems in Bengali. It was not a metrical translation, but the spirit and soul of poetry were to be found in the marvellously musical and rhythmical lines. They disclosed a hitherto unrevealed subtlety of fascination in the English language with delicate nuances of the poet's own touch. Even so the judges could have scarcely realised that in going so far east as India and making a selection from a race ruled by a nation in Europe they were conferring a great honour upon the Nobel Prize itself, for in the list of Nobel prizemen no name stands higher to day than that of Rabindranath Tagore.

A large and influential deputation from Calcutta waited upon the poet at Bolpur in his country home, well named the Abode of Peace (শান্তি নিবাস) to congratulate him on his having been awarded the Nobel Prize. In his reply the poet spoke with a shade of bitterness. Was not all his work done in his own country and were not his books accessible to all readers in Bengal? Those that had given him the Nobel prize had only seen a few of his poems in translation and did not know a word of the language in which they were originally written. The poet was right,* for was it not humiliating that his countrymen in Bengal should have waited for the recognition of his genius to have come home all the way round from Europe? In the introduction, written about this time, to his valuable work, "A Study of Indo-Aryan Civilisation" Mr Havell writes — 'If Anglo-India or the Calcutta University had awarded a prize for literature open to the world neither would have discovered a Bengali poet' † Unfortunately, it is a besetting weakness of our people that they see through other people's eyes and cannot always appreciate worth

for its own sake. If a man gets a good Government job or some trumpery title, there is an epidemic of entertainments in his honour and he is acclaimed as a hero so long as the novelty of his distinction lasts. If not widely popular, the name of Rabindranath was a household word in Bengal even before the Nobel Prize was conferred upon him. His poems and specially his songs were known everywhere and there was not a single Bengali home in which his songs were not sung. The most striking tribute is that of imitation and this has been rendered to him in abounding measure, for there is hardly any Bengali writer of verse who has not imitated Rabindranath's language, his metrical originality and versatility and his unmistakable distinction though of course the supremacy of the Master remains undisputed. When he was fifty years of age, his educated countrymen of Bengal made him a public presentation in the Town Hall of Calcutta, an honour which has not been shown to any other Bengali writer. Moreover, has it often happened that full and adequate appreciation has come to a great writer or a great man of genius in his own life time? Such a man lives in advance of his times and it takes time for later generations to arrive at a proper understanding of him. The world was not always the huge sounding board and the rounded whispering gallery it is to day and great books were written without the world hailing them as important literary events. Was not William Shakespeare an obscure individual in his life time, and he lived only a little over three hundred years ago?

The Nobel prize looms large in the world's estimation and yet one wonders whether a money prize is the best tribute to genius. For a struggling author the prize is a considerable sum of money and Rabindranath himself has received letters inquiring how the Swedish prize for literature may be won. But while it is only about eight thousand pounds of English money, a heavy-weight boxing champion may earn a prize of eight hundred thousand dollars by having his head and face mashed into pulp! Rabindranath himself kept no part of the Nobel Prize money for his own use but handed over the whole amount to the Visvabharati Literary giants like the late Anatole France and George Bernard Shaw have refused to retain the money of the Nobel Prize for their personal use. But the present age is ruled

* This is not the place to enter into a discussion on this point but we have always felt that the poet was not right, as his genius had received marked and unprecedented recognition in Bengal before the award of the Nobel Prize to him—Editor, *The Modern Review*

† That would have only proved how entirely ignorant Anglo-India and the Calcutta University were of Bengal's appreciation of her greatest poet—Editor *The Modern Review*

by the almighty dollar and the greatest writers are those whose books are considered the best sellers in the market. Judged even by this standard Rabindranath easily holds the first place, for a single German firm has sold five million copies of some of his books. To borrow a phrase from the turf, it is the best stayer that wins a race, and the life of a book is to be measured not by its vogue for a season but by its passing the ordeal of time.

What detracts greatly from the intrinsic value of the Nobel Prize is that it is an annual award. How is it possible to discover a great name in literature every year when a century may pass without producing a really great writer? Consequently, the prize has frequently to be given to mediocre writers whose reputation cannot be enhanced by any prize. It is somewhat like the appointment of a poet laureate in England. What great names besides those of Tennyson and Wordsworth are to be found in the list of English laureates? The royal seal and sign manual can create ministers and governors but not a poet who fills his place by right divine and holds a commission from God Himself. Lord Dewar a master of epigram and perhaps the wittiest living after dinner speaker recently said at a dinner of an Institute of Painters in London, "Poets are born—and not paid." This fine epigram was garnished with a story about the present English Poet Laureate, who refused to give the press reporters an interview when he happened to be in America some time ago. The next morning the New York papers came out with the attractive headline, "The King's Canary Won't Chirp." The king's canary is sometimes only a house sparrow faked to look like a canary, but its chirp gives it away. Nor can a gift of money add to a poet's reputation. Money is here today and gone tomorrow, and has no element of stability. Therefore, in ancient Rome they crowned the poet and the man of genius with the laurel crown, a handful of evergreen leaves, emblematic of the freshness and immortality of fame. It could be had for the mere plucking but not all the gold in the world can produce a single leaf of laurel.

Among the messages of congratulations received by the Indian poet there was one of genuine respect and homage from the late Mr E. S. Montagu, then Under Secretary and afterwards Secretary of State for India. At the next distribution of honours Rabindra-

nath received a knighthood. There may or may not be some connection between these two incidents, but it is a speculation of no interest. All that has to be noted is that the Government of the country displayed an interest in the poet on two occasions. First, when they threatened him as a purveyor of sedition and the next time when they conferred upon him a knighthood in the wake of the Nobel prize. This is not the end of the story, for there is a glorious sequel to it. When the Punjab lay prostrate under the iron heel of martial law, bruised, bleeding, outraged and martyred, the great patriot heart of Rabindranath went out in throbbing sympathy to his stricken countrymen in that Province, and he cast away from him, in indignant protest, the knighthood with which he had been honoured. The letter that he wrote to Lord Chelmsford on that occasion will remain a historical and human document of a lofty and dignified protest couched in language of singular force and eloquence. And his decision has been accepted without question throughout the world, for no one now thinks of addressing him as a knight. What an object lesson for many of our countrymen who cling to their petty titles and blazon them on their door fronts! By surrendering his title Rabindranath flung down his gauntlet as a challenge to oppression and it was a deed more truly knightly than the breaking of a lance in a joust of arms.

At different times it has been the privilege of genius to disregard the conventions of social life and to live amidst picturesque, bizarre surroundings. But the blandishments of Bohemia have never had the slightest attraction for Rabindranath Tagore. In his hermitage of peace surrounded by the young Brahman scholars of the Visvabharati, the teachers and learned men from distant lands, he has brought back the atmosphere of the open air teaching of the ancient Aryans. At Bolpur he is revered and addressed as Gurudev just as the Rishis and teachers of ancient India were addressed by their disciples. To such of our countrymen as delight in the garb of the West and look upon England and Europe as the Mecca of their dreams a visit to Bolpur may prove something of a shock. Time and again, the magnet of Rabindranath's personality has drawn famous and learned scholars of Europe to his academy. During their stay these learned pundits from the West discard the stiff and inelegant clothing of Europe for the

graceful raiment of Bengal. But for the strange and humiliating obsession which is euphemistically called the cultural domination of Europe no thought would have ever come to Indians of exchanging their own costumes for European clothing. There is so little imagination and such lack of individual choice in the West that practically all Europe and America have only a single kind of dress. Apart from climatic suitability so far as western countries may be concerned I can conceive of nothing more inartistic than the clothes of Europe with their close fit straight lines and sharp angles making a man look like a rectangle set upon two straight lines. So great an authority as Thomas Alva Edison has condemned the garments of Europe and America without reserve on the ground that they cramp a man's movements and his life. On the other hand most Indian costumes are full of grace generously fashioned giving free movement to the limbs and falling in artistic curves and folds. There is no more attractive headgear anywhere than the turban of the Punjab no upper garment so well proportioned or so suggestive of dignity as the robe worn in northern India, no costume so wholly beautiful as that of Bengal, the *chadar* being an improvement on the Roman toga. The robes that Rabindranath himself wears when travelling in foreign lands are distinguished by originality and individuality. There is probably no Indian living who is in deeper sympathy with the intellect of Europe or has better assimilated the finest literature of that continent but he has not made the mistake of accepting the husk for the kernel of European culture.

Does the Nobel prize afford an explanation of the wonderful reception accorded to Rabindranath Tagore in the West and the Far East? Rudyard Kipling the much belauded poet of the Empire is also a Nobel prizeholder. If he were to undertake a tour of the world would he be acclaimed in the same manner as the Indian poet? For Rabindranath the Nobel prize has served as an introduction to the West, but that is all. For the rest the Nobel prize has been of no more use to him than his cast off lightheadedness. From continent to continent country to country capital to capital he has passed as a vision of light East and West rendering him the obsequious due to a world teacher. It has been a royal progress and Rabindranath has moved like a king as a king of hearts playing with wizard fingers upon the heart

strings of the nations. The great ones of the world have vied with one another in doing him all possible honour, learned and intellectual men have received him as a leader and elder brother the Universities have opened wide their doors in scholastic welcome, men and women have jostled one another for a sight of this poet and prophet from the East. He has lectured to crowded audiences in English which was subsequently translated into the local language. He has recited his poems in the original Bengali to hushed houses which listened, without understanding the words, to the music of his voice. In China the representative of the dethroned Manchu dynasty presented him with an imperial robe. Everywhere and in all lands he has been greeted and acclaimed with an enthusiasm and a reverence of which the world holds no parallel.

Since at the moment we are concerned more with the man than with the poet it may be fittingly asked whether apart from his great gifts Rabindranath has any claim to greatness. The answer is, strip him of his God-given dower of song even as he himself has laid aside his man-made title of distinction take away from him his treasure of wisdom garnered during the years and still he is great—great in his lofty character great in the blameless purity of his life great in his unquenchable love for the land of his birth undeniably great in his deep and earnest religiousness and the faith that rises as an incense to his Maker. As a mere man he is an exemplar whom his countrymen, in all reverence and all humility may well endeavour to follow.

As a poet Rabindranath has won wider celebrity than any poet in his own lifetime. His works or parts of them, are familiar to most readers in Europe Asia and America. The best translations in English are by himself and these have been translated into other languages. Critics in Europe and America, almost without exception have bestowed high praise on his writings and ranked him among the great poets of the world. Occasionally the criticism is shallow especially when the Indian poet has been compared to some European poet. A comparison between two writers in two different languages may have the merit of suggestion but it is not helpful to constructive criticism. A critic who undertakes such a comparison must satisfy his readers that he has read both writers in the original

with full understanding I doubt whether any European critic can make such an assertion in regard to the poetical writings of Rabindranath Tagore. An English admirer, residing in India, of the poet claims to have read him in the original Bengali and he considers the Indian writer in some respects superior to Victor Hugo. He has not, however, thought of comparing the poet to any English writer. If an Indian critic were to make such a comparison he should be asked whether he had read the works of Victor Hugo in the original French. The similarity between the French and the Indian writer is in their versatility and range of creative genius. Both are masters of prose and verse, both are writers of prose fiction both have written dramatic and lyrical poetry, both are child-lovers and have tendered the homage of exquisite song to the sovereignty of childhood. There the comparison ends and it can be carried no further, because the two writers belong to two widely divergent schools. Tennyson rightly called Victor Hugo Stormy Voice of France. The great French poet was Lord of human tears but he was in his element in the *Sturm und Drang* of nature and human passions. French of the French he smote and withered Napoleon *Le Petit* with the flail and fire of his scorn and his burning philippics in prose and verse. He nicknamed Napoleon III the Little in contrast with Napoleon the Great. The muse of the Indian poet moves in the glory of early dawn and seeks the gathering shadows of evening. She finds her pleasure not in the storm and stress but in the smiling beauties of nature. She haunts the moonlight and strays in the ripe and waving corn. She listens to the voice of the sandal-scented wind from the south and knocks gently at the door of the human heart.

In the case of a great poet or writer contemporary judgment may not always be in agreement with the ultimate verdict of posterity. A man standing close to the foot of a mountain cannot form a correct estimate of its height or its imposing position in the landscape. Similarly, a certain perspective of time is necessary for an accurate appreciation of a great original writer or creative genius. But the faculty of criticism is grown with the development of literature and we cannot expect the suspension of contemporary judgment in the

case of any writer, great or small. That judgment as regards the Indian poet is entirely gratifying and will be endorsed by future generations of critics. Rich and varied as is the output of Rabindranath's literary work he stands pre-eminent as a lyric poet. The world of readers outside his own province of Bengal knows him only through the medium of translations. Poetry divides itself easily into three main sections, epic, dramatic and lyric. The three clearly demarcated and separated by wide stretches of time and the evolution of the human intellect. Of these epic poetry is somewhat easy of translation because its essence is narrative. Some loss is unavoidable in translation but the outlines and central structure of an epic can be retained even in a new language. Drama is more difficult but the excellent rendering into English of the powerful Greek tragedies prove that the difficulties of translation are not insuperable. A fine lyrical poem is the despair of the translator. A great epic is fashioned in a Titanic mould of which a cast may be taken. A drama is a panoramic view of human nature and may be copied. But a beautiful lyric is a sparkling little jewel of which every facet is carefully cut by the poet-jeweller and its setting is the language in which it is composed. Any duplication or imitation of such a gem may prove to be mere paste. To be fully appreciated a lyrical poem must be read in the original with due understanding of the language in which it is written. It is a compact and component whole from which no part can be separated from another. The words, the figures, the metre are all wedded together. Rabindranath has translated his poems as no one else could have done, but how is it possible to convey in another language the grace, the metrical arrangement and the musical harmony of the words of the original poems?

It can scarcely be expected that readers and admirers in far lands will learn the language of Bengal to read the works of the Bengali poet as originally written. India itself is a land of many languages and outside Bengal Indian readers have to read the English translations of the poet. I remember several years before Rabindranath received the Nobel prize Gopal Krishna Gokhale, politician and mathematician, learned the Bengali language for the express purpose of reading Rabindranath's poems in the original. Bengali Gokhale read out to me a few

poems on one occasion, apologising for his inability to reproduce the Bengali accent and enunciation, and then asked me to read the same poems in the manner of a Bengali. However wide flung his fame, Rabindranath's permanent place is in the literature of his own language. As a Bengali free from a few delusions, I recognise that Bengali literature does not rank as one of the great literatures of the world, though it is full of promise and has already produced a few writers of undoubted genius. Periods of literary activity have alternated with long spells of stagnation. There have been a very few critics of outstanding ability but critical acumen has not been systematically and conscientiously cultivated. The little criticism that is to be found is either shallow, or mordant, which passes for smartness, or indiscriminating and fulsome adulation. When Rabindranath was a young boy criticism by comparison was rampant in Bengal and every writer of any note was compared to some English writer. Early Bengali literature was neglected. The Vashnava poems of the era of Chaitanya the cradle and crown of the lyrical poetry of Bengal were consigned to the oblivion of cheap and obscure printing presses. The boy Rabindranath turned to this literature with the unerring instinct of nascent genius. As a boy poet he wrote a number of charming poems in imitation of the language of Vidyapati, a Maithil poet by birth and the language of his verse, but also a Bengali poet by adoption and extensive imitation during the period Bengali poetry was influenced by the personality of Chaitanya.

As the pinions of his genius grew stronger the poet soared higher and ranged wider. The supreme art of simplicity was his to begin with and he rapidly acquired considerable depth of thought and a rare strength and delicacy of touch. There was very little variety in rhythm, metre and measure in Bengali poetry, though the great poet Michael Madhusudan Dutt had introduced blank verse and a few simple new metres. Rabindranath dazzled his readers by his creative faculty of introducing new metres and measures. Tripping verses nimble-footed as Perseus, slow, dreamy measures caught in the laud of the lotus eaters, long-swinging stately lines of regal grace, stirring lays of knightly deeds and martyr heroes, lofty chants from ancient Aryan and Buddhist legendary lore, holy hymns rising like hosannas from the shrine of the soul, all

were his and his muse answered every compelling call. His language is of classical purity and dignity, and of striking originality. Critics everywhere have been struck by his wealth of simile and metaphor, the subtlety of perception and suggestion, the realisation of the beautiful. His devotional songs and poems are among the finest in the whole range of literature. They are a noble and melodious expression of a living faith beautiful in its strength and sublime in its appeal. His lyrical poems are of steadily progressive strength and variety, and the careful student can detect the successive stages of development, the growing maturity of thought and expression, the increasing power over language and rhyme, and the splendid outburst of music in several of his later poems. Without attempting anything like an exhaustive criticism or appreciation of the poet I may quote a single poem displaying some of the qualities which have placed Rabindranath in the front rank of lyric poets. This poem was composed when the poet was about thirty-four years of age, in the full plenitude of his powers and the assured strength of his genius. The theme is *Urbasi* :—

উর্বশী

নহ মায়া নহ কলা নহ বস্তু অকস্মিৎ জপিল
হে নলবাবাদিনী উর্বশী।
গোষ্ঠে যবে সন্ধ্যা লাগে জাগে বেহে স্বপ্নাকাল টানি,
তুমি কোনো গৃহদ্বারে নাহি ছাগ সন্ধ্যাবোধিনি।
বিহার তড়িত পরে, কল্পক্ষেত্র নহ নেত্রপাতে
মিতহাসে নাহি চল সজ্জিত বালর সন্ধ্যাতে
শুভ্র অধরাতে।
উৎসর্গ উৎসর্গ মন অনবগুণ্টিত
তুমি অকুণ্টিত।
বৃন্দাবন পুন্দরব আগ্নাতে আগ্নি বিকশি
কবে তুমি কুটিলে উর্বশী।
অবিন বদন্তী ত উঠেছিলে মর্ত্ত্য লাগরে,
জানহাতে হৃদয়গত বিরাগত লগে যাব করে,
ভরাহিত মহাপ্রসন্ন মন্ত্রণার ভূমিরে মত
গাঢ়হীন পরমাগ্রে উজ্জ্বলিত কথা লক্ষ শত
করি অবনত।
কুশলভ বসুন্ধারি হলেহে বসিত,
তুমি অনিন্দিত।

বেণোৎসবে হিলে না কি সুশ্লীলক বালিকা বসী
হে অনন্তবোধিনী উর্বশী।
আঁধার পাথরহলে কার ঘরে বসিত একেলা
মানিত হুহুতা লগে করেছিলে শ্রম ঘর দেলা

মহিমাগৌণককে সমুদ্রের কল্যাণসমীতে
অকলঙ্ক হাতস্থৎ এখান পাগলক স্থাইতে
কার অকটিতে ?
বহনি জালিলে যিবে, যোগেন পরিণ
পূর্ণ অকটিতে ।

মুখ যুগ্মের হতে ত্বি শুখ বিবের স্নেহণী
হে অশূর্ণ পাভা উপর্ণি !
মুনিগ্ন দ্যাব ভাতি বের পব তপ্ততার বক,
তোমারি কটাক্ষাতে ত্রিভুবন যৌবনকল,
তোমার নহির বক অক বাহু বহে চারিভিত্তে,
মুখের ত্বনন বুদ্ধ কবি বিবের লুহ ভিত্তে,
উদার সমীতে ।
মুখের গুহরি বাও মাধব অকণা
বিদ্যায় স্কণা ।

মুখসভাতেল বহে নৃত্য কর পুলাক উর্পনি,
হে বিগলল বিগলল উর্পনি !
হবে হবে নাচি উর্প নিম্নবাহে ভগ্নের দন,
পত পিঠে শিবদ্রিমা কপিল উর্পে যার অকল,
তব শুভার হতে নতগণে বহি পড়ে ভায়া,
অকল্যাৎ পুকের বন্ধাবাহে ভিত্তি বাহবায়া,
বহে হস্তায়া ।

বিগল স্নেহণী তব হুটে মাগবিত্তে
অমি অকল্যে ।

বর্ণের উবাচণে মৃত্তিকী ত্বি হে উর্পণী
হে ভুগ্নমোহনী উর্পণি !
অগতের অকল্যাৎ হে খেত তব ভগ্নের তনবা,
ক্লিষ্টকর ভবিত্তে অকল তব স্নেহ পোষিতা,
মুক্তবর্ণী বিগলন, বিকশিত বিব বাসনা,
অবিশ্বাস্যকালে পাশপাশ বেগেহ তোমার
অতি মধুভার ।
অবিল মনস্বর্ণে অকল্যাৎস্বর্ণি
হে অমণবিনি ।

তই শুন যিবে যিবে তোনা জালি কাঁদিয়ে জননী—
হে নিষ্ঠুরা বহিমা উপর্ণি !
আবিধুর মুখাচন এ অগত যিবিবে কি আর,—
অকল অকল হতে নিতকণে উর্পে আবার !
এখন সে তম্বানি বেধা যিবে এখন প্রত্যতে
বাগিধিনু পাতে ।
অকল্যাৎ বহাধুবি অশূর্ণ স্মীতে
হবে তরুণিত্তে ।

কিহিবে না কিহিবে না—অক গাছে সে গৌরবণী,
অকল্যাৎস্বর্ণি উপর্ণি ।
তাই জালি বহাতলে বদন্তের আনন্দ-উজ্জ্বল
করি ভিবিদ্যের গৌরবান যিবে বহে আসে,
পূর্ণিমানীকোষে বহে বনরিক শরিপূর্ণি হাদি,

দুঃখিত কোণা হতে বাহার বাহুল্য করা বাশি,
বহে অকল্যাৎ ।
তবু আঁপা জেগে থাকে জাগে জননে
অবি অকল্যাৎ ।

Of this poem, which scintillates and glitters like the Kohinoor in the poet's Golconda of flawless jewels of the finest water, I have essayed a translation, with very indifferent success —

Nor mother, nor maid, nor bride art thou,
O beauteous Urvasi! dweller in the garden of the gods!
When Eve comes down on the mead drawing the golden end of her garment round her weary shape,
Thou dost not light the evening lamp in a corner of any home.
With the faltering feet of doubt trembling bosom and downcast eyelids,
Smiling and coy thou dost not pass to the bridal bed
In the still midnight.
Unveiled as the rise of the dawn
Unembarrassed art thou !

Like a flower without a stem blooming in itself
When didst thou blossom Urvasi?
Out of the charmed sea thou didst rise in the primal spring morn
With the chance of ambrosia in thine right hand, the poison cup in thy left,
Like a serpent charm stilled the mighty ocean wave-test
Sank at thy feet bending its million heaving hoods
In obeisance
White as the Kiunda flower, in beauty undraped,
the lord of the gods bowing before thee,
Fair art thou !

Wert thou never a budding maiden tender in years,
O Urvasi, of youth eterne?
In the dark vault under the sea, sitting lone in whose abode,
Didst thou play with rubies and pearls the games of childhood,
In a chamber lit with jewelled lamps, to the cradle-song of the sea,
With pure smiling face, on a couch of coral, in whose arms
Didst thou sleep?
Instant on thy awakening in the universe thou wert fashioned with youth
Full flowered !

From aeons and ages past thou art but the beloved of the Universe,
O Urvasi of grace beyond compare!
Saints break their meditation to lay the merit of their communion at thy feet,
Struck by the shaft of thy glance the three worlds stir with youth.

Borne is thy intoxicating fragrance by the
 Like a bee drunk with honey the poet
 enraptured roams tempted of spirit
 With impassioned song
 Thou passest with the tinkle of thy anklet
 fluttering the end of thy garment,
 Swift as the lightning !

When thou dancest in the assembled hall of
 the gods exuberant with joy

O swaying billowy Urvasi
 To measured music dance the lined waves
 of the sea,
 Shivering to the ears of corals trembles the
 apron of the earth
 From the chanlet on thy breast bursts the
 star that falls on the floor of the sky !
 Suddenly in the breast of man the mind loses
 itself

The stream of blood dances in his veins
 On the distant horizon of a sudden snaps
 thy girdle

O thou without restraint !

On heaven's mountain crest of sunrise thou
 art Aurora embodied

O Urvasi the charmer of the world !
 The slenderness of thy form is washed with
 the tears of the world
 Painted is the pink of thy feet with the
 heart blood of the three worlds
 O thou with thy hair unbound ungarmented !
 on the open lotus-flower
 Of the world's desire thou hast poised thy
 lotus feet

Ever so light !
 In the whole heaven of the mind endless
 is thy delight,
 O companion of dreams !

Hark ! all around earth and heaven are
 crying for thee,

O cruel heedless Urvasi !
 Will the pristine and ancient of cycles come
 back to the earth
 From the fathomless shoreless sea wet
 tressed wilt thou rise again ?
 First will that form appear in that first morn
 All thy limbs will weep hart by the eyes
 of the universe

Dripping the water from thy loveliness
 On a sudden the great ocean will heave and roll
 To a song unsung before

Never again never again ! That moon of
 glory has set
 On the mount of the sunset dwells Urvasi
 So on the earth today in the burst of joy
 of the spring

Whose long drawn sigh of parting eternal
 comes mingled with the notes of mirth ?
 On the night of the full moon when all
 around is full laughter
 Whence come the tunes distraught of the
 late of d stant memory ?

The tears flow in flood
 Still hope keeps awake in the weeping of the
 heart,
 O thou endless one !

The metre of this poem is original the
 language is full of artistic grace and the
 instinct of the true poet is to be repeatedly
 found in the choice of the words Words
 like *কম্পিত* (*Kampra*, trembling), *উষাসী* (*Ushasi*,
 dawn) *তনুয়া* (*Tanma*, slenderness) and
সোনালী (*Sonima*, redness), delightfully
 musical, are rarely met with in Bengali
 poetry In one line occurs the word *কন্দনো*
 (*Krandasi*, heaven and earth) How many
 Bengali readers of the poet know the mean-
 ing of this word or have troubled themselves
 to trace its origin ? It cannot be found in
 any Bengali dictionary or even an average
 Sanscrit dictionary It is an archaic
 Sanscrit word and occurs in three places
 in the Rig Veda, in the second, sixth and
 tenth *mandalas* The meaning of the word
 is two coateading armies shouting defiance
 but in the commentary of Sayanacharya it
 is noted that it also means heaven and
 earth It is in this sense that the word has
 been used by the poet in this poem This
 will give an idea of the wide and accurate
 scholarship of the poet and his artistic
 selection of appropriate words

Urvasi is an epithet of the *dawa* per-
 sonified as *na apsara* a heavenly nymph
 the principal danseuse in Indra's beava
 The Aryan Greek, Roman and Islamic con-
 ceptions of paradise are a perpetuation of
 the lower forms of the pleasures of life
 on earth The paradise of the North
 American Indian is the happy hunting
 ground for he cannot think of a heaven
 without the pleasures of the chase
 Incidents relating to Urvasi are frequently
 mentioned in ancient Sanscrit books. Among
 the objects and beings that rose from the
 sea when it was churned by the gods and
 the demons with the mount Mandar for a
 churning rod and the great serpent Vasuki
 for a churning rope Urvasi was one. This
 splendid allegory crystallises some dim and
 remote tradition about some stupendous
 convulsion of nature may be an unparalleled
 seismic disturbance a mighty volcanic
 eruption, the emergence of a vast tract of
 land from the sea or the submergence of some
 forgotten continent like Atlantis. In Greek
 mythology which is largely a reflex of
 Aryan mythology, Aphrodite named Venus
 in Roman mythology, rose from the
 sea foam in which she was born The
 Sanscrit legend explains how the sea was

churned into foam by a Titanic process. Aphrodite unlike Urvashi does not represent the dawn, but the Greek word for daybreak, *eos* is etymologically very similar to the Sanscrit word for dawn, *usha*.

In all the ancient accounts relating to Urvashi there is nothing that appeals to the finer feelings. There is the fascination, irresistible to saint and sinner alike, of an unearthly and fadeless beauty. In the tenth *mandala* of the Rig Veda there is a dialogue between Pururava and Urvashi. The story is told in fuller detail in the Satapatha Brahmana, the Bhagavata and is mentioned in several other books. In the Mahabharata the second Pandava Arjuna, who rejected Urvashi's advances, was cursed by her. For a short spell she was the wife of King Pururava and in dramatising this incident in Vikramorvasi the poet Kalidasa represents her as a loving and attractive woman. But the modern poet has restored Urvashi to the spirit world and interpreted her with an inspiration so sympathetic and elevating as to reveal her in a new light. As one reads and understands this poem he realises the sublimation of Urvashi from the low level of sense to the height of supersense. She no longer appears merely as the radiant but heartless ravisher of hearts a much magnified, if elusive type of the scarlet woman. Any conception of the eternal feminine whether in the flesh or in the spirit, is incomplete without the three stages of maidenhood, wifehood and motherhood, and this is the first note sounded by the poet while apostrophising Urvashi brooding the universe, unshrinking in the freshness and glory of the first dawn of creation, Urvashi stands in the splendour of her beauty with the glint of the young sunlight on her loveliness.

And this image recalls the legend of her first manifestation, for there is no word about her birth anywhere though the parentage of the gods can be easily traced in the elaborate theogony of Sanscrit sacred literature, with its imposing setting. Behold the gods and their opponents with their muscles showing like corded steel, heaving and straining and pulling at either end of the straightened but withering coils of the mightiest of serpents, trampling the golden strand under their giant feet the massive bulk of mount Mandara whirling each way by turn with the broad speckled bands of the length of the serpent Ananta enfolding its girth, the cosmic ocean lashed and

racked and churned into hissing, hydra-headed foam. And behind this travail and turmoil is the background of the calm and smiling rose flush of the dawn. On this scene of mingled strife and peace appears Urvashi parting the waters and the foam, her hair dripping and clinging to the rounded curves and the slender lines of her peerless form, the vision of her beauty striking the godly and ungodly beholders dumb with amazement.

For centuries poets and dramatists and other writers accepted this conception of Urvashi without question. There was no suggestion of any flaw in the myth, or anything lacking in the imagination that invested the nymph with perennial youth. But the latest of the great poets of India has noted the gap in the life story of Urvashi. We see her suddenly revealed to the astonished eyes of the universe in the maturity of her lissome grace the immortal gift of her beauty and her fatal fascination, but nothing is known of the innocence of her early youth, of her playfulness as a child or the arms that rocked her to sleep in a gilded chamber in some suhmarne palace. And hence the wondering question of the poet concerning the missing infancy of Urvashi. The original legend is undoubtedly a daring figment reveling in the creation of full grown beauty, skipping the stages between childhood and maturity in Judaic tradition and the Book of Genesis the first man and woman were never infants. But the loss to the being or the spirit so created is immeasurable. What beauty of person or consciousness of strength can compensate for the void inseparable from the absence of the lights and shadows of the vista of memory, recollections of the past to fill moments of idleness or preoccupation?

This is the emphasis on the word only' (सि सुधू) when the poet says Urvashi has been for ages the beloved of the whole universe. Her appeal is the disturbing influence of beauty alone without the lighter shades of the memory of an innocent childhood. It is the puissance of sheer beauty shattering the concentrated contemplation of the saint and filling all the worlds with the ache of youth and maddening the fancy of the poet. But she, the creator of all this commotion, the dancer with the jingling anklets making music to her footfall, flits as she will, gay, heartwhole, fancy free. It is when she dances before the assembled gods on the

sapphire floor of the ball room in Indra's palace with all the abandon and witchery of her art that the poet lifts the veil from the mystery of her identity and reveals her as the spirit of beauty behind the phenomena of nature. The rhythmic waves of the sea keep measure to her dancing feet, the tremors of the agitated earth are communicated to the heads of corn, the heart of man is strangely and inexplicably disturbed. The falling meteor is a jewel hurst from the chain round Urvasi's neck in the mad whirl of her dance, the lambent lightning with its wavy lines is the broken strand of the lustrous girdle round her waist. Urvasi is the expression of all the buoyant, spontaneous joyance of Nature!

Still further behind is the Vedic myth though even there the identity of Urvasi with the Morning Dawn and the Evening Twilight is very faint and the allegory is more or less lost in the proper name. In hailing her as the embodiment of dawn in heaven the poet greets her on the threshold of early tradition and yet finds in her the fulfilment of the later and wilder myths cleansed from the grosser accretions of later times. The morning dew in which the dawn is bathed represents the tears of the world while the tinge of rose with which the delicate feet of Urvasi is painted by the rays of the morning sun is the heart blood of all the worlds. As the lotus which remains closed at night opens its heart to the first touch of the sun so the longing and the desire of the universe opens out as a lotus flower on which the dainty sun-kissed feet of Urvasi may rest. The image of beauty that haunts the dreams of the world is the all pervading loveliness of Urvasi.

Will the revolving cycles bring back the ancient and pristine era when Urvasi rose from the sea which hailed her with a new song of welcome? Will a wondering world again witness what the gods saw? Will the wailing cry of heaven and earth reach

Urvasi and turn her tripping feet back to the scene of her first triumphs? Vain, alas is the weeping and yearning for the lost Urvasi! How can the beauty and the glory of the first dawn of creation ever return? Is it not recorded in the Rig Veda* that Urvasi told Pururava, 'I have gone from thee like the first of Mornings...I, like the wind, am difficult to capture'? Urvasi is not the nymph of the daily recurrent dawn. She 'came from the waters flashing brilliant as the falling lightning bringing delicious presents for Pururava'. Gone is she with the glory of the first of Mornings, leaving behind her the memory of a vanished beauty such as has never again been seen on earth or in heaven, and her parting sigh comes floating in the festive season of springtide as an undernote of melancholy!

And so we see Urvasi again ancient as the Vedas in recorded language and far more ancient in mythic tradition uplifted and purified, stepping forth as she did when she rent the veil of uncreated brooding gloom and looked out on the universe in the soft dawnlight, wondering and wondered at, passing far winning unsought the adoration of immortals and mortals. The fame of the poet, in whose genius we owe this new presentation of the world old Urvasi has been broadcast round the world by the wireless of human appreciation conveyed in many tongues, and if we claim him as our own it is with the knowledge that he belongs also to the world and his is the one form of wealth which grows with the giving. To the many exotic foibles that we have brought from the West, let us not add the pride of possession indifferently distributed between a transient empire, a race horse and a casual poet. Let ours be the better portion of sharing the glad gratefulness of giving of adding to the joy and light of the world.

* Rig Veda, X, 90

SPRING THAT IN MY COURTYARD

By RABINDRANATH TAGORE

Spring, that in my courtyard used to make
 A riot once and a buzzing laughter lift,
 With beaped hilt—
 A coronation flowers
 Aerial, jarl in of palace—showers
 A new white new twice stirred the woods awake,
 Whose eyes added all the sky

Seeks me out to-day with soundless feet
 Where I sit alone. Her steadfast gaze
 Goes out to where the fields and heavens meet
 Beside my silent cottage, silently
 She looks and sees the greenness swoon and die
 Into the azure haze.

From *Anthology of Modern Indian Poetry*
 Edited by Gwendoline Goodwin.

WAR ON OPIUM

By DR SUDHINDRA BOSE

Lecturer in Political Science, State University of Iowa

OPIUM has been outlawed by the United States Congress, but it is smuggled into the country in large quantities. America, it is generally conceded, is one of the greatest consumers of opium and its derivatives. America has, therefore, a vital interest in the suppression of the nefarious opium traffic.

There is, of course, no possibility of knowing the actual number of narcotic addicts. This is due to the fact that the use of opium in America is a secret, and not a public vice. The victims doubtless number by thousands, and tens of thousands. The United States Department of Justice announced early this year that at the end of the fiscal year, June 30, 1926, more prisoners were sentenced for violation of the National Anti Narcotic Law than for the violation of the National Prohibition Law.

OPIMUM VICTIMS

The prevalence of addiction to narcotic drugs is causing the greatest apprehensions to American medical, educational and religious bodies. The platforms of all political parties, patriotic and civic associations are pledged to wipe out the opium curse.

All addicts do not come from the underworld. They go there, but ninety percent of them start among the so called best people. It has been demonstrated by extended investigations of the United States Treasury Department and by records of Public Health Offices that the evil has its largest proportionate number of victims not among the irresponsible elements of society, but that all classes are open to its stealthy advances. The Treasury Report of a few years ago revealed the portentous fact that the largest proportionate number of victims are found among housewives, laborers, doctors, nurses, pharmacists." The Chief of the Board of Health of San Francisco also reported that the "great majority of the victims are found among the upper strata of society, including doctors, lawyers, states-

men, businessmen, intelligent and able mechanics, only a small percentage being of the criminal type." The evil is therefore striking the country in its muscle as well as in its brain.

The bureaucrats in India say, even in this year of enlightenment 1927, that opium is a harmless "stimulant". It is highly improbable. In fact, it is plainly not so. Americans, backed by the whole scientific opinion of the genuinely civilized medical men of the world, make merry of the Indian bureaucratic opinion. It is the veriest commonplace of scientific knowledge that opium is a deadly poison. The point is that if any of the bureaucratic gentry were to come here from India and advance his fool theory about the occult virtues of opium, he would be promptly arrested. Worse, he is likely to be shut up in jail as a prehensile moron or a dangerous loony.

Americans recognize that the habit of addiction quickly develops a perilous disease which can be subdued only by adequate medical care. The problems of addiction are of utmost seriousness to the nation. Physicians are urged to fight them with the same heroic spirit which they have shown in attacking yellow fever, and other devastating plagues.

NARCOTIC EDUCATION WEEK

Realizing the awfulness of narcotic indulgence, America observed the last week of February as Anti Narcotic Education Week. Such an Education Week offered an invaluable opportunity for diffusion of information. Schools, churches, clubs and civic societies appealed to all agencies for co-operation and to direct activities of observance.

Governors of many States issued official proclamations designating the week of February 20 to 27 as Anti Narcotic Education Week. The Governor of the State of Arizona, in issuing the proclamation, sought to arouse not only the public opinion in this country, but throughout the world.

for overthrowing the opium menace I further call upon the press," declared the Arizona Governor, the clergy educators and all persons in positions of influence to utter to youth and all others their solemn warning against even the least possible beginnings of these insidious poisons and to register their appeal to public opinion of all nations to the end that all may recognize their responsibility and unite in efforts against this enemy of mankind.

The voice of the people may not be the voice of God, but public opinion is undoubtedly the mightiest power under heaven. As an example of what the aroused public opinion will do, Americans point to the fact that only a few months ago the British Government in India announced officially that exportation of opium from India was going to be cut down progressively. Time will come when the public opinion will be so stirred even in India that it will stop the mouths of all those who have been stoutly but falsely asseverating that the Indian people have no objection to the opium traffic. That is bound to happen on some not distant to-morrow. Now watch!

The Anti-narcotic fight of the Education Week was not confined merely to a few gubernatorial pronouncements. With the zeal of a moral crusade the campaign was carried from one end of the country to the other. Mayors of towns and cities issued proclamations, appointed local committees, and organized public meetings which adopted resolutions expressive of abhorrence of the evil. The press spoke forth the loudest possible warning to all who are subject to the temptation. It called on such nations as still share in the opium traffic to reject henceforth its blood money. Churches arranged for narcotic pulpit discussions at meetings before and during the Education Week. Movies put on trailers, short pictorials and educational titles at all performances. Radio stations, too, did their bit in this campaign. They broadcast brief discussions daily during the Narcotic Education Week.

TEACHERS AND PUPILS

Greatest possible attention was focussed upon schools where young people were put wise to the dangers of the narcotics. Educational organizations of all sorts adopted plans for instruction of youth and for co-operation in anti-narcotic meetings.

Many years ago von Humboldt said: "Whatever you wish to introduce into a nation you must first introduce into its schools. Acting apparently on this axiom, American schools give regular lessons on the evils of strong drink and narcotic plague. Almost all States require instruction in schools in the perils of opium. The Board of Education of Delaware has recently made special announcement, calling upon Boards of Education, school directors, school superintendents, principals, and teachers to exercise unusual vigilance in shielding school children, and to see that suitable instruction and information is available to enable each child to safeguard himself against a habit unspeakably terrible." The members of the Brooklyn Board of Education likewise have lately felt called upon to inform the public of the ceaseless vigilance which they find themselves under the necessity of exercising.

School teachers are constantly on guard, and never fail to warn their pupils of the deadly effects of the opium drugs. Here is the substance of a talk which a teacher gave to the school assembly:

Try Everything Once? Not on Your Life. It is a foot stunt. If you know anyone who talks that way tell him that if he MUST try anything once, don't begin on narcotics not even once. Try something easy. Try playing with cobras and rattlesnakes. May be they won't bite. Try a stiff dose of rat poison. May be the doctor will get to you in time run his pump down your throat and pump you out. But if you once get narcotics into your system no pump ever made can pump them out. You are hooked, you have swallowed the bait, hook and sinker.

HOW IT ALL STARTED

Some fifty years ago an American missionary wrote home from India that opium, in forty years, would circle the globe. The prophecy has been fulfilled with deadly accuracy. How did it all begin? The evil practically started in 1776, when a profitable financial budget had to be arranged for the old East India Trading Company. It was proposed to raise the poppy in India, make opium, and sell it to China.

Warren Hastings of the unhappy memory, who suggested the scheme wrote to England that this new alluring drug was so pernicious that it should be carefully kept away from the English people, and should be used for purposes of Chinese commerce only. China decreed death to any Chinese implicated in the traffic. Means were found, however, to

get the drug in. It spread with such rapidity that it menaced the very life of the nation.

The Chinese government in its efforts to purge the country of the opium curse decided upon a heroic measure. In 1839 the Chinese seized 1440 tons of the British drug in the harbor of Canton, which they destroyed as contraband and piratical. Then followed the two Opium Wars. By 1856 the Chinese opposition to opium trade was finally broken down. China was compelled to sign a treaty legalizing opium importation. A great flood of opium poured in. Moreover the Chinese to save money, began extensive cultivation of the poppy and the making of opium. Gradually the whole nation went opium drunk and yielded to its seduction.

Then came the awakening. In 1906 the Chinese began a campaign for the suppression of opium in their country. They destroyed the poppy on about two million acres of land, and closed up 500,000 opium dens. It was a period of great national house clean up. For a time China was opium free.

"The same greed of the white man," writes an American, which in the beginning forced opium upon the Chinese, next forced upon them morphine and heroin ten times worse than opium." Under the disorganized condition prevailing in China since its Revolution (1911) the growing of the poppy has been renewed. The magnificent fight of a few years ago has all but gone for nothing. The battle, it seems has to be fought all over again.

India and China are today the principal poppy growers of the world. The poppy must go. Opium is an international menace. No nation—so Americans argue—is safe as long as there is the backwash of Indian and Chinese narcotics to flood the world.

During the late European War, India it was said helped to put down the "Hun" and save civilization. Why aren't the Indian people now permitted to save their country and the world from the demon poppy, an enemy hundred times more insidious than the Hunnish Hun?

THE SCIENTIFIC INSTITUTIONS AND UNIVERSITIES OF THE UNION OF SOVIET REPUBLICS

By AN INDIAN STUDENT

A Professor of the Russian University spoke on the 7th of October, 1926 at the institution of the Friends of the New Russia in Berlin on the methods of educational science of Soviet Russia. Several representatives of the German Government, as well as a large number of people interested in pedagogy were present. The chief characteristic of the meeting was that the importance of Russo-German Co-operation in the cultural sphere seemed to be gradually realised also in such circles. Albert Petrovitch Pinkewitch, the Rector of the Second University of Moscow, spoke calmly and definitely. He put forward his principal arguments. But the store of his vast knowledge was indeed disclosed when questions, put to him during the discussion were rightly answered. He gave no rosy interpretation of the situation of his country, but dwelt in an informing manner on its poverty which still prevented them from paying teachers as much as one could wish, from building up as many schools as one might heartily desire and from opening up to an ever increasing number of children

as well as adults the cultural achievements of the pedagogic methods of the Soviet Union.

Albert Pinkewitch is staying at present in Germany and wants to make an educational tour throughout the country. He had already been in Vienna where as a member of the Russian delegation of teachers he took part in the session of the Teachers' International of Paris. He will go also to Weimar, in order to take part in the Pedagogic Congress which will meet there soon. At present he is working in the University of Berlin. So it is also possible for him now to acquaint himself with all the pedagogic institutions and the new pedagogic literature of Western Europe, with which he wishes to deal in a book he intends publishing shortly. A History of Pedagogics in the light of the Marxian visualisation of society is the work on which he is working now. Prof. Pinkewitch spoke as follows—

To thoroughly initiated scientific circles it is now quite clear, that scientific life in Russia, far from showing any sign of deca-

dence gives evidence on the other hand of an all round revival. The Soviet Government as it is recently announced has sent a hundred young students with a scholarship of a thousand Roubles each per year to make an educational tour in foreign countries.

In the campaign of lies in the bourgeoisie press the charge is unceasingly made that the Soviet State behaves as an enemy of science. I have been asked by educated people why we murder and tyrannise over the Professors in our country. One can only laugh at such remarks. I shall perhaps surprise you all if I now assert that 99 p. c. of the Professors who were employed before the war still keep their posts today teach unhindered and are fully satisfied with their present conditions.

There are altogether 71 Universities besides which there are special schools the so called technical which number 524. These schools are of a Russian type which stand between the high and the middle school. The above 71 institutions for higher education are divided as follows:

14 Universities (of which 7 are new) 17 technical high schools (five are new) 5 medical colleges (2 are new) 19 agricultural high schools (10 new) 10 pedagogical institutions (during the Tsarist regime there was only one). Two special schools of economics (none new) and 1 academy which may be classified as follows:

Industrial and technical faculties 21 agricultural 25 medical 17 social economics 14 pedagogical 18 artistic 4. In these 71 institutions there are in all 110,411 students. The percentage of students as drawn from the different social strata is as follows:

216 p. c. workers and children of workers
26 p. c. peasants and children of peasants.
360 p. c. employees and children of employees
107 p. c. intellectuals and children of intellectuals

25 p. c. others.

Among the scientific research workers there are 2616 professors, 5.8 p. c. of whom are communists.

As regard sex 68.8 p. c. are men students and 33.2 p. c. women students. Of the teaching staff 81.6 p. c. are men and 15.1 p. c. women teachers.

The method of teaching is such that the students themselves work out the material which is to be taught through their own activities and are never occupied with thoughts quite foreign to their minds.

In the various administrative and advisory committees of these institutions the students are represented on an equal footing with the professors. The students who come from the factories after having terminated their period of apprenticeship there in order to seek admission into the above-mentioned institution make progress with more difficulty in abstract sciences but produce much more than their colleagues in natural and social sciences. If their general knowledge is found to be insufficient then their duration of work in the factories is prolonged. Since 1926 no one is admitted without previous examination.

There are two types of research institutes those that are connected with the University and the independent ones.

In the Union of Research Institutes for the Social Sciences belong 10 institutions (for history philosophy literature psychology soviet law economics etc). To the Union of the Research Institutes for the Natural Sciences belong 12 Institutes (botany zoology geography mathematics astronomy physics chemistry etc).

The most distinguished and the best organised scientific institution is the Academy of Sciences which incorporates 30 Research Institutes. The Academy organises all scientific expeditions and investigates all special problems.

Regarding the material condition of the professors false information has been spread. The average salary amounts indeed only to 200 Roubles per month but in reality they earn much more from the various Commissions to which they belong and receive payments also from the publishers and scientific journals amounting sometimes to as much as 1000 Roubles per month.

If one bears in mind moreover that the State is always building up the program of furthering the cause of science and considers the present condition as only a transition period one gets a view of the development which is taking place and which the "Educated West cannot even dream of."

BRILL Oct 29 1926

CEYLON'S POLITICAL EMANCIPATION

By SRI NIHAL SINOH

I

II

INDIA is unhappy at the callous manner in which the men at Britain's helm turn a deaf ear to her clamour for the appointment of a Royal Commission to enquire into constitutional reforms. Ceylon, on the other hand, has just been promised such an investigation, but refuses to go wild with enthusiasm over that announcement.

Happiness, apparently, is not meant to be the portion of the semi-free, even if India and Ceylon may be considered to have attained to that rank.

Unquestionably there is a strong and almost universal disposition among the Ceylonese publicists to view the constitutional enquiry announced by His Excellency Sir Hugh Clifford, G. C. M. G. O. B. E. the Governor and Commander in Chief of the Colony, with undisguised suspicion and even alarm. The fear is entertained that the inquiry, instead of ensuring the 'next step in the direction of political emancipation and advancement,' as he put it, it might bring about curtailment of such powers as the people, through their representatives in the Legislative Council, already possess and exercise.

As matters now stand, the 'unofficial members' have, in a sense to be explained later, 'power of the purse' and even the Governor cannot over-ride their will without employing procedure that would render him unpopular and expose him to the charge of ruling the Island without the consent of the 'permanent population,' as the phrase goes in Ceylon. The officials, not excluding His Excellency the Governor himself, have referred to that particular provision of the Constitution in a manner that has made people talk. The alacrity with which the Colonial Office, at Sir Hugh Clifford's suggestion, has announced its intention of taking early steps to set up the constitutional enquiry, which was due in 1929, has, in consequence, roused misgivings.

The Hon. Mr. Edward W. Perera, President of the Ceylon National Congress and one of the most active and spirited Members of the Ceylon Legislative Council, lost no time in warning his people, to be on their guard. He told a press reporter that he viewed the appointment of a Special Constitutional Commission "with a certain degree of suspicion" because 'Special Commissions tend to register certain preconceived Government opinions.' Evidently he does not believe that the British officials in the Island are tired of exercising their monopoly of power over the Administration, and are anxious to relieve themselves of the burden by transferring it to the sons of the soil.

Even so conservative a leader as the Hon. Sir James P. P. P., who, as Vice President of the Legislative Council, presides over its deliberations, from which the Governor—the *ex officio* President—studiously absents himself, deemed it necessary to qualify his approval of the projected enquiry. "The proposal is a good one," he declared to an interviewer, "if the Commission is properly constituted."

The organs of public opinion in Ceylon, with the exception of the single newspaper under British control, are so less suspicious. The *Ceylon Daily News*, conducted under the guidance of Mr. D. R. Wijewardena, a wealthy Sinhalese of proved ability and character who has already done much to quicken public life in the Island, for instance, refused to "grow altogether enthusiastic over the Governor's announcement" for reasons similar to those stated by the President of the Ceylon National Congress.

Mr. Francis de Zoysa, President of the Congress during last year, publicly admitted that he shared in a certain measure the "misgivings" to which that newspaper had given expression. His admission is of peculiar importance since it was in the nature of a revised opinion. Speaking a day

earlier, following the reception of the news, he had not only pronounced himself as being 'certainly in favour of the proposal,' but had gone to the length of deploring the fact that the impending departure of Sir Hugh Clifford from Ceylon to assume the Governorship of Malaya would make it impossible for him 'to assist the Commission in its enquiries on the lines His Excellency apparently had in his mind.' It is to be presumed that the 'lines' along which Sir Hugh may wish to see the constitution amended may not, after all, suit the ex-President of the Ceylon National Congress.

III

If the Governor of Ceylon expected that his announcement of an enquiry which was to pave the way for the next step in the direction of political emancipation and advancement of Ceylon would rouse enthusiasm in the Ceylonese breast and bring him gratitude, he must, indeed, be disappointed by the manifestation of 'misgiving' and 'suspicion' from the leaders of the community. Having spent in the Orcutt all but twenty five of his sixty one years, 'in the study of the people domiciled (born?) in the tropics' and probably feeling that he knows them even better than they know themselves, it is to be doubted that he anticipated any reception other than the one his announcement evoked.

The Ceylonese publicists are by no means perverse by nature. Their refusal to take Sir Hugh Clifford's proposal at Sir Hugh's own valuation, that is to say, as a step in the direction of Ceylon's political 'emancipation', cannot, therefore, be explained away on any such basis.

IV

The announcement, to begin with, was made in an atmosphere which, through no one's designing, took away from it something of its gravity. Members of the Legislative Council had met, on the evening of Saturday April 9th in a private dining room of the Grand Oriental Hotel in Colombo—at which I am at present staying—to give a farewell dinner to a Ceylon Civil Servant who after many years' exile in the Island where there is no income tax was returning to Britain—his Homeland where the Government insists

upon taking away nearly one quarter of a citizen's income from whatever source. Sir Hugh Clifford came to the function with a statement that might conceivably alter the direction of Ceylon's progress. To his dismay he found that not a single member of my craft, generally maligned but welcome when the mighty desire the momentous words that fall from their lips to be broadcasted to the masses was present.

The reporters being indispensable to His Excellency on this occasion, a mad hunt for them began. It being Saturday night, newspaper offices were empty or nearly empty. The men who serve as caretakers of some of the buildings in which Colombo papers are edited were in sole possession at the time and had taken the telephone receivers from the hooks so as to save themselves the trouble of answering calls. So getting hold of press men was by no means the simple proposition it generally is.

While the mad hunt for at least one reporter thus went on, the Governor and other slightly less distinguished personages in that private dining room of the Grand Oriental Hotel in Colombo tried to kill time by every imaginable device. The formality of dining was protracted as long as it could be. Then some one with a talent for elocution—or perhaps only the nerve to attempt it got up and amused the company by 'speaking a piece.' Others followed with recitations and songs. Not a single reporter having turned up even then charades or impromptu impersonation of fantastic characters were started. As one of the local newspapers gravely put it, even His Excellency the Governor and Commander in Chief of the Colony unbent to the point of reciting Rudyard Kipling's 'Vineyard.'

With all that time killing, the assembly still being without a journalist of any sort or condition, the speeches began. An Hon'ble legislator who, I believe was largely responsible for getting up the function undertook to do the best he could with his shorthand.

Finally, however, the Fates smiled. A member of the reporting staff of the *Ceylon Daily News*, routed out of his happy home and well earned week end rest, appeared on the scene, and took down His Excellency's speech. I doubt if any other member of his craft was ever made more welcome in or perhaps even out of the Island. An attempt was made to persuade him to share the fruits

of his toil with the absentee Newspaper-men but he refused to give up his "scoop".

And the other papers had to "lift" the speech from the *Daily News* and make clumsy efforts to hide that fact.

I reproduce His Excellency's announcement, in view of its importance

I am authorised by His Majesty's Principal Secretary of State to announce that he has under consideration certain representations made to him by me relative to the revision of the Constitution. Mr Secretary Amery desires me to say that he is fully aware of the assiduity, devotion to duty and public spirit manifested by the Unofficial Members of the Legislative Council in the conduct of public affairs. He points out however that proposals for revising the Constitution will require careful examination and consideration, in the course of which opportunity should be afforded to all shades of opinion to receive a full and impartial hearing. He accordingly proposes to advise His Majesty to appoint a small Special Commission composed of four members at least two of whom will be persons of Parliamentary experience in Great Britain to come out to Ceylon toward the end of the current year to enquire into and to advise upon the matter in detail."

Some two months before Sir Hugh Clifford rose at that dinner to make his announcement, "Wayfarer" stated in the *Ceylon Daily News*

"It is very much on the cards that the Secretary of State will be invited to appoint a Commission from England for examining the various questions connected with this reform. We know what these dummy Commissions are. They can always be depended upon to go beyond their terms of reference and make recommendations based on ex-parte statements. What could be more easy for such a Commission than to report that the responsibilities and privileges of the Executive Council cannot be increased without a corresponding curtailment of the powers of the Legislative Council?"

A few days later the Hon'ble Mr E.W. Perera asked Sir Hugh's Government if the Government had "in contemplation a scheme of Reform of the Constitution curtailing modifying, or altering the power of financial control possessed by the Unofficial Members of the Legislative Council"

The representative of that Government in the Legislative Council stated in reply "The answer is in the negative. The Government has at present no scheme of Reform under its consideration."

The speech that Sir Hugh Clifford made at the dinner did not quite square with that answer. The announcement that the Secretary of State for the Colonies had authorised him to make did not owe its initiative to Down-

ing Street. It came, it is admitted, as the result of a despatch which Sir Hugh's Government had sent up to London on November 30th, 1926. To say, some two months later, that the Government had "no scheme of reform under its consideration," was little short of equivocation. Knowing something about newspaper making, as I do, I have little doubt that the "Wayfarer" had managed somehow to learn that that despatch had been sent. What if the rest of his surmise was correct and the projected enquiry has for its motive the abridgement of the legislature's existing powers. That is the fear that patriotic Ceylonese entertain.

VI

If the maker of that announcement had been known to be an apostle of Government of the people, by the people, and for the people and the sworn enemy of administration by high officials preponderatingly alien in blood and culture and owing not the least responsibility to any indigenous individual or authority, his eagerness might well have brought him the gratitude of the Ceylonese. He, on the contrary, knew little at first-hand of parliamentary institutions, his life having been cast in the mould of personal, or, at any rate, bureaucratic rule. As he told the Members of the Ceylon Legislature assembled at that fateful gathering, he had left his own country at the age of seventeen, and since then had spent "an aggregate of ninety months in England" (Did he mean Britain or even Europe—or only England?) He had 'been in the House of Commons more than a dozen times in the last forty years'. His whole life "from the age of seventeen to the age of sixty-one" with the aforementioned ninety months in England (?) excepted, had, in fact, been spent in the tropics—either in the Asiatic or the African Colonies, Dependencies, and possessions of Britain.

Some twenty years ago he, as plain Mr Clifford, served for a time as the Colonial Secretary in Ceylon. The 'Unofficial Members' were not then in the majority in the Legislative Council, nor did they have "power of the purse". He spoke in the Legislative Council, as then constituted, and acted in a manner that roused much antagonism in the Island.

About three years ago, when the Colonial Office then presided over by Mr. J. H.

Thomas probably the most conservative among British Labour leaders announced Sir Hugh's appointment as Governor of the Colony there was therefore consternation among the politically conscious Ceylonese. Fearing that he may attempt to scuttling the Constitution introduced during his absence they openly talked of moving His Majesty's Government to cancel that appointment.

Advancing years had however changed the Pro Consul's methods if not his mentality. After coming to Ceylon on November 30, 1925, he refrained from taking any overt action that might give umbrage to the people and confirm them in their suspicions. He even went about talking in a good humoured way to the effect that he was no more than a cipher in the Government of the island and apparently he was quite contented to be one. He even went to the length of chiding the newspaper writers who refused to take his banter seriously.

At this very dinner Sir Hugh told the Members of the Legislative Council that the people in the Island following the traditions of a hundred years came to him and asked him for 'this' and 'that' and he invariably had to tell them that it was not possible for him to give them any promise because the power to implement such promises had now been taken away from him and transferred to the Unofficial Members of the Legislative Council.

So often has His Excellency alluded to that fact that there are Ceylonese who genuinely feel that he is going away from Britain's premier Colony with his term of office only half completed to Malaya where he will receive no greater salary and which is regarded as inferior in status only because in Malaya he will have no Legislative Council with an unofficial majority to fetter his initiative. Highly developed as it is through long exercise of personal rule in the tropics. The editorial writer of the *Daily News* returns his joke with the quip that the representative of the King (in Ceylon) who can do no wrong cannot now according to the Governor even do right.

Personally I do not believe in this cipher business. To my mind there are reasons other than the Governor's inability to do anything in Ceylon under the present Constitution of Sir Hugh Clifford's love for Malaya which have led to his transfer from Colombo to Singapore. These matters, how-

ever, fall outside the scope of this article and may one day be separately discussed.

VII

Even if the retiring Governor of Ceylon were a parliamentarian by temperament and training and if his talk about being the shadow of the legislature did not sound as if he were hankering for the return of the good old days when even a senior British administrator in the Island was the master of all he surveyed the very subject matter of the speech in which he sandwiched the announcement of the Constitutional Commission was sufficient to rouse suspicion and misgiving in the politically minded Ceylonese. The burden of his statement was that the Unofficial Members possessed the power of the purse while they lacked the responsibility for executive administration.

I do not think, said Sir Hugh.

That the present arrangement is a sound one. It places the power in the hands of the Unofficial Members while it places the duty of carrying on the administration of the Government on the shoulders of the Executive Government. It leaves the Unofficial Members at complete liberty to paralyse the Executive at any moment by declining to vote supply. It leaves the Governor who has not attended any debate and has not therefore been in any close touch with the feelings of the House or through it with the feelings of the country to declare that such and such a thing is a matter of paramount importance and force it through the Council in spite of the majority votes of the Unofficials.

The Governor then proceeded in a bantering style to show how Sir James Peiris the Vice President of the Council had ousted him the President out of the Chair. He declared:

I think I should be more than human and I claim to be the most human of any human being present in this room tonight—we do not feel a certain resentment against Sir James Peiris—and my sentiments resemble closely those of the young hedge sparrow when it regards the recently hatched out cuckoo which gradually levels it over the edge of their common nest and takes sole possession of what after all from the beginning of things would seem to belong to the hedge sparrow.

He had no complaint to make against Sir James he said that gentleman had on every occasion since his arrival in the island treated him with the utmost kindness and condescension. He had never assumed the position of superiority which he naturally

held, and had no doubt behaved with the utmost comeliness and paid the utmost deference to His Majesty's representative in Ceylon. *But nevertheless," said Sir Hugh*

he not I as Governor to-day presides over the meetings of the Legislative Council and if I have regarded Sir James Peiris in some measure as the cuckoo in the nest I do not think any of you can find therein very serious grounds for reproach.

Sir Hugh then in the same jesting manner addressed himself to his rather strange friend, Mr E W Perera, who it seems, had some time earlier stated that the hospitality dispensed at "Queen's House — is the Government House in Colombo is called—was playing the mischief with the political principles of the "representatives of the people. The poisonous meals given at that place he had declared according to the Governor were steadily undermining their "loyalty to their constituents. Sir Hugh declared that personally he did not believe that Mr Perera or anybody else in the Island entertained any sort of belief in statements of that description and for the convenience of his successor he suggested that it would be advisable to drop the repetition of phrases of that sort which really mean nothing and only dishonour those who give them currency.

Strong words these, even though said in fun!

These and other passages that could be culled from the version of the speech revised and approved by the Governor himself do not inspire the belief that he is anxious to see the people's representatives not only confirmed in their power of the purse but also being given the responsibility for executive administration. If that be his wish, he certainly has never said a word in favour of it, either while in the Island or before coming to it. In the absence of any such expression his plaints about being powerless even though uttered in a semi-jocular style put in juxtaposition with his life-experience could not but rouse the suspicion that the steps which he has recommended for the political emancipation of Ceylon might actually lead to the abridgement of some of the powers that the people now enjoy.

VIII

Whatever be Sir Hugh's own predilections and preconceptions, the criterion of high

officials exclusively British in blood, which monopolizes executive power in the Island is not credited by the popular leaders with the intention to let that power pass out of their hands. Mr Francis de Zoysa ex-President of the Ceylon National Congress for one has no illusions on that subject. The people could not forget the existence amongst them of powerful reactionary forces he declared in an interview.

Those whose vested interests and privileged positions are threatened by the advance of democracy will make strenuous efforts to get back to the glorious past. Officialdom, seeing its power and prestige waning will fight every inch of ground to regain them or at least to retain as much of them as is now left, and selfish pseudo-patriots may be found willing to sell the country for some slight personal or family gain or glory.

The fear that the patriotic Ceylonese entertain is that the selfish element in the "permanent population may make common cause with the reactionaries among the officials and thereby bring about retrogression. As the editorial writer of the *Ceylon Daily News* puts it

"There is some reason for apprehension. To one of Sir Hugh Clifford's experience it will be no news to be told that every change in the Constitution is the long looked for opportunity of the disgruntled patriot. Every variety of ill-cooked on their armor and emerge from the backwood to strike a blow for self and their self-centred prejudices. Performances of this kind have been enacted in the past and there would be no reason to suppose that they would be any more successful in the future but for one new circumstance to which a good deal of importance has been given by no less an authority than Sir Hugh Clifford himself. His Excellency is never tired of affirming that under the present Constitution the Governor is a cipher. Those who cannot contain their jealousy at the thought that the Council now enjoys the powers which individual Civil Servants once wielded have tried to make capital of the Governor's confession of impotence. Among a certain class of Civil Servants and a certain class of politicians there is a tendency to make common cause. These will undoubtedly try to employ the Commission to further their aims. They may endeavour to convince the Commission that although Mr Amery is aware of the duty devotion to duty and public spirit of the Legislative Council yet in the interests of good Government the powers of the Council ought to be curtailed and the constitution of the Council ought to be modified. If the Royal Commission attempts to do anything of the kind it will commit the most colossal blunder

IX

I have watched the working of the Constitution in Ceylon far too long to be misled

by the minatory talk of the officials that they have no power—that the real power rests with the Unofficial Members of the Legislative Council. True, the officials, even when reinforced by the “unofficial” British planters and merchants and the Burghers (Ceylonese of Dutch descent), are in a permanent minority. True, also, numerically the officials are still worn off in the Finance Committee in which financial power is supposed to reside. Do these provisions of the Constitution, however, make the ‘unofficials’ all-powerful and reduce the officials to mere automata? No one who knows the situation can answer that question in the affirmative.

The unofficial members, in the first place, are riven by differences of race, religion and interest, and, therefore, it is difficult for them to make common cause with one another in matters of public policy. Some of them, at least, are unable to resist the temptations of one sort or another that the officials can throw in their way.

There was only lately an incident which showed that a single official was able to twist the entire Legislative Council around his little finger and get it to rescind a decision on an important matter involving considerable expenditure out of public funds. Sir Hugh Clifford, indeed, patted the ‘unofficials’ on the back for behaving like ‘good boys’ on that occasion.

It must, moreover, be remembered that not only does the Governor possess power to over-ride the wishes of the Legislative Council but the power of initiating money-bills also lies entirely and exclusively with his Government. The ‘Unofficials’ may modify the executive application for funds—may even reject it but they cannot, of their own motion, initiate any money bill.

Two results inevitably follow from this system.

First not only does the people's sense of initiative remain undeveloped, but taxation follows queer—and unjust—lines. Income Tax—the incidence of which would fall upon officials enjoying high salaries and merchants engaged in import and export trade (many of them British by blood and birth)—is not levied, while customs duties, which notoriously press hard upon the poor, constitute a principal source of revenue.

Second so frightened are the ‘Unofficials’ lest the Governor may use his overriding power that they order their legislative life

on the maxim that “discretion is the better part of valour.”

Not a single official occupying any key position in the executive administration being a son of the soil, the translation of policies approved by the legislature lies exclusively in non-Ceylonese hands. Even the Ceylonese who are members of the Executive Council arm in it without being of it, they not holding any portfolio.

While the contention that the officials are powerless is far from tenable, nevertheless the Legislative Council, if it happens to be composed of earnest minded men determined to serve the public cause come what may, despite all temptations from within and from without, can, under even the existing Constitution, be a power in the land. If the present system of election on a territorial basis is kept intact, and the representative character of the council is improved by the widening of the franchise and the removal of certain restrictions as to the qualification of candidates, if the financial powers of the Council are confirmed and the power of initiating money bills given to it by making the officials an integral part of the Councils and responsible to it in name as also in fact, there is no doubt that the ‘political emancipation’ of Ceylon that Sir Hugh Clifford professes to have at heart can easily be brought about.

X

The Ceylonese publicists suspect, however, that that objective is not the one which the officials in Ceylon are striving to attain. They are sure that the officials have ulterior motives, though they are not quite certain as to what method or methods the bureaucracy will employ to “register” its “preconceived opinions.”

The newspapers owned and edited by the Singhalese interpreted the Governor's announcement to mean that a Royal Commission would be set up to carry out the enquiry. The *Times of Ceylon*—the only daily paper under British management, however, takes a different view. “The fact that His Majesty will appoint a Commission” it says, “has led the whole of the Ceylon Press, with the exception of ourselves, and most of the Ceylonese political leaders, to a belief that a Royal Commission is to be appointed. It had been careful to state that it is a Special Commission which will inquire into

the Ceylon Constitution—and this is a very different thing to a Royal Commission." An enquiry at Queen's (Government) House confirmed the opinion "that it is not a Royal Commission which is being appointed, but a Special Commission. "It was further pointed out to the *Times*, presumably at Queen's House, "that the proceedings of a Royal Commission are open to the public, that is to the press, while a Special Commission may hold their sittings *in camera*—which is an important distinction."

A Special Commission will, therefore, in the opinion of this leader writer, be more suitable than a Royal Commission. He believes that the temptation to make impassioned speeches, be the sittings to be public, would "be too much for the Ceylon political leaders." If, however, proceedings were to be held *in camera* 'the evidence is likely to be of a much more valuable type, embodying the real views of the witnesses, who will not be deterred from giving candid expression to their views by the fact that publication in the Press will lead to recriminations and ill feeling."

AI

The leader writer of *Ceylon Daily News* spiritedly assails this position. He produces an extract from "The Working Constitution of the United Kingdom by Lord Courtney of Penwith to support the view that a 'special Commission' can only be a Royal Commission. He vents his rage especially against the suggestion made for an enquiry *in camera* "to squirt poison gas

from the safe seclusion of a secret session may appeal to intriguers and wire-pullers," he says, 'but to no man of honesty and decency." He warns the Government 'that the surest way of rousing ill feelings is by encouraging the hush (hush) policy of hypocrites and humbugs."

This controversy shows that there are among the educated Ceylonese some individuals who pin their faith to a Royal Commission. Mr H A P Sandrasagara, K C, indeed publicly stated a few days ago that he desired a Royal Commission because it would help 'us to see ourselves in the proper light in relation to the next extension of reforms which we may be disposed to claim." In his view a local commission was likely to suffer from 'grave disadvantages and people expressing their views may be disposed to temporize and modify such views, out of false deference to the views ostensibly held by members of the local Commission." A Royal Commission, on the other hand, may be trusted to judge correctly and arrive at correct conclusions."

The truth is that the eyes of the majority of the Ceylonese publicists are turned towards Britain—not towards themselves—that as yet the dawn of nationalism has barely touched the horizon of Ceylon's political firmament. There is at any rate no sign of a spirit of give and take or of sacrificing personal or sectional advantages for the sake of the nation. In this event, if the legislature comes out of the projected enquiry with its powers not only undamaged but even materially enhanced, there should indeed be cause for universal rejoicing in the Island.

A. E., POET AND SEER

By G RAMACHANDRAN

Santimiketan

"A E. is the pen name or rather the occult symbol, indicating the immortal spirit who in this life as George Russell, a native of an ill-favoured manufacturing town in Ulster, edits the organ of agricultural co-operation in Ireland, paints pictures of the worlds, visible and invisible, and distils into immortal lyrics the Wisdom and Beauty of the Infinite."

A E. is essentially a lonely figure, lonely alike in the poignant purity of his spiritual vision and in the exquisitely crystallised perfection of his verse. The spiritual depth of his vision is in part the legacy of Celtic character. The genius of his

race which through centuries of sunshine and shower could renew itself over and over again at the perennial fount of its own idealism, tended often towards the deeper and more vital values of life. This idealism is also perhaps the most fascinating element in the Celtic character. In the 'Emerald Isle' this idealism became a thirst for poetic imagination and expression.

An eminent Irish critic has written

For many centuries the ancient civilisation of Ireland was permeated with the spirit of poetry. Her kings were crowned by poets. Her laws were made and recorded by poets. Her tribal and royal histories were recorded and celebrated by poets. One of the qualities for membership in the National Army a thousand years ago was a knowledge of the 'Twelve great books of poetry'. An elaborate system of apprenticeship was evolved and long before rhyme had found its place in European poetry the Irish poets had worked out about two hundred verse forms some of great complexity."

For the crystallised perfection of his verse we turn to the personality of the poet himself, the light of which illumines all his poetry. And then we discover that more than any other poet except perhaps Rabindranath A E is a poet of *Sadhana*. A poet too has his *Sadhana* his realisation. Only on the wings of *Sadhana* can a poet soar into the higher realms of poesy where utterance becomes divine in its revelation of supreme beauty. Thus is why A E is a seer as well as a poet. But unlike in Rabindranath, in whom the seer and the poet are in perfect harmony, in A E the voice of the seer becomes more insistent. Hence alone does A E lack large and muscular qualities. His poems thus become but definite expressions of his spiritual moods. They resemble, as the critic has pointed out, the aphorisms of Patanjali. To quote the critic again

"His poetry stands like a small frosted white window of little panes like Japanese shoji through which the white light of the spirit percolates sweetly. The outer things of A E's poetry are reduced to a minimum but the reduction in expression has a complementary increase in significance."

Rabindranath's poetry possesses all the wealth of colour, design and movement. He does not miss even the least in creation, while keeping his gaze on the summits. Rabindranath's poetry is like the vast panorama of the sky itself. In it lights and shadows play hide and seek, streams of colours rise and fade and we can listen to the thunder pealing forth from the piled up clouds of life, while not missing the tenderest

and sweetest notes that rise from the depths of pity, sympathy, reverence and love. It is a baffling variety,—a variety the like of which is in life alone. But the poetry of A E is different. It resembles the rays of a bright pure star at which we look with half-shut eyes. His poems are like the rays that shoot out of molten things

'Its edges foamed with amethyst and rose,
Withers once more the old blue flower of day
There where the other like a diamond glows
Its petals fade away

A shadowy tumult stirs the dusky air
Sparkle the delicate dews the distant snows
The great deep thrills, for through it everywhere
The breath of Beauty blows

I saw how all the trembling ages past,
Moulded to her by deep and deeper breath
Neared to the hour when Beauty breathes
her last.
And knows herself in death'

The 'Great Breath' he calls this poem. It is a typical poem where we see the poet and the seer mingling their touch of flame. It was sunset time. Day became a 'blue flower' whose petals were fading away in foams of amethyst and rose. The very conception of day as a 'blue flower' reveals an imagination which, while it is essentially poetic, is on the borderland of spiritual symbolism. The quality of crystallised perfection is present too.

"Sparkled the delicate dews—the distant snows—the great deep thrills—". Almost every line here is like a star ray. There is as exquisite disregard of literary sequence, every word or line having the quality of a flash, but there is the subdued sequence of the spirit which links up in a unified gaudal all the bright 'sparkles'. There is just a touch of colour here and there, but not the least extravagance. The spirit is finding utterance, and utterance so pure, clear and direct that there is the fear of an unconscious indifference to the form, but the spirit is beautiful, it has been waked by the touch of the beauty of the 'blue flower' of day whose petals were fading away, in the enchanting riot of amethyst and rose. So naturally and inevitably the form is traced in flame and beauty. But the vision is so intense that sometimes there is the fear that A E, might only see and not sing. We know that intense vision often finds expression in

utter silence But A. E.'s ecstatic emotional imagination, "drunk with a beauty our eyes could never see," alone saves him from being all seer and no poet.

Of all English poets, A. E. is the least sensual. Whether it be in his communion with Nature or life, he swiftly passes beyond the plane of the senses and eagerly loses himself in the depths of pure spiritual beauty. Thus he brings up only the gems of his own precious experience, of his *Sadhana*. Even to the beloved of his heart be sings

"I did not dream it half so sweet
To feel thy gentle hand
As in a dream thy soul to greet."

and

"Let me know thy diviner counterpart
Before I kneel to thee.
'So in thy motions all expressed
Thy angel I may view
I shall not on thy beauty rest,
But beauty a self in you."

The spirit thus wings above the flesh and yet never ignores it or despises it. In the last lines the spiritual attitude reveals itself vividly. The beloved is thus precious, since she is a part of the 'Eternal Beauty' and to A. E. 'Beauty' is the everlasting light that lures all life through the gates of birth and death and whose pathways throng with suns and stars and myriad races. Beauty thus becomes for A. E. the creative moving energy behind all life, Beauty becomes enthroned in heaven.

There is another poem which reveals vividly the spirit of the poet

I needed love no words could say
She drew me softly nigh her chair
My head upon her knees to lay
With cool hands that caressed my hair

She sat with hands as if to bless
And looked with grave ethereal eyes
Ensoiled by ancient Quietness
A gentle priestess of the Wise

To A. E. the touch of love was 'cool', not warm or burning, cool because to him love is spiritual fulfilment, not sensual craving. "With hands as if to bless", with grave ethereal eyes and 'Ensoiled by ancient Quietness', the beloved becomes 'A gentle priestess of the wise.'

The noblest of all A. E.'s poems is the one entitled 'Love'. It reveals the poet's direct attitude towards life

Ere I lose myself in the vastness and drowse
Myself with the peace
While I gaze on the light and the beauty
Afar from the dim homes of men
May I still feel the heart pang and pity
Love-ties that I would not release,
May the voices of sorrow appealing call me
back to their succour again

What a noble and sublime plea is this! The poet gazes in rapture at the face of Beauty. But more insistent than the need to lose himself in the vastness and drowse himself with the peace is the yearning for all the heart pangs, love-ties and sorrows of life

'I would go as the dove from the ark sent
forth with wishes and prayers
To return with the paradise blossoms that
bloom in the Eden of light
When the deep star chant of the Seraphs I
hear in the mystical airs
May I capture one tone of their joy for the
sad ones disrowned in the night.'

He would go to the Eden of light where the paradise blossoms are in bloom, only to gather them all in the lap of his passionate sympathy for the sad ones disrowned in the night. He gazes at the stars and sees joy flowing from star to star and his soul bursts forth in the poignant cry 'may I capture one tone of their joy for the sad ones disrowned in the night.' Nowhere perhaps in the whole range of English poetry could be found such exquisite intensity of noble feeling as in the last few lines of the poem —

Not alone, not alone would I go to my rest
in the heart of the love
Where I traced in the innermost beauty the
flame of its tenderest breath,
I would still hear the cry of the fallen
recalling me back from above,
To go down to the side of the people who
weep in the shadow of death

The burden of one of Rabindranath's finest songs is "Give me the strength never to disown the poor". The Mahabharata tells the story how Yudhishtira would not enter heaven unless the dog, his sole surviving companion, was allowed to go in with him. Salvation, whatever that might mean, has no value for A. E. the poet or Yudhishtira as long as the rest of mankind is in misery.

A. E. has not written much. All his poems could be collected together in a little more than three hundred pages. But if quality is a test of greatness, irrespective of quantity, then A. E.'s place is among the very greatest of poets. Seldom has such

purity of spiritual vision and perfection of expression flowed so sweetly together as in the rich streams of his poetry. Most of his little poems are luminous with the touch of immortality. One of the finest of these is the 'Refuge'

'Twilight, a timid fawn, went glimmering by,
And night, the dark blue hunter followed fast,
Ceaseless pursuit and flight were in the sky,
But the long chase had ceased for us at last
We watched together while the driven fawn
Hid in the golden tucklet of the day
We, from whose hearts pursuit and flight were
Knew on the hunter's breast her refuge lay"^{gone,}

In the years to come it is very probable that A. E. will find a more and more abiding place in the mind of India. There is in A. E.'s poetry some quality, some enchanting fragrance, which is akin to the spirit of

India's own striving. A. E. has known something of India too. He has poems for Sree Krishna and even on 'OM'. In some respects A. E. stands nearer to Rabindranath than any other English poet. Both are great dreamers. One dreams of an India recognising its vital kinship with the larger life of humanity. The other sings,—

'We are less children of this clime
Than of some nation yet unborn
Or empire in the womb of time
We hold the Ireland in the heart
More than the land our eyes have seen
And love the goal for which we start
More than the tale of what has been"

and

We would no Irish sign efface,
But yet our lips would gladder hail
The first-born of the Coming Race
Than the last splendour of the Gael."

THE INNER LIFE OF SIR NARAYAN CHANDAVARKAR

By D. G. VAIDYA

IF we were to ponder over the secret of the reverence that saints, sages, selfless patriots and noble minded philanthropists inspire in our hearts, we should find it in the fact that they are ever wide awake and are certainly far more so than the ordinary run of human beings. It is by introspection that man approaches perfection. On the other hand, if he harps constantly on the blemishes of other people he slides down to ruin and spiritual suicide.

That man is really great who by constant introspection discovers his drawbacks and makes an unremitting effort to overcome them. One such noble brother was the late Sir Narayan Chandavarkar who departed from this world on the 14th of May last four years ago and a few facts of whose inner life we would weave together in the lines that follow.

The first point that struck any one who had the privilege of Sir Narayan's intimate acquaintance was that he was not only thoughtful in whatever he said and wrote, but he was of a meditative turn of mind. A thoughtful man is not necessarily of a medi-

tative turn of mind. These two qualities do not always go together, nor are they found invariably in the same men. A brooding, meditative and introspective turn of mind is, indeed, a great asset of a character that would perfect itself. A man thinks while he writes. That is not to say that he will ponder over whatever he observes or learn a rich lesson or garner up wisdom and virtue from the varied experiences of life. What distinguished Sir Narayan from many an educated man of his day and class was his gift of meditation. Wherever he was and whatever he saw or heard or read would always start and awaken that mood. His long and lonely walks were to him a constant inspiration and elevation. In them he often brooded over the experiences and happenings of the day, on what he had seen, and read and felt, on the conversation he had with other men, and on the lessons for his own guidance that these varied experiences suggested. Sir Narayan was not a man without any flaws. His own writings will discover many to those who are inclined to note them. What was remarkable about him was that he himself

was very keenly alive to them and incessantly endeavoured to rid himself of them. It is this trait of his nature that the writer would unfold in what follows.

There are many men among us who have not innate fondness for books. Many know how to summarise what they read and to make long excerpts in their note books from what they have read for future reference and guidance. But it is given only to a few to brood over anything that is striking or new in the books they read, much less to work out its application to their personal lives, and needs. Of these rare few who know how to use books Sir Varayan was one among the educated men of his times. Once while happening to read Shakespeare's *Romeo and Juliet*, the following sentence struck him as remarkable:

"The more I give the more I have."
it is finite

And he began thinking on it and expressed himself in his journal as follows:—

Shakespeare has said that of love between human beings man's love for a woman and woman's love for a man suggested a remark to him. But if this love is to be called a finite what can we say of God's love for man? Is it not really even more so than that between two human beings? And if man were to love God as he loves a human being infinitely how much will that love grow and what peace and joy and blessedness will it not bring to his heart. And does not life's fulfilment consist in the possession of such love culminating in such blessedness? What else can reconcile man to life?

Sir Varayan does not stop here in his meditation. His heart further wells up into a prayer to God as follows:—

Oh God oh my Father teach me how to love Thee and to love those who are Thy children. May Thy love reveal to me the goodness in others and may it be given to me though that love to know Thee worth. May it ever keep me in the path of goodness. Bless Thou all for Thy love is infinite.

Sir Varayan did not stop here. The following day his meditative mood is further awakened by the following lines from Shakespeare that occur in the same drama. The lines are "They are beggars that count their worth" and Sir Varayan starts into the following meditation upon them:—

"Rising from my bed the first wish for the day's work was to be good and to do good. No aspiration can be nobler, no wish higher and holier. To be good—how can I be good unless I know what goodness is? God is good—how silently and steadily He works how kind and loving. (Oh my soul) Bring to your work the spirit of love—deal generously and charitably with

your fellows. Be pure in thought and deed and let not the day pass without doing some act of kindness to some suffering soul. And whatever you do, do it in a spirit of humble-mindedness. Be not conceited. Remember you have faults. You are weak."

It is easy to give counsel to another. But what is written above is in a vein of self-expostulation. And it was written not to be seen by the world but only for his own eyes. And this self-expostulation concludes with a prayer thus:

Oh God teach me to be good and to do good. If I ever think of counting my worth I am a beggar lost for Thy love. O Lord there is no worth to me. Let me ever fully realise this. Oh Thou teach it to me. What worth is there in me? What of merit? Good deeds done in perfect humility—the alone constitute a man's worth. Give it to me to know this.

This prayer shows the child like faith and humility and the spiritual awakening of the man whose loss we mourn. How few are there among us who carry on such self-examination from day to day in order that they may grow into the knowledge of spiritual truth and wisdom. Are we not rather prone to hide our faults even from our own selves?

Sir Varayan was a man belonging to that rare class among the sons of India who believe fervently in the efficacy of prayer to give man strength and wisdom to know his own defects and to cure them. Once while he was studying Shakespeare's *Julius Caesar* he came across the following words of Brutus wherein Brutus says "Into what dangers would you lead me Cassius that you would have me seek into myself for that which is not in me?" On this Sir Varayan writes in his diary as under:—

"Brutus was an honest man intent upon doing his own duty. Cassius was full of hatred, cunning and jealousy. Brutus sees through Cassius when the latter heaps praises upon him and attributes to him qualities that he does not possess. There is many a Cassius in the world but many more in our own selves—in our own passions. We must guard against them. Man falls prey to the external flattery because he is prepared for it by the flattery of his own passions. Lord teach me to be strong in my own self—a proof against all internal and external flattery."

Never did Sir Varayan let go a single occasion to speak to his own soul in the manner indicated above. Reading the following psalm in the Old Testament viz. "Who can discover his errors? Cleanse thou me from secret faults" he addresses himself thus:

'This was the prayer of the psalmist, how much more should it be of those who are apt to forget God and be caught by the snares of the world rather than led by the will of Him who made us? Parameshwar, teach me to discern my secret faults and correct them.'

Sir Narayan was not one of those who use their knowledge only for display. He learnt from books the wisdom that helps in the conduct of life, a wisdom which, as has been so well put, books teach not themselves.

It was not from books alone that he garnered up the wisdom of life, the strength for righteous living. Conversation with friends, incidents in public and private life, experiences of every kind were utilised by him for this supreme end, *i.e.*, to purify and perfect himself. One incident of this kind is well worth mentioning here. Sir Narayan was at Khandala with a friend of his, Mr Shivramant Wagle. As was usual with him, in one of his long walks with that friend he met a beggar whom he wanted to give something. He opened his purse to give him a two-anna piece. But the purse contained only a pice. While giving the pice to the beggar Sir Narayan said to him that he was so sorry that he had only that much to give him. To which the beggar answered that he need not be sorry for it, as it was not in his luck to get more. The kind words, added the beggar were more to him than the two-anna piece which he would have got. Referring to this incident Sir Narayan significantly remarks: 'That is a pure soul. A lesson for me.' It was not enough for him to listen to the words of the beggar. He drew from them a lesson for himself in contentment, purity of heart and meekness of spirit, a lesson which he regarded as indeed a very precious return for the alms he had intended to give.

Sir Narayan was very particular about his health. Sometimes he carried his fastidiousness too far. He was far from being a man of robust constitution. His was a delicate constitution without any chronic ailment or disease. But the slightest change in it would upset him. Sir Narayan knew this defect in his temperament and always tried to control it. One morning he woke up and found himself ill at ease. He became extremely nervous about his health, and to overcome his nervousness he prayed and wrote: 'How shall I overcome this habit of mine? Am I not entirely in God's hands? Why need I fear then?' Heartened by this self admonition he got up, had his bath and

said his prayers. That restored him completely. Then he went out for a walk up the hill with his gardener's son. The scenery of the place, the singing of birds, the beauty of the rising sun had their desired effect upon his mind. The gloom and despair were no more. And he became full of joy and gladness. He describes the experience thus:

Listened to the notes of a bird singing from a tree on a raised ground. It brought calm to the mind. Life a song. The trees and plants were standing still—there was the chirping of birds all around. The sun trying to peer through the clouds. Wild flowers here and there. Oh Nature! Thy beauty is soothing. Came home refreshed.

It was a habit with him to recover the poise of the mind and the soul by such contact with Nature. He sought such opportunities when he could be alone in the midst of the beauty of Nature and refresh his spirit. Of this quest he writes:

Sought for the music of birds. Why is that music less than it used to be fifteen years ago? They say because birds are killed. What inhumanity! God's singers how they soften man's heart by their sweet chants!

As was usual with him during the summer vacations, one year he had gone to stay at Khandala and had invited a few friends to stay with him by turns. Mr Shinde of the Depressed Classes Mission Society was with him at that time. Once they went out together for an early morning walk. It was Sir Narayan's habit during such walks to make his companions share with him the charm, beauty, delight and exhilaration of the surrounding scene by drawing largely upon his well stored mind, for apt quotations from his favourite English poets who had described similar scenes. It did not matter to him at such a time whether his companion was an elderly person like Mr Shinde or his little grandson Madhukar. The day on which Mr Shinde went out for a morning stroll with Sir Narayan at Khandala has been remembered to this day by the former. The sky was overcast with clouds, the hills around were lit up with the beautiful rays of the morning sun. The breeze was blowing gently and sweet. The grassy ground over which the two pedestrians were walking was covered with flowers here and there. On the whole the scene was full of poetic inspiration. Sir Narayan began to recite passages from his favourite poet Wordsworth. He felt it too cruel for him to trample the grass with its tufts of flowers underneath his feet. They moved aside,

they dared not hurt these fender little beautiful shoots and flowers. Mr. Shinde was struck with wonder and delight by the effect the scene had made upon Sir Narayan's mind and the outburst of song in which it led from Sir Narayan who poured out quotation after quotation from his favourite poets that vividly brought out the charm and significance of the whole scene. But what was most remarkable about it was that it was not with him a mere sensuous experience—an appeal to the eye and the ear. It became with him, as ever, a landmark in spiritual perception, a vivid realization of the love and glory of God.

Those who knew Sir Narayan only from the outside could not help being struck with his greatness. His eloquence, his command over the English language, his earnestness and enthusiasm, his large and liberal mode of thought at once attracted attention and captivated the heart. But his character, his religious temperament, his unshaken faith in God, his tender heart and cheerful and loving disposition, his fire and genius became clearer only to those who had the privilege of his close and immediate acquaintance. It was then alone that the man stood completely revealed and one could know fully the secret of his greatness. And that lay in his spirituality, in the growth of the spirit within which he was so assiduous to cultivate and to the unfoldment of which he gave all his time, thought and attention.

When one thinks of the care he bestowed on the cultivation of his heart and mind and on the efflorescence of his soul, one cannot help regarding him as a rare type among the educated men of India. Not a day passed in his life without prayer, meditation and devotion. He rose with the break of dawn and began the day with prayer and the reading of some scripture. When one scans the list of books that he had made out for careful reading and thought at different times one is filled with amazement at the order and method which governed his life's work from day to day and hour to hour. Everything with him was perfectly methodical and regular. Everything was well planned and the plan of work was carried out to the letter without haste and without waste. A portion of his busy day was regularly spent in the company of children and he regarded the time thus spent

as a great education for himself. But the method according to which he worked from day to day was never allowed to degenerate into the lifeless mechanism of a clock-work. He pursued his work with delight and joy and with a thrill of emotion that made it really exhilarating. Of this he writes

"I am grateful to God for the impulse to work methodically and the resolve to work rather than weary myself in idleness. I feel so peaceful, so happy, when I have spent the day in good hard work."

It was not enough for him to have subjected himself to this self-imposed discipline, to have prayed while working and worked while praying. What he did further was to note from day to day whether this work and prayer marked a real growth in his life. Thus he ever asked himself, "Have I been industrious? Have I been true, just and prudent? His searchlight was always turned inward. The questioning went on incessantly. Thus, "How have I employed my time?" "How far have I succeeded in my resolution to practise the virtue of patience?" "What good have I done? What notable thing have I observed?"—questions like these are a constant refrain in his private diary. And there are also answers to these questions. Thus he writes, "Went through my daily programme pretty well and faithfully. No time ill-spent."

It is our usual experience in the difficulties of life to grow despondent, gloomy and uncharitable. Rich and poor, ignorant and educated—all are subject to sorrow, bereavement and suffering in this chequered world. Death takes its toll from among those dearly loved by us. It is under trials and tribulations like these that we are really tested and our growth in spirit is properly measured. How he felt and thought on such matters and in the midst of such experiences he has himself put on record as follows

"We complain that life is travail that difficulties and disappointments trouble us and make it sometimes unbearable. But life is discipline and to go through it well we must be strong. The strength must come from faith in our mission. Whence can that strength come but from Thee, Oh Lord! Believe my soul that thou art not of this earth but there is the Divine in thee cling to it make it shine inwards and outwards make that your inspiration and aspire with its help. The mountain tops of life may be misty but stand there climb there and stand like the second day God Almighty help me to go through with manliness, too high for envy and too great for haste."

This passage furnishes the key to the

calmness of spirit with which he bore all things in life whether they brought him joy or sorrow pleasure or pain

There is another trait of his character that ought not to go unmentioned while we are meditating on the lessons of his inner life. No one knew his drawbacks better than himself. We have heard many waxing eloquent over the foibles of his nature. But so much trouble need not have been taken on the subject. For no one has unfolded them better than he. Let us give an instance or two on the point. One morning while absorbed in reading a book on religious reform a thought struck him and he puts down the method of reform thus:

To win men by the winsome beauty of truth is necessary for me whose great short coming is want of gentleness

Another instance occurs in connection with a meditation on a hymn from Tukaram. What he wrote after that meditation is deeply instructive. Writes he:

That is what I should strive for—not to be vexed or angry where I see another in fault but try to restore him in meekness. It is one of my besetting sins—I lose my temper when I see another wrong or fancy I see I forget I do wrong too and why should I not bear with others' infirmities? I resolve once more to be earnest and mild to counsel without haughtiness and reprove without scorn. Win others by love. That is the only way to live and work and be acceptable to God.

Does not this passage and admonition reveal a wrestling soul striving to set him self right with man and God? Does it not show how keenly alive it was to its own defects and how earnestly he prayed and worked to improve himself?

Sir Narayan knew the importance and secret power of prayer. He strove to live more and have his being in God in all the pursuits of his life private and public. His life was ennobled and beautified by the spirit of prayer and godliness that pervaded it. He believed in prayer and openly avowed his faith. In his daily duties prayer gave him strength and resolution and kept him firm in the path that he had chalked out for his guidance. Once while he was a Judge his mind had become confused by hearing the pros and cons of the case on either side. When he returned home he

thought deeply on the matter but could come to no definite decision. In this unsettled mood he prayed to God for light and retired for sleep. He woke up with dawn prayed and started writing the judgment. The whole case became clear to him and the confusion and doubt were no more. Referring to this experience he notes in his diary:

Always pray, especially in doubt and difficulty and God will help you provided the prayer is earnest and the mind is pure.

Whenever any one boastfully said that he had no faith in prayer and that loyal work was all that really mattered Sir Narayan would answer him:

'Work alone without the consciousness and the inspiration that it is God's narrowness is apt to degenerate into mere routine and difficulties and disappointments temptations mar it. But pray to God and accustom yourself to the idea that you are doing God's work and the prayerful habit becomes an inspiration making even drudgery divine.

The facts that have been brought together above from the diaries and personal observations of the life of Sir Narayan Chandavarkar make one thing clear to us. And that is that his was a soul that aspired heavenwards that he valued becoming and being higher more than any other outward good of life. And his life therefore deserves to be remembered as that of one among the very few among the educated sons of India who have striven nobly and ceaselessly to give the life of the spirit the first place in all their doings be they private or public individual or national. Unless we give religion—that is purity of thought word and deed and nobility and honesty—the first place in all our activities and so work as to give God that is Truth Righteousness and Love the pre-eminence over everything else, our efforts are foredoomed to failure. That was the deepest conviction of Sir Narayan's soul. And that is nowhere better embodied than in the following prayer of his:

"My God and Father Thou art Truth Thou art love. Teach me to live truth to abide in Thee teach me to repose in Thee in a spirit of calm resolution. Teach me to hate none teach me to seek good in everything and every one teach me to do my duty regularly and faithfully and to trust Thee.

THE CHINESE WOMAN TO-DAY

An interview with Mrs Sun Yat Sen of China

"OUR grandmothers were 500 years behind the women of America, but our daughters will be fifty years ahead of them", declared Mrs Sun Yat Sen, the widow of the famous Dr. Sun Yat Sen, founder of the Kuo-Min-Tang (the National Peoples' Party of China) and thereby of the revolutionary movement in progress in China to-day. Mrs Sun Yat Sen spoke these words while giving a recent interview about the woman's movement in China in general, and especially about the Political School for Women which she has founded in Hankau, and in which women are being trained for leadership in the woman's movement. A small group of about one hundred young women have been carefully selected and are being intensively trained in this school in the problems of China, the revolution, and the role the Chinese woman must play in the social and political rejuvenation of the Chinese people. In her interview, Mrs. Sun Yat Sen continued:

"These leaders of the woman's movement whom we are training today have as their ideal a free Chinese womanhood who shall be a living part of the struggle for freedom. This was also the ideal of Dr Sun Yat Sen, who continuously repeated in his writings that not only men of our nation, but also women, must be free. He was not only a political, but also a social revolutionary, and particularly in so far as women were concerned. Wherever he went and worked, he fought for the freedom of all classes and of both sexes. Women always sat at the same conference tables with him and his co-workers and women continue to sit at the conference tables today where the fate of China is being decided. In revolutionary ranks today, in the ranks of the Kuo Min-Tang, women have, without demanding them, been given the same rights as men."

Mrs. Sun Yat Sen also spoke about the great changes in China during the past twenty years. "Considered historically," she said, "it is but an hour ago that China recognized her slavery and decided to free herself. But in this one hour great changes have taken place. China is absolutely

illiterate, the men as well as the women. The mothers of China today find their daughters strange, and the grandmothers look upon them as if they were creatures from another world. But we younger women feel that perhaps in the hearts of the older women there exists a faint envy and a timid approval of our life today."

The Late Dr Sun Yat Sen founder and leader of the Kuo-Min-Tang

Mrs. Sun Yat Sen does not speak of her country-women without broad experience. She also knows foreign women's movements intimately, for she travelled extensively with Dr Sun Yat Sen when he visited foreign countries to organize his countrymen for

the revolution She knows America especially well for she studied four years there in the State University of Macon Georgia She admires the responsibility, the seriousness and courage of the American woman

But I doubt, she said if the American woman can conceive of the dimensions of the woman's movement in China today During the four years that I studied in

Chinese women would have to pass through before we gained the same measure of freedom that the American woman already had At such moments I was very sad. The complete freedom of American women, in any case is near at hand but for the Chinese woman this freedom then appeared to be so far, far away, that it seemed a dream of Utopia.

But I was wrong Strong as the chains have been on our women they are today being broken and with gigantic blows of the revolution Our grandmothers were five centuries behind the American women but our daughters will be half a century in advance of them The mighty activities of the Kuo-Min Tang are wiping our centuries of subjection of Chinese women, and we are being spared generations and generations of useless and bitter suffering As I said, this work of freedom is the work of the Kuo Min Tang The mighty, all inclusive foundations of freedom being laid by Chinese nationalism are tearing all social evils and all enslavement out by the roots Everyone finds himself in the midst of this great stream—the highest and the lowest men and women the intellectuals and the working class. Old and young, under the leadership of the Kuo Min Tang, we are day by day abolishing the merciless and barbarous methods and conditions of feudalism We once thought our goal lay in the great distance but we know that today in the twentieth century it is not necessary to go slowly at a snail's pace Much pain and suffering will be spared us because of this. The national Constitution drawn up by the Kuo Min Tang insures women the same rights as men Under new China we women do not have to fight for the franchise, the right of guardianship and education of our own children nor for equal and just marriage laws Marriage and divorce are the same for men as for women in new China Equal citizenship the franchise the same property and social rights for men and women is the fundamental basis of our revolutionary programme just as much as the absolute sovereignty of China in relationship with other powers of the world is a fundamental part of our programme Our revolution is not merely political but is instead also social—which means in its broadest sense ethical

Mrs Sun Yat Sen then discussed her plans for the new political School for Women in Hankan At first, she says the school has been started on a small scale Only one hundred young women can be accommodated

Madame Sun Yat Sen, Widow of the Famous Dr Sun Yat Sen, member of the Executive Committee of the Kuo-Min Tang and leader of the Chinese Woman's Movement

America I came into intimate contact with many women and came to know their political and social activities I saw their desperate struggle for the franchise and their continuous agitation for equality before the law Their determination and seriousness made a tremendous impression upon me but I recognized that the chains that they were trying to free them selves from were not half as strong as the chains the Chinese woman suffered from I watched their struggle and then gazed into the many many decades which I thought we

at first, but soon there will be opportunities for one hundred more, and later still for another hundred and so on. In this way, and with the help of the new laws that have sprung from the national movement, "we will help win freedom in all walks of life for Chinese women. In China we will not have any need to struggle against worn out, old, traditional laws made by men for the

special privileges of men. The Kuo-Min-Tang's laws and decrees recognize no difference between the sexes. The task of the woman of new China is to go to her sisters and to open their eyes to a new and beautiful world."

FROM THE GERMAN BY AGNES SMEDLEY

THE CRISIS IN SOUTH RHODESIA

By C F ANDREWS

WHILE the struggle has been going on from year to year in South Africa, with varying success, which has at last issued in a settlement, giving us breathing space down in South Africa itself, in Southern Rhodesia, on the other hand, things seem to have gone suddenly all against us and a great set-back has occurred. Indians to-day are absolutely excluded from a country, which bears the name of Cecil Rhodes—the same Rhodes who invented the phrase, 'Equal rights for every civilised man south of the Zambesi'.

When I visited Rhodesia for the first time in the year 1921, the contrast with Kenya and other parts of Africa as far as Indians were concerned,—was so great, that I wrote in strongly appreciative terms about it. The 'English' Education test, which admitted Indians into the country was a very fair one. There was no cheating or juggling about it. Indians told me that they had no trouble at the frontier. There was also a distinct air of friendliness within the borders of Rhodesia, and every educated Indian had the franchise according to Cecil Rhodes's own formula of civilisation, which I have quoted above.

Sir Drummond Chaplin was then the administrator, and he was a real friend of the Indians. He liked them, and they liked him. It was an unusual experience to me to pass from one town in Rhodesia to another, and to find that there were no grievances of any kind, but only words of praise for the administration. This gave the lie at once to those who had told me, that it was

impossible to satisfy the Indians, because they delighted to grumble on all occasions and would never be contented.

Again in 1924, when Mrs Sarojini Naidu visited the country, the story that she brought away with her, when she related her experience, exactly tallied with my own. She was, if anything, even more enthusiastic than I was in her appreciation, and she told the whole of India about the admirable treatment that Indians received under the chartered Government of Southern Rhodesia, and how different it all was from Kenya and Tanganyika.

Nevertheless, three short years have wrought havoc already with Indian rights in Southern Rhodesia, and from all the accounts, which I have received, matters are rapidly going from bad to worse. Unless something is done equally rapidly to prevent this, our rights will all be taken from us before we know where we are.

The first occasion when this change in the situation came home to me was on the day that I landed on Beria, in early October, 1926.

Four men, who had been residents in Southern Rhodesia for many years, were waiting for me as I got down from the steamer. They had been all turned back from the frontiers, although they carried Rhodesian certificates. The ground for this refusal to allow them to enter was stated to be, that an Ordinance had been passed, restricting entrance of Indians, and that as they had been absent from the country for more than three years, their certificates had been cancelled.

of Chinese freedom. Furthermore, the spirit of Chinese nationalism is not a shallow one, it has been ripened by the struggle of the last century, for at least eighty years. It is needless to say that in spite of all obstacles Chinese nationalism is marching triumphantly to victory.

III

The Chinese Revolution is not merely political, on the contrary, like all great revolutions, it embraces the whole life of the Chinese people. There is the literary revolution going on in China so that the Chinese masses may be quickly educated. There is the social revolution for the emancipation of the women of China.

Foreign Minister Egen Chen

and for inculcating new ideals of society. The Student Movement and Labor Movement are manifestations of new China's militant spirit. There is the Religious Revolution which in some places has taken the turn of anti-Christian agitation. Many Chinese nationalists are placing new interpretations on the teachings of Confucius which attach great importance to civic righteousness. Among the young nationalists worshipping the spirit of Sun Yat Sen is taking the place of ancestor worship. Mr. S. Yui, Assistant Professor of Political Science in Tsing Hua University, Peking has stated the present situation in China in an admirable way —

The period in China today is a period of fighting for emancipation. The Chinese revolution which began in 1911 is a fight for emancipation from despotic rule. This fight will continue till the Republic is firmly established.

The Chinese renaissance movement which began in 1917 is a fight for emancipation from illiteracy and for freedom of thought. This fight will continue till illiteracy vanishes.

But the most important fight today is the fight for emancipation from the *unequal treaties* which have bound China hand and foot for over

eighty years. And this fight will continue till the Powers realize the gross international injustice they have done to China, and give China her legitimate place in the family of nations.

What China aspires after today is not any concession from any foreign Powers but merely restoration of her lost independence—no more than that, and no less than that.

The spirit of political revolution in China has been well expressed by the 'Christian General' Feng, who placarded the barracks of his soldiers with the slogan, "*The People Subjected To Foreign Imperialism Are No Better Than Homeless Dogs*". The Chinese people do not any longer submit to the condition of being "homeless dogs", and the spirit of revolution has so deepened that even a rickshawman in the street cannot be ill-treated by a foreigner with impunity, as used to be the case before.

China wants to be free and independent, and the Chinese demands from the Treaty Powers are very lucidly set forth by an American student of oriental politics in the following way:

Stripped of non essential claims put forward for bargaining purposes so deeply rooted in all international diplomacy China lays claim to just three reformations in the policy of the powers on her soil. These three demands are (1) rectification of the situation in Shanghai (2) tariff autonomy (3) abolition of foreign extra territorial privileges so far as they interfere with the fundamental principle of public law recognized by all modern civilized States that every sovereign body has the exclusive right to exercise political jurisdiction within its own territories.

It is apparent that these demands are stoutly opposed by the British Foreign Office as well as the State Department of the United States of America which are staunch supporters of the Treaty of Lausanne, by which Turkey has made the ideals of her National Pact effective by the complete abolition of capitulations. The following passage of the Turkish National Pact expresses the demand of the Chinese people, and it may be regarded as the demand of the peoples of Asia struggling for their emancipation —

It is a fundamental condition of our life and continued existence that we like every country should enjoy complete independence and liberty in the matter of assuring the means of our development, in order that our national and economic development should be rendered possible and that it should be possible to conduct affairs in the form of a more up-to-date regular administration for this reason we are

opposed to restrictions inimical to our development in political, judicial, financial and other matters.

After the Chinese nationalist forces had captured Shanghai, General Chiang Kai Shek was interviewed by the representatives of American newspapers. On that occasion this Chinese patriot declared —

Government of all parts of China by the Chinese is my creed. The present revolution will not end until extra territorial rights and concessions and unequal treaties have all been abolished. Our attitude toward America is friendly but we consider America an imperialist, because she has not given the Philippines freedom. The Powers which are willing to abrogate all former treaties and return their concessions and offer recognition to China on the basis of equal treaties will show a friendly spirit and be recognized by China. The new Government will not interfere in the activities of missionaries in China. We have no quarrel with Christianity.

It is the fashion among certain people to class the Chinese nationalists as "Reds", who are inspired by the Russian Bolsheviks and

whose creed is communism or abolition of private property. It is well to remember that in 1911, when Dr. Sun and his followers succeeded in overthrowing the Manchian dynasty and established the Chinese republic, there was no Russian Communistic Government. The majority of the Chinese nationalists, who are following the teachings of the late Dr. Sun Yat Sen, are not communists, on the contrary, they are nationalists.

The English translation of Kuo-min tang goes a long way towards explaining the spirit of the Chinese nationalist movement. In Chinese kuo' means country, min' people and tang or tong' association. 'Kuo min tang' means association to bring the country into the hands of her people. It has three basic principles: 1 People's Nationalism.

The freeing of China from foreigners who have tied up the country by treaties dictated at the cannon point. 2 People's sovereignty — Development of education and political democracy. 3 People's Livelihood. Better opportunities for Chinese businessmen, better conditions for Chinese labor.

(To be concluded)

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed: Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sindhi, Spanish, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazines, articles, addresses, etc. will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer etc. according to the language of the books. No criticism of book-reviews and notices will be published. — Editor, M. R.]

ENGLISH

PLANT AUTOGRAPHS AND THEIR REVELATIONS. By Sir J. C. Bose, F. R. S. Longmans Green and Co., Ltd. London. 7s 6d net.

This book is a popular and connected summary of the researches in the physiology of plants which the author has pursued for a quarter of a century. Written for the general reader with as few technicalities as the subject admits. The line of research adopted was the application to plants of the methods which had been successfully employed in the investigation of muscle and nerve in the animal. The point of the title is that the data on which the author bases his conclusions are the results of experiments in which by means of highly sensitive automatically recording apparatus devised by himself the course of its normal activities and its response to changes of conditions or to stimulation were inscribed by the plant on sheets of paper or glass plates without the observer's intervention.

When pursuing investigations on the border region of physics and physiology, the author tells us in the preface he was amazed to find boundary lines vanishing and points of contact emerging between the realms of the Living and the Non-living. He found metals responding to stimuli they are subject to fatigue stimulated by certain drugs and killed by poisons.

Between inorganic matter at one extreme and animal life at the other there is spread out the vast expanse of the silent life of plants. The difficulty that thwarts the investigator at every step arises from the fact that the interplay of life action is taking place within the dark profundities of the tree which our eyes cannot penetrate. In order to reveal the intricate mechanism of its life it is necessary to gain access to the smallest unit of life, the life-atom, and record its throbbing pulsation. When microscopic vision fails we have still to explore the realm of the invisible.

Thus the author has been able to do by means of highly sensitive automatically recording apparatus invented by himself in the book under notice

the revolution. She knows America especially well for she studied four years there in the State University of Macon Georgia. She admires the responsibility the seriousness and courage of the American woman.

But I doubt, she said if the American woman can conceive of the dimensions of the woman's movement in China today. During the four years that I studied in

Madame Sun Yat Sen, Widow of the Famous Dr. Sun Yat Sen, member of the Executive Committee of the Kuo-Min Tang, and leader of the Chinese Woman's Movement.

America I came into intimate contact with any women and came to know their political and social activities. I saw their desperate struggle for the franchise and their continuous agitation for equality before the law. Their determination and seriousness made a tremendous impression upon me, but I recognized that the chains that they were trying to free themselves from were not half as strong as the chains the Chinese woman suffered from. I watched their struggle and then gazed into the many many decades which I thought we

Chinese women would have to pass through before we gained the same measure of freedom that the American woman already had. At such moments I was very sad. The complete freedom of American women, in any case is near at hand but for the Chinese woman this freedom then appeared to be so far far a way that it seemed a dream of Utopia.

"But I was wrong. Strong as the chains have been on our women they are today being broken and with gigantic blows of the revolution. Our grandmothers were five centuries behind the American women but our daughters will be half a century in advance of them. The mighty activities of the Kuo Min Tang are wiping out centuries of subjection of Chinese women and we are being spared generations and generations of useless and bitter suffering. As I said this work of freedom is the work of the Kuo Min Tang. The mighty all inclusive foundations of freedom being laid by Chinese nationalism are tearing all social evils and all enslavement out by the roots. Everyone finds himself in the midst of this great stream—the highest and the lowest men and women the intellectuals and the working class. Old and young under the leadership of the Kuo Min Tang we are day by day abolishing the merciless and barbarous methods and conditions of feudalism. We once thought our goal lay in the great distance but we know that today in the twentieth century it is not necessary to go slowly at a snail's pace. Much pain and suffering will be spared us because of this. The national Constitution drawn up by the Kuo Min Tang insures women the same rights as men. Under new China we women do not have to fight for the franchise the right of guardianship and education of our own children nor for equal and just marriage laws. Marriage and divorce are the same for men as for women in new China. Equal citizenship the franchise the same property and social rights for men and women is the fundamental basis of our revolutionary programme just as much as the absolute sovereignty of China in relationship with other powers of the world is a fundamental part of our programme. Our revolution is not merely political, but is instead also social—which means in its broadest sense ethical.

Mrs Sun Yat Sen then discussed her plans for the new political School for Women in Hankan. At first she says the school has been started on a small scale. Only one hundred young women can be accommodated

at first, but soon there will be opportunities for one hundred more, and later still for another hundred and so on. In this way, and with the help of the new laws that have sprung from the national movement, "we will help win freedom in all walks of life for Chinese women. In China we will not have any need to struggle against worn-out, old, traditional laws made by men for the

special privileges of men. The Kuo-Min-Tang's laws and decrees recognize no difference between the sexes. The task of the woman of new China is to go to her sisters and to open their eyes to a new and beautiful world."

FROM THE GERMAN BY AGNES SMEDLEY

THE CRISIS IN SOUTH RHODESIA

By C F ANDREWS

WHILE the struggle has been going on from year to year in South Africa, with varying success, which has at last issued in a settlement, giving us breathing space down in South Africa itself, in Southern Rhodesia, on the other hand things seem to have gone suddenly all against us and a great set-back has occurred. Indians to-day are absolutely excluded from a country, which bears the name of Cecil Rhodes—the same Rhodes who invented the phrase, "Equal rights for every civilised man south of the Zambesi."

When I visited Rhodesia for the first time in the year 1921, the contrast with Kenya and other parts of Africa as far as Indians were concerned,—was so great, that I wrote in strongly appreciative terms about it. The 'English' Education test, which admitted Indians into the country, was a very fair one. There was no cheating or juggling about it. Indians told me that they had no trouble at the frontier. There was also a distinct air of friendliness within the borders of Rhodesia, and every educated Indian had the franchise according to Cecil Rhodes's own formula of civilisation, which I have quoted above.

Sir Drummond Chaplin was then the administrator, and he was a real friend of the Indians. He liked them, and they liked him. It was an unusual experience to me to pass from one town in Rhodesia to another, and to find that there were no grievances of any kind, but only words of praise for the administration. This gave the lie at once to those who had told me, that it was

impossible to satisfy the Indians, because they delighted to grumble on all occasions and would never be contented.

Again in 1924, when Mrs Sarojini Naidu visited the country, the story that she brought away with her, when she related her experience, exactly tallied with my own. She was, if anything even more enthusiastic than I was in her appreciation, and she told the whole of India about the admirable treatment that Indians received under the chartered Government of Southern Rhodesia, and how different it all was from Kenya and Tanganyika.

Nevertheless, three short years have wrought havoc already with Indian rights in Southern Rhodesia, and from all the accounts, which I have received, matters are rapidly going from bad to worse. Unless something is done equally rapidly to prevent this, our rights will all be taken from us before we know where we are.

The first occasion when this change in the situation came home to me was on the day that I landed on Beira, in early October, 1926.

Four men, who had been residents in Southern Rhodesia for many years, were waiting for me as I got down from the steamer. They had been all turned back from the frontiers, although they carried Rhodesian certificates. The ground for this refusal to allow them to enter was stated to be, that an Ordinance had been passed, restricting entrance of Indians; and that as they had been absent from the country for more than three years, their certificates had been cancelled.

These four men were simple people, small shopkeepers. Their shops were in Rhodesia. They had at first not heard, while in India, of the passing of any Ordinance restricting entrance. Then, in 1926, a rumour reached them. This made them hurry back to their business. They came as quietly as possible. They landed by the steamer just before the one on which I travelled out, and had been up to the frontiers at Umtali. But they had been turned back. They had sent in their papers and certificates, and were awaiting a verdict from Bulawayo. At the moment, I did all that was possible, writing letters for them and stating their case. It was my definite hope, that they would easily be admitted. But, on the contrary, they have sent me many letters since, which have followed me all about the South African Union, telling me their troubles. The letters are written in the quaintest English, but they are all the more expressive on that account. The last letter was received by me only a few hours ago. Indeed, it is this very letter, that has been the cause of my wishing specially to write this article, for the condition of these outcasts is piteous and it is very hard to feel oneself able to do nothing as yet to help them. It has only been possible to promise them, that I will take up their cause when I get to Rhodesia at last.

Meanwhile, a series of letters reached me from Bulawayo itself, where the Secretary of the Indian Association is stationed. At first, it was impossible to reply to them with any assurance, because it was as clear as possible that South Africa was the storm-centre, and a final defeat in South Africa would mean a defeat up and down the whole coast of East Africa also, and far into the interior. But since the Round Table Agreement has been signed, the relief, that has partly followed, has made it possible to promise that on my return journey I will stay for some time among them and go very thoroughly into their whole situation and consider with them how it can be improved.

Two things have happened since Mrs Sarojini Naidu's visit, in 1924 which have altered the Indian position. The former is the grant of Responsible Government to the white population of Southern Rhodesia. It is now a Dominion, which has not yet reached its full status, but at the same time it can exercise, in certain

very important directions, independent powers.

The second thing is the very large influx of settlers from South Africa, and especially from Natal, where for generations past the Indians have been despised. These new South African settlers have brought in their worst prejudices against the Indians, and the whole tone of the country has become more illiberal than in Mrs Sarojini Naidu's time. Everything points to this in the actions that have been taken, but I do not wish to write too positively about it, until I have seen things with my own eyes and formed an opinion from personal experience.

Two actions, which stand out most clearly at present and form the basis of my own tentative judgment, are these.

(i) The immediate restriction of Indian immigration, which has followed the grant of Responsible Government.

(ii) The half-expressed Government intention to segregate the small number of Indians remaining in the country.

The former of these two decisions, I had already cabled to India. Also I had written articles which have appeared in the Indian papers. But the second has come to me with startling surprise, and as it is not already finally established by the Administration I have still some hope that it may not be proceeded with, if only representation can be made in due time and with due effect. The meetings of the Legislative Council take place in May and June. Unfortunately, I am still compelled to stay on in Capetown, in order to watch the passage of the new legislation on the Indian Question through the House of Assembly, which is to implement the Agreement. Though these Bills, as they are published, appear to be exactly in accord with the Agreement, nevertheless it is of the utmost importance to be on the spot, in case some doubtful amendment should be proposed and it were necessary immediately to oppose it as a breach of the Agreement.

Before this article appears in print, I shall hope to visit Rhodesia, and see things on the spot. If it is still possible to prevent the segregation policy from being carried out, every effort must be made at once to accomplish such a desirable end. It will not be now so difficult to effect this as it was before,—such is my genuine hope—because, by the abandonment of the Asiatic Bill, the

South African Union Government have themselves given up the segregation policy in South Africa. Since it has been generally acknowledged, that other provinces in Africa will take the lead from South Africa, I am not without expectation, that the Rhodesian Government may be induced to give way on this vital point in a similar manner. But the 'Bulawayo Chronicle' which belongs to a Syndicate by no means hostile to Indian interests, has already adopted a bullying attitude in its editorial and it may be more difficult to prevent hasty action in a young country, that has just felt the intoxication of power, than at this distance one is able to imagine.

It may be asked,—and I have often asked it myself, in moments of depression,—what, after all, is the practical use of this perpetual striving? Will not things inevitably take their downward course? Will

not Might still continue to triumph over Right?

In calm moments of insight, it is not possible to believe this. History certainly does not teach it. Faith has now a firm foundation of past experience to build on, though it must remain faith still—'the substance of things hoped for, the evidence of things not seen'.

No, it is only by the assurance, that every little inch gained means greater progress ahead, that our faith is sustained, if is only thus we are enabled to take at one time with fortitude the blow which drives us back, and at another time to seize with out over elation the opening which enables us to go forward—

For while the tired waves, vainly breaking
Seem here no painful inch to gain
Far back through creeks and inlets making
Comes silent flooding in the main

CHINA'S STRUGGLE FOR FREEDOM

BY TARAKNATH DAS A M, Ph D

I

A State may lose its sovereign rights after a defeat in war, or by limitations imposed by a treaty but a people a nation never loses its inalienable right to be free, even after centuries of subjection. The history of the emancipation of Spain from the Moors, of the Balkan States and Greece from Turkey, of the freedom of Poland Finland and Hungary and of the freedom of Ireland after seven hundred years' struggle against British domination and the growing unrest in Egypt, India and the Philippines for national independence demonstrates the fact that a living nation will repeatedly struggle against foreign domination, until it recovers its sovereign rights. Although the doctrine of self determination has been much heralded since the World War, it is certainly as old as the Declaration of American Independence. If it need less to say that the effort of the Chinese people to be free and completely independent from foreign domination is their birthright.

II

The present revolutionary phase of Chinese Nationalism is but a vivid manifestation of

an angle of a happening of tremendous consequence. *The Ultimate Emancipation of the Orient From Western Domination*. which began about a century ago and is now fairly on the road to success.

Indignant and horrified at the consequences of the 'Opium Trade' carried on by the East India Company, China tried to free herself from the Western commercial domination. This led to the First Opium War of 1839-1842. In this war the British were victorious and imposed the Treaty of Nanking.

None should forget that the Chinese laws at that time demanded abolition of the Opium Trade. China's defeat in the Opium War resulted in the introduction of extra territoriality, restriction of tariff autonomy and Great Britain's annexation of Hongkong and extraction of a large indemnity of twenty one million dollars. By the famous Treaty of Nanking China agreed to open up five Chinese treaty ports—Canton, Amoy, Foochow, Ningpo and Shanghai—to foreign powers, and various trade privileges, including 'favoured nation treatment', was accorded to Great Britain. It may be well said that it was the beginning of the era of concert of Western Powers (so-

called Treaty Powers) to keep China under economic, judicial and political subjection.

The Arrow War of 1856 followed the First Opium War. In 1860 the combined forces of France and England laid siege to Peking. By the Treaty of Tientsin concluded in 1860 France and Britain extracted large

noted that while China was going through the Taiping Rebellion Turkey was struggling against Russian encroachment, and India had her so-called Sepoy Rebellion of 1856-1857. Thus ended the second attempt of the Chinese people to free themselves from western aggression and their own corrupt and weak Government.

After the failure of the Taiping Rebellion, the Manchus tried their best to strengthen their position by bringing about certain reforms but as the government was thoroughly corrupt and incompetent, these plans wished were never transformed into effective reforms. In the meantime foreign encroachments upon Chinese Sovereignty began from all sides with greater vigor. China lost her suzerainty over Burma during the period of 1862-1886 over Indo China during the period of 1862 to 1885 and various nations began to stake out portions of Chinese territory. After the Sino-Japanese War (1894-1895) China lost her suzerainty over Korea and the weakness of the celestial empire became so evident that the important Treaty Powers particularly Great Britain, France, Russia and Germany following the policy of break up of China through mutual agreement established special spheres of influence in the Chinese Empire. This resulted in the fact that over 85 per cent of the territory of the Chinese Empire was staked out as special preserves of various powers. The Chinese patriots in utter desperation again organized a nationwide movement to get rid of the Foreign Devils from China and to oust the Manchu rulers. This patriotic movement on the part of the Chinese to regain Chinese sovereignty by ousting the foreign intruders, has been grossly misinterpreted as the so-called anti-foreign Boxer Uprising of 1900 as if it had no other motive than massacring the Christian foreigners. The efforts of the Manchu rulers and concerted military action on the part of the great Powers against the uprising of the Chinese people crushed the Boxer Rebellion. The western Powers found it convenient to acquire further financial control over China by taking over control of the maritime custom revenue as the guarantee for the enormous Boxer indemnity imposed upon the Chinese people and military control over China was planned by increasing foreign soldiers in Peking and various treaty ports. Thus the third attempt for the liberation of China failed at the beginning of the twentieth century.

His Excellency Hon. Sao Ke A Sze the Chinese Minister to the United States of America

indemnities and Britain annexed Kowloon. In 1860 Russia by clever diplomacy of persuasion and threat succeeded in annexing China's maritime province east of the Ussuri Foreign Powers at this time firmly secured extra territorial jurisdiction and established foreign concessions in the so-called treaty ports. The Manchu rulers submitted to the inevitable. But the Chinese people felt indignant at the national humiliation and started the patriotic movement of overthrowing the incompetent Manchu Government which had failed to protect China from foreign aggression. The patriotic movement spread from South China to the north and took the form of the so-called Taiping Rebellion. It lasted for two decades and was suppressed in 1864 through foreign co-operation. It may be

After the suppression of the Boxer uprising the Western Powers interested in controlling China could not agree in their respective plans of dividing the booty. The

The Infant Hercules

Anglo-Americans wanted to have equal opportunity for commerce for themselves as well as others in China even in various spheres of influence while the Russians supported by the French (France was a party to the Dual Alliance of Europe) and even encouraged by Germany wanted to annex sections of Manchuria and Mongolia. This conflicting interest among the Western Powers engaged in exploiting China gave rise to the so called Open Door Policy of the Anglo-Americans which was warmly supported by Japan. The rivalry between the Anglo-Americans on the one hand and the Slavs on the other gave rise to the Anglo-Japanese Alliance which was fully supported by the American government and public. Japan's victory over Russia in the Russo-Japanese War in which more than a hundred thousand Japanese gave their lives and a billion dollars was spent by Japan safeguarded for the time being Chinese independence from further Russian aggression but at the same

time it made it easy for Great Britain to encroach upon Chinese sovereignty in Tibet and various parts of the southern provinces of China. However it may be well said that in a way the victory of Japan over Russia in the Russo-Japanese War was a victory of the cause of the Chinese patriots who genuinely sympathised with Japan and wanted to see a check upon western aggression in China and other parts of Asia. Indeed this Japanese victory was a significant political as well as spiritual victory for all Asia which was groaning under the yoke of western imperialism.

The Chinese patriots after the Russo-Japanese War felt more than ever before that to save China from further aggression it was imperative that China should be freed from her own corrupt and incompetent rulers. They felt that China like Japan should modernise herself.

Political secret societies of the Chinese patriots organised all over the world under the leadership of the late Dr Sun Yat Sen began to work for the overthrow of the Manchu dynasty and the establishment of the Chinese Republic. The life of Dr Sun Yat Sen and his activities for the cause of Chinese Nationalism and Revolution are an epic. He and his followers brought about a revolution in the ideas of the Chinese people and Chinese soldiers so with very little

Chinese Students parading with an inscribed banner through the streets of the Chinese City at Shanghai after the Cantonese had gained Control. Types of Nationalist Intellectuals

blood shed they accomplished their end, when in 1911 the Manchu Emperor was forced to abdicate and China became a Republic. This was the beginning of the triumphant march of Chinese Nationalism.

It may be mentioned that the Chinese residing outside of China aided Dr Sun financially and Dr Sun received considerable help of every kind from the far-sighted Japanese advocates of Asian Independence through Sino-Japanese-Indian friendship.

Dr Sun Yat Sen, to avoid a conflict among the Chinese, resigned the position of the First President of the Chinese Republic, in favour of General Yuan Shi Kai, who promised to uphold the cause of the Chinese Republic. This really led to a serious counter-revolution because

Yuan Shi Kai, within a short time, abrogated the Parliament and assumed the position of a Dictator, supported by his military subordinates. Later on when Yuan attempted to establish himself as the Chinese Emperor, he was heartily supported by the British Government in his adventure. However, the Chinese patriots under the leadership of Dr Sun rose against Yuan to save the cause of Chinese Revolution. In 1917 when the Chinese Government persuaded by the Entente Powers

America, entered the World war against

Germany, Dr Sun and his adherents opposed it vigorously. Chinese patriots felt that China had nothing to gain by fighting Germany and thus strengthening the British power, on the contrary, China should spend all her energies for her own regeneration. For this policy of Dr Sun, he was hated by the British Government.

For a time it seemed that the cause of the Chinese Revolution was lost, as milita-

rism and the opportunism of the Chinese War Lords took the place of popular government in China. Fortunately for China, good came out of the evil of the World War. Japan, by her might and foresight, eliminated Germany from China and presented the Twenty-one Demands to China. The rise of Japanese preponderance in Chinese affairs alarmed the Anglo-Americans, and they carried on anti-Japanese propaganda to rouse the Chinese against Japan. This aided the Chinese nationalist cause with international support. Furthermore, to induce China to enter the World War against Germany, the Entente group of Powers agreed to the non-payment of the Boxer Indemnity for a certain period. China was allowed to terminate all German rights in concessions and extra-territorial jurisdiction in China. The World War made it evident, as it was during the Russo-Japanese War, that there was lack of solidarity among the Western Powers, in their policy in China.

When the World War ended and all the German rights in Shantung were transferred to Japan, due to secret treaties signed between Japan on one side, and Great Britain, France, Italy and Russia on the other, the Chinese nation felt that they were betrayed by the statesmen of the Entente Powers and President Wilson of the United States. This stirred the Chinese people to great indignation and aided the cause of Chinese nationalism. It was the nationalist agitation that forced the Chinese statesmen to assert diplomatic independence by defying the Powers and refusing to sign the Versailles Treaty. This defiance of China is the beginning of her self-assertion in international politics for the sole purpose of regaining her sovereign rights. At the Versailles Peace Conference, the Chinese nationalists successfully served notice to the Powers that Chinese rights could not be bartered away by other nations, through secret agreements. While the Chinese nationalists carried on their activities to rouse the nation to the nationalist cause, through the Student Movement and National Boycott against Japan, the actual victory was achieved through the success in international diplomacy carried on by Chinese statesmen—all young men trained in western lands in western methods. Through American statesmen and journalists, the Chinese carried on agitation on the question of Shantung. The Shantung Question became a very important factor in American opposition to the approval of the

Feng Yu hsiang

Versailles Treaty by the United States Senate American idealists as well as Imperialists espoused China's cause and demanded that Japan must not be allowed to retain Shantung and thus become so rich in raw materials and dominant in the Pacific. Chinese nationalists worked persistently to regain Shantung through international action and enlisted American and British support against Japan in the Washington Conference and in the end succeeded.

About this time Chinese nationalists formulated a course of treating with foreign nations—China must treat individually and independently and on equal terms with foreign Powers. China concluded a separate treaty with Germany as well as Austria by which she freed herself from unequal treaties. After the Washington Conference and the abrogation of the Anglo-Japanese Alliance Japan felt that there was an unwritten Anglo-American agreement against her. To avoid the possibility of complete isolation in world politics Japan was forced to cultivate friendship with China and Russia. Soviet Russia, actuated by the policy of freeing herself from isolation in world politics and to secure support of various Asian states gave up her special privileges in China, Persia and Afghanistan. To cement a friendly understanding the Soviet Government gave up Russian concessions, unequal treaties and extra-territorial jurisdiction in China.

From this it is evident that although China was torn with Civil wars among her War Lords Chinese nationalists were winning great victories in international politics.

By 1925 when the Chinese nationalists under the leadership of Dr. Sun made the influence and power of the Kuo min tang party felt in Southern China and the Yangtze region the Treaty Powers were already divided into various groups and there was no possibility of united action amongst them to keep China under subjection. Among the European Powers, Austria and Germany had given up the unequal treaties, as the result of the World War. Russia gave up the unequal treaties to secure Chinese recognition and friendship. Japan was willing to support China in her efforts to end the unequal treaties, with the hope of securing Sino-Japanese co-operation in the Far East, for her own security and to promote the cause of Asian Independence. America could not advocate a policy which would seem to be less generous towards Chinese

aspirations than those advocated by Japan. France seeing her international situation delicate and complex in Europe particularly in the Mediterranean regions chose the path of moderation and conciliation towards China and co-operation with Japan. Of all the

General Chang Kai-shek

Russia gave enthusiastic support to the anti-British programme of the Chinese nationalists. One hundred and fifty years ago the then existing Anglo-French rivalry and the international situation in Europe aided the cause of American Independence and today Anglo-Russian hostility Anglo-American distrust of Japan and the general condition of world politics is an asset to the cause

so called Treaty Powers. Britain alone took a definite and determined stand against the cause of the Chinese nationalists. The Chinese nationalists with great vigor pursued the policy of agitation against Great Britain as they did a few years ago against Japan. The British authorities tried to overawe the Chinese nationalists by massacres and perpetrated several massacres of the type of the Amritsar massacre—the massacres at Shanghai, Shamen and Wansien. This roused the Chinese nation to a man and crystallized the anti-British sentiment in China for all the wrongs done since the days of the Opium War to the present time. It is natural that

of Chinese freedom. Furthermore, the spirit of Chinese nationalism is not a shallow one; it has been ripened by the struggle of the last century, for at least eighty years. It is needless to say that inspite of all obstacles Chinese nationalism is marching triumphantly to victory.

III

The Chinese Revolution is not merely political on the contrary like all great revolutions it embraces the whole life of the Chinese people. There is the literary revolution going on in China so that the Chinese masses may be quickly educated. There is the social revolution for the emancipation of the women of China and for inculcating new ideals of society. The Student Movement and Labor Movement are manifestations of new Chinese militant spirit. There is the Religious Revolution which in some places has taken the turn of anti-Christian agitation. Many Chinese nationalists are placing new interpretations on the teachings of Confucius which attach great importance to civic righteousness. Among the young nationalists worshipping the spirit of Sun Yat Sen is taking the place of ancestor worship. Mr. S. Yui, Assistant Professor of Political Science in Tsing Hua University, Peking has stated the present situation in China in an admirable way —

Fore xu Minister Eugen Chen

The period in China today is a period of fighting for emancipation. The Chinese revolution which began in 1911 is a fight for emancipation from despotic rule. This fight will continue till the Republic is firmly established.

The Chinese renaissance movement which began in 1917 is a fight for emancipation from illiteracy and for freedom of thought. This fight will continue till illiteracy vanishes.

But the most important fight today is the fight for emancipation from the unequal treaties which have bound China hand and foot for over

eighty years. And this fight will continue till the Powers realize the gross international injustice they have done to China, and give China her legitimate place in the family of nations.

What China aspires after today is not any concession from any foreign Powers but merely restoration of her lost independence—no more than that, and no less than that.

The spirit of political revolution in China has been well expressed by the 'Christian General' Feng, who placarded the barracks of his soldiers with the slogan, *The People Subjected To Foreign Imperialism Are No Better Than Homeless Dogs*. The Chinese people do not any longer submit to the condition of being 'homeless dogs', and the spirit of revolution has so deepened that even a rickshawman in the street cannot be ill-treated by a foreigner with impunity, as used to be the case before.

China wants to be free and independent and the Chinese demands from the Treaty Powers are very lucidly set forth by an American student of oriental politics in the following way:

Stripped of non essential claims put forward for bargaining purposes so deeply rooted in all international diplomacy China lays claim to just three reformation in the policy of the powers on her soil. These three demands are (1) rectification of the situation in Shanghai (2) tariff autonomy (3) abolition of foreign extra territorial privileges so far as they interfere with the fundamental principle of public law recognized by all modern civilized States that every sovereign body has the exclusive right to exercise political jurisdiction within its own territories.

It is apparent that these demands are stoutly opposed by the British Foreign Office as well as the State Department of the United States of America which are staunch supporters of the Treaty of Lausanne by which Turkey has made the ideals of her National Pact effective by the complete abolition of capitulations. The following passage of the Turkish National Pact expresses the demand of the Chinese people and it may be regarded as the demand of the peoples of Asia, struggling for their emancipation —

It is a fundamental condition of our life and continued existence that we like every country should enjoy complete independence and liberty in the matter of assuring the means of our development in order that our national and economic development should be rendered possible and that it should be possible to conduct affairs in the form of a more up-to-date regular administration for this reason we are

opposed to restrictions inimical to our development in political, judicial, financial and other matters."

After the Chinese nationalist forces had captured Shanghai, General Chiang Kai Shek was interviewed by the representatives of American newspapers. On that occasion this Chinese patriot declared —

Government of all parts of China by the Chinese is my creed. The present revolution will not end until extra-territorial rights and concessions and unequal treaties have all been abolished. Our attitude toward America is friendly, but we consider America an imperialist, because she has not given the Philippines freedom. The Powers which are willing to abrogate all former treaties and return their concessions and offer recognition to China on the basis of equal treaties will show a friendly spirit and be recognized by China. The new Government will not interfere in the activities of missionaries in China. We have no quarrel with Christianity."

It is the fashion among certain people to class the Chinese nationalists as "Reds", who are inspired by the Russian Bolsheviks and

whose creed is communism or abolition of private property. It is well to remember that in 1911, when Dr. Sun and his followers succeeded in overthrowing the Manchu dynasty and established the Chinese republic, there was no Russian Communistic Government. The majority of the Chinese nationalists, who are following the teachings of the late Dr. Sun Yat Sen, are not communists, on the contrary, they are nationalist.

The English translation of Kuo-min tang goes a long way towards explaining the spirit of the Chinese nationalist movement. In Chinese 'kuo' means country, 'min' people and 'tang or tong' association. 'Kuo min tang' means 'association to bring the country into the hands of her people'. It has three basic principles: 1. People's Nationalism

The freeing of China from foreigners who have tied up the country by treaties dictated at the cannon point. 2. People's Sovereignty. Development of education and political democracy. 3. People's Livelihood. Better opportunities for Chinese businessmen better conditions for Chinese labor."

(To be concluded)

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed: Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sindhi, Spanish, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses, etc. will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer etc. according to the language of the books. No criticism of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

PLANT AUTOGRAPHS AND THEIR REVELATIONS. By Sir J. C. Bose, F.R.S. Longmans Green and Co., Ltd. London. 7s 6d net.

This book is a popular and connected summary of the researches in the physiology of plants which the author has pursued for a quarter of a century written for the general reader with as few technicalities as the subject admits. The line of research adopted was the application to plants of the methods which had been successfully employed in the investigation of muscle and nerve in the animal. The point of the title is that the data on which the author bases his conclusions are the results of experiments in which by means of highly sensitive automatically recording apparatus devised by himself the course of its normal activities and its response to change of conditions or to stimulation were inscribed by the plant on sheets of paper or glass plates without the observer's intervention.

When pursuing investigations on the border region of physics and physiology, the author tells us in the preface he was amazed to find boundary lines vanishing and points of contact emerging between the realms of the Living and the Non-living. He found metals responding to stimuli they are subject to fatigue, stimulated by certain drugs and killed by poisons."

Between inorganic matter at one extreme and animal life at the other there is spread out the vast expanse of the silent life of plants. The difficulty that thwarts the investigator at every step arises from the fact that the interplay of life action is taking place within the dark profundities of the tree which our eyes cannot penetrate. In order to reveal the intricate mechanism of its life, it is necessary to gain access to the smallest unit of life the life-atom and record its throbbing pulsation. When microscopic vision fails we have still to explore the realm of the invisible."

Thus the author has been able to do by means of highly sensitive automatically recording apparatus invented by himself. In the book under notice

he has taken his readers with him step by step as the wonders of plant life became gradually revealed to him through artificial organs of great sensitiveness by which alone the realm of the invisible could be explored. The barriers which seemed to separate kindred phenomena are found to have vanished, the plant and the animal appearing as a multiform unity in a single ocean of being. In this vision of truth, says the author, the final mystery of things will by no means be lessened but greatly deepened. It is not less of a miracle that man, circumscribed on all sides by the imperfections of his senses, should yet build himself a raft of thought to make daring adventures in uncharted seas. And in his voyage of discovery he catches an occasional glimpse of the ineffable wonder that had been hidden from his view. That vision crushes out of him all self-sufficiency, all that kept him unconscious of the great pulse that beats through the universe."

This volume is the outcome of the author's wish to share with his readers the joy that fills his life. Even those who do not know much of science will be able to understand it and be the author's partner in joy. But it is not merely joy that the reader will derive from its perusal. He will also feel inspired in reading the following concluding paragraphs of the book.

From the plant to the animal, then we follow the long stairway of the ascent of Life. In the high spiritual triumph of the martyr, the ecstasy of the saint, we see the higher and higher expression of that evolutionary process by which Life rises above and beyond all the circumstances of the environment and fortifies itself to control them.

The thrill in matter the throch of life, the pulse of growth the impulse coursing through the nerve and the resulting sensations how diverse are these and yet so unified! How strange it is that the tremor of excitation in nervous matter should not merely be transmitted but transmuted and reflected like an image on a mirror into a different plane of life in sensation and in affection, in thought and in emotion. Of these which is the more real the material body or the image which is independent of it? Which of these is undecaying and which beyond the reach of death?

Many a nation has risen in the past and won the empire of the world. A few buried fragments are all that remain as memorials of the great dynasties that wielded the temporal power. There is however another element which finds its incarnation in matter yet transcends its transmutation and apparent destruction that is the burning flame born of thought which has been handed down through fleeting generations.

Not in matter but in thought, not in possessions nor even in attainments, but in ideals, is to be found the seed of immortality. R C

THE PROBLEM OF COMBATING TUBERCULOSIS IN INDIA
By A. C. Usha, M.B.

This is a reprint of an informative article which originally appeared in the Calcutta Medical Journal for November and December, 1926. The author has discussed the subject from the following points of view—

- (a) The incidence of the disease in India.
- (b) Its clinical types.
- (c) The mechanism of infection in man.

(d) Influence of diet and socio-economic factors on the incidence of the disease.

(e) Its prevention and control.

The pamphlet contains much useful matter regarding the various aspects of the disease which will be read with interest and profit, both by medical men and the lay public. The chapter on the prevention and control of the disease contains many valuable and practical suggestions, the adoption of which would not only contribute to the amelioration of the condition of those who are already victims of the disease but would effectually check its further spread. In the opinion of the learned author a great deal could be done by (1) raising the general vitality, and standard of living and (2) by preventing the 'open' bacillised people to come in contact with healthy or susceptible persons. We endorse the views of the author in this matter and we join with him in his earnest appeal to 'research scholars, the medical profession, the public, the State, the employers and the employed' for a combined effort to organise necessary measures for combating the disease.

HAND BOOK OF GYNAECOLOGY By S. K. Gupta, M.B.

The author has tried to condense, within the small limit of 114 pages, practically the whole subject of Gynaecology general and operative, dealing with female diseases, constitutional and local their etiology, diagnosis, pathology, prognosis and treatment, as also the methods of examination of the patient and the preparation for surgical operations. The book is intended for use by students of medical schools. Unfortunately, it is too over crowded and this has greatly impaired its usefulness. We regret we cannot encourage the use of such books by students, as they fail to give any intelligent understanding of the subject matter, but serve only as cram books for passing examinations.

THE INDIAN MATERIA MEDICA By K. M. Nadlani. Published in Bombay 1927.

The author has taken great care and pain in placing before the medical profession a vast collection of ancient and modern knowledge and experiences of the medicinal use of Indian indigenous drugs belonging to the vegetable, mineral and animal kingdoms. Nearly thirty six years ago Dymock, Warden and Hooper published their classical book, entitled the *Pharmacographia Indica* in three volumes in which very detailed information in respect of the medicinal plants of India was given and this work has rightly been considered as the standard book on the subject. It is time that a revised edition of this valuable book (Publishers—Messrs. Thacker Spink & Co.) should be brought out. The author has freely consulted this book in compiling his *Indian Materia Medica* and following the foot steps of the great pioneer workers in the field of indigenous drugs has furnished a detailed account of 1033 medicinal plants in their various aspects (*Indian Medicinal Plants*) by Major B. D. Basu and Lieut. Col. Kirtkar should be mentioned in this connection. *Ed. M. R.* He has also dealt in his book with the chemical composition and medicinal properties of 54 mineral drugs and of 51 substances belonging to the animal kingdom, used in the indigenous Systems of Medicine. A number of specific medi-

cinal preparations of the *Ayurveda* and *Unani* systems of medicine has been described in the book and the method of their preparation in detail has also been given.

Some of the appendices given at the end of the book, such as those on Indian substitutes for foreign drugs, "percentage composition of and calories in food," "vitamines in food," "natural orders," etc. will be found useful. The appendix on the "percentage composition of foods" could have been improved by introducing separate figures for "fats" and "carbohydrates" in the table. The drugs have been treated in the book alphabetically and this will prove very convenient for ready reference. The book ends with an exhaustive index arranged alphabetically.

One of the objects of the author in publishing this useful volume of Indian *Materia Medica* is to encourage the use of indigenous medicines among medical practitioners trained in the traditions and methods of the Western System of Medicine. There is no doubt that this important subject has hitherto been very much neglected by Indian medical practitioners. Whatever progress has been made in this direction is mainly due to the action of the Government and the interest taken in and the work done by a few enthusiasts belonging to the Imperial and Provincial Medical Services. The signs of the time seem to be more promising. Pharmacological experiments on Indian drugs are now being carried on in well equipped laboratories, both by Indians and by Europeans on scientific lines under State patronage and helped by private benefactions as well as some of the medical graduates of the different Universities of India are showing an increased leaning towards the study of the ancient Hindu System of Medicine. The State and the Legislature are taking some interest in the matter and medical schools and hospitals are being started in the principal towns of India for the study of *Ayurveda* on scientific basis.

There is an economic aspect of the question which the author has not lost sight of. The substitution of many imported foreign drugs by indigenous medicines of equal potency would contribute to a large saving of public money. It would further enable the poor people of India to get medical relief at a much smaller cost. The author is one of the many who believe, rightly or wrongly, that drugs grown locally act more potently on the children of the soil than those imported from other countries.

There is one matter which requires comment. In a book of this kind published in 1927 one would have expected to find record of results of the more important indigenous drugs, such as *Eberhavia diffusa*, *Terminalia Arjuna*, *Holarrhena Antidysenterica*, *Cydhindra Indica*, *Sidaquhi*, *Nerium Odorum*, *Cerbera Thebica*, &c. &c., but we regret to say that we miss them in the book.

We have no hesitation to say that the book will prove to be a useful companion to practitioners of Medicine.

C. L. BOSE.

THE CONSOLIDATION OF THE CHRISTIAN POWER IN INDIA. By Major B. D. Basu, I.M.S. Field. Published by R. Chatterjee, Calcutta, 1927. Price Rs. 18.

With the Sepoy Mutiny, a new chapter opens in Indian history. It saw the abolition of the

rule of the old East India Company in India and the assumption of the sovereign power of India by the Queen Victoria. A large number of problems presented themselves before the Queen and her advisers for immediate solution. One of the most pressing problems was whether the old policy of annexation of Lord Dalhousie would be followed or not. Major B. D. Basu, I.M.S. (Retd.) in his new brochure, *The Consolidation of the Christian Power in India*, discusses this and other post-mutiny problems affecting India in a new light. He tries to analyse the motives which influenced the British authorities to give up the "policy of annexing the Native States governed by 'heathen' princes." He quotes liberally from the British authors whose authority is beyond any shade of doubt, and shows the real motive in giving up the favourite policy of Lord Dalhousie, which was largely responsible for the outbreak of the Sepoy revolt. It was due to Mr John Sullivan and Mr John Dickinson, Jr. of the India Reform Society that the mischievous nature of the policy of annexation was exposed in England. Their writings and speeches from which Major Basu makes ample quotations, showed that the policy was neither ethically just, nor politically expedient nor financially sound. As to the effect of the annexation policy, Mr John Sullivan wrote: "The little court disappears, trade languishes, the capital decays, the people are impoverished, the Englishman flourishes and acts like a sponge drawing up riches from the banks of the Ganges and squeezing them down upon the backs of the 'Thames'." But the expenses which this policy entailed were more than the addition to the revenue of the Company. It was stated that whilst we have not trebled our revenues, we have increased our debt more than sixfold, and we are at this moment adding to that debt in order to make good deficiencies of income." Thus, Major Basu shows conclusively that it was not from any motive of philanthropy, altruism or justice that the policy of the annexation of the Native States was given up, and the Doctrine of Lapse was knocked on the head.

After the Sepoy Mutiny, the cry of the Christians in India was raised by many zealous Christians in India. They began to maintain that the Christian power in India would not be consolidated and the occurrence of mutinies in future would not be prevented unless and until India was converted to their faith. One Mr William Edwards openly declared: "Our best safeguard is in the evangelization of the country."

Another zealous Christian Sir Herbert Edwardes of the Miltan campaign fame carried on an agitation for "the elimination of all un-Christian principles from the Government of British India." According to him, one of the un-Christian elements in the Government of India, was the exclusion of the Bible and Christian teaching from the Government schools and colleges. Sir Herbert Edwardes proposed that the Bible should be taught in the Government schools in India. This view was shared at that time by almost all the high Christian officers in the Punjab, including Sir John Lawrence, the Chief Commissioner of the Punjab (who afterwards became Lord Lawrence, Viceroy of India).

Another problem of the Indian Government was the development of the resources of India. To

our rulers it meant nothing less than affording all possible encouragement to the employment of British capital skill and enterprise in the development of the material resources of India. This is what Major Basu calls the exploitation of India by England which helped greatly to consolidate her power in India. Major Basu shows how this exploitation of India by England is carried out by (a) the Construction of Railways (b) Cultivation of cotton (c) Concessions to British capitalists to float companies in India to work her resources (d) Larger employment of Englishmen in India and (e) Denying self government in India.

The Indian army was another problem with our rulers. After the Indian Mutiny the Christian rulers of India were not in a mood to keep the Artillery in the hands of the Sepoys. Therefore, a Royal Commission was appointed, which resulted in greater degradation and humiliation of the Sepoys. Thus post mutiny reconstruction deprived Indians of the right of serving in the Artillery. Major Basu observes. The re-organisation of the Indian Army not only increased the amount of the tribute of India to England but it emasculated the people made Indian Sepoys inefficient and unfit for leadership.

In the chapter entitled 'Overawing and striking terror into the Punjabis' Major Basu describes the cold blooded judicial murders by such highly professing Christians as Sir John Lawrence and Sir Robert Montgomery. We also read of Mr. Frederick Cooper 'who in the face of God and man dare to boast of the butchery or death by suffocation of nearly 500 of their fellow creatures'.

In this new book *The Consolidation of the Christian Power in India* Major B. D. Basu continues the story which he began in his monumental work *The Rise of the Christian Power in India*. It is a well written and thought provoking sequel to the latter book. He shows how the first five royal Viceroy's namely Canning, Elgin, Lawrence, Mayo and Northbrook tried to consolidate the Christian Power in India. Those who have read his *Rise of the Christian Power in India* should not also miss this interesting volume on *The Consolidation of the Christian Power in India*. Major Basu has already acquired a reputation as a great scholar and historian. He is one of the few Indian scholars who are devoting time and energy to the study of the history and problems of modern India. We congratulate Major Basu on the success of his new treatise.

PHANINDRANATH BOSE

THE RELIGION OF ZARATHUSTRA. By Prof I. J. S. Taraporewalla Ph. D.

We have before us an able and praiseworthy attempt to present the outlines of the Zoroastrian system to those seeking information about that faith. Within the limits set by the author to himself as regards space it was necessary for him to confine himself to the vital doctrines of the faith but the task has been very satisfactorily performed owing to the skill with which the plan of the book has been laid out. On a larger scale similar work was done by Dr. Haug in his *Essays on the Parsis* and by Dr. Dhalla in his *Zoroastrian Theology* more recently. But the writing of such introductory works is indeed, a

periodical necessity with the growth of linguistic study and historical criticism. It need hardly be said that Dr. Taraporewalla is fully equipped for a guide to the Zoroastrian system, being at once a competent scholar of Avesta and Sanskrit.

Indeed one of the chief merits of the book arises, in our opinion from the author's ability to look at his subject from the angle of Sanskrit as well as that of Avesta studies. Thus the first chapter of the book is one of the best since it gives a synoptic vision of the old Aryan home using Indian as well as Iranian sources of information. There we have quite a calendar of gods and heroes of hoary antiquity whom the ancestors both of Persians and of Indians adored alike. Thus Ahura was worshipped in old India in the forms of Asura and Varuna while the deity of sacred fire was in Persia Hairyosangha and in India Narasimha. A marriage ceremony in the Vedic days the god Airyaman was invoked and the same divinity is still invoked by the Parsis on the same occasion. We would recommend to the author the further prosecution of this Synoptic work.

We might draw the attention of the reader to the very good chapter on Good and Evil. Here the various phases and aspects of Dualism are dealt with and of course such a solution of the problem of evil will always have great attractions for a considerable proportion of readers. The subject is made interesting by Dr. Taraporewalla who has thrown light on it from Hindu philosophy. The two spirits of the Gathas have been compared by him to the two-fold powers (Spirit and Matter) as postulated by the Yoga Philosophy of India. Such comparisons limited in scope admitted by though very useful in clearing ideas are far more useful and illuminating than that wholesale introduction of foreign doctrines into the Zoroastrian system which has been the practice of some otherwise competent Parsi scholars with a great zeal for Theosophy. Here we must praise the procedure adopted by our author which is scientific in nature and moderate in spirit. Our duty as scholars is to produce an exposition of the system of the Prophet of Persia and not to make wholesale additions to it after the eclectic fashion. In a sense of course all religions deliver the same message, but that is only in the very long run and only after abstraction has been made of numerous peculiarities of doctrine which are very interesting in themselves from the point of view of the history of dogma and of human thought.

The chapter on the path of Asha righteousness is an interesting account of the growth of spiritual ideals and their development in old Persia. Since the deep and fundamental importance of this concept of Asha colours the whole teaching of the Zoroastrian system our author has done well in making a special study of the path of Asha. He also illustrates the topic by comparing the eternal law of Asha with that of Rita in the Vedas. In both the branches of the Aryan peoples we find the Asha Rita aspect of God brought into prominence even in the earliest hymns. Both Ahura and Asura Varuna embody the highest ideal of truth and righteousness. The other beings worshipped were regarded as so many varied aspects of the activities of the godhead.

From this point the author is led on to a study

of the angelology of his system. His classification of the angelic hierarchy has much to recommend it. There are angels who are personified divine attributes, a second group represent the ancient Indo-Iranian deities. To these must be added a third class representing the elements and powers of nature. Indeed it must be always difficult to keep the latter two classes mutually apart. To convey the true spirit of angelic worship is no easy task but Dr Taraporewalla has achieved it successfully. Another particularly well written chapter is the one devoted to the life and work of Zoroaster himself.

We have no doubt that another edition of this very useful book will be soon required. When that edition comes on we would venture to make some suggestions to the author for improving the book still further. The chapter on Zoroaster should be enlarged and enriched by select quotations to be incorporated from the Gathas. A chapter should also be added on the later development of Zoroastrian doctrine under the Sassanides for developments of great importance there certainly were as also a great deal of reciprocal influence exerted by Christianity, Zoroastrianism and Buddhism which would when duly brought out, make that chapter a most fascinating one. The author is quite competent to deal with the fresh matter thus suggested to be introduced.

But a reviewer should advisedly confine himself to dealing with the edition in hand in the main, there can be no hesitation in stating that the work of Dr Taraporewalla is one of the best introductions to the study of the religion of Zoroaster.

J C C

A SCHEME OF MASS EDUCATION. By A B Mando M A (Columbia, U S A) Pp 84 Price not known

It is Bulletin No. I of Young men's Indian Association Education Committee

The author has made a special study of the question of mass-literacy in India. In this book he makes some practical suggestions for teaching Reading. This method is commonly known as the sentence method. Dr Huey who made a study of the perception span and of the eye movements was the first psychologist to recommend this method. The Phonetic Method the Word Method, the Look and Say Methods etc., which have come into vogue in the Western countries are mere adaptations of his recommendation which are based on the laboratory findings (p 47). Instead of following the traditional method of teaching the alphabet first he begins with words which have a natural setting in a sentence. This method is perfectly psychological. But even our trained teachers are afraid of following this method. And the reason is that they have no practical experience in the matter. Mr Mando tried his method in the Central Jail, Nagpur with wonderful results. If we are to popularise the method we must convince the people. If we wish to convince the people, the experiment should be tried extensively by competent teachers.

But who will take the initiative and who will take the responsibility? There must be practical schools.

THE DARVISHES OR ORIENTAL SPIRITUALISM. By John P. Brown. Edited with Introduction and notes

by H. A. Roper with twenty-three illustrations. Published by the Oxford University Press. Pp. XXIV + 496. Price 18s

The object of this volume is to afford information in regard to the Belief and Principles of the Darvishes as well as to describe their various modes of worshipping the creator.

The spiritualism of the Darvishes differs in many respects from Islamism and has its origin in the religious conceptions of India and Greece. So the information that the author has been enabled to collect together will be of much interest to the reader. Much of this is original and having been extracted from Oriental works and from Turkish, Arabic and Persian Manuscripts, may be relied upon as accurate.

It is a valuable publication and is recommended to our readers. There is no other English book on the subject.

FREEDOM, RELIGION AND REALITY. Edited by Mr. G. Y. Chitambar and Published by Mr. Y. V. Bhandarkar, Secretary Prarthana Samaj, Bombay. Pp 192. Price not known.

It is a commemorative volume published on the occasion of the Diamond Jubilee of the foundation of the Bombay Prarthana Samaj. It contains twelve essays by competent persons. Here is the list—

(i) Worship and Fellowship by J. Estlin Carpenter. (ii) The Position of the Prarthana Samaj in the Religious World by R. G. Bhandarkar. (iii) Modernism in the Church of England by J. S. Bezzant. (iv) Theism of Ramanaya. Some problems by S. Radha Krishnan. (v) The Faith of the Brahma Samaj by G. Y. Chitambar. (vi) The Islamic Revival by Mohamed Ali. (vii) Judaism by Rebecca Reuben. (viii) Bahai Revelation (Bahai Spiritual Assembly, Bombay). (ix) The Ideals of the Prarthana Samaj by Y. V. Bhandarkar. (x) Buddhism and Modern Thought by K. A. Fadhye. (xi) The Philosophy of the Upanishads by the Editor. and (xii) Conclusion by V. G. Bhandarkar.

All the essays breathe the spirit of Liberalism and to this book we draw the attention of all who take an interest in Liberal Religious Ideals.

We congratulate the editor on his being able to include in the volume an article on Judaism. A civilization that is directly and indirectly shaping and modifying our ideas is inimical to the interests of Judaism. An old-read Scripture which contains unjust denunciations of the expounders of that religion and missionary bodies which popularise that Scripture have succeeded in alienating Indian minds from Judaism. This is deplorable. Liberal Judaism is as akin to the Theistic movement of India as any other Theistic Religion and should never be ignored by Indian Theists as they have hitherto done.

They should make a special study of that religion and Montefiore's Outlines of Liberal Judaism (Macmillan) will give an excellent idea of that movement.

MANESH CHANDRA CHUGH

BENGALI

DARDRE KRANDAN By Dr. Rudrakamal Mukherjee. The Book Co Ltd Calcutta. Price Rs 1 Sas. Second Edition Revised and Enlarged.

The first thing that strikes one about this book is its excellent get-up and the expressive cover design which very ably illustrates the title—*The Cry of the Poor*. The book is a pioneer production in Bengali Sociological Literature and is indispensable to the student of the realistic economics of India. A glance at the chapter-heads will give an idea of the wide field it covers. Thus Comparative Economics, Want vs. Luxury, Cottage Industry vs. Factories and Social Service form only a few of the many subjects treated by the author. The work embodies the result of much laborious research-work and original observation on the part of the author and is of the utmost value to politicians, scholars and students alike.

H S

KAVYA DEEPALI Edited by Narendra Deb. Published by Messrs M C Sarkar & Sons Calcutta. Price Rs 3 as 8 1927.

Messrs. M. C. Sarkar and Sons the enterprising firm of publishers, deserve to be congratulated on bringing out this popular and illustrated book of poems. The book under notice, contains 151 poems from the pen of 73 Bengali poets (dead and living) who, according to the editor, represent the modern age. The book begins with a poem entitled *বঙ্গ* from the pen of Rabindranath, the best poet of the modern age and of all ages' and concludes with a verse under the caption *কবি* *কবি* *কবি* by Mrs. Radharani Datta 'whose poetic fame (says the editor) even at this stage is widely acknowledged.' We are however, of opinion that the collection is not fully representative and that much improvement could have been effected. For, we did not expect to miss Dwyendranath Tagore, Bhojchandra Majumdar, Narendra Bhattacharjya and other poets from this collection. Some of the illustrations are no doubt excellent, but a good number of them could have been safely omitted. It is also regrettable to find that the book abounds with execrable printing mistakes.

We hope that the publishers will rectify these in the next edition. It is most likely that the book will command wide popularity as a presentation volume because of its excellent get-up.

MANAS KAMAL By Narendranath Basu. Gurudas Chatterjee & Sons. Rs 1.

Mr. Basu, late Editor of *Bansari*, needs no introduction at our hands. The book, under notice, contains eleven refreshing stories written in elegant style. The printing and get-up leave nothing to be desired. We commend this book to the Bengali reading public.

P C S

VISMARAN By Mohutal Majumdar. Calcutta Prabasi Press 1333 Ph. XIV+131 Rs 2-8.

It should not be necessary to preface a notice of this volume of poems by saying that Mr. M. L. Majumdar is one of the most important of the younger Bengali poets. His first book which came out five years ago gave him a fair title to be so regarded. His second, now before us, is another

evidence of the justness of the claim. But eminence among younger Bengali poets comes to very little unless one can assign some sort of importance to the group as a whole and in this connection it can hardly be disputed that these poets have not had their share of attention and encouragement. They are too much under the shadow of one great name. That they are indebted to Rabindranath is a colourless, almost mischievous commonplace. The rich world conquered by Rabindranath will be the heritage of every poet coming after him, to-morrow or in the distant future. Is there any reason why a writer, with all these gains in language, metre and inspiration before him, should wastefully throw them away even if it were possible for him to do so and start all afresh? The question which matters is whether he is going to treat Rabindranath as a starting point or as a culmination. There is no denying that a good deal of Bengali poetry of to-day does read like an echo of Rabindranath varying, if at all, in its degree of faithfulness. But if there are those to whom Poetry is a mere pretty convention for the expression of æsthetic vapourings and Rabindranath's mellifluous verse, the prettiest ready-made pattern for them all, there are also others who do not feel in a chorus and write to a prescription who would not play the sedulous ape in thought or phrase to anyone, who cannot rest satisfied with anything less than a fresh expression of fresh thoughts in words which are in vital relation with the stuff of their imagination. Among these, through whom we might hope, indeed expect, lies the future of Bengali poetry, Mr. Majumdar has assuredly his place.

In his first collection of verse, the peculiar stamp of Mr. Majumdar's poetic individuality was shown in his choice of certain historical themes which were not strictly speaking historical in treatment. The situation, the character, the story is well known—Nurjehan looking back upon the Romance of her life from the vantage point of its tragic close, the last vigil of Nadirshah and his death at the hands of the assassin, these are familiar tales—but they are there not for their own sake but for the sake of the value which they have as a symbol of the poet's emotional out-look. Under all the reticence and artistic disinterestedness which seems to cover all personal sensibility, behind the objectivity and the chiselled silences of the technique we can yet guess the unspoken meditation the hidden cross currents of the poet's moods. In the present book Mr. Majumdar goes a step further and takes us into his confidence. He speaks in his own person and admits us into his intimate world.

Two long pieces however, furnish the link in the transition. One is Nurjehan and Jehanzir and the other 'Death and Nachiketas.' Being a poet, Mr. Majumdar has possibly nothing but contempt for the scruples of the specialist for after dealing with 'Yama and Nachiketas', he does not hesitate to skip Millennia and launch us in the midst of a palace intrigue in the time of the Great Mogul. But he has done the exact thing that will disarm critics. He has succeeded. Death and Nachiketas is a reflective poem dwelling in words of mournful grandeur on the baffling mystery of death while the other is a fine dramatic piece in which the psychological possibilities of the situation and the characters are quite successfully

exploited. This volume contains only twenty-five poems. But they are enough to furnish additional proof of Mr Majumdar's versatility. It is enough to cite half a dozen titles—An Epicure of Touch, To Schopenhauer, Kalapahar the iconoclast, Dead Love, Dusk out of Season, Moaning of Doves—to give an idea of the range of his inspiration.

There are people who would consider versatility hardly a merit. It might mean no more than lack of character. Certainly this reproach cannot be levelled at Mr. Majumdar, for behind the diversity of topic and treatment, we feel the author's possession of a secret store—an *arrière-pensée* as Montaigne would put it—a doctrine and a view of life of which he gives us many glimpses. His world is steeped in a dim crepuscular light.

তোষকের পর রয়েছে সন্ধ্যা
হাসি লরনারি,
আদি তিমিরে তীর-পশ্চিম
তারকা রাহি ঘর।

He has his yearning for the sun, for clear-cut forms and brilliant colours,

বেরণ বেহাি আদি মোহনীর নোনায়ে
সুকাশি হরনের পান,
সর্ববৈর সকাশি আদি বাজারতরে
বিদ্যতার প্রায় হান্দি।

But it is no longer possible for him to believe in the actuality of this sunlit world. A dusk out of season has descended upon his vision

প্রাণতর সেই পান কোরে হিলে হাংরা,
আদি এ বিবাক বংরা—
নেমেহে লকন সন্ধ্যা, ঘুণ ঘুণাদে গোত্র,
হুণ হাই ভাণা না সুদার।
আবার প্রাণের কুল উরিয়াই সন্ধ্যা তাম
বংরাজের রহি প্রবাসন
আলোকবিহীন বিদ্য হইয়াছে রূপাণ
জুহি সবি পদম সন।

Mr Majumdar's poetry is the flower. I shall not say of evil but of a profound disquiet and disenchantment. Ordinary people will perhaps miss in him beauties of the orthodox and accepted kind—smiling fields of flower and fruit, mild blisses and trials of domesticity and all the little emptinesses of love. Pessimism is a recently learnt emotion and Mr Majumdar is decidedly more modern than the poet of complacency. As Mr. Hardy once said, "The new vale of Tempe may be a grant waste in Shufu. Human souls may find themselves in closer and closer harmony with external things wearing a somberness distasteful to our race when it was young. The time seems near, if it has not actually arrived, when the chastened sublimity of a moor, a sea or a mountain will be all of nature that is in keeping with the moods of the more thinking among mankind." Our poetry will also respond to our altered outlook upon life and nature

বকনীর বেহাি গুহক হরিত-ভাল।
ঘুরে উদান বকু সুখিয়ার পত্র-পাখা।
হলে বলে অধীক-আরকা না করে কৌবল
নিহত স্রোতনীর বাহিতোহে কালের বিদ্য।

হতে সুখি হতে লহ—কৌবল নাহি পান।—
সংসার সুখের পরে কৌবলের উত্তরে নিশান।
সুখের নাহিক শেষ, প্রবাসন কৌবলের নাহি অবসান।

But this disappointing earth, this broken many-hued toy, is for the poet the only thing which counts. The more it deceives him, the more he clings to it.

যে বদ-বদন ভূমি কবিবিরে চাও বদন।
তারি বাস-ভূত আদি, বেহে ঘোর আকর্ষ পিয়াস।
সুখের বোহন বসে কৌবলের প্রতি এহর
বশিহে আবার কণে লকন দিবতির ভাণ।

All this might easily lead to the belief that Mr. Majumdar is a philosopher. We must hasten to emphasise that he is only a poet. He is not going to systematise his sensations into an intellectual understanding of life. He does not "criticise" life. He merely discerns an emotional quality in it.

The distinction of Mr Majumdar's poetic inspiration is well matched by the distinction of his poetic technique. There is between his inspiration and the form in which he has embodied it an essential unity, that is to say his forms are all justified by his inspiration. He is not so overwhelmed by his emotions as to lose sight of the technical side of his business. Perhaps his also is the ideal of Mr T S Eliot's "one is prepared for art when one has ceased to be interested in one's own emotions and experiences except as material." Mr Majumdar has not reached this exacting and rather inhuman standard of detachment but between his attitude and that of the amateur there is all the difference which exists between a man who regards poetry as a craft and one who regards it as a pose. But in his pre-occupation with technique Mr Majumdar does not make the mistake so common with certain Bengali poets of to-day that harmoniously combined sounds, producing on our nervous centres a purely sonorous effect is enough to make poetry. Yet he recognises that words with certain associations arranged in patterns can make poetry independently of definite logical concept. I will quote just one example of his symbolism. A dove is moaning in some tree in a listless noon.

ঘু-ঘু-ঘু—
শোভা-বাড়ির আনিবো,
নিউলি করা পংক জাও,
শোভার গলার হুতা কে বের? সেই কথা কি ঘু বলে?
হুল পড়া বাগবাও
আহা হাতের আনিবো
তারে আলোর হারা হানি—ঘু শুভার—কিসের হলে?
দশনপথে বাঘের বেলা
ঘুরে হুপার আনুতা হুগার—
কোন ভু-ভি ঘুরে গিরে সাজার তারে এঁয়ের হলে।

It is an evocation not less beautiful in its way than the picture of Ruth standing in tears amid the alien corn.

Finally it would be ungracious to pass over the contribution of the publisher to our pleasure. Enough has been said to give an idea of the quality of Mr Majumdar's poetry. It is not less welcome for being given to us in a distinctive

form So rarely does one come across a Bengali book which will not offend good-taste in some way or other that the discreet beauty of this volume will come as a very agreeable surprise to all lovers of the art of the book The publishers deserve our gratitude for striking a note of revolt against the drabness of commercial book production

N

HINDI

VIJAYPATI KI PADAYALI Compiled by Mr. Ramkrishna Sarma Benipuri Published by the Hindi Pustak Bhandar Laheria Serai Pp XIV+327

260 *padas* of Vidyapati are published in this edition with short notes on difficult words The aim of the compiler seems to be to furnish a handy collection of the best songs of the poet The introduction deals with the poet and his work in a general way As regards the pictures they are disappointingly devoid of any art and one is a mere copy from a European model The editor has to be thanked for preserving the original dialect of the *padas*

MATIRAM GRANTHAVALI Edited by Mr. Krishna Mishra B.A. LL.B. Published by the Ganga-Pustakmala Office Lucknow Pp CCLXIII and 244 1926

Matiram Tripathi is a well known Hindi poet of the *bravabhasha* dialect. He belonged to a family which has given the poets Bhushan and Chintamani He lived at the court of Bundi during the reign of the son of the celebrated Chhatrasal Three works of the poet are edited with occasional notes and they are based on several MSS and printed copies The long introduction has dilated on all possible issues in connection with the poet and his poetry The editor is not blind to the defects of the poet who though he excelled in the craft according to the *Rasa* *sastras* lacked in emotion which is the mainspring of all true poetry This edition is sure to become a standard work for reference

MAHALAKI ALBAR OUR UNKA URDU KAVYA By Munao Singh Karunka B.A. Published by Jnanprakash Mandir Machhura Meerut 2nd edition Pp 177

This second edition of the selected poems of the celebrated Urdu poet is a testimony to his popularity His muse was not confined to the rose-garden of convention but he breathed a new life into modern Urdu poetry Thus he created light verses on various topics of modern life politics not excepted He touched on various chords—love humour religion topical events and even Gaodhism and non-co-operation The introduction is useful and shows the poet both as a man and an artist

RAHIM KAVITAVALI Edited by Mr. Surendranath Tiwari Published by the Nawal Kishore Press Lucknow Pp XLIII+98 1926

Every schoolboy in India knows the name of Abdul Rahim Khan Khan khana, the great soldier at the court of Akbar But few of us ever suspect that he was a great poet too The editor of the present collection was drawn towards the *dohas* of

this soldier poet even at his school going age And the result is this compilation for which we cannot thank him too much Rahim is nothing if he is not charming and elegant He poured his heart into his work and he is equally felicitous in his delineation of love and life We are struck by his catholicity of spirit, because in Hindi and Sanskrit verses he pays homage to several Hindu gods and goddesses He was also a patron of poetry His life and works are described in the introduction There is a reproduction of his portrait

DEHATI DUVIYA By Mr. Shripavan Sahai Published by the Hindi Pustak Bhandar Laheria Serai Pp 226 1926

Scenes of country life in Bihar have been most charmingly depicted in this work The author has been well advised in using the popular dialect, which has a peculiar flavour and directness and is also refreshing when contrasted with the much Sanskritised modern Hindi prose As their dialect, no less do the elemental life affairs of the country folks interest us by their foolishness and knavery as well as their honesty and simplicity We congratulate the author on his success and hope he will give us more of such bright stories We like to draw his attention to the necessity of collecting the folk-lore in the very words in which they are delivered

BIHAR KA SAHITYA—PART I Published by the Hindi Pustak Bhandar Laheria Serai, 1926 Pp 279

In this work are collected the presidential addresses of the first five sessions of the Bihar Provincial Hindi Literary Conference, together with those of the Chairmen of the Reception Committees. This is surely a useful publication inasmuch as it focuses our attention on the literary history of Bihar

RAMS BASU

TELUGU

MUHAMMAD By Purupanda Appalaswamy Published by V. V. Ramaswamy Sastrulu & Sons Madras Pp 44 1926

An interesting and well written essay on the life of Muhammad It would have been more useful at the present time if the tenets of the Muslim creed had been lucidly explained and it had been shown how traces of these can be found in Christianity and other religions The variations of doctrine in the Koran are not referred to The life of the great prophet is however vividly described

B. RAMCHANDRA RAU

GUJARATI

We beg to acknowledge receipt of a copy of the 11th Annual Report of the *Mahavir Jain Vidyalaya* of Bombay We do not review Reports We have received several copies of *SARAL BHAGVAD GITA* from Kanji Kalidas Joshi They are translations of the Sanskrit text into Gujarati Marathi and Hindi and illustrated The renderings

are well done and they are sure to be very much appreciated by the reading public

RAMAYANA By *Sisri Chhotlal Chandra* *Shastri* printed and published by the Society for Encouragement of Cheap Literature Ahmedabad Cloth bound, Pp 1121 Second edition Price Rs 6 0 0 With 40 colored illustrations (1926)

This is a translation of Tulasidas's Ramayana in Hindi. Looking to its get up and contents it is marvellously cheap for six rupees. Its introduction is many and comprise a wealth of interesting details on the life of Tulasidas and on various other matters connected with the great epic. Every Gujarati Hindu, and other Gujarati too should read this work

SARALA GITA GOVIND By *Naturalist P Shah, Esq* Printed at the Anand Bandhu Printing Press, Surat Cloth bound, Pp 120 Price Rs 1 12 0 (1927)

Jayadev's Gita Govind is a literary gem in Sanskrit. It is not possible to translate its beauty into vernaculars which lack the wealth and flexibility of Sanskrit vocabulary. An existing translation by Rao Bahadur Kesabhai H. Dhruva into

Gujarati because of the scholarly attainments of the translator tries to go as near the original as possible. The present translation has however, aimed more at easiness of style than at scholarlyness and it may be that those who scorn the trouble involved in perusing a scholarly work may find solace in perusing an easier work disregarding its other faults and shortcomings. The work however needs encouragement

SHASHIKALA AND CHAURPANCHASHIKA By *Nagaras J. Patel* Printed at the Suryaprakash Printing Press Ahmedabad Cloth bound, (with pictures) Pp 100 Price Rs 2 (1926)

The romantic story of how a teacher fell in love with his pupil a princess and was ordered to be executed by her father on discovery of it and how he was reprieved on singing fifty stanzas one as he mounted each of the fifty steps leading to the execution platform reciting his undying love for her is verified by Kavi Bilhan it has been translated into English in his inimitable way by Sir Edwin Arnold and Mr. Patel has attempted re-telling it in Gujarati verse. He has in doing so supplied a want

K M J

CURRENCY AND PRICES IN INDIA*

By PROFESSOR J C SINHA D Sc

THE post war literature on currency is a voluminous one. Even in India many books on the subject have been issued in recent years. Unfortunately most of them cover the same ground. Questions of currency history and theory which have been authoritatively dealt with are often introduced merely to increase the bulk of some books. The present volume also is not entirely free from this defect.

The book is divided into three sections. Part I contains a historical survey of Indian currency from 1806 to 1913. This subject has been dealt with by many writers but our authors have described more fully than any other the gold movement in India during the three quarters of the last century and how it was suddenly shelved in 1874.

We find also in this part an interesting account of the Report of the Mansfield Commission. The reasons which led the authorities to sit tight over this report and take no action is according to our authors one of the unexplained mysteries of the history of Indian currency (p. 5). Though no official explanation has been given the chief obstacle to the acceptance of the Report appears to have been the almost continuous fall in the value of silver which began from the year 1867. Incidentally the authors tell us that this was the first currency commission appointed by the

Government of India. As a matter of fact however a currency committee was appointed as early as 1787 by the government of Cornwallis which took oral and written evidence in India as described in a paper read at the eighth meeting of the Indian Historical Records Commission at Lahore in 1925.

Part II of the book is devoted to a study of Indian prices. Here the authors are mainly on new ground. The section opens with a study of index numbers. India Office Memorandum of 1850-87 and subsequent index numbers of Indian prices are briefly examined. But there is an important omission. The authors have not mentioned the recent index numbers published in the Bombay Labour Gazette and in the Indian Trade Journal, Calcutta. It is true that these relate to prices in Bombay and Calcutta and do not give a very accurate idea of the general price level throughout the country. But it should be remembered that Calcutta index numbers are regularly quoted in the monthly bulletin of the League of Nations for representing price-changes in India.

The study of price levels is followed by the study of prices of individual commodities like rice, wheat, sugar, tea, cotton, jute, coal and oilseeds. The authors arrive at certain conclusions, which are open to criticism.

The price-history of sugar, they tell us, is one of the most illuminating illustrations of what a policy of determined protection can achieve (p. 16). The authors gravely tell us that the difference between the cost of production here

* *Currency and Prices in India* by N. C. Sinha and S. K. Murman. D. B. Taraporevala Sons & Co. Bombay 1927 pp xv + 419 (12s. 6d.)

and that abroad, should be bridged by an adequate protective duty, (this difference amounting according to them, to the paltry figure of 76% in 1913) although the theory of equalising costs has been discarded even in America, where it was first proclaimed as the true principle of protection. The reason assigned is equally curious,—the infancy of the industry!

Nor can one support the authors' contention that the Indian coal industry requires protection, which in their opinion deserves to be strengthened a good deal more, if it is to become an active force in stimulating our other industries. When it is remembered that our coal production exceeds our consumption, the case for a prohibitive import duty becomes stronger still" (pp 239-240). One fails to see how by a protective import duty on foreign coal the Indian coal industry can be made "an active force in stimulating our industries." For as the Tariff Board has pointed out, all measures which tend to raise the cost of fuel are prejudicial to industrial development."

Nor can one accept the authors' view that "the prices of hides, like those of jute, are determined by its (sic) monopolistic supplies," (p 228). The Fiscal Commission has pointed out the dangers of such apparently well entrenched monopolies as jute and every year the address of the Chairman of the Indian Jute Mills Association contains some remarks about possible competition. The authors are on still more debatable grounds when they speak of hides. The chief market for Indian hides has always been Central Europe, particularly Germany. Apart from competition with foreign hides in those markets there is now an intense competition with local produce, which has not to bear the cost and risk of deterioration of long voyages and which can be sold very cheaply with the increased consumption of meat. The rapid rise of motor transport has also reduced the demand for boots and therefore for hides and thus the competition is all the keener between Indian and foreign hides.

Part II of the book closes with some general remarks about the difficulties of determining a representative price level for India, an account of the variation in prices between 1861 and 1920, and a discussion on the relation between currency

and national market, such as silver, copper, wheat, cotton have about the same gold price the world over transportation and taxes aside no matter whether the quotations are in dollars, francs, pounds or marks. On the other hand many articles such as aluminium goods pottery and china ware or specialized chemicals and metallurgical products which either do not enter largely into international trade or whose prices are adjusted slowly, show a great divergence of gold prices in the several markets of the world' (*Depreciated Exchange and International Trade*, second edition p 20).

Even in the case of England the same disparity between sheltered and unsheltered prices is noticeable, as pointed out by Keynes and other monetary theorists.

The authors have missed the obvious point that the assumption of special characteristics of the Indian price-level is not necessary to prove the thesis that relative redundancy of currency for short periods was quite likely under the pre-war system. Even the Hilton-Young Commission has observed the automatic working of the exchange-standard is thus not adequately provided for in India. Under the Indian system contraction is not and never has been automatic" (*Report* para 16).

Part III of the book deals with the three issues raised by the Hilton-Young Commission, viz., the standard, the ratio (the authors put it as the unit) and the Reserve Bank.

With regard to the first question, the authors explain why Indian public opinion has been overwhelmingly in favour of gold standard with a gold currency. The introduction of such a system in India means that India should negotiate for her gold requirements directly with the United States or through England" (p 403). The United States do possess large quantities of free gold, the withdrawal of a part of this gold to India would create no credit difficulty. But the introduction of gold currency in India would give a heavy blow to the American silver interest and naturally we are welcome neither as creditors of our own gold from England, nor as borrowers of surplus gold from America." (p 451).

standard and avoids the difficulties of gold currency

Our authors approve of the Commission's scheme subject to the criticism that the gold reserve should be located exclusively in India—an opinion which is held by all Indian publicists. We endorse also the corollary to this proposition that the Currency Authority shall do its work of buying and selling gold only in India. (P. 472)

We wish however that the authors had suggested closer buying and selling rates for gold. It is difficult to understand why it is necessary to prescribe the selling rate on the basis of 1/20 in order to preserve the Bombay bullion market although the London bullion market is not affected by the very close buying and selling rates fixed by the Bank of England at £3 17s 9d and £3 17s 10½d per £100 of gold, a difference of only 16 p.c.

One fails to see how this gold bullion standard may be called a standard at all when gold will admittedly vary from its par value by as much as 23 per cent. If a yardstick is sometimes equal to 36 inches and sometimes to 36.8 inches no scientist would accept it as a standard for measurement. Exactly the same argument applies to monetary standards.

It has been suggested that it is a sop to Bombay which is unhappy over the 13d rate. It seems that the powerful Exchange Banks which finance gold imports as well as the wealthy bullion dealers of Western India have been appeased by sacrificing the interest of the country as a whole. At the same time the Reserve Bank's obligation to sell gold in India has been made a mere paper obligation. The Bank will ordinarily be the dearest market for gold in this country. The Commission's claim that its scheme is an absolute gold standard, since gold bars are to be given in exchange for notes or silver rupees not for export only but for any purpose (Report, para 60) is therefore unfounded. We suggest that our currency authority should buy and sell gold in India at a reasonable difference, say one per cent. Not until this is done can the new standard be an improvement upon the old one in this respect.

On the ratio question our authors express their opinion in favour of 1s. 4d. rate mainly on the ground that the standard unit of value once fixed must be regarded as sacred and should not be changed. This is certainly a good principle. But it must be borne in mind that during the currency experiment in 1920 the rate had already been changed in 2s. gold and the rupee left its old moorings as early as 1917.

As to the sanctity of the 1s. 4d. rate, the following remarks of the *Statist* which was by no means a blind supporter of the 1s. 6d. rate may be quoted. Given the fact that since 1914 the internal purchasing power of each rupee has been reduced by about 30 p.c., the claims of equity as far as outstanding contracts entered into before the war are concerned would seem to demand a fixation of the rupee at a parity higher than that which obtained before the War. (The *Statist* Sept. 11 1926)

In this connection our authors strangely observe that the question of price adjustment is a mere truism and need not be raised at all (p. viii). The position is that the exchange has been determined

by the authorities at 1s. 6d. since October 1924 and that steps have been taken to maintain this rate by controlling the internal price-level. The fact that these steps have been taken for a fairly long time for more than two years must result in the adjustment of the internal price level with the world price level (p. 513) (italics are ours). This admission cuts the ground on which most of the arguments for 1s. 4d. rate are based.

We now pass on to the last question discussed in the book—the problem of the Reserve Bank. The authors support the view of the majority of the Currency Commission that a separate Reserve Bank is desirable for India.

Doubts have been raised that the amount of rediscounting to be done in India being small the Reserve Bank will not be a paying concern. Such doubts are wholly unfounded. The sole right of note-issue the free deposit of Government balances and the compulsory deposit from the scheduled banks will give the Reserve Bank sufficient funds which, even if employed at a very low rate of interest will bring a handsome profit.

Our authors rightly oppose the special preference to the shareholders of the Imperial Bank in subscribing to the capital of the proposed bank. The Commission recommended that the Imperial Bank's shareholders should be given the first opportunity of subscribing for the capital stock of the Reserve Bank. The Bill provides for deposit of the capital to be subscribed by the Imperial Bank as an institution and not by its individual shareholders. This has led the Exchange Banks to ask that another thirty per cent. of the capital should be reserved for the scheduled banks whose head offices are registered in India or the British Empire. If any such preference is conceded there seems to be no reason for making any distinction between the British and the Foreign Banks included in the First Schedule of the Bill.

The basis for this preference therefore requires examination. It has been said that the Imperial Bank deserves some consideration as a sort of compensation for its alleged sacrifice for it is going to be deprived of the greater part of the Government balances. We are further told that the Bank has been compelled to open a large number of new branches which do not pay.

But it may be noted that the Imperial Bank is not going to lose the prestige of being the custodian of Government funds. It will act as the sole agent of the Reserve Bank at all places in British India where there is a branch of the Imperial Bank and in branch of the Reserve Bank. The fact that substantial Government balances will still be kept in the Imperial Bank will give it sufficient prestige in the eyes of the public. How valuable this privilege is may be realised from the fact that some Indian banks were anxious to have Government balances even by depositing adequate amount of Government securities.

During the last war a Bengali Zamindar of some education withdrew all his money from the district bank office and deposited it in the local Co-operative Central Bank on the ground that the latter was a Government institution. If such be the prestige of a co-operative bank the privilege of having Government balances which the Imperial Bank will still enjoy must be a valued one.

It may also be said that a considerable part of the Reserve Bank's balances kept in the Imperial

Bank will be free of interest (see the Second Schedule of the Bill). The restrictions on the activities of the Imperial Bank especially on foreign exchange business are also going to be removed. These are sufficient compensations for its alleged sacrifices.

As to the maintenance of unprofitable branches it is difficult to believe that a considerable number of them is really unremunerative. The chief difficulty of bankers in the mofussil is to get sufficient deposits at a low rate of interest. The Imperial Bank has not to face this difficulty. There is no reason why its branches should remain unremunerative after the first few years of their establishment, unless the administrative charges there are too heavy. We think therefore that the proposed preference to the Imperial Bank in subscribing shares is unjustified. The case for preference to Exchange Banks is weaker still.

The Joint Select Committee of both Houses of the Central Legislature which recently met in Bombay apparently solved this question by advocating a state bank without share capital. The arguments advanced in favour of this scheme are firstly that the Reserve Bank as proposed by the Government will not command public confidence. Secondly the profits earned by the Bank in dealing with Government moneys should go to the State and not to the shareholders. Lastly it is problematical whether a capitalist owned bank would serve the interests of indigenous trade and commerce.

It cannot be denied that the Government management of currency in this country has been on the whole a failure. We doubt whether the control of credit and currency by a State Bank of India would fare better. We fail to see how a directorate independent of Government control can be formed if the State is to be directly responsible for the institution. It is curious that our politicians who were most vocal against state control of currency are now the loudest in praising the virtues of a State Bank involving as it does state control of currency and credit.

The argument that a state-aided bank will not command as much public confidence as a state-

owned bank is not a strong one. The Indian public has full confidence as to the financial solvency of the Imperial Bank and there is no reason why the Reserve Bank will not command the same confidence. The truth appears to lie the other way about. As Sir Henry Strakosch rightly observes, history furnishes abundant proof that the control of central banking institutions is more soundly exercised by private citizens than by Governments. (*Economic Journal* June 1920).

As to the argument that the profits of the bank dealing with Government moneys should go to the State, it may be said that in the Reserve Bank Bill, provision has been made for a very moderate dividend to the shareholders and the balance is to be paid to the State. As interest will have to be paid on the debentures of the proposed state-owned bank, we doubt whether this latter institution would bring more profit to the Government especially when it is remembered that the management of a state-owned institution is apt to be extravagant especially in India.

The question whether a capitalist owned Bank would serve the interests of indigenous trade depends ultimately on the shareholders. If the majority of them is unsympathetic to Indian interest indigenous trade may not get adequate facilities. But there is no ground for this assumption. The real reason why the State Bank is advocated is that Indian publicists are afraid that the Bank may be controlled by European capitalists who it is apprehended have no sympathy for Indian trade and industries. It is difficult to suggest any practicable measure to allay this suspicion except to ask patriotic Indians to invest in the shares of the Reserve Bank although the yield will be low.

To conclude the book before us contains a mass of useful information on Indian currency and prices and its value to the student would be much enhanced by condensation and leaving out of matter not essential to the arguments of the authors.

THE PROBLEM OF POLITICAL REPRESENTATION IN INDIA

By PROFESSOR GURMUKH Nihal Singh

Banars Hindu University

I

POLITICAL prophets of the 18th century had become so much disgusted with the workings of autocracy in its various forms and distance had lent so great a charm to the picture of the Athenian democracy of the Periclean Age that they began to regard democracy as the one panacea for all human

ills. And though the actual working of democracy has not fulfilled the high expectations of its early admirers and has even disappointed some of its sincerest friends it is still regarded by the vast bulk of the people all over the globe as the best form of government.

Democracy is of two kinds of the direct type and of the representative character. Direct

democracy certainly appears more desirable but it is also more difficult of achievement. In fact, it requires a very high standard of development among the people. The people must possess a high sense of civic responsibility, a sufficient knowledge and understanding of local people and local problems and a considerable amount of political education if they are to work the institution of direct democracy successfully. And so far all attempts to introduce it in large countries have proved abortive. Direct democracy may be possible in small city states or countries like Switzerland but it is impracticable in places like America, Russia or India. The Russian experiment is without a shadow of doubt, a complete failure from this point of view. The attempt to introduce direct democracy has actually resulted in the introduction of indirect representation and of unresponsive autocracy at the top. This is inevitable in a large country. When the number of citizens exceeds a few thousand and when the inhabitants are scattered over a large area and cannot all be gathered in a big hall or a square to deliberate and to register their decisions one way or the other, some sort of representation becomes indispensable. It may be mentioned here in parenthesis that initiative and recall cannot solve the complicated problems of today. As pointed out by Professor Laski —

for what is as a rule urgent in the issues they raise is not the simple desirability of affirmative or negative response but the much more complex question of the desirability of a particular solution stated in all its complex statutory terms. The difficulty in fact, which direct government involves is the final difficulty that it is by its nature far too crude an instrument to find room for the nice distinctions inherent in the art of government.

And if a direct and responsible system of representation is not accepted because that will convert direct democracy into indirect democracy—a series of federations has to be arranged as in Russia or in Miss Follet's scheme the result of which is the adoption of indirect election—from the local to the city or district group from the city and district groups to the provincial group from the provincial groups to the national group and in some cases from the national groups to the imperial or international group. The members of the group at the top have really no living connection with the members of the local group at the bottom and thus feel no sense of responsibility to the people at large.

The defects of indirect elections are quite well known in India and may be described in the words of the authors of the Montagu Chelmsford Report. While criticising the system of doubly indirect elections in force under the Morley Minto scheme the authors observe

There is absolutely no connecton between the supposed primary voter and the man who sits as his representative on the legislative council and the vote of this supposed primary voter has no effect upon the proceedings of the legislative council. In such circumstances there can be no responsibility upon and no political education for the people who nominally exercise the vote.

The system of indirect elections was tried in the United States of America for nearly a century and a quarter and was in the end discarded in 1913 as it proved injurious to the local life of the States. It introduced national issues into local politics and vitiated the whole local atmosphere.

For large countries like India then direct democracy is altogether impracticable and resort must be had to representative democracy.

II

In representative democracy attempt is made to create an Assembly which is, so to speak, the nation in miniature. As far as possible all sections of the people and especially all political interests and opinions should be represented in proportion to their strength in the country and in particular care should be taken that minorities are not placed absolutely at the mercy of the majority but are allowed an adequate opportunity of influencing the decisions of the Assembly. Several systems have been devised to give proper representation to minorities but before referring to them, it is necessary to discuss the basis on which representation should proceed. Representation may be on territorial basis or on communal lines or on the group principle or on a mixed basis. One of these has been ruled out by the Western people as inimical to responsible or self government. On the other hand representation on communal basis is regarded by a large number in India as an inevitable and even healthy stage in the development of a non political people. The authors of the Montagu Chelmsford Report demurred strongly to this view. They wrote —

But when we consider what responsible government implies and how it was developed in

one And there is really no controversy on the point. Every one realises that the Assembly will be guided by enlightened opinion of the particular community in matters affecting that community alone And in purely religious and social matters a composite state cannot afford to take the initiative or to have a positive policy of its own except that of perfect neutrality impartiality and toleration

IV

After reading the defects of communal representation which are so clearly and in such a masterly manner described in the Montagu Chelmsford Report one is strongly tempted to ask Was it then to kill the budding spirit of Indian nationality and to give no chance to the development of self governing institutions in the country that Mr Montagu and Lord Chelmsford recognised the principle of communal representation and made it a part and parcel of their scheme of reforms? And it becomes very difficult for one to answer the question in the negative especially in view of the following lines written by them by way of anticipation —

The British Government is often accused of dividing men in order to govern them But if unnecessarily divides them at the very moment when it professes to start them on the road in governing themselves it will find it difficult to meet the charge of being hypocritical or short sighted

In any case one cannot help regretting that the authors of the Report and our guardian the British Parliament were not strong and wise enough to say no to all representations for the recognition or extension of communal representation As in the reasons given by the joint authors for their inconsistency it is not necessary to say much except that it is a case of adding insult to injury With what ingenueness do the joint authors ask

"How can we say to them (the Muhammadans) that we regard the decision of 1909 as mistaken that its retention is incompatible with progress towards responsible government that its reversal will eventually be to their benefit, and for these reasons we have decided to go back on it?"

At any rate let us hope that the authors of the next report on Indian Constitutional Reforms will have the courage to tell the truth to any community that is still shortsighted enough to ask for special representation for itself and that the results of the actual working of communal representation

since 1920 would have made the people of India wise and strong enough to refuse to have anything to do with any scheme of reforms which is based on the evil system of communal representation

Since the point has been raised in the present day controversy on the subject, it may be mentioned in passing that even the authors of the Montford Report did not feel pledged to support the Muslim claim for separate representation in provinces in which the Muhammadans were in a majority They wrote —

But we can see no reason to set up communal representation for Muhammadans in any province where they form the majority of voters.

And to grant them special representation in provinces like Bengal and the Punjab and to ignore the claims of the Hindu Minority therein was not only wrong but very unjust

Envouinism with one is almost always sure to lead to injustice with others

V

In the Western World two principles are fighting for ascendancy in connection with representation The group principle is making strong assaults on the supremacy of territorial representation In India economic groups are still nebulous and unorganised though certain religious social socio economic educational and commercial groups are becoming important and deserve separate representation But still the territorial interests are overwhelmingly great And is still the chief asset of the people The Indian is still very much of a fixture to the soil and is averse to migration Under these circumstances representation must be based very largely on the territorial principle. On the other hand the organised group life must be given its due share of representation And the religious groups as groups, as organised entities should be given representation in the same way as a University or a Chamber of Commerce is represented at present As stated above the legislative assembly should be the nation in miniature and if religious groups exist in the country they should be given proper representation I recognise the necessity of representing the religious point of view in the Indian legislatures at the present time—as so called religion plays a very important part in the life of our people With the modernisation of India religious groups will cease to be

as important as they are to day, then their representation can be reduced or even done away with. But as long as they continue to exist as organised entities and play an important part in the life of the nation they have a right to be represented on the legislatures.

VI

It is thus a combination of territorial and group representation, with the territorial in the ascendance, that seems best suited for India at the present stage of its development and which offers a rational and scientific solution for the communal difficulty which is dominating the situation to day. There is one other point that needs mention in this connection: it is the division of constituencies into urban and rural as has been done in some provinces in India as for instance in the Punjab Representation of Agricultural and Industrial interests as such is perfectly legitimate and a provision has already been made for their representation in the above scheme in connection with group representation. But to divide the neighbouring people, and to link together men totally unknown to each other as has been done in creating the urban and rural constituencies in the Punjab is absolutely unjustifiable. In some cases specially urban representation is reduced to a farce as for instance, in the case of the urban Sikh constituency. How can one person know the needs of voters situated as far apart as Ambala on one side, Rawalpindi on the other and Lyallpur on the third? And what are the points of contact after all between say, the voters of Amritsar and those of Lyallpur town? And how troublesome and expensive an election campaign is bound to be in such a case? And who are after all the representatives sent from the rural constituencies? Are not several of them town dwellers, and some of them even members of that much derided class, the Indian lawyers? And are the money lending Zamindars greater friends of the rural population than some of their own relations working, may be, temporarily in the neighbouring town? Under such circumstances one cannot wonder that a British publicist accused the Punjab Government of gerrymandering.

In any case it is earnestly hoped that when the system of representation is revised in the near future, this unnatural and unfortunate distinction between urban and

rural constituencies—in a country where few towns have any urban life or peculiarly urban interests to protect and where there is little danger of agricultural classes being in a minority—will be removed and each province will be divided into more natural and rational constituencies.

VII

The work of dividing the country into constituencies is a very important difficult and a delicate one and one which must be performed with a due sense of responsibility and honesty. Unfortunately, an electoral system admits of manipulation and a government, if selfishly inclined, may arrange the seats in such a way as to place its opponents in an unfavourable position. This process of manipulation is known by the name of 'gerrymandering'—an expression which originated in America, where this evil was greatly prevalent at one time. On the other hand democratic principles require that the electoral system should be such as to enable the legislative assembly to embody the opinions of the majority and the minority on the great issues of public interest, and to connect the voters in a real and living manner with the government in power.

It is held by several eminent writers on the subject that the electoral areas should be large each returning not one but several members, so that minorities may receive adequate representation. There are some among them who would make the constituency as large as an Indian province or a small country like England so that even a small and scattered minority may act together and poll enough votes to return a member. Large multiple member constituencies have been gaining popularity in recent times in the West. And in order to make them useful for minority representation various methods like those of limited and communal voting, or the two types of proportional representation—have been devised. The one which is favoured most at present is the system of proportional representation of the single transferable vote type.

Opinion is divided among experts as to the merits of proportional representation. Those who favour it stress the importance of giving representation to minorities and making the assembly a nation in miniature in the true sense of the term. Those who oppose it emphasise the necessity of maintaining the

the world we cannot take this view. In the earlier form which it assumed in Europe it appeared only when the territorial principle had vanquished the tribal principle and blood and religion had ceased to assert a rival claim with the State to a citizen's allegiance. We conclude unhesitatingly that the history of self government among the nations who developed it and spread it through the world, is decisively against the admission by the State of any divided allegiance against the State's arranging its members in any way which encourages them to think of themselves primarily as citizens of any smaller unit than itself.

The principle of communal representation was carefully discussed and strongly condemned by Mr Montagu and Lord Chelmsford in their classic report on Indian Constitutional Reforms, and it would not have been necessary to examine it here to day if they had been strong enough to act up to their convictions and had followed the dictates of reason and experience. But the fact that the Reforms of 1919, instead of discarding communal representation greatly extended its application and that one big community in India—the Muslim community—still continues to clamour for it and that it forms a centre of fierce controversy in the country makes a dispassionate consideration of it absolutely essential.

III

The greatest defect of communal representation is which is fatal to the growth of Indian nationality and self governing institutions in the country, is that it makes the people think of their differences and divisions and prevents them from acquiring "the citizen spirit." As pointed out by the Montagu Chelmsford Report and as illustrated by the experience of the past few years and the state of affairs in the country to-day

"Division by creeds and classes means the creation of political camps organised against each other and teaches men to think as partisans and not as citizens and it is difficult to see how the change from this system to national representation is ever to occur.

These are words well worth pondering over! There were not a few among the leaders of the Indian National Congress in 1916 and there are still some leading persons amongst us to day, who hug themselves with the comforting belief that communal representation is a transitory measure in its very nature and that it will shortly give way, in some miraculous fashion, to a national system of representation. Such persons are expecting a crop of mangoes from a field of

thorns, and the words of the joint authors of the Montagu Chelmsford Report ought to prove an eye-opener to them. Communal representation is like a deadly poison which once introduced into the system spreads itself over the whole organism and eats away the vitals of the body. Like the snake it has to be killed as soon as it is born, if allowed to survive, it works havoc, as it has already done in almost all parts of the country. It has killed the delicate and young plant of Hindu Moslem Unity and has created communal tension all over the country. Those persons who were prepared to drink from the same cup are breaking each other's heads and calling each other ugly names. And in a cosmopolitan city like Calcutta we have the spectacle of bloody riots lasting for days at an end and the unholy sight of the burning of temples mosques and Gurdwaras! Communal representation has strengthened and spread the communal mentality. Communal spirit is rising in the country and everywhere one hears of *Tanxim* and *Tablig Sangathan* and *Mahabir Dals*. National organisations are withering away for lack of interest and support, but communal organisations are multiplying and attracting crowds of supporters. One by one the national leaders are succumbing to the intoxication of the communal vaccine and one does not know where the process will stop if things are allowed to drift for long.

Communal representation is, however, not only injurious to the growth of the citizen spirit and the development of self governing institutions, it is really harmful to the progress of the community whose interests it seeks to protect. As pointed out by the authors of the report on Indian Constitutional Reforms—

A minority which is given special representation owing to its weak and backward state is positively encouraged to settle down into a feeling of satisfied security. It is under no inducement to educate and qualify itself to make good the ground which it has lost compared with the stronger majority.

Another defect of communal representation is that under it "the give and take which is the essence of political life is lacking. There is no inducement to the one side to forbear, or to the other to exert itself. The communal system stereotypes existing relations." On the other hand, under a system of common electorates there is chance for the development of good will, toleration towards each other, friendly feel-

ings and relations, regard for each other's wishes, desire to study each other's needs and effort to please each other. There is an opportunity, at any rate, for the growth of the citizen spirit, which as has been shown above, is so essential for the development of self government in the country.

However, there is one fundamental point, which is almost always ignored in controversies on the subject, and to which I wish to draw special attention. Communal mentality has got so tremendous a hold over us that we cannot imagine a sphere where there are no divisions on communal lines. Because differences of religion have been made the basis of social and other distinctions we have taken for granted that they must also be made the basis of political representation. If differences of religion matter so much in other spheres they must matter in politics as well. And drugged with this mentality we have never made any serious effort to find out what exactly are our communal differences in politics. My conviction is formed after careful study—that in politics, in things that matter in politics our differences do not fortunately run on communal lines and it is only our communal mentality that is playing costly tricks on us which has created a sort of mirage before our eyes and which makes us see differences where there are really none.

Let us examine the differences among Indians on important political questions, say on the need and kind of self government on the need for state help to industry and agriculture on the maintenance of law and order, on the desirability of the Indianisation of army and other public services on the questions of tariffs and transport on educational development in the country, on matters secondary and a host of other questions that come up for decision before the Legislative Assembly or a provincial Council. I make bold to assert that on none of these opinions is divided in the country on communal lines. And I cite the pages of the proceedings of the Indian Legislative Council and the Assembly in support of my statement. There are, however two questions which are generally put in a different category—(i) the question of the distribution of leaves and fishes and (ii) the measures dealing with the peculiar problems of a particular community, like the abolition of Sati, the legalising of widow re-marriage,

management of the Gurdwaras, etc. Even in regard to these I submit there is really no communal difficulty.

(i) The question of the services—of the distribution of positions and privileges—is no doubt a ticklish one. Self interest and greed often make persons blind and unreasonable. They can little for self contradictions provided they gain their narrow selfish ends. Those who regard caste distinctions of the type prevalent in South India monstrous inhuman and barbaric, for selfish ends of their own, begin to justify the Class Areas Bill in South Africa. Those who wax eloquent at the injustice of excluding capable Indians from higher positions in the country on grounds of race and colour and clamour for giving equal opportunities to men of all races and shades of colour for selfish purposes of their own begin to advocate the hiring of all posts on communal grounds. When it suits their purposes they make efficiency the basis for constituting the services but when it does not satisfy their greed they give a back place to efficiency and put community in its place. Communal greed has really made us so blind and unreasonable that we care very little for such self contradictions. And we have pushed matters to such ridiculous length that even admissions to schools and colleges are being regulated on communal lines. The zeal displayed by persons like Sir Fazl Hussain in affording educational facilities for their co-religionists is indeed admirable but the methods used are abominable. If one medical college or one public First Grade College is insufficient for the needs of the province to make provision for another one is not only right but noble but to keep out a superior student, simply because he belongs to a particular community, and to make room for an inferior student of another community is, to say the least, unjust. Educational and other opportunities for full development ought to be provided for children and adults of all caste, creed, communities, colours and races, and positions and privileges distributed on the basis of merit and efficiency. Such is the principle found by experience in the various parts of the world to be most just, reasonable and best suited to the interests of country and humanity. It has only to be applied to the case in point—the services question in India—and the whole difficulty disappears at once.

(ii) The other matter is a less difficult

two party system intact and the need of preventing the growth of too many groups in the legislature. And for this purpose they favour the division of the country into small constituencies each returning one member only.

It is not necessary to deal with all the merits and demerits of the system of proportional representation here because the system is in any case, unsuited to Indian conditions of the present day. It is too complex a system to be worked in the present ignorant condition of the country. Even in advanced Western countries it places the voters at the mercy of party organisers and diminishes materially the civic interest of the voters. At any rate for a considerable time to come the Indian voter will not be in a position to understand the complicated nature of the system of proportional representation much less will they be able to use it correctly and independently. On the other hand the system of small single-member constituencies is very well suited to the present conditions of the country. It is simple and easily comprehensible and can even be used by illiterate voters. What I value most in small, single member constituencies is the opportunity of knowing the candidate for election in a genuine way by the voters and that of knowing the real need and wishes of the voters by the candidate. And there is the further chance of keeping

a close and personal relation between the candidate and the voters after the election. It is only by keeping up the close personal relation that representative government can be made truly democratic. If the large size of the constituency makes the maintenance of such close personal relationship impossible—if the member is neither well known to nor very familiar with the needs and wishes of the people—the government of the country ceases to be democratic or according to the wishes of the people. But if along with the opportunity of maintaining a close personal relation the voters are given a restricted right of recall the danger of the representative going against the wishes of the people or that of the assembly getting out of touch with public opinion can be almost altogether eliminated.

VIII

A scientific study of the problem of political representation in India thus leads to the conclusion that the present system of communal electorates with the invidious and unnecessary distinction of urban and rural constituencies should be discarded and a system of small single member, common (non communal), territorial constituencies, tempered with a certain amount of group representation, including that of the organised religious groups be adopted in its place.

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc. in the original contributions and editorials published in this Review or in other papers. Criticising it. As various opinions may reasonably be held on the same subject this section is not meant for the airing of such differences of opinion. As owing to the kindness of our numerous contributors we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor The Modern Review.]

The Pedigree of a Javanese Queen

In the Nalanla copper plate of Devapala (Hirnanla Shastri *Javanica Indica* Vol. XVII pp. 110-7 in plates and N. G. Majumdar *Horographs of the Indera Research Society* No. 1 pp. 131) there occurs the following account (verse 30) concerning the queen of Samaratravira of Java

राजा धनकुलस्य सदाः श्रीरक्षे मेता सुता
नयामुद्रानमुद्रादयधयो तारेन वारादय ।

Thus I formerly translated as: The lady named Tara who was like Tara (Goddess) herself a daughter of the great king Varmasetu of the Soma lineage became the chief Queen of that land of the earth. But I now propose to substitute in the place of the great king Varmasetu of the Soma lineage the following: that great king who was the very dam of the (riverlike) Varman family and belonged to the Soma lineage. In the compound Varmasetu the word 'Varman' which denotes some family bearing this name is evidently conceived as

a powerful stream for whose restraint or preservation a dam would be a great necessity. The king, for whom this epithet has been employed, is thus represented as the main support of the Varman family to which he belonged.

From the above passage it is clear that (1) the father of queen Tara was a king (2) that he belonged to a Varman family; and (3) that he was born in a line known as the 'Somakula'. These three points, as also the fact that the Javanese queen lived about the 9th century A.D. which is the approximate date of Devapala, a contemporary of her son Balaputradeva, are probably sufficient to connect her father with the dynasty ruling over Cambodia in this period. For kings of that dynasty bore the surname 'Varman' and most of them traced their pedigree to Kaundinya and Soma or styled themselves as belonging to the 'Somakula' (H. C. Majumdar, 'Indian Colonisation in the Far East', *Proceedings, Madras Oriental Conference*, 1924, p. 343). One of the greatest kings of this dynasty, Jayavarman II, who ascended the throne in 802 A.D. hailed from Java (Malay Peninsula) and was a Buddhist, at least in the beginning of his reign, (Hindustu kingdoms in Indo-China', *Indian Historical Quarterly*, 1923, pp. 614, 615-16). The passage in question, therefore, very probably refers to the matrimonial relationship existing in the period between the Varman of Cambodia and the Sailendras of the Malay Peninsula. I am not aware whether this suggestion has been already made by any other scholar. In any case I take this opportunity to publish my views in the hope that those who are better acquainted with Far Eastern Archaeology may be able to throw fresh light on this important passage of the Nalanda copper plate.

N. O. MAJUMDAR, M.A.

Media of Instruction in the United Provinces

You have done a piece of useful service in drawing attention, in the current number of your journal, to the hardship caused to non-Hindustani Communities in the United Provinces, by the proposal to insist on Hindi or Urdu as the medium of instruction and examinations in the High Schools with effect from the year 1929. There are many institutions affected adversely by this decision and I enclose a copy of a representation I have sent to the Board of High School and Intermediate Education on behalf of the Bengali-Tola High School, Benares City of which I am President. Nearly 75 p.c. of the pupils of the institution have Bengali as their mother-tongue and in accordance with the new rule, they will be compelled to study and answer examination papers either in Hindi or in Urdu. Owing to the presence of great centres of pilgrimage in the Provinces, like Benares, Prayag, and Ayodhya, a number of non-Hindustani speaking Hindus have settled here and if they cannot have the privilege of having their own mother-tongues recognised as the media of instruction and examination, they can at least be allowed to continue to use as at present English, which they have to learn in any case. The study of additional languages besides the mother-tongue, English and

sometimes also Sanskrit, is not a very educational proposition.

P. SESHADRI

President, Bengali-Tola High School, Benares City.

From

Prof. P. Seshadri, M.A.
President, Committee of Management,
Bengali-Tola High School,
Benares City.

To

The Secretary
Board of High School and Intermediate
Education, United Provinces, Allahabad
No 190

Dated Benares, the 26th April 1926

Sir,

On behalf of the Committee of Management of the Bengali-Tola High School, I have the honour to request the Board to exempt this institution from the operation of the rule making Hindi or Urdu the medium of instruction in all recognised Secondary Schools with effect from 1929.

The Bengali-Tola High School was founded so far back as 1854 to meet the educational requirements of the local Indian community. Ever since that time, the school has scrupulously avoided any kind of exclusiveness and has opened its doors to all irrespective of race and nationality, so that on its rolls boys of all provinces have always found a place. But having regard to the situation and the surroundings of the institution in the City, Bengali pupils have always also formed the majority. In fact at present they constitute 74 p.c. of the total number. The introduction as required by the Regulation of Hindi or Urdu as the medium of instruction in classes IX & X will prove seriously detrimental to the interests of the Bengali pupils and mar the educational progress of the Bengali community here.

Having regard to the special circumstances in which the Bengali-Tola School is placed, I am compelled to request you to allow us to employ English as the medium of instruction in classes IX & X (and also as the medium of examination at the High School Examination). In fact, any other course will render the work of the school impossible.

I have the honour to be

Sir,

Your most obedient Servant,
Sd. P. SESHADRI,

President, Bengali-Tola High School,
Benares City.

Marriage Customs of Kadva Kunbis

An article on Kadva Kunbis and their awkward marriage customs has appeared in the January issue of the *Modern Review* of the current year. It contains some misunderstandings or mistakes. The total population of Kadva Kunbis amounts to about 14 lacs. They are found in Gujarat, Kathiawar, Nimad in Mewar, Jevla in Nasik District, and farming but some of them

are tradesmen artists industrialists and mill owners Up to Samvat 1966 (1910 A D) the date for marriages was announced every ten years from the temple of Goddess Uma at Unza. But after that year the system is being reformed and day by day the system of one day marriages is dying out. In Samvat 1966 one couple was married on a day other than the one declared by the Goddess with the result that the marriage season lasted for 2 months—Vaishakh and Jaistha in that year. Three years thence (i.e. in 1913 A D) one girl was married in Sardhav a village in Kalol Taluka of Kadi Prant in Baroda State. R. B. Govindbhai Hathbhai Desai the then Soba of Kadi Prant (Nayab Divan of Baroda State at present) and the police Superintendent Mr. Rupshankerbhai attended the marriage. After that marriage every year marriages have been taking place in villages as well as in cities. On the last Vasant Panchami two couples of high families of Ahmedabad (who took the leading part in announcing and receiving the date of marriages declared from Unza) were married. In Kathiwar also such marriages have been performed. Thus

marriages are being celebrated on any day of the year. And there seems no possibility that the date for one day marriages will be announced from the temple of Goddess Uma in the ensuing years of Samvat 1986 (1930 A D).

His Highness the Gaikwar of Baroda has appointed a commission to enquire into the Child Marriage Prohibition Act and to readjust it. Many educated members of our community (Kadva Khatris) and certain institutions such as Kadva Patidar Hukarak Mandal have recommended to the commission to make the Act more strict to give such defaulters some physical punishment above fine and to sentence the priest and the persons who partake in the marriage. Also they have recommended that the persons who announce the date from Unza should be punished with rigorous imprisonment. From the above facts one can see that the custom of one day marriages has been removed and marriages take and will take place as in other Hindu communities on dates suitable to both the parties.

Ahmedabad

HIMALAL VASANTDAS MEHTA

GLEANINGS

Why do we Weep?

Weeping is fundamentally an expression of helplessness we are told by Cecil F. Reynolds of Los Angeles writing in *The Journal of Neurology and Psychopathology* (Chicago). Tears were originally

NEWMARKET INFANTS YELL

They "come into the world to weep and not to laugh at the streaks of sunrise

a response to fatigue or irritation, unpairing, one's ability to act. But they are now an elaborate cognitive device developed in the course of a race. He presents this theory in the following terms:

Weeping is primarily egoistic whereas laughing is normally social and altruistic. Infants come into the world to weep or at least with that facial expression and not to laugh at the streaks of sunrise or flickers of a tallow candle. Also normally they yell vociferously. We are not for the moment concerned with the yell but we are deeply interested in the facial expressions which suggest tears. Physiologically the facial expression is adapted to protection, the eyes against irritation and stimulation as well as against increased tension (according to Darwin) and the tears (if and when they make their appearance) to wash away irritants from within the lids and to moisten the cornea. Now in the lower animals, such as the dog, excessive lachrymal secretion is indicative of (1) fatigue especially from prolonged vigilance on behalf of the pack, (2) certain diseased states, (3) foreign matter within the lids. All of these conditions are of lasting from the hunter's viewpoint and also of temporary duration. Especially is fatigue common to all members of the herd at times, and the presence of lachrymation is probably the first indication to the herd that one of their members is on the verge of exhaustion and needs relief and forbearance. Now, what holds good for the dog and wolf pack should also hold good for our anthropoid ancestors, who were also gregarious, aggressive hunters almost certainly carnivorous. It may be remarked too that in yawning even without forcible closure of the eyes tears may be produced at times—a fact which suggests a central origin for the phenomenon and lends some support to the fatigue theory here outlined.

Hence it appears that a function of the nervous system originally intended as a response to physical

cal disorder has gradually evolved into an expression of psychological helplessness

markable intelligence and sympathy his songs have been rewritten for him by celebrated poets in order that they shall be of literary merit.

Literary Digest

Highest Paid Chinese Actor

In the Chinese theater the play is essentially the thing and nothing is on the stage that does not directly contribute. But decoration becomes an essential owing to the national disposition to symbolism and this is a rather curious fact in a country where the stage has no scenery. Their theater is not imitative and therefore a landscape or an interior is created for an audience by suggestion by emotion and it must be confessed of the theater habitue of to-day by drama tradition.

A PROSPECTIVE CELESTIAL VISITOR

Mei Lanfang, one of the highest paid actors in the world, who is reported intending to visit and play in America.

Mei Lanfang, a Chinese young actor is finding favor with a group of literary men and a discerning theater public in Peking. Although his celebrity has developed since the fall of the empire nine years ago, the plays in which he appears and the manner of his acting belong to the Imperial Stage tradition. Mei Lanfang limits himself to about twenty plays and presents each role with re-

'Force' China's Only Way

By force alone can China obtain what is due to her it is now claimed and this is said to prove

IT'S A LONG WAY FROM SHANGHAI TO CHINATOWN NEW YORK

But the Chinese Nationalists in Manhattan and in other sections of this country seem to have the same strong opinions as their fellows in China,

what a failure Western diplomacy has been in China just as it was previously in Japan. Yet by force in China is not necessarily meant military force we are told, but force as exerted through the political and economic boycott and through mob action.

Motoring Two Hundred Miles an Hour

No man ever traveled on the surface of the earth any where near so fast as did Major Segrave on Daytona Beach. His official speed of 203.79 miles an hour beats the previous record by forty-seven miles and his instruments showed that at times he was going at the rate of 211 miles.

V. KHARE

(1859 1924)

By JADUVATH SARKAR

I

VASUDEV Vaman Shastri Khare was born on 5th August, 1858 at the village of Gnhagar, in the Ratnagiri district of Bombay. He belonged to a family of learned but poor and simple Brahman teachers of Sanskrit of the good old type which is now rapidly becoming extinct. Young Vasudev however did not take kindly to the ancestral way of life. Though naturally very intelligent and possessed of a keen memory he disliked regular work and loved to roam about and play with the truant boys of the village. At this time he lost his father and the burden of supporting the entire family fell upon the shoulders of his aged grandfather Mahadev Appa. The young man acquired a good command of his mother tongue read Marathi books extensively and even wrote some poems and dramatic pieces to be staged by the local amateurs on festive occasions.

When reproved by his grandfather young Vasudev used often to stay away from the house for days together and range the surrounding hilly country or lounge about the adjoining beach watching the waves of the Indian Ocean. A small incident now turned his career most opportunely. While playing naughty pranks at the Shimaga festival he was caught with other village urchins and a housewife poured a volley of abuse on his revered grandfather for letting him run wild. This set him thinking and the boy left his village walked eighty miles over the hills to Kolhapur, and set himself though penniless, to learn Sanskrit in that ancient capital. A Brahman student is often given free board and lodging by orthodox Hindu families that can afford it, and Khare eked out his living by composing Marathi verses for which he had a natural genius. After returning home he was married in 1873.

Goaded by the increased want of his family the young husband of fourteen left his village for Satara where he joined the home-school of the famous scholar Anant Acharya Gajendragadkar and devoted himself to Sanskrit studies, earning his bread by

writing for the local Marathi newspaper, the *Maharashtra Mitra*. In three years he mastered Sanskrit grammar, literature and logic. Next he migrated to Poona in search of work and was taken into the New English School recently started. Bal Gangadhar Tilak, one of the founders of the school, became his friend for life and in 1880 secured for Khare the post of Sanskrit teacher in the High School of Miraj.

Vasudev Vaman Shastri Khare

II

It was at Miraj that Khare's life work was done. Here he lived till death serving the school on a monthly salary of Rs 30 which rose to Rs 45 after 32 years of service. One of his former pupils thus writes his impressions about him.

As a teacher his impressive personality and erudition at once commanded the respect of his students. His manner though outwardly strict, was characterised by that milk of human kindness which is found typified in the Village Schoolmaster of Oliver Goldsmith's poem. Ross Collection

tendency to provide each god with a wife for example Indra with Indrani. In the popular non-Aryan cults, which provided the greater part of

the mythology of medieval Hinduism on the other hand goddesses are of great importance even outnumbering the masculine deities. Perhaps this difference is to be associated with the patriarchal character of Aryan the matriarchal character of Dravid culture. We do not know very much in detail about the native goddesses at a very early period except that they included types of beneficent powers of fecundity and prosperity as well as malevolent demons. In the development of theistic and devotional Hinduism all these feminine powers could be and gradually were incorporated into a consistent theological scheme in manifestations of one goddess who is either herself the Supreme Power (Energy) or the power (energy) inherent in a male deity. As Power the goddess (Devi) is called Sakti (Energy); her manifold forms Saktis; and from this word is derived the adjective *sakta* designating the cults of the Great Mother and feminine powers characteristic of Tantric Hinduism. Thus in her own right the Devi is the Absolute in action manifestation and variety Nature in all her multiplicity violence and charm dispensing impartially birth and death illusion and enlightenment. In relation to a particular cosmic deity such as Siva she is in a popular sense his wife and also in specific forms engages in activities on behalf of gods or men and this relation and these activities form the theme of innumerable Pauranic legends.

No form of the goddess is more devotedly worshipped than she who is known as Durga (Inaccessible) Camunda Candika, Candi hatayani and as Kali or Mahakali the Dark one or Great Dark One. This Kali is at the same time the Great Mother lovingly adored and a dread power delighting in death and destruction and even in human sacrifice as Bhavani in the days of *thugi* (thuggee) the patron deity of robbers and murderers.

To Durga is attached one of the best known of Pauranic legends that of the slaying of the Asura (demon) Mahisa whence she is known as Mahisamardini. As such she is often represented both in sculpture and painting in a fierce many armed form engaged in victorious conflict with the demon whose natural form is that of a buffalo but who at the point of death emerges in human form from its severed neck. Of this type the Museum already possesses (Ross Collection) a fine example of late Javanese origin.

In another type she is represented more

is a facially though still armed and many armed stand on upon the severed head which serves her as a pedestal. It is of this type that the Museum has just acquired through the generosity of Dr. Denman W. Ross a magnificent example of seventh century date and South Indian origin.

The sculpture, in the usual dark coarse granitic of the South is in very high relief, it is weathered in parts as though by sand erosion and lacks one arm but it is otherwise well preserved and may well be regarded as the most important example of Indian sculpture in the Museum. The goddess is eight armed and stands as already mentioned on the severed head of the buffalo. The figure is balanced on one hip (French hanch) the other leg being bent at the knee and slightly advanced the body swayed. The lower right (normal) arm originally a separate piece of stone attached by two iron rivets is missing the hand was originally raised probably in the *abhaya hasta* pose (of encouragement to the worshipper) possibly in the *tarjani hasta* pose of threatening the enemy. The remaining arms on the right bear the sword (*khadga*) dart or arrow discus (*chakra*) and trident (*trishula*). The lower left (normal) hand is held gracefully on the hip (*katjaralambita hasta*) the others hold a shield (*kheṭaka*) conch (*saṅkha*) and bow (*Vanus*). Behind each shoulder appears a quiver. The goddess wears a narrow breast band (*sthaṭaṭaṭa*) and a *dhoti* the latter hardly perceptible, a crown (*Varanda nishita*) elaborate, garland and other usual jewelry.

It may seem rather curious that Durga or Mahakali should often as in the present case be represented as carrying the two distinctive weapons of Vishnu (discus and conch) in addition to those of Siva, of whom the trident is especially characteristic, and with whom she is more closely connected. But this is often explained by the story as related in the *Taṇṇa Pirana* where it is stated that when Kalyāṇi came forth to do battle all the great deities lent her their weapons—Siva his trident, Vishnu the discus and conch, Varuna the noose, Agni a dart, Vayu a bow, Surya a javelin and arrows, Kala a sword and shield and other gods various arms and ornaments. It may also be observed that in the *Davimahatmaya* of the *Markandeya Purana* the Supreme Devi is called Mahalakṣmi and all the cosmic deities both male and female are derived from her. In the *Suprabhedagama* the goddess is called the dear younger sister of Vishnu. In any case in the last analysis the relation of Vishnu with Siva becomes very close and it will not be forgotten that a well known conception (*Harihara*) often realized in images, unites in one figure the forms of both.

In South Indian structural Siva temples of various dates the image of Durga standing on the buffalo's head as described above, usually occupies a niche on the outside of the north wall of the main shrine, an example to be seen at the *Pasupati (Siva)* near Tanjore District, of perhaps ninth century date. It is possible, of course, the figures (of which other examples are known) may have accompanied our relief. Other examples of Cola and later date are to be found at *Srinivasam* and *Utharavaram*, and on the outer wall of the well known *Subrahmanya* temple at Tanjore.

Figures of the same type, but older in date and nearer stylistically to ours than are those above

referred to, are met with at *Vamallapuram* thirty miles south of Madras and popularly known as the *Seven Pagodas*, one four armed on the outer back wall of the monolithic *Draupadi Ratha*.

DERA H. 1. (a) SOUTHERN INDIA 8th CENTURY
Ross Collection

another, iconographically identical with our example (except that the pose is symmetrical) in the rock-cut *Tirumala Mandapam*. The Pallava dynasty to which these monuments

are due was one of the most glorious in the history of India and Farther India. Originally vassals of the Andhras in Vengi the Kistna Godavari delta (where the Amaravati stupa was completed at the close of the second century A.D.) they succeeded the former in the third or fourth century. In the sixth century they lost Vengi to the Calukyas but extended their dominions southward to Tanjore with a capital at Conjeevaram (Kancipuram). The greatest rulers of the dynasty were Mahendravarman I (A.D. 600-620) and Narasimhavarman I (620-645) the former one of the greatest figures in Tamil history appears to have introduced into the South the excavated cave temple style (Dalavanur Trichinopoly etc.) To him and to his successor Narasimhavarman succeeded Mamalla (whence the name Mamallapuram City of Mamalla) are due the excavated and monolithic temples and the great rock cut composition of the Descent of the Ganges (Gangavatarana, formerly known as Arjuna's Penance) on the seashore at the Seven Pagodas the structural temples at Conjeevaram and the beautiful Shore Temple at Mamallapuram dating from the early part of the following century. The Pallavas originally Buddhists had already at the beginning of the seventh century become devoted Savas though Buddhism survived in the South well into the Cola period. The Pallavas too in succession to the Andhras and Kalukyas (Indians are still in the Malay Archipelago called Orang Kling, men of Kaluga) were the chief transmitters of Indian institutions and art to Farther India and Indonesia (Sumatra the Land of Gold and Java).

Although representing a fully developed and sophisticated style these Pallava monuments equally significant as historical documents and as art, are the oldest extant remains of Dravidian

art all that preceded them must have been constructed of impermanent materials. It is very easy indeed, to recognize in the lithic forms the reproductions of the features of a fully evolved art of timber and brick construction such as Mahendra varman refers to in the old Kancipuram pillar inscription referring to temples of brick timber metal and mortar and it is noteworthy that Primitive Khmer art, which is very closely related to that of the Andhras Calukyas and Pallavas is almost exclusively one of brick construction. Thus neither in construction nor in sculpture have we to do with anything that can be called primitive, the earliest monuments are classic and establish almost all the main types of Dravidian art as they still survive. From the Pallava period on words the tendency is towards greater and greater elaboration and to a less and less reserved phantasy and because most visitors' experience of Dravidian art is limited to the seventeenth century style of Madurai an impression is current that all Dravidian art is necessarily wild and extravagant. On the contrary the earlier work expressing an intense and militant energy combines with this energy a serenity and tenderness and attains an epic quality that compares favorably even with the exquisite, abundant, and voluptuous but in the last analysis less consistent, Northern art of the Gupta period. And these qualities are to be recognized not only in the art preserved in India proper but in the character of early Farther Indian (Khmer etc.) art at the time when it is nearest in form to its Indian sources. The Museum is fortunate in possessing a magnificent and typical example of the classic phase of the sculpture of the Dravidian South.

(ANANDA COOMARASWAMY in *Museum of Fine Arts Bulletin, Boston*)

OUTLAWING WAR

In our efforts to rid the world of the war curse, outlawry is the only road that really gets anywhere.

Our everlastingly timorous attempts to accomplish something by inches by limiting armaments a little, by trying to make war a little more merciful, and the like is mere futile 'pottering', 'tinkering', 'fiddling' pulling out a few hairs from the tiger's tail or trimming down one or two of his claws. We have got to shoot the tiger. Our LAWYER DOES IT. *Nothing else does or can.*

What could we accomplish in trying to prevent murder or arson if both were legal? In the days of duelling and slavery there was no possibility of stopping those terrible and long standing evils until they were outlawed. The absolutely necessary first step was to make them crimes. Then they soon disappeared. If we would stop war, we must

make it a Crime as we ought to have done long ago. This takes away its legal support makes any nation engaging in it a felon and arrays all the powerful machinery and influences of law of law courts of recognized order and justice and of public opinion, against it. That means death.

Everything else is mere playing with the tiger—trying to tie him with little strings, as if he were a pet lamb which we must not hurt. He laughs snaps the strings whenever he pleases remains exactly the same old insatiable man eater that he has been for ten thousand years and is ready at any moment to spring on the nations from behind any petty national quarrel in the world. Let us shoot him in the only possible way, that of outlawry, before he devours another thirty millions of men, women and children, as in 1911 to 1918—J. T. SUNDHLAND

V. KHARE

(1859-1924)

By JADUNATH SARKAR

I

VASUDEV Vaman Shastri Khare was born on 5th August, 1858, at the village of Gubagar, in the Ratnagiri district of Bombay. He belonged to a family of learned but poor and simple Brahman teachers of Sanskrit of the good old type which is now rapidly becoming extinct. Young Vasudev, however, did not take kindly to the ancestral way of life. Though naturally very intelligent and possessed of a keen memory, he disliked regular work and loved to roam about and play with the truant boys of the village. At this time he lost his father, and the burden of supporting the entire family fell upon the shoulders of his aged grandfather, Mahadev Appa. The young man acquired a good command of his mother tongue, read Marathi books extensively, and even wrote some poems and dramatic pieces to be staged by the local amateurs on festive occasions.

When reproved by his grandfather young Vasudev used often to stay away from the house for days together and range about the surrounding hilly country or lounge about the adjoining beach watching the waves of the Indian Ocean. A small incident now turned his career most opportunely. While playing naughty pranks at the Shimaga festival, he was caught with other village archies and a housewife poured a volley of abuse on his revered grandfather for letting him run wild. This set him thinking, and the boy left his village, walked eighty miles over the hills to Kolhapur, and set himself, though penniless, to learn Sanskrit in that ancient capital. A Brahman student is often given free board and lodging by orthodox Hindu families that can afford it, and Khare eked out his living by composing Marathi verses, for which he had a natural genius. After returning home, he was married in 1873.

Goaded by the increased want of his family, the young husband of fourteen left his village for Satara, where he joined the home-school of the famous scholar Anant Acharya Gajendragadkar and devoted himself to Sanskrit studies, earning his bread by

writing for the local Marathi newspaper, the *Maharashtra Mitra*. In three years he mastered Sanskrit grammar, literature and logic. Next he migrated to Poona in search of work, and was taken into the New English School recently started. Bal Gangadhar Tilak, one of the founders of the school, became his friend for life, and in 1880 secured for Khare the post of Sanskrit teacher in the High School of Miraj.

Vasudev Vaman Shastri Khare

II

It was at Miraj that Khare's life's work was done. Here he lived till death, serving the school on a monthly salary of Rs 30, which rose to Rs 45 after 32 years of service. One of his former pupils thus writes his impressions about him:

As a teacher his impressive personality and erudition at once commanded the respect of his students. His manner though outwardly strict, was characterised by that milk of human kindness which is found typified in the Village School-master of Oliver Goldsmith's poem. The prescribed lesson in Sanskrit or Marathi was supplemented and diversified by his witty remarks. choice

quotations and apt illustrations. He explained the famous poets with a natural zest. Very often the students glowed with enthusiasm caught from him or were convulsed with laughter at his comic sallies. Many of his old pupils are now well placed in life and they retain the highest esteem for their beloved *Shastribhoj* as he was lovingly called.

At the Miraj High School he keenly felt how his ignorance of English placed him on a lower footing than the other teachers. Khare at once set himself in the task of learning this foreign tongue with his characteristic vigour and perseverance. Within one year he picked up so much knowledge of it that the Educational Inspector of Dharwar who had found him entirely innocent of English at his previous annual visit, was surprised to see him using English correctly and freely next year. Khare kept up his English studies and widened his mental outlook by reading a number of works on history and literature in that language.

To the Maratha public he was best known as a poet and dramatist of rare power. He broke away from the conventions of the old school of poets by choosing new themes, such as the ocean, patriotism, &c., and using blank verse. All his poetical works were popular, especially the *Samudra Yashawant*, *Rao Mahalaya* (epic), *Phulka Chutke* (stray poems, 1881-1888)—the second of which is now a text book for the B.A. students of the Bombay University.

Vasudev Vaman Khare's dramas brought him fame and some amount of money. *Gunollarsha* (1880) which brings the great Shivaji on the stage passed through five editions in the author's life-time. After 33 years of silence, he resumed this class of composition in 1913 and produced *Taramantal Chitranachana*, *Krishna Kanchan Shiva Sambhar* (the birth of Shivaji) and *Ugra Mangal* (this last not yet published). In several of these pieces, songs set to various tunes enchant the audience. The public patronage of the dramatist enabled the historian to meet in part the heavy cost of his twelve large volumes of historical records, which have not paid their way.

III

Popular as Khare the dramatist and nationalist poet was and still continues to be, his title to the remembrance and gratitude of posterity is his service to Maratha history. When he first went to Poona as a young

school pandit, he was thrown into the company of Sane and Modak and helped them in editing their historical magazine *Katyotthas Sangraha* at its start. In 1888 he published a life of Nana Fadnis, in which, however, he could not utilise unpublished records. But at Miraj his attention was drawn to the vast and unimpaired collection of old historical documents in the possession of the nobles of the Patwardhan family who had occupied places of great importance in the Maratha State in the Peshwa period. Of this family 13 members had been slain and 16 wounded in the wars of the Marathas, and many others had distinguished themselves in the civil service as well. The letters they wrote from the scene of their operations or the Poona Court, to their masters or to their relatives, form a priceless treasure of the raw materials of Maratha history.

The Patwardhan family is now divided into many branches, having their fiefs in the South Maratha country,—at Miraj (two houses, senior and junior) Kurendwad Tasgaon, Jamkhanda. Their geographical position on the road from Mysore (under British occupation after the fall of Tipu Sultan in 1799)—as well as Bajirao II's foolish hostility to his vassals,—made the Patwardhans court British protection for saving their patrimony. A Patwardhan was in command of the Maratha army that co-operated with the English in the last war with Tipu. (See Moore's *Operations of Little's Detachment* for many interesting details.) The Patwardhans assisted the English in the operations following the treaty of Bassein, as readers of Sir Arthur Wellesley's despatches know. Thus their homes were saved from war and ravage and their records have remained intact.

Napoleon I has truly remarked that in war it is not men that count but *the man*. The same truth was now illustrated in the domain of history. Khare's employment at Miraj and settlement in that town was a divine dispensation to all lovers of Maratha history.

Hero was the work and hero was *the man*.

Khare obtained permission from the Miraj Junior State (and afterwards the Inchalkaraj Chief) to read their papers, and seriously applied himself to the task which was destined to be his life's work. With tireless patience he made his way through these chaotic masses of old papers written in the difficult cursive Modi hand, and picked

out the writings of the makers of Maratha history,—State papers, despatches, reports, private letters and accounts,—letters from the Peshwas or the Patwardhan officials. Khare selected the really valuable documents, transcribed them in Deva nagari for the press chronologically arranged them and wrote historical notes to serve as the connecting tissue and necessary introduction—and then went to publish them. The prospect was at first hopeless. As his old pupil writes

He had so many other obstacles in the way of publishing this material that a man of lesser stuff would have given up the attempt in despair. At that time very few of our people recognised the importance of history much less that of historical letters. The educated men disdained vernacular publications. The author lived at a place without a Printing Press and remote from the world of letters for the sake of his daily bread he had to spend the greater part of the day in drilling dull boys in Sanskrit grammatical forms. Then there was the official opposition to the publication of these papers. He had none to help and few to sympathise with him. Above all money was a factor too significant to be ignored.

Still with the courage and confidence of a religious devotee he began the publication of these select historical documents in June 1897 in a monthly magazine named *Aithasik Lekh Sangraha* or Collection of Historical Letters (printed Kurundwad). After the fourth year, issue in monthly parts was discontinued and only complete volumes of 60 to 600 pages each were issued at intervals of one two and even three years, according to the state of his private income, because the support of the public (and even that of the Patwardhan Chiefs) was extremely slow and meagre. The author had to meet the printers bill for the preceding volumes from his own pocket before sending a fresh volume to the press.

However, the perseverance of this poor school pandit—whose salary never rose above Rs 45 a month—triumphed. Before his death in June 1924 he had completed 12 volumes covering 6843 pages. And after his death his son Lashwant published the 13th volume bringing the collection up to 7320 pages.

The letters begin in 1739 and become

most copious from 1761, the fatal year of Panipat. It was Khare's desire to carry them on to 1802 when Maratha independence ceased in all but the name. In the twelfth volume, the actual publication of which was preceded by his death by a few months he had reached November 1800 and his son has brought the records down to June 1802.

Khare's most striking characteristics were his systematic arrangement, judicious spirit or strong commonsense and terseness in all of which he presents a pleasing contrast to V K Rajwade. His *Lekh Sangraha* will stand as a model for other workers among historical archives and editors of documents. His introductions are most helpful to the reader and admirably concise and free from irrelevant digressions.

He retired from his school in 1913 and lived for eleven years more. But his originally robust constitution was broken by poverty household worries and overwork. On 11th June 1924 he breathed his last, after two years suffering from dysentery. The Poona Itihas Mandal had elected him its President for one year, and a building has been erected at Miraj in his memory.

Among his other works are the *Hari-ramshu Bakhar*, *Ichhal karany*, *Samstha nanchu Itihas*, *Malay*, *un Shahji* and *Adhilar Yoga*. As a man he was truly adorable. His loving pupil writes—

Though for the greater part of his life he was forced to live in poverty what Fortune denied to him was supplied by his innate contentment and simplicity. A self respecting man he would never stoop to abject means to enrich himself. Gifted with high brain power as he was he never shunned hard work. He preferred silent work to platform speeches. His labours at the history of the past did not blind him to the present and he kept himself in touch with current literature and newspapers. He was social in his manners and never was a man more witty and humorous in private talk.

GREATER INDIA REVISITED

By KALIDAS NAG

EASTWARD HO

IT was August, 1924. The Eastern Ocean between Saigon (Indo China) and Singapore, normally trying for tourists, became abnormally exasperating. All the passengers in the small, old-fashioned French mail boat *S S Donat* were keeping pace as it were with the wild dance of the waves. How every one of us got sick of the sea and dreamed, with a pathetic longing, of Land,—we the children of the soil! I was trying to get relief by dipping occasionally into the pages of Frederic Mistral, the Peasant Poet, weaving his grand Earth epic

'Dous le sol jusqu'au tuf a creusé ma charrure'

Our 'earth-hunger' grew in an inordinate measure. Three days and four nights of continuous voyage brought us finally to the grand harbour of inter oceanic commerce, Singapore.

Singha pura, the city of the Lions,—what a magic in the name evoking the memories of millenniums! How Indian "Sea Wolves" and "Sea Lions" have roared here while passing through this gate to the Eastern ocean and have left permanently to this harbour, the legacy of their names in the native dialects of India. The son of king *Singhabahu*, becomes sick of land, he leaves India and plunges into the unknown waters. He lands in an island which he conquers and colonises and becomes known as King *Vijaya of Sinhala* (Ceylon). The first Poet of India the author of the Indian epic *Ramayana*, sings of the curbing of the ocean by Prince Rama and his conquest of Ceylon. Valmiki betrays another preoccupation of the Indians of yore, their dream of the Goldenland, *Suvarnabhumi*, the Indian Chersonese.

"सुवर्णभूमीकदोषम् सुवर्णकर मक्षिदम्"।

Be it Ceylon (Lanka) or Malay or Sumatra or Java, according to various schools of antiquarians, the fact remains undisputed that *Singhapura*—Singapore, is a symbol of that movement towards the sea and of that hunger for the unknown, that make up the

marvellous history of ancient Indian colonisation. This epic of the Indian Vikings, this golden legend of the Indian Eastward Ho! Would it remain unsung and unwritten for ever? Should we never enquire why the legends of the reign of the Emperor of Peace, Dharmasoka,

marvellous history of ancient Indian colonisation. This epic of the Indian Vikings, this golden legend of the Indian Eastward Ho ! Would it remain unsung and unwritten for ever ? Should we never enquire why the legends of the reign of the Emperor of Peace, Dharmasoka,

Society Bulletin No 2 pp 37) how the chapter of commercial expansion was balanced by that unique chapter of cultural colonisation inaugurated by Dharmasoka and continued magnificently by the Prince Monk Gunavarman the painter missionary of hashmir passing through Ceylon to Shō-po (Java or Sumatra) which was thoroughly converted to the faith of Fraternity (Maitri) and how the Chinese pilgrim Fa hien touched Ye-po-ti (Javadvipa) on his way to and from India in the 5th century A D how the great naval empire of Srivijaya (the Sheli-to-she of Chinese writers) with Sumatra as its base wove India, Indo-China and Java into a grand scheme of cultural harmony connecting the Imperial architects of Borobudur with the Palas of Magadh and Bengal and the Cholas of South India lastly how the Hinduised Majapahit empire of Java continued to shape the destinies of the Malay Archipelago down to the very end of the 15th century (1476) claiming the vast expanse from Malay to the Polynesian world as the cultural domain of India, naming it as *Insulinidia*? All these questions together with the dim visions of the far off empires of Champa and Chamboi which I had just left behind on my way to Java, and the shades of the cultural pioneers Kaundinya and Paramartha Amoghavaraja and Dipambara, haunted me while landed in *Singhajura* the gateway to Java

SINGAPORE, THE GREAT EASTERN GATE

But other lions are roaring here while the Hindu lions are almost forgotten save and except in the name which still clings to this cosmopolitan harbour. My claiming descent from my great ancestors Sakya Nagasena Gunavarman etc did not spare me the purgatory of the Passport Office. I had the British visa all right, but I was informed by my friend Dr Parimal Sen of the Tan Tok Sen Hospital who was all attention to me during my stay in Singapore that I had better show my face before the Dutch Consul who was the final arbiter of my destiny. Entering the dingy office in the stuffy steaming atmosphere I felt all my pride as a descendant of the great Hindu pioneers dissipated into vapour. I had to offer all sorts of explanations as to why I was proceeding to Java how long I was going to stay there etc etc. Thanks to my credentials and my previous visit to Holland which earned me some friends amongst the Dutch Orientalists I managed to satisfy the

passport officers, who duly sanctioned my visit to the Queen of the East without paying the 200 guilders or so as *toelatings kapt*, admission fee or deposit money generally exacted as a security against incorrect behaviour. I heaved a sigh of relief when my passport was regularised although I was a bit crestfallen thinking how History with relentless justice has written "barred by limitation on the title deeds of my Hindu ancestors who were really the first to reclaim this part of the world from barbarism

Belles of Malay

in civilisation but they slept for nearly half a millennium (modest when compared with the sleep of their Gods who sleep through aeons) and I their humble descendant, must pay the penalty for that luxury.

The penalty was not very heavy. I had to pay five Singapore dollars for the Dutch visa. Then enquiring about the ticket to Batavia I came to know that return passages from Singapore to Batavia and back would cost me 90 Singapore dollars. The steamers plying in that region belong to *Koninklijke Paketvaart Maatschappij*—a Dutch shipping agency enjoying practical monopoly in that service. To the credit of this company it must be said that the steamers berth arrangements and other comforts are the very best that one can get during one's tour through the Far East. Neither the British Indian Steam Navigation Co (Calcutta Singapore line) nor the shipping lines of French Indo China both of which meet here in Singapore can stand comparison in any way with the beautiful clean well ventilated steamers of the Dutch Company. This contrast appealed to me the more sharply because I had just then had the bitter experience of travel

ling in an antedeluvian French boat coming from Indo China

Before leaving Singapore I visited the nice little museum built in memory of Sir Stamford Raffles who, during the Napoleonic wars, occupied Java for five years (1810-1815), lest that island might fall into the hands of the French. With the fall of Napoleon that fear was dissipated and Java was restored to the Dutch (1815). The British were thinking of establishing a commercial emporium in Achin, north of Sumatra, but Raffles recommended Singapore as the better site and he turned out to be a good prophet. For, thanks to Raffles Singapore is now the very key to the Eastern ocean, commanding its extensive trade relations. Here the Ceylonese are jostling with the Chinese and the Tamil bullock cart drivers are bravely blocking the way of the up-to-date automobiles of the Westerners. Passing through the streets looking at the huge commercial buildings and banks I felt that slow yet mighty undercurrent of Dollars rushing under this superficial civilisation that the West has reared up here. The wealth of the East vaster than what the epic imagination of Milton could have visualised is passing to the Occident through this gigantic Mammon's murt, Singapore.

THE RAFFLES MUSEUM

The only cultural oasis in this desert strewn with dollars is the Raffles Museum. The collection is made with a view to give a general idea of the fauna and flora the geology and ethnography of the Malay Archipelago. I found specimens of dwelling houses and domestic things weapons and implements dress and decorations from the various islands of the Dutch Indies. A Javanese theatre in miniature with the puppet heroes and heroines the special musical instruments the variegated types of masks rich in suggestion and decoration—all gave me a foretaste of Java that was drawing me with an irresistible fascination.

In a corner I found a few things which seemed to me of great interest to the students of Indian culture history. A series of terracotta plaques with Buddhist figures in low relief some containing religious texts in clear old nagari character (as we find on some later Javanese sculptures) testify to the migration of north Indian (possibly Magadha—Bengal) Buddhism along this land bridge of Malay

to Insulinidia. Most of these things have been discovered in a cave of north Malay touching Sum. The great Dutch Indologist Prof. Kern had deciphered some of these documents and had ascribed them to the 9th and 10th century A.D. Another important relic is a mutilated pillar containing fragments of an inscription in old Javanese (Kawi) language. It stood there as a forlorn monument of a submerged civilisation—the once glorious Hindu culture, overwhelmed by the later Islamic and Occidental inundations.

SAILING FOR JAVA

I sailed for Java on the Dutch steamer *Plancaus* in the afternoon. Singapore slowly melted away in the distance. The dull gray sky and waters of the harbour were suddenly transformed with the crimson glow of the setting sun. In that mystic blending of colours I lapsed into an uncanny mood. I seemed to witness the sunset of Gods, *Le Crepuscule des dieux*, with its Wagnerian grandeur, the slow sinking of millions of Gods and heroes of the Australasian and Malay-Polynesian peoples, of the Brahmanical and Buddhist congregations—all disappearing behind the curtain of the Unknown. The ship sailed in the night and innumerable dreams kept rhythm with the palpitation of the stars.

THE ISLANDS OF BANCA AND SUMATRA, THE THEATRE OF THE SRIVJAYA EMPIRE

The next morning we were passing through the Straits of Banca with the great island of Sumatra on one side and the island of Bangka or Banca, on the other. Banca with Sumatra is rich in minerals. Gold, silver, iron ore, lead and amber are found while tin is its chief product. Sumatra, Banca and other islands must have been explored by the early Indian adventurers, for we find very accurate descriptions of the islands in the Ramayana and other texts, "islands strewn with gold and silver." These were the halting stages in the onward march of the Hindus towards Java, Bali and Borneo. When Fortune smiled on every adventure of those intrepid Hindu colonists and Victory crowned them with her laurels, they founded here the great Sumatran empire of *Srivijaya* which for nearly a thousand years maintained its proud title as the sentinel of the Southern seas sweeping these waters of pirates and enforcing peace and fairplay. It was the Hindu kings of the Shailendra Dynasty of Sumatra

Boro-Budur

that reared up that architectural epic Borobudur in Central Java (8th 9th century) The Sanskrit inscription discovered in Kota Kapur in the island of Banca informs us that in 686 A. D. Srivijaya sent an expedition to Java. It was exactly then when the learned Chinese pilgrim Yü-t'ing was studying Indian texts in the Sumatran centres of learning (685-689). The emperors of Srivijaya had relations with the Palas of Bengal the Cholas of South India and the Khmer kings of Cambodia. As late as the 11th century A. D. the great Buddhist reformer of Bengal Dipankara Sriyana (Atisha) went to meet Acharya Chandrakirti in the Suvarnadwipa (Sumatra) the Sumatran schools of study were in close touch with the great Indian University of Nalanda. The power of Srivijaya was eclipsed by the great Javanese empire of Majapahit founded in 1294 by Sri Htjarajasa, which in its turn collapsed before the onrush of Islam in the 15th century (vide Dr Bijanrao Chatterjee's "Java and Sumatra, Greater India Bulletin No 3).

Now this area haunted by great historic

memories looks savage and deserted. The 100,000 population of Banca shows over 50,000 Chinese who are now dominating the whole of the Southern ocean right up to the Malay States. And Sumatra, the proud throne of the Shailendras is covered with dense jungle. The whole day I listened to the sonorous music of desolation from the dark green forests of Sumatra lamenting her past glories under the Hindu emperors of Srivijaya. How much of history is entombed within this sepulchre of greenery! How Nature tries to hide under the cover of her smiling forests the ravages of Time and how Man with an uncanny instinct digs up the skeletons of his ancestral glories!

FROM SINGAPORE TO BATAVIA

Our fine little *Plancius* (6000 tons) floated from Singapore with a splendid weather. The sea was calm and placid like a pond. The *Plancius* crossed the Equator gave us a superb view of Sumatra and Banca and brought us to Tandjong Priok the harbour

of Batavia, in the morning, covering a distance of 532 nautical miles in 40 hours. From the harbour one can reach the city by train or by car in twenty minutes. Some friends who expected me, kindly met me on board the steamer and brought me safely to Weltevreden (well content in Dutch) or the new city. Really it looked a well-contented metropolis with large clean streets, fine parks and sumptuous buildings. Batavia rivals Singapore as an emporium of Asiatic commerce. It is the capital of the Dutch possessions in the East—The *Nederlandsch-Indie* as it is called by the Dutchmen.

Kalpa taru of Hindu Mythology
A Specimen of Indo-Javanese Bas Relief

I had the good fortune to enjoy the hospitality of Mr Corporaal, the Principal of the Training College, Gunung Sari. It is a "new model" school run on co educational lines. Its fame for efficiency, order and peaceful atmosphere has attracted boys and girls from every part of the Dutch Indies. Students from east and west Java, from Bali, from Sumatra and other islands, greeted me

with their variegated native costumes and refined courtesies. At a glance I could discover the wide range of variation in features, in dresses, in gestures—a *tableau vivant* of the picturesque types of Indonesia greeting my eyes. How thankful am I that the Principal and his fellow teachers kindly arranged to keep me in the very heart of this community of Indonesian youths. How much would I have lost (as the tourists in general do) by entering an up to date hotel with its modern comforts!

A MODEL SCHOOL OF BATAVIA

The whole day, my first day in Java, passed away like a dream. The teaching staff, composed of Dutch and Javanese teachers, impressed me with a spirit of rare devotion and idealism. Mr Corporaal struck me as an ideal captain; then Mr. Maatman, Mr Post and other Dutch scholars were splendid lieutenants, with true instincts and sympathy as teachers. The wives of the teachers, were also in active service, some as superintendent of the girls' boarding, some as kitchen queens. I was taken round the whole establishment, not excluding the washing department, for, as Mrs Maatman humorously said, I must be convinced that they observe Dutch cleanliness right through the institution. Really it seemed to me that I had come to a model school the like of which is rarely to be met with in India.

What intensified my joy was the discovery that our Poet Rabindranath had, from a distance, thoroughly captivated the heart of the professors as well as of the pupils. They asked me many things about the Poet and his Shantiniketan. I found here for the first time some of the Dutch translations of his works which, I gathered, were keenly appreciated. The special favourites were *De Leerschool van den Papegaai* (Parrot's Training) *Opiëdingsidealen* (The Crescent Moon) translated by the Javanese writer Noto Soeroto Rabindranath's "The Centre of Indian Culture" (*Het Centrum der Indische Cultuur*), has roused great enthusiasm for India in the heart of many serious minded people.

I was introduced to the Javanese Pandit whose family name was *Shastra wirya*. He taught the Javanese language and literature in the school and he furnished me with valuable information about the present state of scholastic learning in Java along indigenous lines. He lamented like our own Pandits that the traditional method

of study was decaying. I humorously asked if he knew the original significance of his family name *पञ्च रोषः*. He did not know Sanskrit and got a little confused. I complimented him by saying how his name paid a glowing tribute to the Indians, who believed that real strength was not in brute force but that it lay in the stored-up wisdom, the *Shastras* of our ancestors. Mr. Shastravirya was highly flattered and requested me to recite a few slokas from the *Bhagavad Gita*, which I found to be the universal favourite here.

AN INDO-JAVANESE EVENING

So I had the joy of discovering the very first day of my stay in this ancient Indian colony that India still had some place in the heart of the Javanese people. I spent the afternoon describing the Shantiniketan school and the Poet's original method of teaching music and acting. I did not know that I was touching sympathetic chords and that my young Indonesian friends were preparing a most delectable surprise for me that evening. Scouting my weakness for music and drama and noticing my eagerness to know something of the famous Javanese theatre, boys and girls of the school conspired to overwhelm me with a suddenly improvised programme. I began to suspect it late in the afternoon when I found the boys running about, carrying foliage and flowers and other beautiful things towards the central *Pandapa* (*Mandapa*) in a corner of the spacious play ground. Then I was duly informed and taken to witness the performance. The students organised the orchestra (*Gamelan*), the chorus, the dance-drama, everything. They showed inborn taste and talent. In vocal music they did not show much individuality. The cosmopolitan music with imported European tunes, seemed a little queer; but the moment the indigenous orchestra, the *Gamelan*, started playing, all sense of discrepancy vanished and we felt transported to the age of classical Javanese drama. The girls were naturally shy; yet they contributed their quota by singing a few pastoral songs. There is a distinct regional character in their melodies. The Sundanese and the Balinese tunes seemed well differentiated.

Suddenly we were snatched away from our musical musings to vigorous action. The boys of Sumatra possessed the stage. They gave a splendid show of the Soma-

dagger-duels. The most thrilling part came when one of the combatants charged furiously with a dagger while his rival,

A Javanese Mahayana Sculpture

completely unarmed, defended himself with a sureness and rapidity that seemed phenomenal. The Sumatrans enjoy even to-day a reputation for fight. A section of the

Sumatran people, those inhabiting Atchin, in the northwest, maintained their independence down to 1873 when the inevitable war with the Dutch broke out which resulted in the subjugation of the province. But the resistance offered was so strenuous that it cost 80 000 lives and £20 000 000 to the Dutch. It was only in 1908 that these people were completely subjugated. Naturally I found in the tense agile musculature and flaring looks of these Sumatran youths, vestiges of the old fire.

Then followed a comic interlude to relieve the tension. My friends explained how the boys were giving us an oral caricature of current politics through brilliant dialogues in the cultured dialect of Central Java set against the boorish idiom of the unorthodox provinces. I was reminded of a similar *dialectal* duel between the aristocratic Castilians (of Madrid) and the upstart loud tongued Catalans (of Barcelona) which I had witnessed in a modern Spanish comedy while I was in Madrid. The people of Central Java (Sourakarta-Jokjakarta area), consider themselves as the *Aryas* of Java enjoying the monopoly of all refinement and artistic tastes, and their superior airs were excellently rendered to the great joy of the audience.

A MAHABHARATA DANCE

I was convinced that the Javanese were born actors but I did not realise how great they were in *dance* till I witnessed the representation of the *Brata yuddha* (Bharatayuddha) by these amateur dancers of the school. Dancing is as natural to the Javanese as swimming to the swan. I wonder who teaches them the extraordinary expressiveness in rhythmic gestures—dumb yet so much more eloquent than the loud rantings of our

modern theatrical dialogues! The teacher, so far as I could gather, was tradition. So much the more reason for us Indians to enquire how old was that tradition and if it emigrated from India along with those recensions of the great Epics which were taken over to Indonesia by the early Indian colonists.

The episode given to us by the boys was that of the fight between Karna and Ghatotkacha during the fight of Kurukshetra. These boys who seemed so quiet and docile in ordinary life, were transformed with an epic grandeur, the moment they donned their traditional costumes of the Heroic Age. On the one side Ghatotkacha, the *non Aryan* warrior with his wild and uncouth gestures, his violent methods of attack, - an incarnation of brute force, on the other side Karna, the Aryan hero, moving with grace and self-confidence restraining passion, calm and self-possessed, yet quick as lightning, stunning his adversary with one unerring blow—without the least sign of cruelty disfiguring his noble visage—a very picture of chivalry and heroism standing out of the pages of the Mahabharata. The whole interpretation of our Great Epic through rhythm and dance in accompaniment to the highly suggestive Polynesian orchestra, *Gamelan* overwhelmed me with their conviction and verisimilitude. I thanked my Javanese brothers, these boy actors who are keeping up the great tradition of the dance commentary on our Epics. How thankful should we Indians be to our friends of Greater India for this unique contribution to our Mahabharata! Throughout the night—my first night spent in Java—these dance rhythms whirled in my brain and I seemed to live again in the hoary heroic days of the Great Epics.

LETTERS FROM THE EDITOR

^

AT Vienna Rabindranath Tagore, Mr and Mrs Prasanta Chandra Mahalanobis and myself put up at Hotel Imperial. So far as I was concerned, I felt less comfortable in this hotel than in any other in Europe. Some of my requirements were attended

to rather tardily. The charges, too, were rather high.

I have already said that on the way to Vienna from Prague, Rabindranath felt indisposed. On reaching Vienna it was found that he had fever. Professor Dr.

Weenebach, the leading physician of the city, was called in. He at once cancelled the Poet's lecturing engagements in Vienna for the time being and strongly advised him not to visit Poland and Russia in his weak state of health. So the visit to Russia was definitely given up. When he was at Berlin an invitation had come from Russia to him and his party, eight persons in all, including myself, to visit and tour in Russia, which was accepted. Passports had been obtained for the purpose from the British Consulate at Prague. As the Poet had to omit Russia from his tour programme, I, too, had to forego the advantage of seeing that most interesting country. I ought to add that, even if the Poet had not fallen ill, my own illness, which followed in the course of a few days, would have prevented me from continuing my travels.

Dr. Weenebach is not a mere physician. He is a man of wide culture, as his conversation showed. He is a good conversationalist. In fact, he used to spend so much time in talk with the Poet that if one did not know that he was a physician having no most extensive practice, one would take him to be a man who did not know what to do with his abundant leisure. He is verging on seventy but looks younger. He confessed that he had been successful in his profession but said he would have liked to be a poet, to have the vision of the good, the true and the beautiful. He added that his own desire had been to some extent realised in the person of a son of his who was an artist and sculptor. He has prepared a bust of myself; the doctor told us, adding humorously, "Even my wife says it is good!" When the conversation turned on the fame and pecuniary rewards of poets, Rabindranath said, "Poets should not have two rewards for one achievement." "I am sorry I do not remember his exact words. But if I am not mistaken, I understood him at the time to mean that a poet's 'vision' being in itself a sufficient blessing and reward, he need not feel dissatisfied if he had no fame or pecuniary reward. Similar dicta, though falling from Rabindranath's lips only as casual remarks in the course of ordinary conversation, impressed Dr. Weenebach very much, leading him to dwell on the Poet's power of saying things of 'tremendous significance' in the course of ordinary conversation.

One day Dr. Weenebach gave the Poet

a comparatively big dose of some strong medicine, and expected that it would weaken him. But to his surprise, he found the next day that, though the medicine had produced its desired effect, it had not weakened him at all. So he thought the Poet's physique to be exceptionally strong. This gladdened us all.

I wanted to consult this eminent medical authority to get cured of my night sweat. He told me not to go to his clinic, as there was a long waiting list of patients there. If my name were put down at the bottom of the list, I might he said leave Vienna before my turn came and if my name were interpolated somewhere near the top, the other people would get angry! So he promised to examine me at the hotel some day. And this he did and prescribed some pills, though he could not find out the cause of my illness. He asked me many questions two of which were, "Have you any worries?" and "Are you homesick?" He said my internal organs were perfectly sound and advised me to return home early. If I wanted to remain longer in Europe, I should in his opinion spend the time in the south of France or in some other region where the climate was mild. I said I had friends in Geneva not in the south of France. So he agreed to my going back to Geneva.

For an aural defect I consulted Dr. Neumann who is the greatest throat, ear and nose specialist in Vienna. On the first day, when he had done what he had to do for my right ear, he suddenly thrust a lozenge into my mouth! I at first thought, was it part of the treatment? But when immediately afterwards he did the same to Mr. Prasanna Mahalanobis, who had taken me to his clinic, I understood it was perhaps meant to console me for the trouble (!) he had given me! I was amused to learn afterwards from Rabindranath that when he went to the doctor's clinic for treatment, he, too was consoled (!) like a child in the same manner.

There are in Vienna 38 clinics for ear, nose and throat troubles. We heard this from Dr. Neumann when he came to our hotel to see Rabindranath at his request. When the Poet told him how he had in youth injured his vocal organs by excessive strain, the doctor said he had a class for teaching 'voice production' or 'logopedy' as he called it and if Mr. Mahalanobis would go there for a few days, he might learn the method and tell the poet what to

do, —that would help him to avoid injuring his vocal organs in future. So one morning Mr Mahalanobis and myself went to Dr Neumann's clinic, where one of his assistants was treating patients. There was however, no lopedey class that day. But we found some very interesting cases there. One elderly man of about 50 had to have his vocal organs removed some time ago owing to some disease. Artificial organs were substituted for these and he was being taught to speak with the help of these organs. He had begun with uttering single syllables, and at the time of our visit was able to utter six syllables at a stretch, and then gasped. His vernacular was German, but he knew English also. He spoke a few words to us in English. Dr Neumann's assistant told us that in course of time this patient would be able to utter comparatively longer sentences. Another very interesting case was that of a family of five boys all of whom could not pronounce the *r* sound, but made a nasal sound instead. The eldest boy was about 10 the youngest about 2. Their father had this defect, but had got cured before the birth of the eldest boy. So the defect, we were told, was not imitative in origin but hereditary. The doctor made the boys speak through a rubber pipe and got records on pieces of smoked paper wrapped round a revolving cylinder. He would apply the remedy after finding out the cause of the defect. I had some conversation with him on the coaction between the *r* and *n* sounds in the course of which I told him that *l* and *r* were interchangeable in many languages and dialects, as well as *l* and *n* and that in our Sanskrit alphabets one *n* the celestial (*anuradha*) had a sound which was partly akin to *r* through an intermediate hard sound of *d* (३). He was much interested in all this. Of the five brothers the youngest refused to speak through the tube. The doctor took him in his arms and coaxed him, but he refused to be obliging. From the dress of the mother and the two children it was plain that the family was very poor. But in Austria there is no caste and no "untouchability" of the kind which we have in India, and so it was quite natural for the doctor to be affectionate and kind to a poor infant who had been brought to him for free treatment. Another case was that of a young man who was quite healthy in other respects but who naturally spoke in a high pitched voice. He was being gradually

cured of this defect. The last case we saw was that of a young woman who also was very healthy but naturally spoke in a husky voice. She also was being gradually cured. I mention these cases to show that in Europe people do not resign themselves to fate but try to find remedies for what we in India consider incurable or irremediable.

It was 10 Vienna for the first time in Europe that I saw in the streets and public gardens children who were comparatively anaemic and thin, though even they were healthier than the generality of Indian children. In Vienna, too, for the first time in Europe I found beggars in the streets. They all had cylindrical tin boxes with a slot at the top and with a piece of paper attached to the side describing the charitable object for which money was wanted. It is possible that some at least of these men and women were making collections for charitable objects. One collector of small donations for an institution for the blind, a Catholic priest, came to our hotel also. A waiter bore testimony to his bona fides.

Among the countries in Europe through which I passed, Austria seems to have suffered most from the world war. It has been dismembered and is at present a small state. But signs of its former greatness and magnificence linger in Vienna. In fact, of all the towns I have seen in Europe Vienna seemed to me the most beautiful, Paris not excepted. Mr. Mahalanobis had seen it before, and so he showed me round Ring Strasse, the principal public thoroughfare with its three roads for motor and other vehicular traffic and four footpaths as magnificent. The two central footpaths are bordered by avenues of trees and the trees are encircled by beds of flowers. The lamp posts in Ring Strasse are decorated with flowers growing and blooming high up from the ground in wire (?) baskets attached to them. The palaces of Vienna are now used as museums art galleries, etc. The grounds of the old Imperial palace where the Emperor Franz Josef, the last monarch of the Hapsburg line, lived, had always been open to the public even when the emperors lived there. That showed a wise and friendly attitude to the people in this respect. The new palace adjoining the old one which was built for the Crown Prince and which was larger, more comfortable and more splendid, was never occupied by any member

of the royal family, for, before it could be completed, the great world war broke out. I went inside only one of the palaces—the Belvedere. With its terraced gardens, fountains and small artificial lakes and the large paintings hung on the walls of its numerous rooms and halls it looks grand even in its present untenanted condition.

The art galleries, I was told, have been denuded of some of the best paintings as the result of Austria's defeat in the war. Still, what remain make them worth a visit. The buildings in which the works of art are housed are very beautiful. Their interior showed of what costly materials they were built. The parliament house has an imposing frontage. I have no mind to describe one by one all the edifices I saw nor did I see all of them. But I must refer here to the University. It provides for studies in all faculties. Medical education here, I was told, was particularly excellent. I calculated when I was at Vienna that an Indian student could get education there by spending Rs 120 to Rs 150 per month. There is only one difficulty—that of language. But German can be learnt in a few months. I have always thought that some of our students should go to the best continental universities. This has now become imperative and a point of honour with us, owing to the outbreak of colourphobia in an almost epidemic form in Edinburgh. During my onward voyage to Europe, a senior I.M.S. officer who was a fellow traveller on board the *Pilsna* told me that he was going to Vienna for study in order to specialize in diseases of the ear, nose and throat. I inferred therefrom that Vienna was probably the best centre of education for that kind of specialization. What I saw there in the very large buildings in which the choicest were situated confirmed my impression. One Sunday morning Mr and Mrs. Mahalanobis and myself went out to see some of the best cathedrals. As none of us knew German, we had no mind to listen to the divine services, we wanted only to see the exterior and interior of the buildings, observe how the services were conducted and listen to the music. What we saw was certainly impressive. But we found that in every one of these places of worship where the worshippers were Roman Catholics, the attendance was very poor.

One evening we four Bengalis in the Imperial Hotel fell to talking of the early days of the anti-partition agitation in Bengal.

It was a fascinating story which Rabindranath told of those days of unparalleled enthusiasm. I was then in Allahabad and could not therefore take part in the movement before April 1903, when I came back to Bengal. At the time when we were engaged in conversation it did not strike any of us that it was the 30th of April and 16th of October, the *Rakhi bandhan* day on which our thoughts had accidentally reverted to the first stage of the anti-partition movement, it struck me some days afterwards.

One day a young man came from Hungary to the hotel to invite the Poet on behalf of the citizens of Budapest to visit that city and lecture there. Dr Wenkebach did not allow him to see Rabindranath but told him himself that the Poet's health was such that nothing definite could be said. In Vienna itself the cancellation of the Poet's first engagement, for which Dr Wenkebach took the entire responsibility of his own accord, caused keen and widespread disappointment. The Poet was able to lecture there subsequently and also to visit Budapest, where, I learnt at Geneva he received an ovation oriental in its warmth and magnificence. The Hungarians, being of Asiatic extraction, claimed him as their own.

The time came at length for me to return to Geneva. I left Vienna one day at about 7 in the evening and reached Geneva the next day after 9 o'clock at night. Mr Mahalanobis came to see me off at Vienna station and gave the conductor of the train five shillings from me to give me a cup of cocoa in the train next morning and some mineral water. He did so but when at Zurich at midday I had to leave the Vienna train and board another, he told me that those five shillings were his tip and that I owed him three shillings for the cup of cocoa and one small bottle of mineral water. I gave him what he wanted, not feeling disposed to haggle with that specimen of humanity.

I have already said that I reached Zurich at midday. Very early in the morning the same day I had seen for the first time in my life snow falling. In the dim light of dawn I saw that the hill sides were white. When it became clearer, I found that the branches of the pine trees also looked white. It then occurred to me that it might have snowed during the night. But as it was only the latter part of October, I could not be quite sure that it really had. But when the train stopped at a station named St. Anton am Arlberg,

taken as a specimen of the educated Chinese. His pronunciation was such that it was difficult to make out what he said. But perhaps there are people in China whose knowledge of the history of India is like his. At one of the intermediate ports, on the African coast, a Bombay Musalman trader came on board with carpets, &c. I enjoyed a talk with him in Urdu for some minutes. I learnt from him that he had left home 12 years ago and was not inclined to visit India again. "I have neither father nor mother in India," said he. "I have married here, and have had children. There is British rule there, too, in India. Where is happiness to be found on earth? That was the gist of what he said in Urdu."

At long last, I arrived at Colombo. It was still quite dark when I got up from bed in the small hours of the morning of the 23rd November and saw the rows of lights in Colombo harbour at some distance. At the suggestion of Mr Mahalanobis, I had written to Mr Sinnatambay of H. M. Customs at Colombo to kindly meet me on board. He did so as soon as it was possible, for which I thanked him. There was no delay or trouble at the Customs office. I found Mr Manindrabhushan Gupta, art teacher, Ananda College, waiting for me there. As arranged by him I was taken to the residence of Mr Bhupendranath Basu of the Spinning and Weaving Mills. With the utmost cordiality he and Mrs Basu did everything possible to make me comfortable. I felt quite at home with them though I had not known even their names before we met. When I left Colombo after three days stay with them and their two dear little babies it was with a sad feeling as if I was leaving behind those whom I had known and loved all their lives.

The train from Colombo goes as far as Talai Mannar station. Passengers to India then cross over to Dhanuskodi in a steamer. The customs inspection on this steamer was very vexatious and inquisitorial.

The railway train stood on Dhanuskodi pier full in the sun for a long time. The

place was sandy and very hot. I felt very thirsty. But though I repeatedly asked the men at the restaurant car to give me some lemonade and ice, they simply promised but never brought me any to my carriage. Were it not for the kindness and courtesy of a pandit of the Rameswaram temple, who had come to take pilgrims to the temple, I should have had to go without any drink for hours. His name is Motiram. He brought to me an aerated waters man, who served me all along the journey to Madras. Even the first class carriages in the train to Madras are quite ramshackle, the jolting is terrible. For hours the train passes through a sandy region. So the passengers dross, bedies, luggage and even their nostrils, throats, lungs and stomach get dusty. One had to pull up the window panes. But then the compartments became very hot in spite of the fans. This was in the last week of November. I do not know how it is like in summer. I have forgotten to say that though I had reserved my berth from Colombo through Messrs. Thomas Cook and Son and paid for a telegram to Dhanuskodi station which I knew had reached it in time, the railway guard or some such officer was quite indifferent to enquiries as to where my berth was. He said he did not know. The customs inspection on the steamer, conducted by Indian officials, the guards indifference, the restaurant car men's inattention to my needs—all told me plainly that I had indeed come back to my motherland, an outsider there. It was through the courtesy of a lower railway official that I got a berth. At Madras Mr Bankim Chandra Ray, Engineer, kindly came to the train with rice *dal* vegetable curries, sweets, etc. I felt very grateful to him. I halted for a day at Madras with Mr H. Bose, who is related to me. He and his family were very kind to me. I reached Calcutta on the 30th November last.

I beg my readers to excuse me for inflicting on them these rambling letters which contain many trifling details which are probably of no interest to them.

OUR STUDENTS' INTERESTS

THIS is the season when the University examination results are declared in almost all provinces of India and there is much sighing, wailing and breaking of hearts. A study of the 'popular' news papers on the subject might make even a cynic laugh, were it not for the fact that a tragic element is mingled with the thing. Many students and even guardians, in their ignorance, take the utterances of the daily papers—especially their favourite one as Gospel truth. The tactics of these academic agitators is curiously alike everywhere: first a massacre of the innocents (this is the hackneyed phrase for the occasion) is recklessly predicted or even asserted dishonestly in defiance of truth after the publication of the results; the entire blame for the failure is thrown upon the University. The questions were too long, or too stiff the examiners were a set of butchers, or the Syndics were heartless outsiders without any interest in the colleges—these are the favourite allegations. In addition, variety was added to the tale this year by a malicious attack upon Prof. Jadunath Sarkar, the first Indian *teacher-Vice-chancellor* in the history of the Calcutta University, because in this his first year the Matriculation pass percentage fell by 3 (from 57 in 1926 to 54 in 1927) though in the time of his predecessor Sir Ewart Greaves of hallowed memory and the "students' true friend," the Matriculation percentage had been brought down from 71.5 to 57—a drop of 14.5 per cent. in one year.

This personal issue was probably designed to blind the Bengal public to the real inwardness of our student problem. That problem is independent of personality and province. It is a question of general all India concern. Why do our boys fail in examinations in such large numbers?

It must be obvious that our affiliating universities only examine or test candidates who have been taught by quite a different agency, namely, the schools and colleges, not one of which is financed or conducted by the university. The quality of the teaching in these institutions must decisively influence the

result of the examination, unless the examination is to be reduced to a mockery.

And the quality of the teaching depends entirely upon the teachers' pay, social standing and leanness for their work. Nothing can alter this law of Nature, though a University, if it is so ill advised, can cook the figures that it publishes as "success" in its examinations.

In Bengal, the lot of the High School teachers has been growing worse year by year. They are underpaid, overworked, driven to seek out their scanty salaries (usually Rs. 25 to 35) by sweating as private tutors, and are browbeaten by Management Committees' or private proprietors of schools. As the result of the fondness of school managers to appoint only the "lowest bidder" as a teacher, Maculay's remark about England a century ago has been verified here, and the only qualification of a schoolmaster is that he is unfit for any other profession" (Speech in the House of Commons).

Even where competent teachers have been secured, they are sometimes irregularly paid or underpaid. Unless the guardians of our boys set themselves to reform this state of things, how can they expect better results? If we sow tares, we cannot reap wheat. The majority of our college lecturers and demonstrators are hardly better off, their pay is better—slightly better, but their wants are greater, and their status is as low, their tenure as insecure as that of the school masters.

The evil is aggravated by the vicious practice that has crept into many of our educational institutions of cheapening expenditure and attracting pupils to the utmost, regardless of all other considerations. Class promotions are given and boys sent up for the University examinations without any testing of their fitness. In many places no "test-examination" is held, and in several it is a sham,—every student who can pay his fees is sent up for the examinations. The worst offenders in this matter are some large institutions with unmanageable roll strength and a very easily manageable conscience. They do not weed out the unfit before sending

saw snow actually falling on the fmg black coats of the railway men Then I had no more doubts It was through an Alpine region that I had been passing

As usual the train from Vienna was artificially heated When it stopped at Zurich and after half an hour or so started towards its destination leaving me in a through carriage to be picked up by a train going to Geneva I remained in that carriage in the midst of the large wind swept railway yard for more than an hour Not being connected now with any source of heat, it soon became intensely cold After spending so many hours in a heated carriage to remain for more than an hour in such a cold one was not good When I reached Geneva it was raining, and my carriage was near that part of the platform over which there was no shed So in alighting from the carriage and going to my hotel which was near by, I got wet This added to the intense cold at Zurich, was perhaps the reason why I fell ill soon after my arrival at Geneva

I had influenza with double pneumonia The hotel where I was was the same in which I had put up during my first visit to Geneva During my illness the hotel people were very kind and obliging My esteemed friends Dr and Mrs R K Das did all that was necessary for my speedy recovery They called in a good doctor and engaged a nurse to remain in the hotel throughout the day and night But the nurse could not have done much for me without the help of Mrs Das who during the entire period of my illness remained in the hotel day and night with the nurse in a room adjoining mine This adjacent room was the hotel proprietor's own room, which Mrs Das prevailed upon him to vacate If my daughters had been at Geneva with me they could not have done more for me than Mrs Das did Such was her unremitting care that when she went downstairs the hotel people would ask 'How is your father?' They must have thought that one could do so much only for one's father or some such loved and honoured relative

Rabindranath Tagore enquired of the hotel proprietor by telegraph from Vienna how I was Mr Rathindranath Tagore from Berlin and Mr Prasanta Mahalanobis from Vienna made similar enquiries and helped me in other ways I am grateful to them all for their kindness When I was convalescent the good doctor advised me to sail home by

the first available steamer He is a French Swiss, and can speak a little English When I recovered, he was good enough to say in his own interesting English, Your heart [he meant the bodily organ] is too young for your age, and also, 'You have recovered wonderfully quickly' His fee considering his knowledge and skill and the cost of living at Geneva, was quite moderate It was only ten Swiss francs per visit, equivalent to about Rs 58

I engaged a berth by telegraph in the Messageries Maritimes steamer *Amazon*,

The Editor on the deck of the *Amazon*

which was to sail from Marseilles to Colombo on the 5th of November, 1926 As I was then too weak to travel alone by railway, Mr Satyendra Chandra Ghosh who was carrying on researches in plant physiology at Geneva University for a doctorate, was good enough to accompany me to Marseilles. In the train I met Mr B C Sen, I C S who was returning with Mrs Sen, after travelling in Europe for months to take up his duties as Commissioner of Orissa. We knew one another by name, though we had never met and conversed before. As they were also going down to Marseilles to sail by another steamer we had a long conversation in the train on various topics of the day including last year's riots in Calcutta

and other places in Bengal. As he nitted his position, Mr Sen spoke with reserve. Mrs Sen, eldest daughter of the late Sir K G Oupia, spoke in a way which showed that she had the high spirit of a true daughter of East Bengal.

We arrived at Marseilles after nightfall on the 11th November. As several steamers belonging to different lines were to sail the next day, the hotels were rather full. Mr Guha telephoned to several from the railway station with no encouraging response. At length we decided to go to Hotel Bristol, of which an omnibus was waiting at the station with a canvasser. Mr and Mrs Sen went to a different hotel, where they had engaged rooms by telegraph from Geneva.

Next day I went on board the steamer with Mr Guha. As I do not know French and only a few employees of the *Amazone* know English, Mr Guha's knowledge of French was of great use. Just before the ship steamed off from the harbour, Mr Guha photographed me from the jetty. I had telegraphed from Geneva for a single berth first-class cabin but had been given an upper berth in a three berth cabin. They had given me the upper berth in it in spite of the fact that a lower berth was vacant. However, on speaking to an officer, I was allowed to occupy this lower berth so long as it remained unoccupied. So throughout the voyage whenever the vessel neared some port, I was anxious lest some one should come on board to occupy this lower berth. If I had been in my usual state of health an upper berth would not have much mattered. But as I was weak, it would have been risky to have to get up to and come down from the upper berth many times during 24 hours. This would have been necessary because though the cabin was a first-class one there was not a single chair in it. One could take rest only on the bunk. The other arrangements of the ship too, were far from being up to date. Only a limited quantity of water for washing was given in a bucket. There were no hot and cold water pipes and taps in the cabins. One might ring any number of times without the water coming. I rang one day in the afternoon many times for a cup of tea. The waiter came at length and gave me a cup of cold tea telling me at the same time in French and with his fingers that it was 5 o'clock, and if I wanted tea on any other day I must take it at 4. It was not my habit to take tea or any thing else in

the afternoon. I took it only on that one day, and was served with unusual politeness indeed. The French are said to be very polite. I do not doubt it. But in the ship *Amazone* there was no superfluity of that commodity. The parser, or controller, as they call him, of the ship was entirely wanting in politeness. Nobody seemed in the least anxious for the comfort of the passengers. At least, that was my experience. I must here say that my fellow passenger in the cabin, a French military officer, was very polite. He knows only one English word, finish. He told me by gestures, when it was time to go to the dining saloon, when to sleep etc. As there was no other Indian passenger in the first class, and as a third class Indian passenger named Mr Balsara was rudely told by the purser on the second day of the voyage not to come to me, I was practically companionless throughout the voyage and I felt lonely and miserable most probably because of my physical weakness. I constantly prayed for solace and strength and for faith in God's presence with me. On the 16th of November after nightfall when it was very dark I seemed to feel His presence.

The only respect in which the arrangements of the *Amazone* appeared to me superior to those of some other lines which I know of was that there was not the least trace of colour distinction in it. The passengers all sat at table for their meals without any distinction of race, creed, complexion or nationality.

There was a Japanese passenger on board whose ways were very amusing. He officiously introduced himself to the French speaking passengers who formed the majority both men and women and to the few English passengers also, and would hold long conversations with them. But, though on some days he sat next to me on the same bench on the deck for a long time, he did not speak to me. This snobbishness of his and his superior airs were quite amusing. But I also thought, why should people seek to cultivate the acquaintance of an inhabitant of an enslaved country? A funny little Chinese passenger came up to me one day and solemnly assured me that up to 133 years ago India was a dependency of China and had only since then become a British dependency. He should not of course be

taken as a specimen of the educated Chinese. His pronounciation was such that it was difficult to make out what he said. But perhaps there are people in China whose knowledge of the history of India is like his. At one of the intermediate ports, on the African coast, a Bombay Minsalman trader came on board with carpets, &c. I enjoyed a talk with him in Urdu for some minutes. I learnt from him that he had left home 12 years ago and was not inclined to visit India again. I have neither father nor mother in India," said he. "I have married here, and have had children. There is British rule there too, in India. Where is happiness to be found on earth?" That was the gist of what he said in Urdu.

At long last, I arrived at Colombo. It was still quite dark when I got up from bed in the small hours of the morning of the 23rd November and saw the rows of lights in Colombo harbour at some distance. At the suggestion of Mr Mahalanobis I had written to Mr Sinnatambay of H. M. Customs at Colombo to kindly meet me on board. He did so as soon as it was possible, for which I thanked him. There was no delay or trouble at the Customs office. I found Mr Manindrabhinsban Gupta, art teacher, Anaada College, waiting for me there. As arranged by him I was taken to the residence of Mr Bhapendranath Basu of the Spinning and Weaving Mills. With the utmost cordiality he and Mrs Basu did everything possible to make me comfortable. I felt quite at home with them though I had not known even their names before we met. When I left Colombo after three days' stay with them and their two dear little babies, it was with a sad feeling as if I was leaving behind those whom I had known and loved all their lives.

The train from Colombo goes as far as Talai Mannar station. Passengers to India then cross over to Dhanuskodi in a steamer. The customs inspection on this steamer was very vexatious and inquisitorial.

The railway train stood on Dhannskodi pier full in the sun for a long time. The

place was sandy and very hot. I felt very thirsty. But though I repeatedly asked the men at the restaurant car to give me some lemonade and ice, they simply promised but never brought me any to my carriage. Were it not for the kindness and courtesy of a panda of the Rameswaram temple, who had come to take pilgrims to the temple, I should have had to go without any drink for hours. His name is Motiram. He brought to me an aerated waters man, who served me all along the journey to Madras. Even the first class carriages in the train to Madras are quite ramshackle, the jolting is terrible. For hours the train passes through a sandy region. So the passengers' dress bodies, luggage and even their nostrils, throats, lungs and stomachs get dusty! One had to pull up the window panes. But then the compartments became very hot in spite of the fans. This was in the last week of November. I do not know how it is like in summer. I have forgotten to say that though I had reserved my berth from Colombo through Messrs. Thomas Cook and Son and paid for a telegram to Dhanuskodi station, which I knew had reached it in time, the railway guard or some such officer was quite indifferent to enquiries as to where my berth was. He said he did not know. The customs inspection on the steamer, conducted by Indian officials, the guard's indifference, the restaurant car men's inattention to my needs—all told me plainly that I had indeed come back to my motherland as an uplander there. It was through the courtesy of a lower railway official that I got a berth. At Madura Mr Baalim Chandra Ray, Engineer, kindly came to the train with rice, dal, vegetable curries, sweets etc. I felt very grateful to him. I halted for a day at Madras with Mr H. Bose, who is related to me. He and his family were very kind to me. I reached Calcutta on the 30th November last.

I beg my readers to excuse me for inflicting on them these rambling letters, which contain many trifling details which are probably of no interest to them.

OUR STUDENTS' INTERESTS

THIS is the season when the University examination results are declared in almost all provinces of India, and there is much sighing, wailing and breaking of hearts. A study of the 'popular' newspapers on the subject might make even a cynic laugh, were it not for the fact that a tragic element is mingled with the thing. Many students and even guardians, in their ignorance, take the utterances of the daily papers—especially their favourite one, as Gospel truth. The tactics of these academic agitators is curiously alike everywhere: first a massacre of the innocents (this is the hackneyed phrase for the occasion) is recklessly predicted or even asserted dishonestly in defiance of truth; after the publication of the results the entire blame for the failure is thrown upon the University. The question, were too long, or too stiff, the examiners were a set of butchers, or the Syndics were heartless outsiders without any interest in the colleges,—these are the favourite allegations. In addition, variety was added to the tale this year by a malicious attack upon Prof. Jannath Sarkar, the first Indian *teacher-Vice-chancellor* in the history of the Calcutta University, because in this his first year the Matriculation pass percentage fell by 3 (from 57 in 1926 to 54 in 1927) though in the time of his predecessor Sir Ewart Greaves of hallowed memory and the "students' true friend," the Matriculation percentage had been brought down from 71.5 to 57—a drop of 14.5 per cent in one year.

This personal issue was probably designed to blind the Bengal public to the real inwardness of our student problem. That problem is independent of personality and province. It is a question of general all India concern. Why do our boys fail in examinations in such large numbers?

It must be obvious that our affiliating universities only examine or test candidates who have been taught by quite a different agency, namely, the schools and colleges, not one of which is financed or conducted by the university. The quality of the teaching in these institutions must decisively influence the

result of the examination, unless the examination is to be reduced to a mockery.

And the quality of the teaching depends entirely upon the teachers' pay, social standing and keenness for their work. Nothing can alter this law of Nature, though a University, if it is so ill advised, can cook the figures that it publishes as "success in its examinations."

In Bengal, the lot of the High School teachers has been growing worse year by year. They are underpaid, overworked, driven to seek out their scanty salaries (usually Rs 25 to 35) by sweating as private tutors, and are browbeaten by "Management Committees" or private proprietors of schools. As the result of the fondness of school-managers to appoint only the 'lowest bidder' as a teacher, Macaulay's remark about England a century ago has been verified here, and the only qualification of a schoolmaster is that he is unfit for any other profession" (Speech in the House of Commons).

Even where competent teachers have been secured, they are sometimes irregularly paid or underpaid. Unless the guardians of our boys set themselves to reform this state of things, how can they expect better results? If we sow tares, we cannot reap wheat. The majority of our college lecturers and demonstrators are hardly better off, their pay is better—slightly better, but their wants are greater, and their status is as low, their tenure as insecure as that of the school masters.

The evil is aggravated by the vicious practice that has crept into many of our educational institutions of cheapening expenditure and attracting pupils to the utmost, regardless of all other considerations. Class promotions are given and boys sent up for the University examinations without any testing of their fitness. In many places no "test-examination" is held, and in several it is a sham,—every student who can pay his fees is sent up for the examinations. The worst offenders in this matter are some large institutions with unmanageable roll strength and a very easily manageable conscience. They do not weed out the unfit before sending

up candidates for the university. Nothing can be more harmful to the true interests of our boys than this policy. It keeps the student in a fool's paradise year after year, and leaves him rude awakening, when it is too late, to the axe of the university examiner. It is so convenient all the anger of the disappointed student or his father is directed against the University, while the mercenary school or college continues to pile up fees from the deluded students as abundantly as before.

If a boy is told his special defect very early in his school course, he can try to improve himself by doing extra work in that subject (or book) and his people can keep a special watch on him by periodically marking his progress. Reform is easy at the initial stage, before the boy's particular defect has been hardened into incurability by years of neglect and ignorance of the defect. But if, on the other hand he is promoted to a higher class as a matter of course the opportunity of early reform is lost and the incentive to greater exertion is never kindled. Youth has a wonderful capacity for expansion and self reform if only we can make an appeal to it in the proper time and way and guide its efforts. Our mercenary schools and colleges do their best to kill this capacity because they keep our boys in the dark about their own merits and demerits and never rouse them to superior exertions on a definite line under the teacher's eyes. Is educational improvement possible if college exercises are not made a reality?

In scientific subjects, practical work is scamped or even avoided in several institutions. For example Botany is taught without microscopes. How can boys taught (?) in such money-piling shops pass even the Intermediate Examination in Science?

The worst enemies of our student population are the political leaders who have been shrewdly exploiting the noble patriotism of our young men by turning them by the thousand

into unpaid servants for their personal glorification or ambition. We have noticed that for several months before the Council elections of 1926 and the Municipal elections early in 1927, in every ward of Calcutta the students' brigade was drilled, organised and put under requisition by designing political candidates of one particular party. They canvassed for the leader, they organised his meetings, they packed every public gathering in order to shout down his rivals, they distributed his pamphlets, they swelled his street processions. Then, on the election day, early in the morning the boys' brigades were let loose on the town,—they took the voters to the poll, they crowded round the polling stations all the day, shouting, fighting for the voters, hurrahing 'Jai Jai' and at the close of the voting they led their chiefs' victorious procession through the streets making night hideous. When did these blind tools of ambitious and unscrupulous politicians get any time to prepare for their examinations?

The popular literature, cinema and stage of the day teach that self-indulgence—the gratification of our animal impulses—is the highest expression of manhood and the mark of true freedom. Youth fed on such stuff is incapable of any earnest effort or mental discipline—the two *sine qua non* of success in student life as recognised in ancient India as well as in the Universities of today. The inevitable result is what we see before our eyes. No jugglery by a University can make it otherwise.

These are the facts known to every observant Indian. Let the guardians of our students know who the real enemies of our boys are however much they might camouflage their designs under a plethora of words ending in *-ism* and a stage drapery of 'below 40 counts' homespun. The disease that is eating into the vitals of our youth is there. Dare we apply the remedy—or even propose it?

INDIAN PERIODICALS

Some Indians and European Women

Madame Agnes Smedley tells us in the course of an article on 'Indians in Europe' contributed to *Welfare*—

Many Indians returned from Europe (I do not mean just England) after years of study here, as

well as many who have not even seen Europe seem to have one idea which they continually perpetrate upon the Indian people through their letters to the press and through articles and private speech. It is that all European women are immoral. Some add to this the statement that European women are butterflies. And I know of one Indian woman who paid a flying visit

to Europe with her husband, who met rudely moral professional women, but who returned to India and wrote the same old story—"European women are immoral." Then I once met a Muslim missionary who, after a month in Germany, said to me, "All European women are prostitutes."

She records other similar false slanders of European women in general, and observes:—

I can think of a number of Indians who have studied in Europe who have known other than women of loose characters. There is a group connected with the National Muslim University of Delhi. There are men from Madras and from the State of Hyderabad. There are some from Bengal. They have come into the same city and same environment as other Indians—but they seem to have chosen different kinds of women as their friends, than did so many others who poison the Indian public with their accumulated wisdom from Europe.

If loose men come to Europe looking for 'loose women' they will find them. If there were but me in all Europe, they would find her. But that is no reflection upon Europe and none upon the woman—it is a reflection upon the man to whom this is the goal of seeking.

Bertrand Russell on China

In reviewing a new edition of Bertrand Russell's book on 'The Problem of China' Rev. Dr N Macnicol writes in *The National Christian Council Review*—

Mr Russell believes he tells us, that all politics are inspired by a gnawing devil. It is not surprising to these circumstances that the politics of Great Britain of America, and of Japan in China come under his unqualified condemnation. America having more than any other nation taken China under her tutelage comes especially—not so much on account of her crimes as on account of her virtues—under his lash. His point of view is regard to China is as the Western or Westernised peoples may be indicated by what he says of America's attitude. The Chinese have a civilization and a national temperament in many ways superior to those of white men. A few Europeans ultimately discover this but Americans never do. They remain always missionaries, not of Christianity though they often think that is what they are preaching but of Americanism. What is Americanism? 'Clean living clean thinking and clean.' I think an American would reply 'If the American influence prevailed it would no doubt, by means of hygiene save the lives of many Chinamen but would at the same time make them not worth saving. It cannot therefore be regarded as wholly and absolutely satisfactory' (p. 221).

These are unjust words. It may be added—for America's comfort—that Mr Russell gives pre-eminence in evidencing to Great Britain. The interest of the passage quoted is in the suggestion that it gives us that Western lands are in grave danger of being messengers—even in the case of the Christian missionary—of a very diluted Christianity a religion that may be more the product, of our own inherited dispositions and

instincts and prejudices than of the mind of Christ. This is what in Mr Russell's book gives one to think, and the book is worth reading by us all if it does so. Can we give India and China Christ without giving these lands the wrapping of civilisation within which the West has through the centuries enwrapped its message?

Sankara and the Purification of Temples

Mr T. L. Vaswani says in *The Kalpa*—

Of Sri Sankara I thought this morning and I said with a heart-ache—O that Sankara were reincarnated in these days to save Hinduism and make it a living power in our national life—make it world dynamic.

For Hinduism lies wounded today in the house of its own priests. Many of the Hindu temples in Sind has fallen into the hands of drunkards and debauchees. Who will turn them out and bring back the Lord? Who will release the *mandus* from the Dark Powers and bring back the White Ones? The little town of Old Sukkur, where I wrote these words has set a noble example by starting a movement for the Reform of Mandirs. The watchword of the movement is—

Purify the Temples! Today Old Sukkur is engaged in a holy struggle to rescue a temple from the hands of a band who has usurped it to enhance of the Panchayat's decision and public opinion. Old Sukkur is fighting a noble fight for public morality and Hindu Dharma.

Mahatma Gandhi on Sister Nivedita

Commenting on the passage in *Young India* where Sister Nivedita is spoken of as a 'volatile person' and 'the splendour that surrounded her' is referred to, the *Vedanta Kesari* observes—

The above remarks give a very false idea of the illustrious Sister—and do great wrong to her memory. We do not question the sincerity with which Mahatma Gandhi gives expression to his thoughts. But for the sake of Truth we must point out that he has got an altogether wrong impression of the great soul that lived and died for the cause of India. Mahatma Gandhi saw very little of the real Sister Nivedita. And it is no wonder that insufficient knowledge that is always 'dangerous' would create a great misunderstanding.

Mahatma Gandhi evidently saw the Sister at the American Consulate in Chowringhee where she was temporarily staying as the guest of some of her American friends who came to visit India about the time he met her. Neither the mansion nor the splendour with which he was taken aback were Nivedita's. Her usual mansion was a small old house in a lane in a humble quarter of Northern Calcutta, where, to quote the words of an English friend, she preferred an ascetic life to the comforts and luxuries of her Western home. And the splendour that used to surround her usually at the small girls' school con-

ducted by her came as a surprise to many of her visitors. Thus describes one of her lady students in a short sketch on the Sister:—The school house is far from being healthy or well ventilated. The rooms are small and the roof very low. During the summer (when the school remains closed) the rooms get so hot that half an hour's stay there will make the head ache. There was no fan hung in Nivedita's room. She always used to bring a hand fan about her. The small compartment allotted to her she decorated according to her own tastes. Most of the day she used to stay in that room buried in her work.

At the express wish of her Master Swami Vivekananda Nivedita dedicated herself to the cause of the school. She used to spend some time in teaching the girls. But the major portion of her time had to be devoted to literary work undertaken for maintaining the school. Sometimes she had to pass through great economic difficulties. On all such occasions the first thing she used to do was to cut short her very limited personal expenses. She would deny herself even the bare necessities of life. And as the result of this hardship she often suffered greatly in health. To those who knew and could appreciate the story of her self imposed and life-long penance, Nivedita the Brahmacharin, was the very personification of steadfastness and one-pointed devotion. To call her a volatile person is not only to misunderstand her but also to dishonour her blessed memory. We do not know who is really responsible for this unhappy expression. But whoever he may be Mahatma Gandhi's experiment with Truth in the case of the illustrious Sister has not been a success. It would have been a complete failure had he not been able in spite of his disagreement with her to notice and admire her overflowing love for Hinduism.

It is unfortunate that Mahatma Gandhi did not find any meeting point in his conversation with Sister Nivedita. But the idea that there could be no point of contact between them is preposterous. The Sister was a many-sided genius. She was a great spiritual idealist, a passionate votary of her adopted motherland, a vehement champion of Indian culture, a writer of rare literary abilities, an enthusiastic interpreter of Indian life and art, a most forceful leader of the national movement, a humble worker for the cause of Indian manhood, all in one. And many of the greatest sons of India found points of agreement with her and could be counted as her life-long friends.

But like the greatest men and women of the world she had her own ways of making friends. A complex personality that she was, she combined a hero's will with the spotless purity, kindly heart and self-sacrificing love of a perfect Brahmacharin. Even in the midst of her sweetness and tenderness there was something in her character that might be termed militant. And rarely could one be included among her friends without facing an encounter with her. No wonder that after being the object of her sudden onslaught, some felt a sort of disagreement with her. In the words of one of her friends—Mr A J F Blair, Friendship with Nivedita was not a slow growth. It sprang to maturity at the first meeting or not at all, and I do not know that any one was ever privileged to know the depths of her womanly kindness without first being subjected to that moral test.

But to one once admitted to her friendship she would open her heart and give herself without any reserve. Often after an apparent disagreement there would come a great understanding, and one could feel that no under-hearted woman ever breathed. It was not given to all as has been the case with Mahatma Gandhi to fully discover the inexhaustible mine of gold that Sister Nivedita really was. Why it was so seems to be beyond the comprehension of ordinary mortals.

Nepal Government Railways

We read in *Indian and Eastern Engineer*

The Nepal Government Railways have just appointed as their Chief Mechanical Engineer Mr H St John Sanderson who holds the same post for the whole of Messrs Martin & Co's Light Railways. Mr Sanderson has just completed various appointments of railway staff for the Nepal Government and leaves India for home by the Anchor, Brookbank S S Elysia from Bombay on June 5th.

It would have been better if the Nepal Government had been able to employ an entirely Indian staff for its railways. Perhaps Nepali young men are in training for all posts.

Hindu Pantheism

The editor of *Prabuddha Bharata* observes

Prof Radhakrishnan's defence of what is generally understood as Hindu pantheism is very fine. He is quite right in saying that the Hindu thought takes care to emphasise the transcendent character of the Supreme. He bears the world but is by no means lost in it. Hindu thought admits that the immanence of God is a fact admitting of various degrees. While there is nothing which is not lit by God, God is more fully revealed in the organic than in the inorganic, etc. We think there is another aspect of the question. Even if we do not admit differences in Divine revelation in various things, ethical endeavour does not become impossible. The Hindu outlook that everything is divine is the greatest incentive to moral perfection. For the Hindu does not forget that a thing as it appears is not Divine but that behind its name and form there abides the perfect Brahman and that by transcending the limitations of his own self he gains the light of wisdom to perceive Brahman. This view makes man constantly struggle to break the bonds of ignorance and desire that bind him to the lower vision and to rise every moment to the height of superior spiritual perception. It is not necessary to recognise degrees in the Divine manifestation in things.

State versus Company Management of Railways

We read in Mr S C Ghose's article on the above subject in *The Calcutta Review*—

It may be useful to mention here that in the contract of the newly formed company which has taken over the German State Railways and is managing them as commercial concerns the following clause appears —

"The rights of supervision and control of the operation and tariffs of the Railways reserved to the Government by the present law shall never be so exercised by the Government as to prevent the Company earning a net revenue adequate to secure the regular payment of interest and sinking fund on the bonds and the preference shares."

A railway or railways of a country are the arteries of trade and industries and the flow of traffic through them should be even and continuous and this can only be done if the management is efficient and the rates and fares are reasonable. Interference and control of Legislature over Railways of a country are essential so long as they are in public interests and do not be the hands of the managers too tightly whether the railways are company owned or state-owned. But when the railways are state-owned the Legislature in a democratic country is naturally responsible both for efficiency in management and for their finances and they are again required to see that the safety of the public and the charges to the public are fair and reasonable. If these can be attained by state railways which are already there it is well and good but if company ownership of a purely Indian character can at any time develop and purchase the Indian State Railways and give efficient service and cheap rates and fares it would be still better because it would make the Indian people more enterprising and self-reliant so long as such companies do not ask for any subsidy from the Government either in the shape of free gift of land or a guarantee of minimum dividend.

The Olympic Games

The Volunteer writes —

THE OLYMPIC GAMES—Next year in July the Olympic games will be held in Amsterdam fifty-five nations of the world are to take part in these international trials of progress in physical culture, games, athletics and sports. Germany is making great preparations to make a success at the game. The German Government has sanctioned £7000 this year and £10000 will be received next year. She is trying to put in a large number of candidates—340—as against about 250 to 300 from Great Britain. This is the first time after the War that Germany enters the field. The Stadium at Amsterdam which has already cost £40000 will be completed by January 1928. Separate Hockey and football grounds and a splendid Cycle Track are also nearing completion.

In 1932 the Olympic games are to be held at Los Angeles, California in the United States of America. One million Dollars already have been spent for the building of the stadium. The American Representative to the International Olympic Conference has offered to provide a ship to carry competitors from Europe to the place of the Games.

AFRICAN GAMES—Africa is also taking up organised physical culture in a remarkable manner.

African Games are to be held in 1929 in Alexandria for the first time. King Foad who is at the head of the scheme has subscribed £3000 and the City of Alexandria £10000. If this first attempt succeeds the African Games will soon come to the level of the Olympic Games.

How much money the India Government would wonder is spending for such purposes or for the matter of that even for physical culture in the country itself?

'Gospel Ethics

Mr Mahesh Chandra Ghosh writes in the *Vedic Vagdan* —

Here and there we find good moral precepts in the Gospels. But the general level of Biblical morality is very low. Morality is valued not for its intrinsic worth but for what is supposed to be its commercial success. Gospel morality is an affair of rewards and punishments.

He illustrates this remark by quoting passages from the Gospels, and observes —

Thus we see that reward occupies a prominent place in the Gospel morality.

Avoidance of punishment is according to Jesus a correlative spring of action. We are to do good or not to do evil for otherwise we shall be punished.

He gives examples in support of his remark, and says —

It is useless multiplying examples. The whole of the Bible is permeated by this idea of reward and punishment. What is called *Dharma* in Indian Philosophy is also a religion of reward and punishment but it is meant only for those who are on a lower level and have no higher ideal. *Dharma* leads to heaven but not to *Moksha* (salvation). Those who have risen to a higher level have condemned it in unequivocal terms. In the Mahabharata we find the following verse —

*Dharma vanayalohajaghanvo dharmayavadnam
Na dharmaphalamapnoti yo dharmam dogdhum*

"Among the professors of virtue the vilest and most despicable is he who is a virtue-merchant. Results of virtue will never accrue to him who wishes to make the virtue cow *Vana Jarva* XXXI 5"

He quotes other similar sayings from the Hindu scriptures and concludes

Biblical morality is purely mercantile. It is a system of Barter—an *Art of trafficking* (emphatically Euthyphro 14) to borrow the fine phrase of Plato who uses it to condemn the religion of give and take. This sort of morality has however merits of its own. All men are not on the same level of spirituality and the highest form of morality will never satisfy those who are on a lower level or have been trained to remain so. These men will appreciate the precepts of Jesus.

Nature and Men in Kashmir

Mr Margaret E Cousins writes in *Stridharma*

It is a strange thing that in this land where Nature wears her loveliest robes embroidered with the most lavish flowers foliage and fruit, under her ermine cape—her snow clad mountain range—with her jewels of sparkling waters and ruby sunsets and diamond headed lotus leaves and the vivid blue enamel of her skies and their reflections in her many waters yet the dress of the haman being is nowhere in India so ugly. Dull greys and browns and dirty whites are the colours of which unwieldy, wide circumferenced knee-long kurtas are made, and worn alike by men and women. The sleeves are very wide and turned up at the end like those of kimonos, but there is not a line of beauty in the costume. I found the excuse for its ugly ungraceful width in the fact that during the many cold months they carry under this garment a small wicker basket in which there is an earthenware bowl filled with smouldering charcoal. In such wise do they keep themselves warm. Occasionally one sees a brilliant coloured turban on a man but a discoloured cloth covers the head of the woman back from the forehead as a kind of shawl. A large amount of very skilful filagree work in silver is worn as jewellery. If only the women dressed more beautifully their handsome features would show to great advantage but the men think that their beauty then would be too much of a temptation to other men so a dirty appearance is a sign of modesty and chastity and a clean rosy complexion is in this land amongst the uneducated people at any rate a sign of vanity and looseness of character. Of course, the educated women are entirely different and have more sensible ideas. It is from a similar idea that the Japanese married woman makes herself hideous by blackening her teeth and the Tibetan wife by putting disfiguring black smears under her eyes and on her forehead and women in India were veiled. It is a strange struggle between beauty and man's jealous sense of possession of it.

Flies

We learn from *The Oriental Watchman and Herald of Health*—

Flies literally swarm in some houses covering every article of food by day and blackening the walls by night. In other homes comparatively few are found, for the tidy housekeeper takes every precaution to keep them out. She is especially careful not to leave food of any kind standing around uncovered and drives the flies out of doors at least once every day.

Flies are not only an annoyance to the occupants of a house but they are filthy creatures. They come directly from the filth of decaying animal and vegetable matter and without faking the pains to wipe their feet settle upon or in our food and drink or upon our hands, faces and clothing, depositing everywhere their filthy fly spools and the germs of disease. Their feet being covered with long short, sticky hairs, are especially well

adapted for collecting and carrying filth and disease germs.

Recent investigation, have established without a doubt the fact that flies carry many germs of typhoid fever, tuberculosis, cholera infantum, dysentery and probably many other diseases.

It has been estimated that every fly carries about with him most of the time, in or upon his body, about a quarter of a million bacilli and scatters these wherever he goes. The germs are not only carried on the feet, legs and other portions of the body but they occur also in large numbers in the fly specks which are so freely deposited by flies. As many as five thousand tubercular germs have been found in a single fly speck.

Flies should be kept out of houses and from all places where foods are prepared, sold or served. This can be done by tightly screening all doors and windows and by driving out or killing the few that may gain entrance when the screen doors are opened. Bakeries especially should be kept free from flies and all foods exposed for sale should be properly screened. Great care must be exercised to protect the baby and its food and the nipple of its nursing bottle from infection by flies. Do not buy foods of any kind that are to be eaten without thorough cooking if they are being run over by flies, for in so doing one is running too great a risk.

Flies may be killed by means of sticky fly paper, fly traps and various liquid poisons. Of the latter probably the best is a solution of formalin water, which may be prepared by adding a teaspoonful of the 40 per cent solution of formaldehyde to one-half glass of water. This liquid should be exposed in saucers or plates where the flies will have free access to it, but must be placed beyond reach of children as it is poisonous. A fly poison not dangerous to human life may be prepared by dissolving one dram of potassium bichromate in two ounces of water and adding a little sugar. This should be distributed about the house in shallow dishes. Flies may be stupefied by burning pyrethrum powder in the room and may then be swept up and burned.

To prevent the breeding of flies all accumulation of decomposing animal or vegetable matter, especially stable manure should be removed from the premises daily or at least two or three times a week. If this cannot be done the manure or other decomposing substances should be sprinkled with chloride of lime or a solution of sulphate of iron two pounds to one gallon of water.

Outside privy vaults should be made flyproof. This would necessitate only a slight expense, but the benefit to be derived from such a course would be very great. Garbage cans should be frequently cleaned and sprinkled with lime or a solution of formaldehyde or other disinfectant and should be kept tightly covered.

'The Soul of Education'

Mr Bernard Houghton opines in *Current Thought*—

The bureaucratic schools turn out a double sort. India's schools will aim at brave and intelligent men and women. The ideal of the

bureaucracy is the well-drilled soldier the ideal of India should be the citizen of Greece. The one education crushes represses, the other inspires the mind and thrills the soul. Difficulties there will surely be at the commencement. We do not expect miracles. Many teachers who have grown up to manhood and womanhood under a despotic government will fail to grasp the new spirit the new angle of vision. Many will cling to authoritative methods and think in chains.

But the changed mental atmosphere of India will achieve much. Everywhere there will be a sense of freedom of buoyancy as of prisoners long held behind walls who taste the free air and see again the green spaces of the open country. Everywhere patriotic men and women will be seeking fresh outlets for their energies and adopting new ideas. Swaraj is no mere reform of political machinery; it means the renaissance of India. It touches the imagination which reforms leave cold. In such an atmosphere men and women shaking off the fetters they have worn so long realise themselves they achieve wonders. We may be sure that teachers too will look out on the world of education with very different eyes to those with which under the bureaucracy they now see it.

In education as in government, it is policy which counts. The spirit with which a government or a department is worked affects all from the highest to the lowest. Proclaim military ideals as now and from university to village dogma and discipline raise their ugly heads. Set up the standard of freedom and of fellowship and everywhere men walk an inch taller and with a bolder step. This new spirit in education the inspectors will bring home to every teacher they will explain the new methods and hearten on the beginners. Progress may be a little slow at first, but then the teachers will labour not to find favour in the eyes of a foreign master but to build up a new India, for the greatness and glory of their own dear Motherland.

Indian Architecture

The third instalment of the late Mr Manomohan Ganguly's notes on Indian Architecture, published in *The Journal of the Bihar and Orissa Research Society* concludes thus —

A pessimist as a philosopher a Hindu is not so as an artist. As an artist he spiritualises matter and thus embodies architectural idealism in different forms which never oppress the imagination by its solid reality.

The architecture of the ancient Hindus is pervaded by a spirit of earnestness and self sacrifice the temple being as it were an offering a gift to the deity the Islam enshrined in the sanctum and as such we notice a profusion of decoration condemned by Fergusson as over-decorated richness a remark exemplifying the deadening effect of the idealisation of the principle of utility for architecture is not construction the heavens art but is according to Rustom the art which so disposes and adorns the edifices raised

by man for whatsoever use that the sight of these may contribute to his mental health power and pleasure.

The structures of the present day illustrate a violation of this fundamental canon of architecture by allowing the constructive element to override the aesthetic side indicating the nomess of the decorative principle forming a vital part of ancient and medieval Indian Architecture.

However hampered by tradition or fettered by conventionality ancient Indian Architecture may be we find evident and clear indications stamping it with originality vigour and genius. Ours of the present day appears as one badly imitated unsuited to the climate and the traditions of the past.

'Do Justice to Inferior Servants'

We read in the *General Letter* issued by the Bombay Presidency Postal and R M S Association

One often wonders what the Postal administration thinks about the status of inferior servants of the Department. The inferior servant is not entitled to any kind of leave with pay. At the most he is paid the difference between the pay earned by him and the wages paid to his substitute. Then in the matter of pension, the situation is still more grotesque. The pension of Rs 4 was settled in the old bygone days when the Runner was paid Rs 6 and the other inferior servant scarcely anything more than Rs 7 or Rs 8 at the most. Between those old times and now there is a difference of 500% in the cost of living. The minimum pay of a Runner is Rs 14 and the Post Office inferior servant gets an average of Rs 16 in the lowest scale. In Cities like Bombay the lowest monthly wages is Rs 28-8-0 where a pension of Rs 6 is simply ridiculous. But even this pension cannot be had after 30 years of service the man must complete the age of 60. Thus a man who enters service say at the age of 15 must work for full 45 years before he can earn a grand pension of Rs 6 a month. Perhaps the Department considers an inferior servant as no better than a day labourer. The Department forgets that the lowest of the inferior servants requires a greater intelligence, a greater precision and far greater honesty and character to withstand temptation such as is placed before him every minute of his life in the Post Office. The conditions in the Post Office are peculiarly hard and exacting and require a far greater consideration at the hands of the Department than has been yet given to these unfortunate servants.

Suspicion of Japan

Mr St Nihal Singh writes in *The Indian Review*

Japan is both hated and feared by patrons of the West with possessions in the East. She is

hated because by managing to keep herself out of the foreign clutches and making herself self-sufficient in arts and crafts she has raised the pulse of all the dependent people of the Orient and placed before them patterns upon which they can model their national life. She is feared because she is credited with the ambition of dominating Asia to a degree even greater than that to which it is now dominated by Occidentals.

In the view of most Americans in the Philippines every Japanese in the Archipelago is a spy. They will tell the stranger in confidence that when the day comes for Japan to strike every member of the Japanese colony will perform his or her appointed task in aiding the Nipponese landing parties to add to the Sunrise Empire these islands of great potential wealth which they have been coveting for years.

The Filipino leaders do not share such suspicions. They say that the Japanese scare has been raised for the express purpose of cheating them out of their birth right. In 1916 the United States Congress pledged itself solemnly to withdraw its sovereignty over the Philippine Islands and to recognize their independence as soon as a stable Government can be established therein. The only condition laid down has long since been fulfilled. Since however the men at the helm of the American nation are in no mood to honour that pledge because they are reluctant to forego the opportunities of exploiting themselves the rich and varied economic resources of the Islands, this exorbitant has been manufactured.

In the Dutch East Indies the Japanese are subject to the same suspicion.

The British in the East do not give tongue to their suspicions of the Japanese so freely as do the Americans and Hollanders but they, as a race are not outspoken and moreover until recently they were in alliance with the Japanese and considerations of decency doubtless exercise a restraining influence. Had they been without ingivings and fears however the scheme for the establishment of the Naval base at Singapore would never have been conceived.

In all places where the West dominates the East, Japan is indeed being charged with cherished secret designs to oust Europe and America, and to substitute herself in their place.

The B I S N. Company's Treatment of Deck Passengers

The Indian, a monthly published under the auspices of the Indian Association of Singapore observes

When the poet of the *Inferno* wrote about the people in the seventh circle of Hell he had no idea that in the future there would be no necessity to go to a theological hell when worse things were possible in this world itself. The condition of the Deck passengers on board the ships of the B I S N. Company is so gruesome that one wonders why people who could put an end to such tortures are quite apathetic about it.

We have heard and we have seen ourselves what is being done to the coolies from South India on board the company's ships.

What we are concerned with is the harsh treatment meted out to them in the ships during the passage. They are all packed together like tinned sardines as the Company sees to it that as many passengers are crammed as the deck can hold. An awning is put above them which in monsoon weather, when there are squalls and heavy rains fails to afford them any protection. Most of them are drenched whenever there are heavy rains. In Western countries people treat their animals more decently.

First there are the ticket examiners. They have a peculiar way of examining tickets whenever the idea enters their heads and before starting all the coolies who have been let into the ship are asked to get out and then come back into the ship after showing their tickets to the tin gods of the Company. In the process they are kicked and abused if they rush together at the entrance which they have to do if they are to get a decent place on the deck. But this is only the beginning of their trials. The checking of tickets cannot be done too often" seems to be the slogan of the ship officers and the insults to which the poor coolies are subjected every time the tickets are checked would call for prosecution for grievous hurt at least in any other country.

Then there are some people who are entrusted with feeding these labourers. First come first served is not the only condition which the coolies have to understand. Those who go first are given food and what is called sauce which latter as time goes on gets more and more diluted with water, and the result is there is a rush of the coolies when the food is served. They carry in their hands leaves which they hold in their hands into which handfuls of rice are thrown and sauce poured with a dexterity and quickness and smoothness which reminds one of feeding time at the zoo. There is a scramble to get the sauce while it is as yet undiluted with the attendant licks from the immortals who look upon the labourers as so much cattle and treat them with a callousness that one cannot see matched anywhere else in God's earth.

The International Institute of Agriculture, Rome

Mr D Ananda Rao says in *The Mysore Economic Journal*

One might ask what practical influence this Institute exerts on the States which are represented in it. It is possible that through this Institute the recommendations and desires of the agricultural world could be put into practical effect. It can summon on its own initiative conferences to consider matters of moment and which would often tend to modify existing national legislation. For example in 1914 it summoned an International Phytopathological Conference in 1920 the Conference on Locust Control and in 1926 the World Forestry Congress and the meeting of experts on Chemical Fertilisers. Again just at the time of the visit of the writer arrangements were in progress for holding an International Congress on Olive Growing. To us in India such congresses

and conferences are of immense value as it would mean that we would be benefited by enquiry into agricultural questions of international importance. Opportunity may be taken by qualified Indians to attend such congresses as delegates. With an Indian representative on the spot, it would be possible to institute enquiry into social and economic conditions of the farming classes and also on the condition of important crops and livestock of the country. That the whole of Great Britain and its colonies and dependencies are represented by one delegate means that India is practically lost sight of. It goes without saying that in order to achieve any benefit from an institution of this nature India must have her own representative and at India's expense. He must be one who will justify the trust imposed on him, capable to plead India's cause at all times, and one who is young enough to return to India for future work having been profited and mellowed by the opportunities he had in discussing with people of international reputation and thus raise the status of that one community which forms seventy five per cent of her people.

Widows at Brindaban

We read in *The Widows Cause*

Miss Helen Ingram writes from Delhi —

"Can't you do anything through your paper to stop widows coming to pilgrimages places like Brindaban? I have seen them there and their condition is terrible."

This is what a sympathetic heart feels for humanity for the womankind and for our own sisters and daughters. This is where every heart feels pinched and where that cannot but express itself. This is where the Hindu mentality is revealed in its worst, where it denies human sympathies and the very existence of God. It is here that the savageness of the middle ages is still traceable in our present civilised age. It is here that the march of centuries stands unimpeded. And it is here that we have to kneel down and thrust our heads between our knees in all shame humility and helplessness.

And for all that Bengal in particular is responsible

Government's Treatment of Mail Runners

Blue Bird writes in *Labour*

The mail runners are conspicuous among men for their unfailing regularity and utter trustworthiness. Even in districts which boast of good roads and the inevitable motor bus the latter may not be used for mail transport for motors break down runners never do.

The salary of a mail runner averages from twelve to fifteen rupees a month. Runners are especially liable to heart disease and lung troubles. It is not often that a man is fit for work after fifteen years of it.

There are many growls against the Post Office which certainly does fail us with a frequency that is irritating. But it is never the runners that let us down. Every one in India owes a

debt of gratitude to them and we touch our hat to them in passing perhaps the most faithful loyal band of workers this present age knows.

The above are excerpts from an article, "The Indian Mail Runner," by a traveller which appeared in a recent issue of *The Times of India Illustrated Weekly*. The praise and eulogy is well merited and is by no means fulsome or exaggerated. I have seen the runner at work in fair weather and foul in biting cold and sweltering heat, on hills and in the plains and on the water ways of Eastern Bengal and can do bear testimony to his regularity and loyalty. The decision therefore of Government not for the present to improve the pay and conditions of service of the runner is most disappointing not only to the runner, but to all who realize and appreciate his faithfulness and loyalty for the runner is unquestionably deserving his pay totally inadequate and by no means commensurate with the work he is called upon to perform.

Tuberculosis among School Children

The D A V College Union Magazine has a useful article on the above subject by Rai Bahadur Captain Maharaj Krishan Kapur M.D., D.P.S. There he tells us in part

An Indian child in his own family is under none or very little restraint.

He has also full liberty to run about and play about in the streets and in open air. His admission into a school more particularly in a Boarding School involves such a sudden change in his habits and environments that the unstable frame of a growing child is very easily affected, unless sufficient care and precautions are exercised by those who have the charge of the little ones. No undue pressure should be inflicted and the child should be gradually and smoothly weaned from his old habits and brought to adjust himself slowly to the new conditions of restraint and discipline. Even monkeys and certain other wild animals have been noticed to develop consumption when admitted in zoological gardens unless very scrupulous care is taken to protect them from the evil results of the sudden change of the conditions of their life.

This then is the first duty of the schoolmasters the neglect of which in several cases (in the past at least) has driven young children into the clutches of Tuberculosis. Little children must be dealt with much more sympathy and kindness and the proverbial schoolmasterly rigour must take the place of paternal kindness very very slowly. Do not for God's sake overdo in your zeal for the immediate correction of a child's bad habits that have grown with him, but try to bring him round very gently and softly.

Defective school buildings and over-crowding in the class rooms are a great menace.

In open air schools classes are held in verandas or open sheds or in the school park or gardens. To protect the children from severe cold or intense heat, class rooms can be built cheaply, with inexpensive arrangements to flood them with fresh air from outside in abundance so as to keep the air within almost as clean and fresh as the

atmosphere outside. The health and growth of children always improves wonderfully in these conditions. Even children predisposed and inclined towards Tuberculosis or otherwise deficient benefit enormously in the open air schools.

An Analysis of Indian States

Mr V Venkatasubhaya says in the *Karantalā* —

In spite of the so-called sanctity of sannads and treaties the number of States has been varying from year to year. Their exact number in any particular year has to be ascertained from the corrected list for that year. *The Imperial Gazetteer* Vol IV of 1907 gives the total number of 693, but the list for 1925 contains only 562 States. The grouping and classification also are different in the two years. The smaller figure of 1925 is due chiefly to the reduction of States in three Provinces — from 148 to 89 in Central India Agency from 52 to 41 in Burma and from 26 to 1 in Assam. Drastic changes apparently are not unknown to the Political Department of the Government of India.

As many as 451 States have an area of less than 1,000 sq miles, that 452 states have less than 100,000 population and that 374 States have a revenue of less than Rs. 1 lakh. British India, with an area of 1,091,000 sq miles and a population of nearly 222 millions is divided into 373 districts. The average area of a British Indian district is therefore 4,000 sq miles and its average population about 8,00,000. If the suggestion were made that each district in British India should be constituted into a State, how ridiculous would it be considered? Yet it is only some thirty among the 562 States that possess the area population and resources of an average British Indian District. Some of the States are so absurdly small that no one can help pitying them for the unfortunate dignity imposed upon them. As many as 15 States territories which in no case reach a square mile! Fourteen States exist in Surat District, not one of which according to the list of 1925 realized a revenue of more than Rs. 3,000 in the previous financial year. Three of these States could not boast of a population of 100 souls and five of them a revenue of Rs. 100! The smallest revenue mentioned is Rs. 20—for the year let it be remembered—and the smallest population 31 souls. What earthly purpose is served by magnifying these petty landlords into Chiefs and Thakores and by talking of them in the same breath as of the Nizam or the Maharaja of Mysore? From the analysis given above, only some fifteen States appear to possess the necessary area, population and resources to be able to function efficiently as States according to modern conceptions. What should happen to the rest is a big question. The large majority would certainly have to be removed from the list. Others may be formed into groups so that each group may be considered a State for certain purposes. But anyhow, the question has to be thoroughly gone into and only a Royal Commission will command the confidence of the various parties concerned.

Rural Ireland and Rural India

Mr K S Ramaswami Sastri observes in *Rural India* —

That Ireland and India are alike in many respects is one of the commonplaces of historical as well as contemporary experience. But in no respect do they resemble each other more than in the fact that both Ireland and India live in the village. In both, the village economy broke down under the storm and stress of modern competition. They differ however in this respect, namely that Ireland has achieved rural reconstruction while India is talking about it.

Ireland suffered from loss of industries, rack-renting, extreme subdivision of holdings, religious feuds, social disunion, poverty, emigration, economic depression, low standards of life, unsatisfactory education, artistic sterility and other evils which have been familiar also in India. But very early the finest spirit of the land made strenuous and continuous efforts to combat the poverty of the people and to put a new spirit into them.

Creameries, agricultural societies, credit societies, poultry societies, flax societies, etc., were successfully started and worked.

The co-operative principle was applied also to the home industries such as hand knitting, lace-making, embroidery, carpet making, etc. Co-operative stores were started in numerous places. Industrial co-operation also was begun.

The result was that wealth increased in the land. Even more than this, practical ideals of communal action and communal welfare permeated even the lowest and poorest classes. The sense of responsibility was developed. The following passage has a direct lesson to India. Through the co-operative movement has come a growing social consciousness and a recognition of the common interests of people living in the same neighbourhood. Concerning itself with matters in which all have a common interest it has proved that the factors of disension so prevalent in Ireland need not prevent the development of a real community life. Race religion politics have so dominated the minds of Irishmen that the possibility of uniting in any direction for any purpose has seemed to them very remote. The granting of Home Rule many said would merely raise other issues. The Irishman would never be happy unless he was disagreeing with some one. And, indeed, the danger to the co-operative movement from these causes was very serious. Meetings were often held in an atmosphere of considerable tension. Nevertheless the dangers were averted in a remarkable fashion. Only one case is recorded where a society was wrecked by sectarianism. To-day no lesson is more firmly fixed in the minds of co-operators than that neither race nor religion nor politics interferes with a man's co-operative capacities. And where men unite to run a creamery or an agricultural store without allowing their differences and other questions to interfere, they cannot long continue to feel bitterly toward each other in the streets outside. The dividing facts of life are being relegated to their true position by the realisation of community of interest in the economic sphere.

Importance of Cattle breeding and Dairying

According to an article on the importance of the cattle-breeding and dairying industry in India contributed by Mr W Smith to the *Journal of Animal Husbandry and Dairying in India* —

It is certain that nothing can take the place of the draught bullock in Indian cultivation. Horses, mules, donkeys, tractors, camels and buffaloes have all been tried and found wanting. Now to produce a working bullock we must have a cow and as our cow must rear her calf she must give milk consequently the cattle problem is a dairy problem and it is agriculturally speaking a universal problem. The productivity of the soil depends upon the efficiency of cultivation and this depends upon the quality of the plough bullock.

In many parts of India the introduction of cultivation and the adoption of more modern implements has been retarded owing to the in-

efficiency of the work bullocks. The cattle question is more important than the growing of any single crop. It affects the growing of all crops and is as important as cultivation itself. Then the cattle-dairy problem is important because nearly all primary transport in India that is the transport of produce from the field to the railroad, is dependent upon bullock efficiency.

Again the general health and physical well being of the whole of the people of India is affected by the milk and *ghee* (clarified butter) supply which comes from the cow. If modern teaching regarding the vitamin content of foods has taught us any thing it is that no vegetable fats can take the place of animal fats as food for children and young persons, as the vegetable oils do not contain the essential growth producing vitamin. The great majority of Indians do not consume animal fat in any form but milk fats and without a plentiful pure and cheap milk supply the people of India cannot attain to the highest degree of health and physical development.

FOREIGN PERIODICALS

Indian Legislative Assembly a Debating Club

A German Socialist named Franz Josef Furtwangler spent some time in India and contributed his impressions to the *Berlin Vorwärts*. Here are some of his impressions of the Legislative Assembly at Delhi.

Members receive twenty rupees or approximately seven and one half dollars for every day's attendance besides traveling expenses from their place of residence to Delhi and return. Although they meet in what is reputed to be the largest Parliament House in the world they are one of the smallest legislative bodies in existence and they probably have less authority than any other Legislative Assembly is a very nice term but it does not accurately describe the parliament of a country where the Viceroy can legislate by simple decree. Nevertheless this body has influential members—whites, kings and cotton kings and others like them.

Altogether this debating society—to characterize it accurately—consists of one hundred and forty people including government officials and government appointees. Fifteen of the latter are supposed to represent different vocational and business groups. Only one of them a gentleman named Joshi has been appointed to speak for labor. Since a man must have an income of two thousand rupees to vote the workers can naturally elect no representatives of their own. Several Englishmen elected under the property qualification also sit in the body. Victor Sassoon the head of the cotton industry who is reputed to be a millionaire is their leader. Only a little more than one half of the members are elected native

delegates. These fall into three groups, which are differentiated from each other by a very simple method. In a free country with a really representative parliament, industry, trade, banking, agriculture, labor and various religious and cultural movements would all be likely to have their delegates. Nothing of the sort exists here however. Really there is only one Party which is divided into three strata according to the degree of anti-British feeling as Joshi put it.

This German writer was present during the debate on the motion for the repeal of the Bengal Ordinance. Regarding the Home Secretary's speech in reply he records—

He was loudly applauded by the white members when he sat down. An English acquaintance of mine in the gallery however said he had never in his life heard a weaker defense of a government measure. Possibly so. I too felt that the gentleman who had just resumed his seat wiping his brow with his handkerchief would have felt it incumbent upon him to make out a better case if he been speaking in the House of Commons. Here however where the Assembly members have no real authority he was not put on his mettle.

A German's Socialist Impressions of Bengal

The same writer gives his impressions of Bengal partly thus—

The people themselves were more interesting than their architecture and their street life. Calcutta

and in fact the whole province of Bengal with its forty seven million inhabitants, differ from the rest of India. Above all they have practically no pariahs or untouchables. This is of great political importance. In Southern and Central India the untouchables number many millions and create a problem that must be solved before decisive steps can be taken toward greater political autonomy. The Bengalese on the other hand have a free hand to agitate for national and social independence. They are often called the French of India and undoubtedly are quicker intellectually and more imaginative and emotional than any other people of the Peninsula. They have a keen sense of humor and irony and what we designate by that untranslatable word *esprit*.

A Bengalese peasant lives on a couple of acres of land cultivated like a garden from which he somehow manages to squeeze a meagre living. The soil is very fertile and the rainfall abundant so that famine is practically unknown. In order to keep the cultivators from waxing fat and slothful however the Government and the *zamindar* or native landlord, are careful to relieve them of their surplus crops.

In the city the Bengalese is usually a merchant or a clerk in a bank or a trading house. When he engages in manual labor it is generally in the skilled trades. Resident Englishmen tell me that a Bengalese machinist or electrician is quite as competent as a white mechanic in the same calling. Calcutta's hundred thousand or more underskilled and underpaid textile operatives especially in the jute mills are mostly immigrants from other provinces driven to the city by crop failures and overpopulation. Calcutta also has more lawyers than any other place in India. These are the gentlemen who keep the political pot boiling. In no other part of the country are the common people so well informed upon questions of the day. Nowhere else was I able to talk intelligently with a clerk or a hotel porter about Brand Chamberlain and Stresemann. The English naturally consider the Bengalese trouble-makers because they are politically the most self assertive of the natives.

Calcutta's secret police is one of the best organized of the kind in the world. What Metemich called demagogues are here called agitators and Red Bengal is a term on every lip. Dozens of able and honorable politicians are languishing in confinement, where some of these have been held for several years. They are imprisoned under an ordinance issued by the Viceroy after Parliament had rejected it authorizing the Government to put political undesirables in jail for a term not exceeding six months. After the six months is up these gentlemen are notified that they still have another term coming to them. The most prominent among the prisoners is Subhas Chandra Bose, Chief Executive Officer of the Calcutta Corporation who was arrested in October 1924 and interned at Mandalay. We should call him in Europe a Radical Liberal rather than a Terrorist or a Communist.

Some Truths About the Singapore Base and Jamshedpur

George Bronson Rex is responsible for

the following views expressed in the *Far Eastern Review* of Shanghai —

India is to have a navy. Winding up its sessions in London on November 23 the Imperial Conference passed resolutions approving the development of the Singapore Base in order to facilitate the free movements of the Empire fleets and congratulated the Government of India on its decision to build a navy. The Conference applauded the Premier's speech on inter imperial relations which among other things denied to India a Dominion status. British India and the congeries of quasi independent native states will remain vassals of the Federation of British Dominions subordinate to six mistresses instead of one. It is well to remember however that India sits and votes in the League of Nations as a sovereign state free to exercise its independence in minor world problems but subject to the dictation of its overlords where vital British and Imperial policies are concerned. The Indian navy manned by lascars and officered by British experts adds just so many more warships to the quota assigned to Great Britain under the Washington treaty.

Singapore will become the masterbase of one major and two minor navies independent in peace but united in war. The British Australian Indian and perhaps New Zealand fighting fleet, operating from the Gibraltar of the East and munitioned from the great Indian steel works at Jamshedpur will in time dominate the Pacific and Indian Oceans. All arguments advanced to justify the ten million pounds expenditure for the construction of the Singapore Base indicate that the hypothetical enemy is Japan. Ponder over this. Immediately after Japan was relegated to the status of a second rate naval power by the Arms Limitation Conference the trusted ally of Great Britain became a menace to the Empire whose security for twenty years had been guaranteed by its navy. For two decades the Japanese fleets in Asiatic waters under the watchful supervision of British expert advisers enabled Great Britain to concentrate her naval strength in the North Sea. When war became unavoidable, the Grand Fleet with all its first-line fighting units was mobilized in home waters ready for the conflict. During the war the Japanese navy patrolled the Mediterranean and the All Red Route to India, Australia, and China. Dominions and Indian armies, and supplies for the fronts in Flanders Gallipoli Saloniki Egypt, Palestine, and Mesopotamia passed in safety over the sea-lanes guarded by the warships of the Rising Sun. Yet the ink had hardly dried on the Washington treaties when the faithful and tried ally of Great Britain was transformed into an imaginary enemy against whom it became urgently necessary to construct the most powerful naval base in Asia!

The Philippines stand as a buffer between Japan and the British possessions in India, Malay and the Pacific a guaranty that so long as they remain under American protection their neutrality must be respected. Independence without the power to preserve neutrality is a perilous position. Should the United States withdraw her guaranty by conceding independence to the Philippines the strategic situation in the Pacific would at once become loaded with dynamite far more dangerous to world peace than the squabbles of Europe. The

Philippines are the keys to world empire. If possession of these keys ever passes out of the hands of the United States, they will be taken over and retained by some other Power who will know how to use them for its own profit.

The future of the Philippines is uncertain. Great Britain cannot afford to take chances. Neither can Japan contemplate with unconcern any further extension of European influence in far Eastern waters. Within easy steaming distance of Midway and the Solon Group—or any one of the thousand Philippine islands suitable as submarine bases—lies the Rubber Empire of the world, a source of unlimited wealth upon which Great Britain is now drawing and will continue to draw to pay her debts to the United States. Eliminating the bogey of an Asiatic menace to Australia or India, these immensely rich possessions must be adequately protected against any possible contingency.

For propaganda purposes it suits Britain's book to encourage the belief that Singapore is aimed at Japan. Common sense will tell us however that as long as the war debt remains a subject of recurrent controversy Singapore is just as logically aimed at the country which might covet and profit by seizing her Rubber Empire. On the other hand the uncertainty of American permanence in the Philippines forces Great Britain to prepare against the contingency of Filipino independence. Singapore automatically supersedes Gibraltar as the key to her Asiatic and Pacific empires.

Add to the British naval quota the present and future Australian tonnage, every ship placed in commission by the Indian Government, throw in the fortifications at Singapore, the huge Jamshedpur Steel Works—the key of British Imperial defense in Asia—and Americans will begin to realize that if Japan is not to be eliminated as a first-class Power and her influence in Asia undermined her Government must make every sacrifice to maintain in a high state of preparedness and efficiency the full naval quota assigned to her under the Washington treaties.

By dint of subsidies the Indian Government is developing the greatest steel works in Asia. If this subsidy be withdrawn the Indian Army Board will operate and maintain its own steel plant from its own funds. Protected by the subsidy the Indian iron and steel makers have captured the Japanese pig iron market, compelling the Japanese manufacturer to contribute to the cost of creating a military weapon designed in part for their undoing. By the time the Singapore Base is completed the Jamshedpur Steel Works will be placed on a permanent and profitable working basis. An Indian navy will be in the process of development outside the restrictions of the Washington treaties and patrolling the waters between Singapore and Suez.

A Black Man's Protest

The speech of Lamine Singhor, Negro Delegate from Central Africa at the Congress of Oppressed Nationalities held at Brussels last February, has appeared in *L'Indépendance Belge* of Brussels. Extracts from it are given below.

Permit me to dwell a moment, by way of introduction, upon the word 'colonization.' What does it mean? It means usurping the right of a nation to direct its own destinies. Any nation that is deprived of that right is, in the strict meaning of the word, a colony. I will quote to you some passages from a report made by a former colonial administrator of France and published in several newspapers of that country. It relates to typical colonial abuses.

I accuse M. Hutin who was at that time a colonel and is now a general and a commander of the Legion of Honor for having ordered the looting of the trading station at Molenga and of having shared the loot. A list of stolen articles follows—cases of jam for his personal use, pictures, a shotgun, a Browning, high priced cloth and so on. The author of the report continues: I accuse the Assistant Chief of the post at Bania of having brought before him a chief of the Gana tribe, who refused to tell him where certain Mauser rifles, captured by his men from the German deserters, were hidden. He first caused the chiefs hand to be crushed in an iron copying press. He then had him flogged with lashes containing bits of steel, and, after honey had been rubbed upon his wounds exposed him in the sun to be stung by bees.

Who is there that does not shudder with horror at the thought that Frenchmen in the twentieth century still commit atrocities that would shame the worst barbarism of the Middle Ages?

It is true that you can no longer sell a Negro to a white man or a Chinaman or even to another Negro. But it is a familiar sight to see one imperialist Power sell a whole Negro nation to another imperialist Power. What did France actually do with the Congo in 1912? She simply turned a great territory there over to Germany. Did she ask the people of the country if they wanted to belong to the Germans? Some French politicians write in their press that their West Indian Negroes are beginning to demand too many privileges, and that it would be better to sell them to America and get something out of them. It is a lie that slavery has been abolished. It has only been modernized.

You saw during the war how every Negro who could be caught was put into the army, to be taken away and killed. So many were forced to serve that the French governors in Africa began to protest, fearing that the natives would rebel. But since cannon fodder must be had at any cost, France found a tractable Negro heaped honors upon him called him Commissioner-General representing the French Republic in Africa, gave him an escort of French officers and of Negroes decked out in gorgeous uniforms and sent him back to his native land. There he was received with the most exalted honors. French administrators and colonial governors greeted him with bands of music welcomed him, soldiers presented arms to him. So this Negro managed to get eighty thousand more men to add to the half million already fighting in France.

Ah, you Chinaman among my auditors here. I embrace you as comrades. You are setting a grand example of revolt for all the oppressed colonial peoples. I only hope that they will catch the inspiration from you.

French imperialists. I say have sent Negro troops to Indo China to shoot down the natives of that country in case they rebel against French

oppression They tell these troops that they are of a different race from the people whom they are ordered to kill in case the latter venture to revolt against their so-called Mother Country. Comrades the Negro race has slept too long But beware they who have slept long and soundly when they once awoken will not fall asleep again

Now let us see how this Mother Country' rewards the services of the black soldiers who have been wounded in her defense, the men who have been crippled by the bullets of pretended enemies and can no longer labor to support themselves They are treated very differently from the French wounded who fought shoulder to shoulder with them on the battlefield and in defense as we are told of the same Mother Country I will cite to you only two examples Here is a wounded French soldier graded with ninety per cent disability—that is in the second class He has one child The French Government grants him a pension of 6588 francs a year Here on the other hand is a Negro soldier of the same class married the father of one child wounded in the same way wounded in the same army also graded with ninety per cent disability He receives 620 francs Then take a war cripple with one hundred per cent disability That is to say he cannot move himself he must be carried wherever he goes If he is a white Frenchman he receives 15390 francs a year if he is a Negro he gets only 1800 francs

When we are needed to be slaughtered or to perform heavy labor we are Frenchmen But when it comes to giving us our right we are no longer Frenchmen—we are Negroes

American Boys Taller than their Grandfathers

Writing in *The Journal of the American Medical Association* (Chicago) Dr Horace Gray of Chicago says that two inches in half a century is the rate at which the average stature of American born boys of American born parents has been increasing

Increases in the stature of children (average height for age) as shown in some recent series of observations may be due to taller ancestry or to more comfortable economic class But between two homogeneous groups an increase may also be due to other causes measurement in the morning rather than the afternoon measurement in a month of the year when seasonal growth is more rapid accident (random sampling) progress in control of various infantile diseases that retard growth knowledge of vitamins sunlight and rachitis with consequent better nurture This paper however is concerned not with the cause, but with the phenomenon

Indianisation of the Army

Lieutenant General Sir George MacMunn writes in *The Asiatic Review* —

The admission of Indian officers to the same positions of command as British officers is admitted

ly a difficult problem and it is not too much to say that the difficulties of the situation have induced us in a somewhat Anglo-Saxon spirit to shelve the question for many years In the Indian Civil Medical Forestry and Engineering Services Indians have been admitted on the same terms as Europeans and in certain phases of this work they have shown a brilliant aptitude In the Army however though the martial classes are in many ways more readily agreeable to the British military officer than any others we have never been able to give them any share in the higher positions Has this been from a want of understanding or have there been other causes? I venture to think that to a certain extent we must accept the blame, because we have not tried until lately to face the difficulties which surrounded the matter

Rabindranath on the Chinese Expedition

The following views of Rabindranath Tagore on the Chinese expedition has appeared in *Unity* of Chicago —

I have always felt very keenly on the subject of China and have never failed to express my condemnation of the policy that is being pursued there The present expedition of the English against China is a crime against humanity and to our utter shame India is being used as a pawn in the game

The perpetrators of this tyranny that is doing havoc in China always keep themselves behind while the Indians who are being used as tools in carrying out their nefarious designs have to come in direct contact with the Chinese people The result is that all their resentment and hatred are directed against the Indians so much so that they call us demons It is not an unfamiliar sight in China to see the Indian policeman pulling the Chinese by the hair and kicking him down for no apparent reasons What wonder is there that we should be characterized by that title? I was Indian soldiers who had helped England to wrest Hong Kong from China, and many a scar of their dealing disfigures the fair breast of our neighbour, the China who once treasured within her heart the foot prints of Buddha the China of T'ang and Huen Tsang

This is the tragedy of the present helpless plight of India. Enslaved as we are to our utter shame we are being used as instruments for forging fetters for other people In a crusade against justice freedom and morality where the English are the aggressors India is being dragged into the field against her own will It is a loathsome insult to our manhood, and to add to this the column and condemnation which should justly go over to our masters wholly fall to our share

And what has India to gain by allowing such a huge waste of money and man power? By fighting for a cause which is so disreputable, her sons cannot claim to be recognized as heroes, nor does it help her in the least to shake off the yoke of foreign domination that sits heavy upon her That is why India is regarded by other Asiatic Powers as a menace to their freedom The vast resources at her disposal are the very ground

of their apprehension and so long as the disposal of these resources lies beyond her own control they will be always looking upon her with an eye of suspicion and sneer.

The result is that India is fast losing that respect which was only hers as the greatest spiritual ambassador in Asia. It is she who has for ages supplied the spiritual nourishment to China and other Asiatic countries and sent out emissaries to preach the gospel of love and unity. But in the hour of China's peril the fallen people of India now go there as the harbinger of political repression, the age-long affinity that tradition has built up at once crumble down to pieces. Can anything be more deplorable?

We are being repeatedly reminded by the British statesmen that England is fighting on the defensive in China. But who gave the offence may I ask? Who attempted to thrust down the throat of the whole population of China at the point of the bayonet and penalized their noncompliance by taking possession of their country? Why was Hong Kong wrested away from the Chinese people by force? It was China's weakness that made her submit at that time and if a powerful China now demands the restoration of what was once her own surely a long possession by force cannot be urged by the English as a justification for retaining an ill-gotten property. It was the English who took up the original offensive and they should not now take shelter under the false cry of a defensive campaign. It is China that is really on the defensive.

Let the English indulge in the free exercise of their arbitrary will within India, but let them not compel us to participate in the colossal crime against humanity in China. Let them desist from the unholy exploitation of the helplessness of a people in order to rob other peoples of their heritage. Let lose your engine of law and order to work with unabated vigour, but for God's sake leave us alone to deal the cup of our humiliation within the four corners of this land and not make an exhibition of it before the world.

War clouds hover to-day over the sky of humanity. The cry resounds in the West and Asia doth prepare weapons in her armouries of which the target is to be the heart of Europe and as it is being built on the shore of the Pacific for the ravaging vulture-ships of England. True Japan of the farthest East is already awake. China in her turn is being roused at the sound of robbers breaking through her walls. It may be that this gigantic nation will be able to shake off the weakness of repeated blood-letting and of the fumes of opium and become self-conscious. And of course those who have been engaged in rifling her pockets will be bound to look on this as a menace to Europe.

British Use of Indian Soldiers in China

Rabindranath has voiced India's condemnation of the Chinese expedition and of Britain's use of Indian soldiers in China in his own matchless way. *The Modern World*

of Baltimore U S A for May has given extracts from some Indian journals on the same subject the first being from this Review with the following prefatory words:—

Since there is no subject at the moment on which skepticism is better justified than the willing acceptance by the people of India of British use of Indian soldiers in China. We give the following very illuminating comments from the Indian press.

The American paper observes in conclusion—

Britain's use of Indian troops by force majeure is merely a part of the accustomed technique of imperialism. The belief by the outside world that India willingly submits to this condition is however an error which should not be allowed to prevail.

Coerce or Convince'

We read in the same journal—

In his recent address to the Indian Legislative Assembly the Viceroy Lord Irwin said:

Those anxious to see constitutional advance must either coerce parliament or convince it. Parliament will not be coerced.

As several papers in India have noted Lord Irwin does not appear quite to understand the history of British institutions and of the British Empire.

There is little evidence in the past to indicate that British rule despotic or imperial has at any time been convinced without coercion. Even the suffragists gained their point by methods of coercion. There have been indeed political writers who have exalted this fact in English constitutional development declaring that every right the individual now enjoys having been won by force or the show of force, it has more validity than the rights given to the citizens of such democracies as France and the United States.

Lord Irwin does less than justice to his nation. Always it has given way only when coerced and never has a wider range of coercion encircled it. It is coerced today by the moral strength of Gandhi. It is coerced by the astuteness and diplomacy of Soviet Russia. It is coerced by the *khomintang* armies. It is coerced by the economic boycott successfully applied to it. It is coerced by American financial supremacy.

Even in the country houses Englishmen are slowly being convinced that the day for their predatory activities is beginning to pass. Despite Lord Irwin coercion and coercion alone is bringing this conviction.

Abolition of Slavery in Nepal Not due to League of Nations Influence

Fiji Samachar for March has reproduced an article from *Anti Slavery Reporter and Aborigines Friend*, January, 1927 which briefly narrates the history of that measure.

As we have pointed out more than once the League of Nations had nothing whatever to do with it, directly or indirectly though Sir William Vincent gave the League credit for it. *Anti Slavery Reporter and Aborigines Friend* writes —

We have received an interesting note from the Nepal Anti Slavery Office briefly reviewing the work of the Maharaja. It appears from this that for a century the ultimate abolition of slavery has been in the minds of the Administration of Nepal and some sort of legislation has been passed from time to time but it remained to all intents and purposes a dead letter as a result of the deep rooted character of the institution and the proslavery sympathies of the population. The present Maharaja determined to carry the matter further. While fully aware of the difficulties he has deeply impressed with the abuses and excesses inseparable from the institution of slavery. As a beginning in order to ascertain full particulars of the slave population he instituted a census in 1911 and again in 1921 and a general register was formed, which became the basis of the work of the subsequent emancipation. The laws on the subject of slavery were carefully collected sifted and arranged and then His Highness determined to appeal to the people and made his great speech of November 1924 at the same time announcing that he himself would make a gift of 14 lakhs of rupees to meet the requisite compensation money and would provide more if necessary. This courageous policy met with an encouraging response and by an overwhelming majority the slave-owners declared in favour of total abolition.

Changing Values in India

R. F. Maccune writes in *Vox Studentium* of Geneva —

The number of University students cannot be very much more than 100,000. The influence of the *literals* however is very great.

If there is one factor that affects the development of the Indian people to-day more than another that factor is Poverty—not a low standard of comfort, but want of food and clothing. Hundreds of men come out of the Universities every year only to add to the number of the unemployed. The last days of the average Indian student's university career are shadowed by the fear not of economic insecurity but of actual starvation in the immediate future. Some people who have been in India might consider this an overstatement. They have seen Indian students of just one set and they do not know.

If the present-day student in India has any religious cult at all it is, broadly speaking, the cult of social regeneration. His estimate of the values of life is in fact changing. He has, for instance learned to grasp the real worth of human personality. Whatever his practice as a member of a community he does not think much of caste. He often calls it "an accident of birth." The days of "untouchability" are numbered in India now—and the present university student will be responsible for its extinction in no small measure.

Again the subconscious but effective feeling which has somehow lurked in the Indian mind that woman cannot be trusted that her nature is deceitful affects but little the university student of to-day. The men recognise her as a being endowed with moral discernment even as they are

Indian Students in Europe

According to P. R. Bharucha writing in *The Indus* —

Japanese and Chinese students seeking to equip themselves to grapple with the problems of their respective countries are found generally spread all over Europe, not necessarily confining their studies at any one single place but wandering from university to university training themselves under the most competent teachers whether in England, France, Germany, Denmark or elsewhere. And recently the Government of Afghanistan has encouraged its students to do the same. There is no good reason why Indian students should not follow this method instead of flocking almost exclusively to Oxford, Cambridge, London or Edinburgh. Hitherto very few of us have ventured to try French or German universities.

Surely the young Indian trying to learn all about the co-operative movement at the London School of Economics or Forestry at Oxford is an unconscious humorist! It does not seem to occur to him that for the first, he ought to go to Denmark and for the second he ought to go to France or Germany!

The writer says he is not concerned with those who go to England to qualify for good jobs.

We address ourselves to the young Indians who come out here as seekers, as learners. Their first care is we presume to make the best use of their time and opportunities here. If they go home well equipped they will find enough to do to occupy their whole lives; they can create jobs for themselves. We ought to study the methods of the Japanese student who comes to Europe not to collect degrees and diplomas but to sit and learn at the feet of the great European *gurus* and like a true scholar wanders from one place of learning to another seeking and taking of the best that Europe has to give. Not that we have any quarrel with degrees and diplomas as such but let them be treated as mere incidentals.

Our present object is to draw the attention of our students to the fact that all the great Continental universities afford fine opportunities for study and research and to urge them to take the fullest advantage of these opportunities for specialized studies and to the endeavour that is being made to establish an international university centre at Montpellier in the South of France.

Justice for Kenya Indian

We read in the *London Indian* —

British Settlers demand supreme control of

Kenya Council. They are only ten thousand in all while there are forty thousand Indians and Asians and about three million Africans. Still they demand an absolute majority over all other groups. This will mean total degradation of Indians resident in Kenya. See what Mr Churchill says about Indian achievement in Kenya —

The Indian was here long before the first British official. He may point to as many generations of useful industry on the coast and in land as the white settlers can count years of residence. Is it possible for any Government with a scrap of respect for honest dealing between man and man to embark upon a policy of deliberately squeezing out the native of India from regions in which he has established himself under every security of public faith?

It is the Tory Government that is breaking faith with the Indians; and shall we apply the description of Churchill to their action?

In 1923 we were promised that there would be no segregation of Indians in township and residential areas. But this year 21 plots in the town of Mombasa are to be sold to Europeans only the Indians not be allowed to buy. That is the way this Government is keeping its promises.

See Dr Norman Leys book on Kenya for what the Indian has done for the African population. The Indian is prepared to stand companionship with any other nationality for the uplift work that is being carried out. Yet under the name of civilization he is being unjustly dealt with.

A deputation has come from Kenya to London to place the matter before the Colonial Secretary but he refuses to see them and asks them to see the Governor with whom the matter has been discussed several times without any effect.

Kenya was called by Sir John Kirk as India America meaning that it was an Indian colony in every respect. Indian laws were introduced in the country and Indian currency was ruling till 1972 when the new dangerous doctrine of European vested interests being paramount was first mooted. Since then the treatment of Indians has been that of squeezing them out of the colony and capturing it for British capitalists for exploiting the African.

India looks to British labour to help them to retain their hard won achievements of centuries.

For Indians Desiring American Education

We read in *The Hindustanee Student* (500 Riverside Drive New York City N Y U S A.) —

For detailed information about American educational institutions consult the Secretaries of following organizations: American Academics Club, Jehangir Wadia Bldg, 1st floor, Esplanade Road, Fort, Bombay. The American Club, 121 Esplanade Road, Calcutta. The Indian Students Union, 221 Gower Street, W C 1 London. England Association des Hindous de Paris, 17 Rue de Sommerard, Paris V. France. Verein der Indier in Zentral Europa, E. V., Ansebeck Str. 8-9 Berlin Germany. Also consult American Express Company's offices. Copies of the booklet Education in the United States of America are available for reference in above places.

'Raison D'être of Tagore Society' in Japan

Countess Metaxa promoter of the Tagore Society in Japan writes thus in part in *The Young East* of Tokyo —

The society of the Friends of Tagore is being formed by us in answer to his appeal to the Far Eastern peoples in which he said that closer union of thought is necessary for the nations which have started their civilisation from a common source. A highly developed system of philosophy religion and knowledge of nature more extant, more transcendental than science of mere material facts has been transmitted in common to the sages of several nations of the Far East from remotest antiquity. The conditions and circumstances of each of these nations were different, therefore the characters of their culture varied but the foundation was one. Now China, India, Korea and Japan are like branches of the same tree but the trunk which bears them is one. During centuries these nations have been infrequent intercourse and have kept their civilisation alive and thriving.

Our Society differs widely from the Pan Asiatic one because we do not study the ideals of the West Asiatic group of nations as being utterly different from the East Asiatic one. Besides our aim is quite opposite, for politics are banished from our Society. Politics change, being based on personal or party interest and nothing is so shallow as politics.

Therefore, our Society leaves out politics and concerns itself with the ideal and moral standard of the East Asiatic peoples. For this purpose it is vital to concentrate once more on that ancient wisdom which has been the pit and marrow of their life, and then after having consolidated that acquirement as a national treasure receive from the West what is congenial to their own nature not blindly imitating but appreciating, criticising, choosing freely and rejecting what might make them weak and false to themselves.

Now the moment has come for the Eastern nations that partook in the past of the same civilisation to join together in order to strengthen the intellectual and moral tenets which were their common bond, so as to meet foreign influx in a clear independent broad spirit with a friendly heart for only the strong can be really friendly. Now the man has come whom we can take for our model Tagore the great Master of the East and to-day the greatest poet of the world. A Westerner said to me. In future they will speak of Tagore as of Homer and study Bengali as we study Greek to read him in the original. True. Generally while great men are alive few persons understand their real value. Later from a distance humanity sees better. Let us not commit this error let us appreciate him and follow his sunny figure while he is still with us. Tagore is an idealist but at the same time a positive and practical mind who has asserted himself by the creation of such useful institutions as his agricultural schools, farms and gardens at Santiniketan, his University at Bolpur. Standing on the solid basis of truth revealed to his ancient fatherland, he receives all that is just and good

in the foreign countries not losing his Hindu originality, and opening before his steps the hearts of European peoples. The union of East and West is possible, but it must be a union on equal level in the independent spirit of Tagore. Tagore is no dreamer. His feeling of eternal truth is based on transcendental reality. His love of life pervades his being with the sense of the Divine, and pours itself down on all the phenomena of earthly existence. In nature, in exterior things, he sees the link of the living Universe and this fills his soul with an ever renewed joy. I don't know one author in whose work the word joy comes again and again so often. All ancient Eastern philosophy is resumed in Tagore's short philosophical work, *Sadhana*, therefore our society will specially promote the study of this book.

To finish this exposition let me say once more that our aim lies in drawing nearer to each other in a bond of brotherly love, to safeguard what is beautiful in ancient culture and to walk into a larger future under the guidance of that great, radiant, loving genius our Oriental teacher and poet Tagore.

Journalism in Italy

According to *The Inquirer* of London —

The practice of journalism in Italy requires that the journalist must be of the right political faith. The National Fascist Syndicate of Journalists has issued an official *communiqué* which definitely excludes from the ranks of journalism more than 100 journalists some of whom have had under the old regime very great influence on Italian political life. The Fascist syndicates will not allow any of them to resume in any possible way the exercise of the journalistic profession. Other journalists whose allegiance to the Fascist regime is doubtful will not be permitted to write articles requiring any political responsibility."

Have Animals Souls? French Academy so Decides"

Grace Knoche writes in *The Theosophical Path* —

Thus the headlines of an Associated Press despatch from Paris about the recent affirmative vote of the French Academy on this question at a meeting of thirteen members.

The official report of this meeting is not before us but several press-despatches are. From these it appears that the question came up rather unexpectedly in the course of the Academy's classic (and never finished) task of revising the French dictionary *Memorie* because the crucial word its consideration elicited the remark from Minister of Justice Barthou that (as translated in the despatches) human beings alone possess memory (*Memoire*) therefore the word itself applies to the human race alone.

Among those present were Marshals Joffre and Koch. Both protested against the statement because of personal experiences with various animals during the war and cited instances in proof. Another

member, M. Henri Robert, the noted criminal lawyer provoked further discussion by remarking that while he had met many soulless men, he had never yet appeared for a soulless animal! The discussion finally reached so amicable and dignified a conclusion that M. Reznier, the Academy's permanent secretary, called for a vote upon the question: Do animals have memory (*Memoire*) and incidentally, souls? The thirteen Immortals, voting 8 to 5 decided affirmatively.

Sickness Insurance and Health

Professor G. Loriga, Chief Inspector of Labor, Rome concludes his article on the place of sickness insurance in the national health system in *International Labour Review* thus —

The object of benefits in kind as applied to accident insurance differs considerably from that which they have in relation to sickness and invalidity insurance. In the former case, the principal task to be fulfilled is one of preservation and reconstruction which ceases with the individual. In the latter the therapeutic function is associated with that of prophylaxis, present or future, and provision is made for prevention of the spread of disease, for improvement of the health of the present generation and for the creation of more favorable conditions of existence for those to come. Thus not only the individual but society as a whole benefits by it.

In view of this diversity of function, it might almost be said that accident insurance is an institution established principally for the purpose of affording assistance, the other forms of insurance are in the nature of social welfare institutions and as such form the most valuable auxiliaries of the state policy in relation to public health. In the author's opinion in view of this difference in the aim of sickness insurance (the scope of which is not alone the restoration of the health of insured persons but also the preservation of their physical well being and that of the whole community) the organization of the medical service should be regarded as a matter of much greater importance and should be rendered entirely independent of the administrative service. Moreover, it is felt that the following conditions are requisite for the efficient functioning of the medical service, both from the therapeutic and from the hygienic points of view:

(a) That assistance be made available for the greatest possible number of insured persons both manual and intellectual workers and for all the members of their families living with or supported by them.

(b) That limits of benefit laid down for the purpose of repairing physical injury and for prophylactic assistance be made as broad as possible.

(c) That the needs of pregnant women, mothers and children of all ages receive special consideration.

In the present writer's opinion, sickness insurance established on these lines may become a really efficient adjunct to the social assistance of the economically weak which is its ultimate

object, and may also contribute to a remarkable extent to the improvement of public health.

"Science Knows No Country"

Arthur De C Sowerby writes in the *China Journal*

That science knows no country and knowledge is international are facts which we would have thought had been universally accepted throughout the twentieth century world. That the people of any nation laying claim to culture could be so backward or behind the times as to think that they could maintain a corner in any branch of human knowledge or retain the sole right to prosecute any particular line of investigation is hard to believe. Yet from Peking comes the astounding news that certain scientific organizations there have formed an association to fight the efforts of various foreign scientific expeditions to search for remains of ancient man and other treasures of geological and archaeological interest in different parts of China. It is held that Chinese ancient relics and treasures should be explored only by the Chinese people themselves. Particular exception appears to have been taken to the recent expeditions of the American Museum of Natural History into Mongolia and the proposed Swedish expedition under Dr Sven Hedin into North western China and Turkestan. Some of the members of the association have even gone so far as to demand the return to China of the one million year old dinosaur eggs discovered by Dr R. C Andrews and party in Mongolia and taken to America.

In so far as this movement aims at retaining in China valuable archaeological relics and actual treasures of a bygone age we feel a considerable amount of sympathy with it but to attempt to forbid foreign scientists from carrying out geological and archaeological explorations on the ground that this should be left for Chinese to do is carrying the principle of "China for the Chinese" to a point bordering on the ridiculous and it persisted in will make Chinese scientists the laughing stock of the world, and place them outside the pale of modern science.

Chinese Women and the Struggle for Freedom

We read in the *China Weekly Review* —

Sixteen years ago when Dr Sun Yat sen established his provisional government at Nanking a

delegation of sixty Chinese women hobbled down the long street leading to the assembly building, hobbled along on their bound feet signifying centuries of oppression, to the assembly building and petitioned for the right to vote. This delegation received little attention at that time, but those Chinese women who gathered in the ante-room of the parliamentary building in Nanking sixteen years ago and interviewed Dr C T Wang started something which has lived to this day and which has grown with ever increasing intensity to the present.

From that scene in Nanking of a decade and a half ago, we jump to present day Hankow the so-called seat of radicalism in China and we find as pictured herewith a women's Battalion, composed of very capable Chinese females who are actually helping in the revolutionary movement. No longer do these Chinese women hobble about on bound feet. They have normal feet and they wear the same kind of military uniform that their brothers wear and they carry very business-like revolvers and if we would believe all of the stories which are being circulated they know how to use their weapons. It has been reported that these women, or at least some of them, have actually been in the front lines of battle, but this has not been substantiated. Usually they have been used as strike pickets carrying red Cross relief first aid behind the battle lines and so on.

The Arcos Raid

The New Republic observes —

The British government's police raid on the premises of the Russian trade delegation and co-operative societies is an amazing incident. Sir William Joynson Hicks the Home Secretary who appears to have been personally responsible for the action asserts that the government was in search of a missing state document of importance. It was not recovered. He declares that it was burned by the Russians after the raid had started, while the Soviet representatives insist that it was never in their possession and that they know nothing about it. As a result of the incident feeling against Great Britain is running high in Russia. Mass meetings of protest have been held in city after city and the British government has felt it necessary to warn its citizens not to travel by the Trans-Siberian Railway until the present inflamed state of public feeling has moderated. The affair is certain to react unfavorably upon English trade with the U S S R, which amounts at present to about \$65 000 000 a year.

MR. THOMPSON'S BOOK ON RABINDRANATH TAGORE

By RAMANANDA CHATTERJEE

MR Edward Thompson has written a second book on the Poet Tagore, named "Rabindranath Tagore, Poet and Dramatist" I do not intend to review it. For, if I had

any leisure, I would devote it rather to reading and re-reading the Poet's prose and poetical works than to going through a book on him and his works by Mr Edward

Thompson must not be understood to suggest that Mr Thompson does not possess sufficient culture and powers of literary appreciation and criticism to write on poets' lives and works. What I mean is that the respective extents and degrees of his knowledge and of his ignorance of the Bengali language and literature are such that he is not competent to write on the works of the greatest of Bengali authors.

Let me be precise.

I do not mean that Mr Thompson is absolutely ignorant of Bengali. For, I presume, he knows the Bengali alphabet, can probably consult a Bengali to English dictionary, and can form some idea of the substance of a piece of Bengali prose and poetry with the help of such a dictionary and of an educated Bengali translator. When he was in Bengal some years ago he once tried to speak to me in Bengali but gave up the attempt after perpetrating two or three sentences in broken Bengali. I believe the teachers of our village primary schools possess more knowledge of Bengali than he. But as he is superior to them in other intellectual attainments he can make such a display of his little Bengali as to be able to mislead his readers—unintentionally, let me hope. Nowhere has he frankly confessed how little he knows of the languages and literature of a country of whose greatest author he has set himself up as a judge.

I know that he is lecturer in Bengali, University of Oxford, and have wondered whether other lecturers in living languages in that and other British universities are such marvellous scholars in their subjects as Mr Thompson is in Bengali. Should that be the case, which I hope it is not and should that fact become known, Oxford would certainly be looked down upon with contempt by all real oriental scholars.

As if the fact of Mr Thompson's being the lecturer in Bengali in a far famed ancient university were not sufficient in itself to make the gods laugh, he states in the preface to his book that it was accepted by London University as a thesis for their Ph.D. degree. I wonder who the examiners were and what their pretensions to Bengali scholarship are. The winning of a London doctorate by two or three of my countrymen had made me suspect whether that university always obtains the services of competent and just examiners and whether some of its doctorates are not 'consolation degrees'. Mr Thompson's case strengthens my suspicion.

Were Mr Thompson to appear at the Middle Vernacular Examination in Bengal, which is passed by many of our children before they are in their teens, he would be sure to be 'plunged' in the paper in Bengali literature. I will not be so unfair to him as to suggest that he should prove his Bengali scholarship by passing the Calcutta University Matriculation Examination in Bengali, for that would be too stiff for him.

Mr Thompson must have been desperately determined to excite the risibility of the gods. For he has solemnly indited the following paragraph in his preface:

Milton's English verse is less than 18,000 lines. Mahendranath Tagore's published verses and dramas, the subject of the present study amount to 100,000 or their equivalent. His non-dramatic prose in the collected edition of his works now in process will be in the proportion to his verse and dramas of seven enormous volumes to three. I undertook the appalling task of reading through his bulky literature, because I wished to understand the people among whom I was living. I wrote this book in the hope of serving two races. (The italics are mine. R. Chatterjee.)

It is not impossible that Mr Thompson has performed the visual feat of looking at all the pages of all the published Bengali works of Tagore, though he himself confesses that he has not seen many of the books listed in his Bibliography. But does he mean to tell us seriously and expect us to believe that he is scholar enough to have studied this bulky literature? *Credat Judeis*.

Three facts mentioned in his book, viz. that he is lecturer in Bengali in the University of Oxford, that his book was accepted as a thesis for the Ph.D. degree by London University, and that he has read through all Tagore's works has confirmed my belief that, so far at least as the vernaculars of Britain's dependency of India is concerned, SCHOLARS ARE BORN, NOT MADE in the British Isles. Old Vishnu Sharma has told us somewhere in his work that people are reputed to be strong because of their wealth and because of wealth they are considered become scholars also (*arthad bharati panditah*). Had he been living now, he would have ascribed the genesis of the reputation for scholarship to political ascendancy also.

Had Mr Thompson to write a book on a third rate German or French poet, would he have dared to do so with such poor knowledge of German or French as he possesses of Bengali? Our humiliation and sufferings as a subject people are already too

many in various directions. But is that any reason why our greatest poet should be made to feel that he has been treated, not as a member of the world brotherhood of authors, but as a member of a subject race and a grey haired pupil of the pedagogue Mr Thompson? The tone of the book in many passages is of such (unconsciously) supercilious patronage as to make it very irritating reading.

The author asserts

"I believe that no other nation would have served India better than my own has done but, on the whole, they have shown themselves very incurious as to its thought and literature. Resentment of this neglect has estranged educated Indians and is a factor of first rate importance in the present strained situation."

This is not the place to discuss what the British people have done in and for India and whether any other nation could have done better. But even Mr Thompson will, I hope, allow that we the people of India know far better than he what we resent and what has created 'the present strained situation.' I can tell him unhesitatingly that it is *not* the "incuriosity of the British people as to India's thought and literature which is mainly if at all responsible for estranging educated Indians, and that, as there is little or no resentment of this neglect, it is *not* a factor of first rate or tenth rate importance in the present strained situation if it be a factor at all. Personally, I do not know a single educated Indian who *resents* this neglect and has been estranged by it. What we really resent, I need not say

Mr Thompson says in the preface that he has drawn largely on the poet's discussions with him. Many foot-notes do indeed tell us that the passages quoted are from the poet's "conversation with him. Did Mr Thompson take notes of these conversations in the presence of the poet at the time of these talks? If not, how long afterwards did he take down the notes? Did he ever tell the poet that he was doing so? Did he inform him that any of these notes would be published? Did he ever show them to the poet for verification before making public use of them? I know that he did not. I know that the poet does not remember having told Mr Thompson many of the things he has reported. It is possible though not at all certain or probable that in some instances the poet has simply forgotten. But is it not very probable that in more instances Mr

Thompson's memory and his preconceptions have been to blame? In any case, gentlemanliness, fairness and the scholar's anxiety for absolute accuracy, so far as that is attainable, should have prompted the Reverend E J Thompson to behave in such a way as to enable him to answer in the affirmative most of the questions I have put above.

As regards the book having been accepted by London University as a thes for their Ph D degree, may I ask what sort of documentation is required by that University for doctorate theses? Are notes of conversations taken to be correct and reliable without any proof of their accuracy?

In this article I am not concerned with the merits or demerits of the book as a whole. I write only of what my eyes fell upon in turning over its pages.

Mr Thompson writes page 88, He seems to have made no direct study of the New Testament.' This is not true. The poet has read the New Testament, but not the Old. According to Mr Thompson, Tagore (*Thakur*, 'Lord') was a title used by the early British officials for any Brahmin in their service. The poet himself it is to be presumed, knows more of the derivation of his family name than the Oxford lecturer. And it is likely too that his knowledge of the history of Bengali word meanings is greater than that of the author. So I merely state the fact that the poet has never heard that his family name became *Thakur* for the reason assigned by the author. Nor have I. Who is Mr Thompson's authority?

According to him "Pirali" the name of the Brahmin sub-caste to which the poet's family belongs, is derived from Persian *pir+ali* chief minister. That is wrong, according to my information. The story goes that an ancestor of the Tagores was a high officer of a Musatman chief of Jessore named Pir Ali. This ancestor of the family was excommunicated by the orthodox Hindus of the time because he had involuntarily allowed the smell of some meat dishes prepared for the chief to enter his nostrils as according to a Sanskrit adage, smelling is half eating. Pir Ali is a common Muslim proper name. See the Bengali dictionary by Juaneudramohan Das, the best yet published.

About the poet Michael Madhusudan Datta, the author writes

He keeps an almost unbounded popularity and there can be very few among Bengal's

thousands of annual prize-givings where a recitation from his chief poem is not on the programme."

Every educated Bengali holds the opinion that Michael was a great poet. But as to recitations from his chief poem, the author has been misinformed. I have been a schoolboy, a college student, a school master, a professor, a principal, and a president at many annual prize givings. But I do not remember a single such function at which any recitations were given from Michael. During the last four months I have presided over two prize givings. In these, too, the recitations were from other authors.

I have said that I am not at present concerned with the quality of Mr Thompson's work. Nor am I concerned with his opinions of the poet's works. Nevertheless, as I find that he has devoted one whole chapter to the poet's 'jubandebata doctrine' as the author calls it, I wish to say that he has not understood it aright. He had better ask the poet the reason why, if he be in the humble mood to learn.

Mr Thompson holds that in *The Home and the World* Tagore has adapted the scheme of Browning's *The Ring and the Book*. But the author himself says in another place, "First hand knowledge of Browning came late, and even then, I suspect, was confined to the short pieces." Moreover *The Ring and the Book* is a sort of grouping together of stories of a murder told from different points of view whereas in *The Home and the World* the chief characters analyse their own respective feelings and moods and the workings of their own minds as influenced by various events and circumstances. I fail to see, therefore, how there has been any adaptation here. It is not necessary for my purpose to discuss the point in greater detail.

As regards the play *Achalayatan*, Mr Thompson thinks "Its fable was probably suggested by *The Princess* and more remotely, *The Castle of Indolence* and *The Faerie Queen*." I know the poet has not read either *The Faerie Queen* or *The Castle of Indolence*. As for *The Princess*, the poet, I know, is unable to perceive the remotest resemblance between it and *Achalayatan*, nor am I. The author thinks that this dramatic piece obviously owes something to Christianity perhaps more than any other book of his. I wish Mr Thompson had stated definitely where the debt lay. I could then have disproved his assertion, as I

held him to be wrong. He is equally wrong when he says that "It owes much to such modern Hindu movements as that of Ram-Krishna and Vivekananda, which inculcates the oneness of all religions." Here, too, it would have been well if he had stated where the debt lay by quoting parallel passages and sayings. It is not my point that Rabindranath has not been influenced by any ancient or contemporary movements or teachers or literatures. What I insist upon is that nobody should run away with a preconceived notion or say things which cannot be proved. Mr Thompson had said several such untrue things in his smaller book on the Poet, which were pointed out in *Prabasi*. Perhaps it is mainly because of the elaborate *Prabasi* review that he admits in his present work that the earlier one "is mistaken in some respects."

In more than one passage of his book the author tells the public that after the poet's 'famous success', with his *Gitanjali* winning the Nobel prize, there has been a "complete reversal" among Britishers and the poet has been treated "as an exposed charlatan." But he has not given his readers any extracts even from newspaper reviews of Tagore's works to substantiate the truth of these uncomplimentary remarks ascribed to the poet's British critics. Meanwhile his British publishers are as eager as ever to publish new works of his and new editions of his old works. They are hard-headed men of business, not "the Poet's Bengali admirers." Does this show a "reversal"?

Mr Thompson does not perhaps like that the poet is so popular among German-speaking peoples. He says that "reaction will come, as elsewhere." But during my recent visit to Germany, Czechoslovakia and Austria, I did not find any signs of this predicted reaction.

Mr Thompson's Howlers

I have no time to compare Mr. Thompson's translations of Tagore's poems with their originals. But I will give some of his translations of Bengali words, including names of the Poet's works, etc. These deserve to take their place among schoolboy howlers.

He translates Kabiwallas as 'poet-fellows'. This is ridiculous. Kabi means 'poet' undoubtedly. But in current and colloquial Bengali it means also the verses, poems,

songs, doggerel, improvised by the Bengali improvisadores, who had great vogue some decades ago. See Jnanendramohan Bas's Dictionary. They were called "Kabiwallas", that is to say, "makers of *Kabis*". Perhaps Mr. Thompson is not acquainted with any such improvised 'Kabi'. I will give one here. Once at Jara, a village in Midnapore, the home of a Zemindar family, there was a "poetic tournament" between two Kabiwallas. One named Jaga sang first, comparing Jara to Brindaban, to flatter the Zemindar. Then up rose his rival, and sang —

কি কোথা বনুলি, অগা, জাড়া খোলাকি দুখান ।
 কোথা রে তোরা জানহুও, কোথা রে তোরা যাগহুও,
 সাধন অহে মণিকুণ্ড, কেহুনে নুগা ধরন ।—
 কবি হইবি পদমা দিবি, পোদাহুঁ কি সাধন ।

"How could you, O Jaga, call Jara Oolok Brindaban? Where is your Shyam Kunda, where your Radha Kunda? Right in front of you is Manik Kunda, go and see its radishes there. You are to sing *Kabis* and take the fee why indulge in adulation?"

Shyam Kunda and Radha Kunda are in the real Brindaban. Manik Kunda is a village near Jara noted for its big radishes. The author translates "*ayu ma*" as "nurse" in *Loving Conversation of a Newly Wedded Bengali Couple* (p. 89). *Ayu-ma* means grandmother or great grandmother.

Chalita bhasa is not "walking language," but current or colloquial language.

Sabdakalpa is not "sound and reality," but "the science of words", or philology in one of its branches.

"Chhatur Pada" (ছত্র পদ্য) is not "Verses in Leisure" but "Readings (for boys and girls) for Vacation time". The readings are in prose.

"Gita panchashika" does not mean "Five Loops of Song", but a collection of fifty songs. Just as "score" stands for twenty collectively, so *panchashika* stands for fifty collectively. The name has nothing to do with the Bengali word *Shika* (শিকার). Mr. Thompson's translation must cause uncontrollable laughter among Bengali women, — they do not keep songs on *Shikas*!

"Arupa-ratana" is not "The Ugly Gem," but "The Formless Jewel", meaning the Being Who has no form.

Let me stop here. It would be a tiresome job to point out all the laughable renderings of the author.

To be a competent judge of the works of any people's poets, a man's mind should be steeped in their literature as it were. He should have long breathed its atmosphere, and known the associations which cling to many of its words, etc. But can the author of howlers like those to be found in Mr. Thompson's book be believed by any stretch of imagination to have equipped himself in that manner for his difficult task?

নিরলসদৃশে দেখে ঘরকোঁচি দুখানত ।

PRIMARY EDUCATION FOR BENGAL

By RAMANANDA CHATTERJEE

THE news has been published in some papers that Mr. B. Chakrabarti, Minister in charge of Education, Bengal, has drafted a primary education bill for introduction in the next session of the Bengal Legislative Council. The draft not having been published yet, I have not seen it. Its object is said to be the extension and improvement of primary education. It is also said that universal or universal and compulsory education will not be attempted, but nevertheless new taxation will be resorted to for meeting the expenditure needed for the improvement and extension contemplated.

Political, economic, social, moral, edu-

cational, sanitary, agricultural, industrial, commercial, and all other kinds of progress, are interdependent, and many, if not most, of these divisions overlap. But in this note I shall deal only with primary education. I need not discuss whether without education any advance along any line can be made. Some education, I take it, is necessary for advance and improvement in any direction. And for an entire nation the easiest and surest means of imparting education is literacy. Therefore, we have to consider the ways and means of making the entire population of Bengal, above the age of 5, literate.

This cannot be done at once. Those old

standards of life also markedly differed a circumstance that should not be lost sight of. The whites have incurred sacrifice to maintain their higher standards and are afraid of the larger number of Indians in their midst who have comparatively a far lower standard and who are numerically superior. Those who seek an honourable solution of the Indian problem in South Africa must give due weight to these facts. Afraid of being swamped by Indians their reduction to a manageable compass was thus deemed necessary, to the maintenance of the Standard of the Whites.

Mr Sastri and his brother Islamic and European Colleagues came all the way from India, at the expense of the poor Indian tax payers with a view to elbow the Indian out and proclaim to the world that as a race the Indian is unfit to live trade and work side by side with the white man! But in his eagerness to make out a case for the party he has espoused Mr Sastri has evidently been following a wrong course altogether and in building his case he has started from erroneous premises and reached totally irrelevant conclusions. When he says that the Indian is numerically superior in number there he starts from wrong premises in reference to the statistics would prove the fallacy of his contentions. Indeed the white population of South Africa is about one and half million while the Indian population does not exceed 150,000 all told and therefore it would be obvious that it is not the Indian who is superior in number but it is the White!

Mr Sastri maintains that the Whites have incurred sacrifice to maintain their higher standard more than the Indian who have comparatively a far lower standard but the Rt Hon gentleman has apparently forgotten that the present high standard of living and that of the efficiency of their industries and commerce is due if not entirely at least to a very great extent to the exploiting policy pursued towards the Indian whose perseverance and noble sacrifices made Natal fit for European expansion in this outpost of the Empire. There was a time when the white man could not earn three shillings per day and had to run away from this country for pastures now and their crops were rooting on the ground for want of workers and for lack of distributing agents. Under such harrowing circumstances the Indian was invited to colonise and it is he who brought prosperity and built up the commerce and industry which have proved the main frame work of the white civilisation and necessarily for the maintenance of the present high standard of living! After building up their industry and civilisation now finds the white man that the Indian who was indispensable at one time is no longer desirable because the latter is to use Mr Patrick Duncan's fitting expression advancing in education and civilisation and is such is becoming a deadly competitor in the open market. The power and prestige of the white race as rulers over non Europeans disables them from frankly disclosing the true causes that have led to this burning race antagonism and so in order to make out a case against the Indians they find it expedient to level against them all sorts of imaginary accusations and in order to lend additional colour to these charges they have in addition to spreading unfounded alarmist reports armed themselves with the Bar Act and

a legislative Colour Bar Act all having the objective to keep the Indian and Native down for ever, without affording them an opportunity to raise their head above the water level and yet the white races shout that the Indian is a menace to the country which Mr Sastri and his colleagues who were ostensibly our leaders and spokesmen accepted these asseverations for its face value.

After doing all these and similar vandalism in the name of the maintenance of "Western civilisation" and for upholding their higher standard, and after exhausting all their ingenuity, subtly, skill and power to deter other races from raising to a higher standard of living it is simple amazing to hear from the lip of an outstanding Indian of the type of Mr Sastri repeating the same old fable which Dr Malan and Mr Boydell have been in the habit of sermonizing! If these were the real causes that influenced Mr Sastri and his colleagues to arrive at the conclusion to *reduce the Indian Population to a manageable compass*, then one is constrained to ask why should they visit South Africa to deliver this precious judgement! They could have confirmed it long ago because the Paddison Deputation had already placed their seal of approval on behalf of the Indian Government and having all the official documents and Blue Books before them they could have issued their ukase without this wastage of public money!

Indeed one is very doubtful whether Mr Sastri and his colleagues have arrived at the conclusions they did on the merits of the case or whether it is the outcome of political and high Imperial expediency which I leave to the public to draw their own inferences!

Mr Aiyar further says -

Indeed Mr Sastri has committed an unpardonable blunder in being a party to this unnatural alliance with the Union Government for eliminating the Indian community from the shores of South Africa and undoubtedly he has done irretrievable damage to the cause of Indian Nationalism and to the future of our race among the comity of civilised nations. No patriotic Indian could help but saying that this so called Settlement is a shame. It is a blot on the sacred name of India and certainly it is an insult to the wide culture and acute intellect of Mr Sastri himself. In however grand eloquent phraseology he may expatiate on the wonderful achievements of Sir Mohamed Habibullah's statesmanship the fact remains that the future historian of India would chronicle in bold black letters this dismal chapter in the history of South African Indian colonisation as a standing monument of India's eternal threat to an alien Empire as a clear demonstration as to how Indian interests are bargained away for the paramount interests of this White Empire, and as a manifest proof of how when a nation loses its freedom that nation becomes callous to all mankind indifferent to all sense of national honour and other distinguishable qualities which go to make up a free civilised being! However India's subservient position to all and sundry white races having been established by the white lawlessness and their brown henchmen under this Settlement it is still to be seen whether the India and Indians of South Africa in

general would resign themselves to their late and meekly with staid indifference or whether any spirit left in them to survive the present ordeal. Time alone can tell the effect of this humble appeal to the higher instincts and nobility of character of the Indian people.

We are finally provided with an able summary of the present arrangement, which we reproduce below in full

1 Under the Immigration Regulation Act the stigma of undesirability imposed on the Asiatics as a race remains as ever before and those of the domiciled Indians are assigned only provincial domicile, but no Union domicile which debars them from being recognized as subjects of the Union and as such not entitled to claim the rights of South African Nationals even though one was born and brought up in South Africa and in the absence of any provision in the Statute for recognition of Indians as Nationals of the Union no settlement based on understandings would have any salutary effect on the fortunes of the domiciled Indian community

2 The original stipulation of Dr Malan's Reservation of Areas Bill has been complied with under this settlement. Those were Dr Malan maintained that Asiatics were an "alien element" in the population of this country and as such there must be a considerable reduction of them by economic pressure but not by force. In the present settlement, the acceptance of the so-called assisted Emigration of Indians by the offer of a bonus of £20 a head in addition to amending the Immigration Law giving autocratic powers to the Executive to challenge the right of any Indian and to deport him has satisfied that part of the conditions which had reference to the alien element. As for the economic pressure, the acceptance of the Industrial Legislation based on socialistic principles has completely swept the Indian off the board notwithstanding the pious wish of the signatories to this settlement to find some ameliorating steps for the Indian workers

3 Dr Malan aimed at segregating the whole Indian population within a radius of thirty miles under this settlement while the Indian Government have yielded to segregation within municipal township and village board jurisdiction by their agreement for the sale of lands with restrictive clauses there is obviously no need for urban segregation because there will be no Indian population left on account of the fact that under economic pressure the Indian will have to choose between starvation and repatriation

4. Respecting the concession given to the Indian side it has been maintained that the mere fact of the Union having agreed to allow the repatriates to retain their domicile for a period of three years after their return to India is a valu-

able concession. While I am not prepared to say anything about the practical effect of this concession the point is whether the bulk of the permanently settled Indian population have given their consent to the Indian Government to bargain away their rights for the sum of £20?

5 It has been urged that the Union having bound themselves to afford opportunities for Indian advancement as they would other subjects is a Magna Charta. The point is whether the Union Government have under this settlement, recognized at least those of the permanently settled Indian population as part of the general population of the Union? If that be so, then the Magna Charta could be considered a Magna Charta, but from the recent utterance of Dr Malan one has just apprehensions when Mr Strachan Martineau representative in Parliament suggested to the minister that the Provincial barrier should be removed in the case of those Indians who could comply with the European standard of living Dr Malan promptly repudiated any such undertaking and avowed that the policy of localising the Indian in their respective provinces shall be followed in fact under the circumstances wherein comes the Indian Magna Charta?

6 As regards the uplift of the Indians educationally, it was only last week that the Natal Provincial Council by a unanimous vote throw out the proposal. On the whole, from the foregoing analysis of this settlement by which the Indian Community has gained practically nothing coupled with the fact that the Union Government have introduced two bills, which are in a disguised form, a part reproduction of the spirit of the late Reservation of Areas Bill it must be transparent to all well-disposed and honest minded citizens that the Indian Question has assumed a new phase and in all probability the community may in the near future be called upon to face a combined opposition from two powerful Governments in their endeavour to gain their elementary rights of citizenship for which they have hitherto been struggling! It is a significant indeed that Mr Sastri the pet of the British Imperialists, and the darling of the European Association of India and by no means an ardent Indian Nationalist, should have been chosen for the post of the first Agent General to this country but despite his winning eloquence and consummate diplomatic skill it is to be apprehended that, in the present temper of the Indian community he is not likely to meet with a smooth working of his settlement and in fact, it is regrettable to note that he has to a considerable extent estranged Indian public feeling in this country by his recent speeches and articles in the Press in vindication of the unwise and questionable policy which he has been acting on in respect of the Indian question in South Africa.

And as for the portion of this tax paid by manufacturers and importers, surely the province which is able to give them a local habitation and opportunities of enterprise owing to its geographical and other advantages ought to be entitled to what they pay as income tax. Great Britain is mainly a manufacturing country and its manufactures are for the most part sold to various foreign lands, including India. In fixing prices British manufacturers take into consideration the income tax they would have to pay. Therefore in reality it is the foreign purchasers of British goods who pay most of the British income tax. But does the British Treasury for that reason send to the public treasuries of the purchasing countries the bulk or any portion of the British income tax collections? We Indians should be very glad to have our share.

For all these reasons we have no hesitation in coming to the conclusion that Bengal should be given as much money as Madras, or as Bombay which has less than half of its population and then free universal elementary education would at once become quite easy. We do not in the least suggest that Madras or Bombay or any other province should be robbed to do justice to Bengal. Nothing of the kind. There is ample room for economy in the speeding departments of the Government of India. Let there be retrenchment there and all will be well.

I am entirely opposed to any extra taxation for extending primary education as we have shown that the thing would be quite feasible if Bengal were equitably treated by the Central Government. Let our Ministers manfully stand up for such just treatment. If they do not get it, let them resign. But if they the brown bureaucrats simply cry ditto to the white bureaucracy and go in for additional taxation they would simply prepare the ground for civil disobedience. An educational tax or cess in the present financial arrangements and circumstances of Bengal would more than justify a Non-Taxation civil disobedience campaign.

The suggested expenditure of three crores of rupees for primary education in Bengal is nothing extravagant. In the year 1924-25 Bombay spent Rs 170 12 999 for 856 566 Primary School pupils and Madras spent Rs 141 14 468 for 1898 436 pupils. Therefore to suggest the expenditure of Rs 300 00 000 for 15 00 000 of pupils is rather to err greatly on the side of culpable economy.

I have hitherto said only what can and ought to be done by the Government. In constitutional theory, the Government and the white bureaucracy are not idealistic. But it lies in the power of the white bureaucracy to give effect to what ought to be the principles of all enlightened governments. It is on that account that they are called upon to do their duty. We do not want any aims from them. We only ask that, instead of mispending the money we pay in taxes they spend it for the improvement of the moral and material condition of the people. But if they do not do their duty we should bring pressure to bear on them in all possible righteous ways.

Increase of income is not the only way to meet the suggested expenditure. Retrenchment also is possible and should be resorted to. For instance the posts of divisional commissioners, police superintendents, etc., may be abolished without loss of efficiency.

In the meantime, we can and ought to do something ourselves directly in addition to or instead of what may be done by and through the Government.

Endeavours made by educated and comparatively well-to-do people for the good of the country are sometimes looked upon by them as favours done to the backward illiterate poor people. That is a false notion.

It is we the educated classes who are deeply in debt to the illiterate poor people for our education and in many other ways. In the two universities of Calcutta and Dacca, very much more is spent for the education of the university students per head per annum than is received from the students. This amount in excess of which we are unable just now to give an exact idea not having the necessary statistics before us is contributed by the Government. Government grants come in the last resort either from the taxes paid by the common people or from their labour of various kinds. So those who attend the University classes as students and obtain their degrees in the various faculties are indebted to their poorer and less fortunate countrymen for their intellectual equipment. As for collegiate education I have compiled the following statement from the Education Directors Report for 1925-26 showing the expenditure per head and the amount contributed by the Government per head per annum.

College	Annual Expendi- ture per student	Gov't's share.
Presidency	Rs 537 0 0	Rs. 366 0 0
Dacca Intermediate	412 12 2	" 325 4 9
Hogshi	" 524 8 4	" 433 15 0
Sinscent	614 10 3	" 561 2 3
Krishnagar	594 15 0	" 496 4 6
Chattagram	217 3 5	" 126 10 10
Rajshahi	207 9 2	" 111 4 11
Aided Colleges	" 103 2 0	" 23 7 2

The fees paid by the students do not suffice to meet all the expenses of their education. Government meets the deficit from the taxes paid by the people. Therefore, we the educated classes are indebted for our education to the people and should try to repay this debt in all possible ways. It should not be supposed that our debt is measured simply by what the Government has paid *plus* interest thereon. We are indebted to our people for whatever money or fame or other things which our education has enabled us to acquire. Those who have graduated from private unaided colleges must not think that they have paid fully for their education and are not indebted to anybody. They are indebted to the comparatively poorly paid professors, lecturers and demonstrators of these colleges.

We can try to repay our debts to two

ways. Seeing that a primary school in Bengal can be maintained by an average annual expenditure of only Rs. 122 6 5, it should undoubtedly be within the means of many an educated well-to-do man in Bengal to maintain such a school. Those who are not in a position to do so can pay Rs. 3 12 5 per annum for the education of a single primary school pupil. Those who cannot do even that ought themselves to undertake to personally teach at least one child, not related to them up to the highest primary school standard. Those who are in a position to make pecuniary contributions may do so to some Society or Association for the education of the people, which they know to be trustworthy. For my part, I recommend the Society for the Improvement of the Backward Classes Assam and Bengal, of which the office is situated at 14, Badur-bagar Row, Calcutta.

In conclusion I would appeal to the well-to-do Zemindars of Bengal to do their duty in this matter. There are Zemindars who have no village homes. They live in Calcutta or some other town. Others have homes in villages. All should do their duty to their tenants in the matter of education, for they owe their income to these rayats.

INDIANS ABROAD

Mr Srinivasa Sastri Criticised

THE South African Settlement arrived at by the Highbush Deputation has roused resentment among many of the South African Indian intelligentsia. Although, owing to a persistent propaganda carried on by certain persons, many people have been led to believe that the Settlement is something of a great achievement, it has not convinced everybody, and, we are probably facing a fresh period of intensive agitation in Africa for the recognition of Indian rights there.

Mr Srinivasa Sastri, who has proclaimed the excellence of the new arrangement from the press and the platform has come in for a large share of criticism from South African journals. In reply to an article contributed

by the Rt Hon Mr Sastri to the *Hindustan Review* in which he discusses the present settlement, Mr Subramania Aiyar, editor of the *African Chronicle*, publishes a spirited retort in *Indian Views*. He says about the article in question,

Shorn of all verbiage, the article is a tissue of platitudes and political contradictions and no wonder Mr Sastri is so unpopular politically in India as he is likely to be here ere long!

Mr Aiyar later turns to Mr Sastri's Poona speech and says,

The Hon gentleman the brain head and shoulder of the Round Table Conference addressing his moderate and liberal colleagues at the Deccan Sabha, at Poona on the 6th March thus expressed his candid opinion on the Indian Settlement. He said that the difference between the White and the Coloured population in South Africa were both racial and economic. Their respective

And as for the portion of this tax paid by manufacturers and importers surely the province which is able to give them a local habitation and opportunities of enterprise owing to its geographical and other advantages, ought to be entitled to what they pay as income tax. Great Britain is mainly a manufacturing country and its manufactures are for the most part sold in various foreign lands, including India. In fixing prices British manufacturers take into consideration the income tax they would have to pay. Therefore in reality it is the foreign purchasers of British goods who pay most of the British income tax. But does the British Treasury for that reason send to the public treasuries of the purchasing countries the bulk or any portion of the British income tax collections? We Indians should be very glad to have our share.

For all these reasons we have no hesitation in coming to the conclusion that Bengal should be given as much money as Madras, or as Bombay which has less than half of its population and then free universal elementary education would at once become quite easy. We do not in the least suggest that Madras or Bombay or any other province should be robbed to do justice to Bengal. Nothing of the kind. There is ample room for economy in the spending departments of the Government of India. Let there be retrenchment there and all will be well.

I am entirely opposed to any extra taxation for extending primary education as we have shown that the thing would be quite feasible if Bengal were equitably treated by the Central Government. Let our Ministers manfully stand up for such just treatment. If they do not get it, let them resign. But if they the brown bureaucracy and go in for additional taxation they would simply prepare the ground for civil disobedience. An educational tax or cess in the present financial arrangements and circumstances of Bengal, would more than justify a Non-Taxation civil disobedience campaign.

The suggested expenditure of three crores of rupees for primary education in Bengal is nothing extravagant. In the year 1914-21 Bombay spent Rs 170,12,999 for 856,566 primary school pupils and Madras spent Rs 11,14,168 for 18,98,436 pupils. Therefore, to suggest the expenditure of Rs. 3,00,00,000 for 1,00,00,000 of pupils is rather to err greatly on the side of culpable economy.

I have hitherto said only what can and ought to be done by the Government. In constitutional theory, the Government and the white bureaucracy are not identical. But it lies in the power of the white bureaucracy to give effect to what ought to be the principles of all enlightened governments. It is on that account that they are called upon to do their duty. We do not want any alms from them. We only ask that, instead of mispending the money we pay in taxes they spend it for the improvement of the moral and material condition of the people. But if they do not do their duty we should bring pressure to bear on them in all possible righteous way.

Increase of income is not the only way to meet the suggested expenditure. Retrenchment also is possible and should be resorted to. For instance the posts of divisional commissioners, police superintendents, etc. may be abolished without loss of efficiency.

In the meantime, we can and ought to do something ourselves directly in addition to or instead of what may be done by and through the Government.

Endeavours made by educated and comparatively well-to-do people for the good of the country are sometimes looked upon by them as favours done to the backward illiterate poor people. That is a false notion.

It is we the educated classes who are deeply in debt to the illiterate poor people for our education and in many other ways. In the two universities of Calcutta and Dacca, very much more is spent for the education of the university students per head per annum than is received from the students. This amount in excess of which we are unable just now to give an exact idea, not having the necessary statistics before us is contributed by the Government. Government grants come in the last resort either from the taxes paid by the common people or from their labour of various kinds. So those who attend the University classes as students and obtain their degrees in the various faculties are indebted to their poorer and less fortunate countrymen for their intellectual equipment. As for collegiate education I have compiled the following statement from the Education Directors Report for 1925-26 showing the expenditure per head and the amount contributed by the Government per head, per annum.

song-, doggerel, improvised by the Bengali improvisadores, who had great vogue some decades ago See Jnanendramban Das's Dictionary They were called "Kabiwallas", that is to say, makers of *Kabis*." Perhaps Mr Thompson is not acquainted with any such improvised "Kabi" I will give you here Once at Jara, a village in Midnapore, the home of a Zemindar family, there was a "poetic tournament" between two Kabiwallas One named Jaga sang first, comparing Jara to Brindaban, to flatter the Zemindar Then up rose his rival and sang —

কি কোরে বলি জগা, ভাড়া খোলাক বুঝান ।
কোথা রে তোরা ভাবিকুও, কোথা রে তোরা রাবিকুও
নাহন অ'হে রাবিকুও, কোথায় নোনা রানন ।—
কবি গাইবি গদ্য দিবি, খোলাকু কি কারন ।

"How could you, O Jaga, call Jara Golok Brindaban? Where is your Shyam Kunda, where your Radha kunda? Right in front of you is Manik Kunda go and see its radishes there You are to sing *Kabis* and take the fee why indulge in adulation?"

Shyam Kunda and Radha Kunda are in the real Brindaban Manik Kunda is a village near Jara noted for its big radishes.

The author translates '*ayi ma*' as 'nurse' in *Living Conversation of a Newly Wedded Bengali Couple* (p 89) *Ayi ma* means grandmother or great grandmother

Chalita bhasa is not 'walking language,' but current or colloquial language

Sabdantatva is not "sound and reality," but 'the science of words', or philology in one of its branches

"Chhantir Pada" (ছন্দের পদ) is not 'Verses in Leisure' but 'Readings (for boys and girls) for Vacation time.' The readings are in prose

'Gita panchashika' does not mean 'Five Loops of Song', but a collection of fifty songs Just as 'score' stands for twenty collectively, so *panchashika* stands for fifty collectively The name has nothing to do

with the Bengali word *Shika* (শিক) Mr Thompson's translation must cause uncontrollable laughter among Bengali women, — they do not keep songs on *Shikas*!

"Arupa ratana" is not "The Ugly Gem," but "The Formless Jewel", meaning the Being Who has no form

Let me stop here It would be a tiresome job to point out all the laughable renderings of the author

To be a competent judge of the works of any people's poets, a man's mind should be steeped in their literature as it were He should have long breathed its atmosphere, and known the associations which cling to many of its words etc. But can the author of novels like those to be found in Mr Thompson's book be believed by any stretch of imagination to have equipped himself in that manner for his difficult task?

PRIMARY EDUCATION FOR BENGAL

By RAMANANDA CHATTERJEE

THE news has been published in some papers that Mr B Chakrabarti, Minister in charge of Education, Bengal, has drafted a primary education bill for introduction in the next session of the Bengal Legislative Council. The draft not having been published yet, I have not seen it. Its object is said to be the extension and improvement of primary education. It is also said that universal or universal and compulsory education will not be attempted, but nevertheless new taxation will be resorted to for meeting the expenditure needed for the improvement and extension contemplated.

Political, economic, social, moral, edu-

cational, sanitary, agricultural, industrial, commercial, and all other kinds of progress, are interdependent, and many, if not most, of these divisions overlap. But in this note I shall deal only with primary education. I need not discuss whether without education any advance along any line can be made. Some education, I take it, is necessary for advance and improvement in any direction. And for an entire nation the easiest and surest means of imparting education is literacy. Therefore, we have to consider the ways and means of making the entire population of Bengal, above the age of 5, literate.

This cannot be done at once. Those old

men and women who are illiterate we may leave out of consideration. For though it may not be *impossible* to make them literate, it is impracticable. The remaining adult illiterate male population may be taught the three Rs and much else besides by means of the magic lantern, the cinema, etc. The adult illiterate women are more difficult to tackle. Nevertheless an attempt should be made to educate them. For the present, what I am concerned with is the education of boys and girls. If we could give elementary education to *all* of them in course of time, when the old and adult illiterates would die out, the whole country could be spoken of as literate.

In many civilized countries where universal elementary education is the rule such education is given to all children of the ages between 6 and 14 years. In Bengal let us be less ambitious. Let us see what it will cost to impart elementary education to boys and girls of 5 to 10 years of age. Girls must not be left out of consideration for any reason whatever. The Thakore Sahib of Gondal showed much common sense shrewdness and insight into human nature when in his State he made primary education compulsory for girls alone making it optional for boys. He argued that an educated or merely literate mother would be sure to try to make her sons and daughters literate though many a highly educated father does not feel ashamed to keep the daughters uneducated. And he also rightly argued that the illiterate husband of an educated wife should there be any such, would be quick to educate himself for very shame.

I need not repeat the stock arguments in favour of the education of girls and women. The time has long past when it could not be taken for granted that their education was indispensably necessary in their own interests as well as in those of the nation as a whole.

In the British-ruled province of Bengal there were 73,42,558 boys and girls of the age 5 to 10, according to the census of 1921. Out of these according to the Education Director's Report for 1925-6 only 16,60,555 children were at school on the 31st March, 1926, which means that less than 22 per cent. were at school. But we must provide schools for and educate all these children. Let me assume that, owing to the natural increase in population, their number is now 75 lakhs. According to the Director's report the cost

of educating a child in a primary school in Bengal is on an average only Rs. 3 12 5 per annum. This is very much smaller than the all-India average which in 1923-24 was Rs. 7 13 3 for boys and Rs. 10 6 5 for girls. It is a disgrace that so little per head is spent in Bengal for the primary education of its children. This disgrace attaches to the Government of India for fleecing Bengal to the skin, to the successive Governors and Governments of Bengal for submitting to be so fleeced and for not allotting more money for primary education and to the people of Bengal for not doing their very utmost to remedy such a scandalous state of things.

Let me, however, see what it would cost to give all the seventy-five lakhs of Bengal's children primary education of the kind and quality that may be had for even the very small sums spent. Let me make the amount Rs. 4 instead of Rs. 3 12 5. Then the total expenditure would come to Rs. 300,00,000 (three crores or thirty millions of rupees). Is this too big a sum to spend for giving primary education to all the children of a province containing a population of 40,95,536? Certainly not. But the question arises, how can the expenditure be met? It can be quite easily met, if the Government of India allows Bengal to keep for its own expenditure an equitable portion of the revenues raised in Bengal.

How hard Bengal has been hit by the apportionment of revenues between the Central and the Provincial Governments will appear from the following table—

Province	Population in 1921	Provincial Income Budgeted for 1927-8
Bengal	4 66 95 536	10 73 39 000
Madras	4 23 18 985	16 54 00 000
Bombay	1 93 48 210	15 08 00 000
U P	4 53 75 787	12 94 50 000
Punjab	2 06 85 024	11 13 00 000

This table shows that the most populous of the five major provinces is allowed the smallest sum of money for its expenses. Bengal is not a barren desert. Bengal is not a province without any industries or commerce. It does not occupy the lowest place among the provinces in agriculture, commerce and industries. The total revenue collected in this province whether classed as provincial or central, is not the smallest of all collected in the different provinces. On the contrary, Bengal's total collection is the largest. Why then is Bengal allowed to keep only the smallest amount?

It is usual to say that, owing to the permanent settlement of the land revenue in Bengal, the land revenue here, which is a provincial head of income, is very small, and hence Bengal's total budgeted income is small. But the Permanent Settlement was made by the British Government with the landlords in its own interest. The people of Bengal as a whole were not a party to it. They do not benefit by it, for, the majority, who live by agriculture directly or indirectly, have to pay the landlords in the shape of legal, non-legal and illegal exactions not less than the common people in other provinces. If any persons profit by it, it is the very small minority of Zemindars. Let the Government, therefore, say and do what it likes to these landlords. We the ordinary people must refuse to be cheated and starved, because in the year 1793 the British Government and the Zemindars entered into some arrangement mutually advantageous to them.

Moreover, if less land revenue is raised in Bengal than in some other provinces, more revenue is raised by taxation of some other kinds in Bengal than elsewhere. Let us take, for instance, land revenue and the income tax for the year 1921-23, the latest from the latest issue of the *Statistical Abstract*

Province	Land Revenue	Income Tax	Total of the two
Bengal	71073587	55173923	86347520
Madras	61764867	14176365	75941232
Bombay	51652815	46177031	33023909
P. P.	6716814	7857689	7139563
Punjab	35458120	6067102	11155222

Thus from the two sources named above it was only in Bombay that more revenue was raised than in Bengal, and that to the extent of only Rs 51,81,389. But as against these fifty four lakhs of Bombay in the same year 1921-23, Rs 375,63,920 were raised by export duty on the raw and manufactured jute at Bengal, which is practically a monopoly of Bengal.

It has been argued that the jute export duty is not paid by the people of Bengal, but by the foreign purchasers of jute. This is not axiomatic. For, as pointed out by Mr K. C. Neogy in the Legislative Assembly on the 10th of March this year, in the opinion of the Fiscal Commission, page 100 of their Report, "some portion, if not the whole, of an export duty falls on the home producer." The same gentleman pointed out in the same

place and on the same day, that the Taxation Enquiry Committee observed in paragraph 150 of their Report —

"In spite of the monopolistic character of the product, there exists a possibility that, in certain conditions of the trade a portion of the export duty may fall on the producer."

So Bengal is entitled to at least part of the proceeds of the jute export duty. But assuming that the producer does not pay any part of the duty, according to what principle of justice or equity does the Government of India lay hold of the entire proceeds? It is in Bengal that the thing is produced. It is the Bengal Government which does something, however little it may be, for the improvement of the cultivation of jute. It is the people of Bengal who toil to produce the raw jute. It is they who suffer from the contaminated water and the misedours resulting from the steeping of jute. It is they who suffer from the pollution of the river waters by the septio tanks of the jute mills. It is the public health department of Bengal which does something, however little, for counteracting the injurious effects of the production of raw and manufactured jute. The Government of India simply looks on from its serene heights all the while, and it is only when the proceeds of the export duty are collected that it swoops down and carries off the booty in its mighty talons. The Mellon Award, which has legalised this plunder, is absolutely iniquitous. Bengal ought to have the whole of the jute export duty, and then free universal elementary education would be at once feasible, as only three crores are required for it, and jute duty produces more than 375 crores. Up to the 31st March, 1927, the Government of India have, by means of this tax, netted at least 34 crores of rupees, starving all the 'nation holding' departments of Bengal.

It has been argued that as the whole of the income tax revenue collected in Bengal is not really paid by the inhabitants of Bengal, they have no claim to it. Perhaps it is meant that the purchasers in other provinces of the things made or imported by manufacturers or importers in Bengal pay part of the income tax collected in Bengal, for these manufacturers and importers include the income tax in fixing prices. Assuming the cogency of this argument, at least the portion of this revenue which is paid by private individuals out of their incomes in Bengal, can only be claimed by Bengal.

And as for the portion of this tax paid by manufacturers and importers, surely the province which is able to give them a local habitation and opportunities of enterprise owing to its geographical and other advantages, ought to be entitled to what they pay as income tax. Great Britain is mainly a manufacturing country, and its manufactures are for the most part sold in various foreign lands, including India. In fixing prices British manufacturers take into consideration the income tax they would have to pay. Therefore, in reality, it is the foreign purchasers of British goods who pay most of the British income tax. But does the British Treasury for that reason send to the public treasuries of the purchasing countries the bulk or any portion of the British income tax collections? We Indians should be very glad to have our share!

For all these reasons we have no hesitation in coming to the conclusion that Bengal should be given as much money as Madras, or as Bombay, which has less than half of its population, and then free universal elementary education would at once become quite easy. We do not in the least suggest that Madras or Bombay or any other province should be robbed to do justice to Bengal. Nothing of the kind. There is ample room for economy in the spending departments of the Government of India. Let there be retrenchment there, and all will be well.

I am entirely opposed to any extra taxation for extending primary education, as we have shown that the thing would be quite feasible if Bengal were equitably treated by the Central Government. Let our Ministers manfully stand up for such just treatment. If they do not get it, let them resign. But if they, the brown bureaucrats simply cry ditto to the white bureaucracy and go in for additional taxation, they would simply prepare the ground for civil disobedience. An educational tax or cess in the present financial arrangements and circumstances of Bengal, would more than justify a "No Taxation" civil disobedience campaign.

The suggested expenditure of three crores of rupees for primary education in Bengal is nothing extravagant. In the year 1924-25 Bombay spent Rs 17012, 999 for 856, 566 Primary School pupils, and Madras spent Rs 1,114 168 for 1898436 pupils. Therefore to suggest the expenditure of Rs 3000000 for 7500000 of pupils is rather to err greatly on the side of culpable economy.

I have hitherto said only what can and ought to be done by the Government. In constitutional theory, the Government and the white bureaucracy are not identical. But it lies in the power of the white bureaucracy to give effect to what ought to be the principles of all enlightened governments. It is on that account that they are called upon to do their duty. We do not want any ulms from them. We only ask that, instead of mispending the money we pay in taxes, they spend it for the improvement of the moral and material condition of the people. But if they do not do their duty, we should bring pressure to bear on them in all possible righteous ways.

Increase of income is not the only way to meet the suggested expenditure. Retrenchment also is possible and should be resorted to. For instance, the posts of divisional commissioners, police superintendents, etc., may be abolished without loss of efficiency.

In the meantime, we can and ought to do something ourselves directly, in addition to or instead of what may be done by and through the Government.

Endeavours made by educated and comparatively well-to-do people for the good of the country are sometimes looked upon by them as favours done to the backward illiterate poor people. That is a false notion.

It is we the educated classes who are deeply in debt to the illiterate poor people for our education and in many other ways. In the two universities of Calcutta and Dacca, very much more is spent for the education of the university students per head per annum than is received from the students. This amount in excess, of which we are unable just now to give an exact idea not having the necessary statistics before us, is contributed by the Government. Government grants come in the last resort either from the taxes paid by the common people or from their labour of various kinds. So, those who attend the University classes as students and obtain their degrees in the various faculties are indebted to their poorer and less fortunate countrymen for their intellectual equipment. As for collegiate education, I have compiled the following statement from the Education Director's Report for 1925-26, showing the expenditure per head and the amount contributed by the Government per head, per annum.

College	Annual Expenditure per student	Govt's share.
Presidency	Rs 597 0 0	Rs 366 0 0
Dacca Intermediate	415 12 2	325 4 9
Hughli	524 8 4	433 15 0
Sanskrit	614 10 3	561 2 3

The fees paid by the students do not suffice to meet all the expenses of their education. Government meets the deficit from the taxes paid by the people. Therefore, we the educated classes are indebted for our education to the people, and should try to repay this debt in all possible ways. It should not be supposed that our debt is measured simply by what the Government has paid *plus* interest thereon. We are indebted to our people for whatever money or fame or other things which our education has enabled us to acquire. Those who have graduated from private unaided colleges must not think that they have paid fully for their education and are not indebted to anybody. They are indebted to the comparatively poorly paid professors, lecturers and demonstrators of these colleges.

We can try to repay our debts in two

ways. Seeing that a primary school in Bengal can be maintained by an average annual expenditure of only Rs 122 6 5, it should undoubtedly be within the means of many an educated well-to-do man in Bengal to maintain such a school. Those who are not in a position to do so can pay Rs 3 12 5 per annum for the education of a single primary school pupil. Those who cannot do even that ought themselves to undertake to personally teach at least one child not related to them up to the highest primary school standard. Those who are in a position to make pecuniary contributions may do so to some Society or Association for the education of the people, which they know to be trustworthy. For my part, I recommend the Society for the Improvement of the Backward Classes, Assam and Bengal, of which the office is situated at 14, Badur-bagan Row, Calcutta.

In conclusion, I would appeal to the well-to-do Zamindars of Bengal to do their duty in this matter. There are Zamindars who have no village homes. They live in Calcutta or some other town. Others have homes in villages. All should do their duty to their tenants in the matter of education, for they owe their income to these rayats.

INDIANS ABROAD

Mr Srinivasa Sastri Criticised

THE South African Settlement arrived at by the Hibbulla Deputation has roused resentment among many of the South African Indian intelligentsia. Although, owing to a persistent propaganda carried on by certain persons, many people have been led to believe that the Settlement is something of a great achievement, it has not convinced everybody, and, we are probably facing a fresh period of intensive agitation in Africa for the recognition of Indian rights there.

Mr Srinivasa Sastri, who has proclaimed the excellence of the new arrangement from the press and the platform has come in for a large share of criticism from South African journals. In reply to an article contributed

by the Rt. Hon. Mr Sastri to the *Hindustan Review* in which he discusses the present settlement, Mr. Subramania Aiyar, editor of the *African Chronicle*, publishes a spirited retort in *Indian Views*. He says about the article in question,

Shorn of all verbiage the article is a tissue of platitudes and political contradictions and no wonder Mr Sastri is so unpopular politically in India as he is likely to be here ere long!

Mr Aiyar later turns to Mr Sastri's Poona speech and says

The Hon. gentleman the brain head and shoulder of the Round Table Conference addressing his moderate and liberal colleagues at the Deccan Sabha, at Poona, on the 6th March, thus expressed his candid opinion on the Indian Settlement. He said that the difference between the White and the Coloured population in South Africa were both racial and economic. Their respective

standards of life also markedly differed a circumstance that should not be lost sight of. The whites have incurred sacrifice to maintain their higher standards and are afraid of the larger number of Indians in their midst who have comparatively a far lower standard and who are numerically superior. Those who seek an honourable solution of the Indian problem in South Africa must give due weight to these facts. Afraid of being swamped by Indians their reduction to a manageable compass was thus deemed necessary to the maintenance of the Standard of the Whites.

Mr Sastri and his brother Indian and European Colleagues came all the way from India, at the expense of the poor Indian tax payers with a view to elbow the Indian out and proclaim to the world that as a race the Indian is unfit to live trade and work side by side with the white man! But in his eagerness to make out a case for the party he has espoused Mr Sastri has evidently been following a wrong course altogether and in building his case he has started from erroneous premises and reached totally irrelevant conclusions. When he says that the Indian is numerically superior in number there he starts from wrong premises a reference to the statistics would prove the fallacy of his contentions. Indeed the white population of South Africa is about one and half million while the Indian population does not exceed 1,00,000 all told and therefore it would be obvious that it is not the Indian who is superior in number but it is the White!

Mr Sastri maintains that the Whites have incurred sacrifice to maintain their higher standard more than the Indian who have comparatively a far lower standard but the Rt. Hon. Gentleman has apparently forgotten that the present high standard of living and that of the efficiency of their industries and commerce is due if not entirely at least to a very great extent to the exploiting policy pursued towards the Indian whose per severeopos and noble sacrifices made Natal fit for European expansion in this outpost of the Empire. There was a time when the white man could not earn three shillings per day and had to run away from this country for pastures new and their crops were rotting on the ground for want of workers and for lack of distributing agents. Under such harrowing circumstances the Indian was invited to colonise and it is he who brought prosperity and built up the commerce and industry which have proved the main frame work of the white civilisation and necessarily for the maintenance of the present high standard of living! After building up their industry and civilisation now finds the white man that the Indian who was indispensable at one time is no longer desirable because the latter is to use Mr Patrick Duncan's fitting expression "advancing in education and civilisation" and as such is becoming a deadly competitor in the open market. The power and prestige of the white race as rulers over non Europeans disables them from frankly disclosing the true causes that have led to this burning race antagonism and so in order to make out a case against the Indians they find it expedient to level against them all sorts of imaginary accusations and in order to lend additional colour to the charges they have in addition to "prevailing" unfounded alarmist reports armed themselves with a wage Colour Bar Act and

a legislative Colour Bar Act all having the objective to keep the Indian and Native down for ever without affording them an opportunity to raise their head above the water level and yet the white races shout that the Indian is a menace to the country which Mr Sastri and his colleagues who were ostensibly our leaders and spokesmen accepted these asseverations for its face value.

After doing all these and similar vandalism in the name of the maintenance of Western civilisation and for upholding their higher standard, and after exhausting all their ingenuity subtlety skill and power to deter other races from raising to a higher standard of living it is simply amazing to hear from the lip of an outstanding Indian of the type of Mr Sastri repeating the same old fable which Dr Malan and Mr Boydell have been in the habit of sermonising! If these were the real causes that influenced Mr Sastri and his colleagues to arrive at the conclusion to *reduce the Indian Population to a manageable compass*, then one is constrained to ask why should they visit South Africa to deliver their precious judgement! They could have confirmed it long ago because the Paddison Deputation had already placed their seal of approval on behalf of the Indian Government and having all the official documents and Blue Books before them they could have issued their ukase without this wastage of public money!

Indeed one is very doubtful whether Mr Sastri and his colleagues have arrived at the conclusions they did on the merits of the case or whether it is the outcome of political and high Imperial expediency which I leave to the public to draw their own inferences!

Mr Aiyar further says

Indeed Mr Sastri has committed an unpardonable blunder in being a party to this unnatural alliance with the Union Government for eliminating the Indian community from the shores of South Africa and undoubtedly he has done irretrievable damage to the cause of Indian Nationalism and to the future of our race among the comity of civilised nations. No patriotic Indian could help but saying that this so-called Settlement is a shame. It is a blot on the sacred name of India and certainly it is an insult to the wide culture and acute intellect of Mr Sastri himself. In however grand eloquent phraseology he may expatiate on the wonderful achievements of Sir Mahamed Habbibullah's statesmanship the fact remains that the future historian of India would chronicle in bold black letters this dismal chapter in the history of South African Indian colonisation as a standing monument of India's eternal thralldom to an alien Empire as a clear demonstration as to how Indian interests are bargained away for the paramount interests of this White Empire, and as a manifest proof of how when a nation loses its freedom that nation becomes callous to all manliness indifferent to all sense of national honour and other distinguishable qualities which go to make up a free civilised being. However India's subservient position to all and sundry white races having been established by the white bureaucracy and their brown bench men under this Settlement it is still to be seen whether the people of India and Indians of South Africa in

general would resign themselves to their fate and mix with the Indians or with their way of life left in them to survive the present ordeal. Time alone can tell the extent of this hardihood of the higher instincts and nobility of character of the Indian people.

We are finally provided with an able summary of the present arrangement, which we reproduce below in full.

1. Under the Immigration Regulation Act, the stigma of unfree labour imposed on the Asiatics as a race remains as ever but only those of the domestic Indians are assumed only European domicile but no Union domicile which deprives them from being recognized as subjects of the Union and as such not entitled to claim the rights of South Africa in Europe, even though one was born and brought up in South Africa and in the absence of any provision in the Statute for recognition of Indians as Nationals of the Union, no settlement based on undisturbance would have any statutory effect on the fortunes of the domestic Indian community.

2. The original intention of the Mr. Munn's Bill, now known as the Aliens Bill, has been somewhat modified under the new terms. Those were the Munn's maintain that Asiatics were an "alien element" in the population of the country and as such they must be subjected to a considerable restriction of their economic freedom but not by force. In the present settlement the acceptance of the so-called assisted migration of Indians, the offer of a bonus of £20 in addition to an alien under the Immigration Law giving automatic power to the Government to challenge the right of any Indian as to deport him has satisfied that part of the intention which had reference to the alien element. As for the economic pressure the acceptance of the Industrial Legislation Law on socialist principles has completely swept the Indian off the board notwithstanding the good wish of the Government to this settlement to find some ameliorating steps for the Indian workers.

3. Dr. Malan aimed at a greasing the whole Indian population with a radius of thirty miles under the settlement while the Indian Government have yielded to wariness on with municipal township and village local jurisdiction by their agreement for the sale of lands with restrictive clauses there is obviously no need for urban segregation because there will be no Indian population left on account of the fact that under economic pressure the Indian will have to choose between starvation and repatriation.

4. Respecting this concession given to the Indian side, it has been maintained that the mere fact of the Union having agreed to allow the repatriates to retain their domicile for a period of three years after their return to India is a valuable concession.

While I am not prepared to say anything about the practical effect of this concession the point is whether the bulk of the permanently settled Indian population have given their consent to the Indian Government to bargain away their rights for the sum of £20?

5. It has been urged that the Union having bought themselves to afford opportunity for Indian advancement as they would other subjects is a Munn's Charter. The point is whether the Union Government have under the settlement recognized at least those of the permanently settled Indian population as part of the general population of the Union. If that be so then the Munn's Charter could be considered a Munn's Charter but from the recent statement of Dr. Malan one has not approached when Mr. Strickland, Minister for Agriculture, stated to the Minister that the Provincial barrier should be removed in the case of those Indians who will comply with the European standard of living Dr. Malan promptly rejected any such undertaking and added that the principle of admitting Indians in their respective provinces shall be followed in fact under the circumstances, wherein comes the Indian Munn's Charter.

6. As regards the uplift of the Indians educationally, it was only last week that the Natal Legislative Council by a unanimous vote threw out the proposed Bill which bore the following analysis of this attempt to which the Indian Community has agreed practically nothing, coupled with the fact that the Union Government have introduced two Bills which are in a dangerous form a part revelation of the spirit of the late Government of Natal Bill it must be transparent to all well-disposed and honest minded citizens that the Indian Question has assumed a new phase and in all probability the community may in the near future be called upon to face a combined opposition from two powerful Governments in their endeavour to gain their elementary rights of citizenship for which they have hitherto been struggling. It is significant indeed that Mr. Swarth, the poet of the British Imperialists and the darling of the European Association of India and by no means an ardent Indian Nationalist, should have been chosen for the post of the first Agent General to this country but despite his winning eloquence and consummate diplomatic skill it is to be apprehended that in the present temper of the Indian community he is not likely to meet with a smooth working of his settlement and in fact, it is reasonable to note that, he has to a considerable extent estranged Indian public feeling in this country by his recent speeches and articles in the Press in violation of the unwritten and questionable policy which he has been acting on in respect of the Indian question in South Africa.

REPRESENTATION ON THE POPULATION BASIS AND THE LEGISLATIVE ASSEMBLY

BY RAMANANDA CHATTERJEE

At one of its sittings in Bombay the All India Congress Committee has resolved that the adequate representation of the two great communities of India should if desired be secured by reservation of seats in joint electorates on the basis of population in every province and in the central legislature. This means that, so far as each of these two communities is concerned the principle is recognised that the number of the representatives of each community in the Legislative Assembly is to be determined by its numerical strength. If a community is to have the number of its representatives in the Assembly determined by its numerical strength in a province then it stands to reason that the number of representatives of each province in the Legislative Assembly should also be determined by the numerical strength of its total population. To take an example. If the Hindus of the Punjab and the Musalmans of the Punjab are to have a number of separate representatives in the Legislative Assembly their respective numbers being determined by their respective numerical strength then the total number of representatives of the entire population of the Punjab in the Assembly should be also determined after comparing the number of its inhabitants with the numbers of the inhabitants of the other provinces. If the population of British India be taken to be 240 millions in round numbers and if the number of elected members of the Assembly be fixed at, say 120 then each province should have one member for every two millions of its population.

What we drive at may be summed up by saying that what is sauce for the Provincial Community Goose should be sauce for the Total Provincial Population Gander also.

Let us now see how many elected representatives in the Legislative Assembly each province has at present and let us also mention how many inhabitants each province contains.

Province	Elected Members in L A	Population
Madras	16	42,318,985
Bombay	16	19,348,219
Bengal	17	46,695,536
U P	16	45,375,187
Punjab	12	20,685,024
Bihar and Orissa	12	34,007,189
C P and Berar	6	13,912,60
Assam	4	7,606,730
Delhi	1	483,188
Burma	4	13,212,192
Ajmer Merwara	1	495,211

A glance at the table would suffice to show that representation has not been given to the provinces on the basis of population. It need not be pointed out which provinces have been unjustly treated on the population basis. Will the All India Congress Committee pass a resolution that each province should have representatives in proportion to its numerical strength?

If we take the representation of any of the provinces as the standard it will be found that some of the other provinces are under represented and some over represented. If the provinces of Delhi and Ajmer Merwara which have the smallest number of representatives namely one each be taken as the standard it will be found that all the other provinces are under represented. If the province of Bengal having 17 members be taken as the standard most of the other provinces will be found to be over represented.

As Bombay has given birth to some perhaps most of the ablest statisticians of India, let us take Bombay as the standard and find out how many representatives the other provinces should have. For convenience of calculation let us take the population of Bombay to be twenty millions in round numbers. Then as Bombay has sixteen members we may say the rule is that every province is to have one member for every 1,250,000 of its population. According to this rule the provinces should have the

following numbers of representatives in the Legislative Assembly —

Bombay	16	C P and Berar	11
Madras	31	Assam	6
Bengal	37	Delhi	Nil
U P	36	Burma	10
Punjab	16	Ajmer Merwara	Nil
Bihar and Orissa	27	Total	133

One hundred and ninety-three is by no means a large number for the Legislative Assembly of such a large and populous country as India. The British Parliament has a very much larger number of members, though it represents a much smaller number of inhabitants.

We do not, of course, suggest [that the Legislative Assembly should be constituted exactly according to the table printed above. We have given the table just to show how representation in the Legislative Assembly on the population basis might look like.

It may be thought that, as things are, Bengal has the largest representation of all provinces. That is not true so far as the people of Bengal, we mean its Indian inhabitants, are concerned. Omitting the representatives of the European birds of passage, the provinces have the following numbers of representatives:

Madras	15	C P and Berar	6
Bombay	14	Assam	3
Bengal	14	Delhi	1
U P	15	Burma	3
Punjab	12	Ajmer-Merwara	1
Bihar and Orissa	12		

This table makes the unjust treatment of some provinces on the population basis still more glaring.

We do not know on what basis the Government has fixed the number of representatives for the different provinces. We have seen that the basis could not have been population, for then, most of the provinces would have had, proportionately, far different numbers of members. Literacy or education could not have been the basis either. The numbers of literates in the different provinces are shown below:

Province	Literates	Indians' Representatives
Assam	483,105	3
Bengal	4,254,601	14

Province	Literates	Indians' Representatives
Bihar and Orissa	1,586,257	12
Bombay	1,615,533	14
Burma	3,652,043	3
C P and Berar	633,293	6
Madras	3,621,908	15
U P	1,688,872	15
Punjab	833,492	12

This table also shows how some of the provinces have been unjustly treated on the basis of the total number of literates.

The number of representatives may have been assigned according to the total amount of revenue collected in each province -- we do not know. We have not at present before us these figures of total revenue collections. When we have them or can make time to work out the totals, we may deal with the point. But we have a rough idea that even according to that basis some provinces would be found to have been unjustly treated.

Speaking for our own province of Bengal, we may say that, whatever basis of representation be adopted, Bengal would be found to have been very unjustly treated and is woefully under-represented.

Of the eleven provinces which send representatives to the Legislative Assembly, six, namely, Madras, Bombay, Bengal, the United Provinces, Assam and Burma, have been saddled with representatives of the European community. This incubus is the heaviest in the case of Bengal. Europeans in Madras have one representative, in Bombay two, in the United Provinces one in Assam one and in Burma one, but Bengal Europeans have three representatives, to counterbalance as much as they can the totally inadequate representation which the Indian inhabitants of Bengal have. Bengal has allowed almost the whole of her commerce and industries to be captured by outsiders. She pays the penalty by her wealth being drained away. But under-representation of her Indian inhabitants and over-representation of her European birds of passage is an additional punishment which she does not deserve.

"non voted we find that it has been ruled by the Legislative Department of the Government of India that the passag pay admissible under Schedule IV to the Superior Civil Rules 1924 is non votable irrespective of whether the ordinary pay of the officer is non votable or not and further it appears that even the ordinary travelling allowances of officers whose pay is non voted are no longer subject to the vote of the legislature. These changes have the merit of being effected openly as a matter of deliberate policy. The audit report however, gives us glimpses here and there of irregularities that are being perpetrated behind the scenes in the matter of supply of Government quarters and furniture to officials. Mysterious references indicate that the conduct of even some of the highest officers is open to grave question in these matters. Certain facts appear to be quite clear.

Proper economic rent is not charged to some officials for residential buildings and maintenance charges are not covered by the rent realised. No regular accounts are kept about furniture supplied to high officials, and it is uncertain whether annual grants for the maintenance of such furniture are properly utilised. Excessive prices are sometimes paid by high officers for the purchase of furniture and the limit of cost prescribed by rules—which appears to be high enough—is sometimes exceeded. There is misrepresentation of facts and manipulation of accounts. The following extract from the report is an index to the character of the scandal—

The Committee agreed with the Auditor-General that special care should be taken by high officials not to ask for furniture which is inadmissible under the rules from the supplying officers who might be placed in a difficult position if such demands were made.

In most such cases which concern the high officials themselves the action usually taken by Government is either condonation or amendment of the rules to suit the irregularities and where it is neither of these two the orders of Government are awaited from year to year.

Lord Canning's Minute on Archaeological Remains

Lord Curzon is known to have taken a great interest in the archaeological remains of India. But long before him Lord Canning

took a similar interest in our archaeological remains. In January 1862 Lord Canning recorded a minute regarding the investigation of the archaeological remains of Upper India. In this minute he wrote

It is impossible to pass through that part Upper India—or indeed as far as my experience goes any part—of the British territories in India without being struck by the neglect with which the greater portion of the architectural remains and of the traces of by gone civilization have been treated though many of these and some which have attracted notice are full of beauty and interest. By neglect, I do not mean only the omission to restore them or even to arrest their decay for this would be a task which, in many cases, would require an expenditure of labour and money far greater than any Government of India could bestow upon it. But so far as Government is concerned there has been neglect of a much cheaper duty, that of investigating and placing on record, for the instruction of future generations, many particulars that might still be rescued from oblivion and throw light upon England's great dependency a history which as time moves on as the country becomes more easily accessible and traversable and as Englishmen are led to give more thought to India than such as barely suffices to hold it and govern it, will assuredly occupy more and more the attention of the intelligent and enquiring classes in European countries. It will not be to our credit as an enlightened ruling power if we continue to allow such fields of investigation as the remains of the old Buddhist capital in Bihar the vest ruins of Kanauj the plains round Delhi studded with ruins more thickly than even the Campagna of Rome and many others to remain without more examination than they have hitherto received.

Accordingly, the Archaeological Survey of India was undertaken by the Government of India and Colonel A. Cunningham was appointed as the first Archaeological Surveyor to the Government of India whose investigations would pass from South Bihar into Tirhoot Gorakhpore and Fyzabad.

Pagal Haranath

We are indebted to Mr N V Mehta corresponding member of Haranath Society West Field Warden Road Bombay for a copy of the photograph of the religious teacher who was known as Pagal Haranath or the mad Haranath and who passed away on the 25th of May last. He was born in Sonamukhi in the district of Bankura Bengal on the 3rd July 1865 according to Mr Mehta but in July 1870 according to the

Bengali weekly *Sa ray*. His family name was Banerji. He studied up to the B.A. standard but could not get a degree. He served for some time in Kashmir as the Assistant Superintendent of its Dharmartha Office. He had followers of many castes and creeds in various provinces of India. He did not preach any particular dogma or doctrines.

News of Women in Many Lands

Mrs N O Freeman Chicago's oldest Co-ed 77 years old is taking a course in American and English Literature at North Western University with men and women students who are of the age of her grandchildren—such is her love of knowledge.

Pagal Haranath

Mrs N O Freeman

but appears to have laid great stress on loving neighborly conduct. The following is from a printed message of his sent by Mr Mehta

a player who has thrice to appear on the stage and act in one particular play can never after his first or second appearance totally disappear and leave the play. He only changes his dress and remains standing amongst all and no sooner the time comes than he again puts on the proper dress and continues playing his part. The actor by changing his dress can remain amongst the spectators unrecognized by them but he cannot go out of the sight of the other members of the theatrical company. In whatever dress he may be dressed, they all recognise him at once. Therefore do I say that they do not belong to the inner circle, who set their minds thinking about such disappearances.

NOTES

Audit Control of Public Expenditure

The Accountant General, Central Revenues, has favoured us with a copy of *Audit and Appropriation Accounts of the Central Government (Civil)* for the year 1925-26. This compilation is a feature of the new constitutional reform in India, and fulfills a statutory requirement. The transitional character of the administrative changes in India is reflected by the fact that, though the present volume relates to the fifth year of the Montagu reform era, it is the second report on the British model. The usefulness of a strict audit control over departmental expenditure cannot be exaggerated under any form of Government. In the British Isles, this control is exercised not merely in the interests of economy and regularity of expenditure but also as a powerful aid to parliamentary control over spending departments. While financial decorum and integrity are ensured by the examination of accounts with reference to technical rules by an authority independent of the administrative departments, the audit and appropriation accounts enable the House of Commons through its Public Accounts Committee, to satisfy itself that expenditure has not transgressed the scope of the different heads under which money was voted. Since 1921, the Legislative Assembly in India has enjoyed a limited right of voting expenditure, and as a corollary to it, the Government of India Act requires the appointment of a Public Accounts Committee, partly elected by non-official members of the Assembly and partly nominated by Government to examine and report on the 'voted' expenditure of Government. The Committee is presided over by the Finance Member and is assisted by the Auditor General in its work of scrutiny of the audit and appropriation accounts. Principal departmental officers appear before it as witnesses to be examined in detail on the points arising out of the accounts and sometimes a wide ground of administrative questions is covered by such examination. This procedure not only tends to expose the official improprieties of varying magnitudes. The Committee thereafter presents its report

in the Assembly along with a verbatim transcript of the evidence of departmental witnesses. The Finance Member at the same time moves for the formal grant of any excess vote under any head that may be necessary to regularise expenditure of the year under report. Such excess vote does not necessarily mean actual provision of additional funds, because excess of expenditure under one head is almost invariably counterbalanced by unspent money under others. Though the control of expenditure thus exercised by a parliamentary institution is 'post mortem' in character, tradition has made it none the less effective in Great Britain. To be reported to the Public Accounts Committee for any irregular spending, is considered to be a severe ordeal and chastisement for the British official. The limitations of the present Indian constitution, the privileged position of the superior officialdom, the division of expenditure into 'votable' and 'non-votable', and the shadowy character of the authority of the Legislative Assembly were in the sphere of 'votable' expenditure, tend to deprive this well known parliamentary expedient of its potency as an engine of control and correction.

The volume before us deals with both 'votable' and 'non-votable' expenditure of the Government of India in all departments excepting Military, Railway and Posts and Telegraphs, and it will be considered by the Public Accounts Committee shortly. A detailed examination of the contents of this compilation would be beyond the scope of these notes, and we hope the daily press will do greater justice to these official publications than it has hitherto done. We will, however, touch upon a few salient features of these accounts, just as a sample of the valuable materials that are available to the publicists even in dry as dust audit reports.

In the year under review, the departments covered by the report were responsible for an expenditure of about 28¾ crores of rupees under the 'voted' head, and about 24½ under 'non-voted' as against total grants of about 37 crores voted by the Assembly and about 29½ crores in the non-voted sphere. The percentage of total savings under voted grants

works up to 29.50 and under non voted grants to 3.55. This remarkable disparity in the proportions of savings points to overbudgeting of votable expenditure (in expectation of cuts²) and the report itself admits a tendency to provide more funds than ultimately prove actually required for voted expenditure. It appears that the Public Accounts Committee draw attention to this evil tendency while dealing with the accounts for 1924-25. The fact that over estimating is not so noticeable in the non voted sphere suggests the necessity of a scientific inquiry into the psychology of departmental authorities that secure far greater accuracy in estimates in the non voted compartment of public expenditure. Though the total expenditure shows a large saving, there are individual heads under which grants have been exceeded. Thus sanction of the Legislative Assembly is required for an excess expenditure of about 12 lakhs under certain votable grants while the non voted grants under certain heads were exceeded by about one lakh for which the sanction of the Finance Department is necessary. Here again the disparity is obvious. In justice to the account authorities and the Public Accounts Committee it must be admitted that they are making efforts to solve these difficulties and ensure greater control of expenditure.

A measure of some importance touched upon by the report, is the institution of the Provincial Loans fund since April 1925 "for the purpose concentrating all loan transactions between the Central and Provincial Governments in a self contained financial unit which should be altogether independent of the general debt account of the Central Government. The total capital liabilities of Provincial Governments due to the Government of India and outstanding on the 1st April 1925 amounted to over 100 crores. And in the year 1925-26 the fund advanced Rs. 952 lakhs and odd to various Provincial Governments, while repayments were made to the extent of 1.76 lakhs and odd.

While such items are likely to prove attractive only to the serious student of public affairs and economics, the portion of the audit report affords that to the average reader interesting side-lights on the administrative machinery of Government is that which deals with financial irregularities. It may be noticed that the term "financial irregularities" covers a wide field extending from intakes of non compliance with

technical rules and errors in interpretation involving financial loss to the state, to cases of serious breach of trust and downright cheating. The general tendency appears to be to condone past "irregularities" while laying down stricter rules for future guidance. The function of the audit authorities ceases with bringing instances of irregularity to the notice of Government, and incorporating the more important among them in the audit report for the information of the Public Accounts Committee. The report, moreover mentions the action taken by Government in each case and unless the Public Accounts Committee is satisfied with such action it can make its own comments for the edification of Government. It is thus a moral check that is exercised by the audit authorities and the Public Accounts Committee for the right to condone irregularities is vested in the Executive Government. Publicity such as is given to these cases in the audit report and the proceedings of the Public Accounts Committee has undoubtedly its effect. And from this point of view, we should desire greater details to be provided of such cases in the audit report. As this is the first year when we have been presented with a copy of the audit and appropriation report, we are unable to follow the rather cryptic references to certain cases dealt with in previous reports and which are yet pending. For instance in paragraph 33 of the report, brief reference is made to the financial irregularities brought to light in the accounts of the Rajputana Salt Sources, and in another place it is stated in two lines that the cases are still under investigation and no final orders have yet been passed by Government. It is difficult to identify in these brief references, a scandal of great magnitude, in which large amounts may be involved, and which was dealt with by the Public Accounts Committee last year in connection with the audit report for 1924-25. That Government should take such a long time in coming to a final decision in a case of this description appears to be surprising.

No one in these days, will accuse the Government of India of being overburdened with conscientious scruples in their trusteeship of our public revenue, when the financial interests of officials conflict with those of economy or constitutional propriety.

Thus, in the list of changes in the classifications of expenditure from "voted to

barrister of Paris delivered a thesis on the life of Mahatma Gandhi at the reopening of the French courts. She is the first woman lawyer ever to address the assembled Bar of Paris.

Mrs. Sharada Diwan, a daughter of Sir Chimanlal Setalvad, has, with distinction, passed the M. A. examination of the Bombay University with a thesis on the population problem in India. Much credit is due to her and to her husband that she has been able to prosecute her studies after her marriage. She is the first Hindu Gujarati lady to obtain the M. A. degree.

Miss Shyamkumari Nehru, daughter of Pandit Shyamalal Nehru, who had already distinguished herself by topping the list of successful candidates of the Allahabad University in the B. A. and the M. A. previous examinations, obtaining a first class in both, has recently stood first in the previous LL. B. examination of the same University. After obtaining her law degree, she intends to practise in the Allahabad High Court.

Miss Sheila Roy, daughter of the late Dr. Parash Ranjan Roy, has stood first in the first class in the Allahabad M. Sc. previous examination in Chemistry. As very few girl students go in for science

Filipinos Leading Chinese Soldiers

The following clipping from the continental edition of the *Daily Mail* of England will be found interesting —

Manila, Monday — Filipinos trained in the Insular National Guard under United States officers are now commanding units in the Cantonese Nationalist army according to reliable reports circulating here today.

A foreshadowing of increased independence agitation in the Philippines meanwhile is seen in the formation in the islands of a secret society resembling the Kuomintang of the Chinese Nationalists. The Kuomintang it is pointed out, was the chief factor in the overthrow of the Manchu dynasty in 1911 and has been the most potent force in the success of the Southern Nationalists to date.

Branches of the new Philippine society called *Legionarios del Pueblo* are being formed throughout the archipelago and the movement is believed to be spreading rapidly.

The native population is showing a keen interest in the advance of the Chinese Nationalists. The local Press is carrying detailed accounts of the developments of the Chinese civil warfare.

It has not been definitely determined to what

Mrs. Madgaonkar

Mrs. Gajjar

degrees. Miss Roy's achievement deserves special mention

extent the Philippine Independence Party headed by M Manuel Quezon, President of the Insular Senate is identified with the new Nationalist Society

Sasimohan De of Sylhet

In a village in the district of Sylhet there was a wicked debauchee of the name of Fayeze Ali. He had dishonoured and ruined many girls and women and some others removed to other villages to escape being victimised by him. It is a shame that, owing to the moral atrophy and cowardice of most of the

Sasimohan De of Sylhet

villagers this man was enabled to pursue his nefarious career so long. At length he attempted to seduce the sixteen year old young wife of a poor man by offering her costly presents through a woman of the same village. The name of this young girl is Pabitra which means 'The pure one'. It is a very appropriate name. Pabitra refused all these presents and overtures with scorn. Not to be baffled the brute Fayeze Ali thrust himself into the cottage occupied by Pabitra and her mother. Pabitra was firm and again refused

complaisance with his wishes. He left threatening both mother and daughter that if they did not yield he would dishonour them both by force. When a neighbour of theirs a young man or boy of 18 Sasimohan De by name heard all this, he promised to protect them. So when one evening Fayeze Ali forcibly entered their house with evil intent and was about to assault Pabitra Sasimohan came in with three companions and began to belabour him with a *lathi* to make him desist from his wicked attempt. The man died in consequence. Sasimohan was committed to the sessions on the charge of murder as he alone beat Fayeze Ali. The jury consisted of five Hindus and two Musalmans. They returned a unanimous verdict of not guilty and the judge accordingly let him off. We are glad the chivalrous and brave young man has been rightly let off without any punishment. In Bengal assaults on women and girls followed sometimes by murder or unintended death of the victims have become very numerous. The people as a whole are not up and doing against these wicked deeds. The Government has not taken any special steps to deal promptly and effectively with these crimes. Only a very small number of the people of Bengal are trying to fight the evil. All these circumstances have to be taken into consideration in judging of the worth of the young hero who so nobly and at such great risk came to the rescue of the poor pure hearted girl Pabitra.

It would have been well if Fayeze Ali had survived the lesson he was taught and lived to repent and reform himself. But there cannot be the least doubt that the honour of women is far more precious than the lives of debauchees and if the defenders of women's honour happen sometimes to kill their assailants in the attempt to prevent an impending assault, it cannot be helped. Girls and women must be given protection at all costs.

Lies in the British Parliament

Earl Winterton stated in the house of commons a few weeks ago that Mr Subhas Chandra Bose had been placed before two judges and other detenus before one. Some other similar untrue statements were made by him. When Mr Bose's statement flatly contradicting these assertions was published

in India and subsequently cabled to England, Lord Woterton had to eat his words. But it need not be assumed that he would mend his ways, men of his ilk are incorrigible, because they cannot be brought to book in the only way which appeals to them.

His lordship chooses to call the detenus convicts, though they have never been tried and no formal charge even has ever been framed against them. Let him please himself. They are no more convicts than he is a dinosaur.

Another man, of the name of Pilcher, who also is an M. P., has said that Mr. Subhas Chandra Bose was implicated in a murderous plot of which the object was to kill the Governor of Bengal.

The utterers of all these lies are morally contemptible. But politically they are not despicable. For they are capable of much mischief. The least that the people of India can and ought to do is to have an Information Bureau with sufficient funds, to contradict these lies in the countries where they are broadcasted.

The Arcos Raid

The excuse for the Arcos raid in London was that a secret document of great value was to be recovered from the building raided. It was not found, however. But it was claimed that other important documents had been found. Russians declare these to be forgeries. We are not, of course, sure. But we cannot say that British politicians are incapable of forgery. History has convicted them of the crime repeatedly. And recently on the occasion of the Arcos debate, Mr. Arthur Ponsonby said in the House of Commons:

"I have no respect for dirt even in high places. But what I object to more than dirt is the hypocrisy which pretends that we are so pure that we do not indulge in any of these methods during war time. All this is recognised as part and parcel of war machinery. You have lies, propaganda, atrocity factories, telephone tapping, letter opening, department for forgery, department for faking photographs, and that sort of thing and each Government has it. We must really face the fact when getting on our high moral horse that forgery, theft, lying, bribery and corruption exist in every Foreign Office and Chancellery throughout the world. This weapon is used during war because it is valuable. It is used during the so-called peace because peace is used for making preparations for the next war."

When challenged by Sir Austen Chamberlain, Mr. Ponsonby said that during his career he had

seen a document taken from the archives of a foreign country.

What Britishers May and May Not Be Forgiven

The Modern World of Baltimore, U. S. A., writes:

Sir Stanley Jackson is the new Governor of Bengal.

He recently informed the subjects of that province "that if they played cricket," that is, played fair with him he would reciprocate by playing fair with them.

Welfare—a very able Calcutta publication, with the specific policy of seeking the physical improvement of the Indian people—comments on his proposal as follows:

Sir Stanley was not quite doing justice to the spirit of cricket when he thus made fair play a conditional thing. Moreover Sir Stanley forgot his capt in, the Government of India. How can it be cricket at all when we are fielding eternally with shackles on our feet and they are hitting and scoring as they like. Whenever we talk about declaring the innings and taking up the bat ourselves, we are told that our bats will be only 2 inches by 6 inches and that we must play with leaden leg guards and with bandaged eyes. And to crown all our stumps must be a mile wide and a mile high, while the ball will be fired at us from a field gun. We own up our defeat right at the beginning.

This is followed by the American journal's own comments, which are reproduced below:

There is an elementary rightness in this criticism. Certainly it all becomes an imperial power, holding sovereignty by force to urge the code of ethics of sportsmen on a subject people.

A very distinguished Indian recently declared: We of India, readily forgive England for everything she has done to us save one thing. We forgive her for conquering us. We forgive her for firing our people from guns. We forgive her for forcing the opium habit upon us. We forgive her for any physical thing she has done to us. Down all history outside conquerors have subjected us to similar things. We are accustomed to them. We look upon them as rooted in the elemental passions of mankind. But there is one thing England has done which no one of our former conquerors ever attempted. She has sought to justify her deeds on moral and ethical grounds. Unwilling to admit the selfishness and greed which prompted them she has rationalized her rapacity in terms of morality. This obviously, means the debauching of the moral currency of mankind. It is an attempt to make black white and white black. It obscures all the true ethical relationships of men and races. This hypocrisy, this debauching of moral ideals—the East will never forgive the land of Mr. Pecksniff.

Let us be honest about these things. The Occident is in possession of superior organization and of superior weapons. With these it is able, temporarily to bully the Orient and all weaker peoples. There is nothing intrinsically base about

this Baseness enters the picture only when intellectual panders arise to proclaim that idealism and not self interest actuates our bullying Baseness enters the picture only when we expect from those we bully adherence to sporting canons which imply relations between equals and not relations between the powerful and the power less

There may be something more unsportsmanlike than in urging sportsmanship upon a hopelessly handicapped and shackled adversary But we doubt it

A Detenu at Death's Door

We extract from *The Bengalee* the whole of the following editorial article because it relates to a detenu in the grip of a fatal disease —

Nearly four years ago—to be correct in October 1923—Sj Jiban Lal Chatterji was arrested under the famous Regulation III of 1918. When arrested he was a hale and hearty young man. During the course of his detention he has contracted tuberculosis a disease which is perhaps the most treacherous of all known to medical science. Unless it is detected in the incipient stage and unless the greatest care is taken to arrest its progress tuberculosis invariably ends fatally. The reports received about the state of health of Jiban Babu hardly justify an optimistic prognosis. The opinion of the Superintendent of the Sharenge Santhal Mission Hospital is that both his lungs are affected. Hemoptysis is very frequent. His present weight is only 100 lbs and he has lost 6 lbs. in two months. This shows that there is very little hope of his surviving for long. Yet the Government instead of acting up to the declaration made by Sir Alexander Muddiman in the Assembly and following the precedent set up by the release of Sj Suthas Chandra Bose has so long kept Jiban Babu in a jail and only recently transferred him to the Sharenge Hospital. But the conditions in which he has to live there are by no means those which are called for in the case of a phthisis patient. The climate of Sharenge is not at all bracing on the other hand its neighbourhood is malarious. The hospital is meant for women and is surrounded with high walls which block the ventilator the hospital building being one-storeyed. Jiban Babu is himself kept in a small room in the Phthisis Ward which is hardly better than a prison cell. There are practically no arrangements for nursing. There is no privy in the hospital which is a great inconvenience to weak and emaciated patients such as Jiban Babu has now become. And to add to his troubles the Government has sanctioned an allowance of Rs 40 only which cannot conceivably suffice for him as the diet needed for a consumptive is very expensive. Fruits and other articles have to be sent for from Calcutta, as they are not procurable locally. Though Havuraj Syamadas Vachaspati is treating Jiban Babu yet owing to confinement at the Sharenge Hospital and the absence of facilities for examination as often as is necessary the treatment cannot be as effective as it might have been. There are also great inconveniences in sending medicines. But all these considerations do not weigh with the Government which allows itself to be guided by police reports in its policy

of detaining and imprisoning men without trial or judicial conviction. But why we inquire of the Government why Jiban Babu is being treated differently from Suthas Bose? From all accounts he is more seriously ill than Suthas Babu and the Government has itself recognized the principle that detenus should be released if the release is called for on medical grounds. Why then is he still deprived of his personal liberty? Is it because he is not yet considered sufficiently ill? Or is it because he did not enter and resign from the Indian Civil Service and did not become Chief Executive Officer of the Calcutta Corporation? Or is it because public meetings have not been held specifically demanding his release and because questions about him have not been asked in the British House of Commons?

The facts about the health and treatment of all the detenus which appear almost daily in the papers should be brought up to date and printed in the form of a pamphlet for the information of members of the British Parliament and of the Legislative Assembly. The Indian Journalists Association should perform this duty. We are prepared to bear our share of the expenses.

Aftermath of Rangila Rasul' Case

Rangila Rasul is it appears, the title of a pamphlet attacking the life and character of the prophet Muhammad. Mr Justice Dalip Singh of the Lahore High Court, in his judgment in the Rangila Rasul' case criticised this pamphlet most unsparingly and also said that it was natural that such an attack on their prophet would enrage and deeply wound the susceptibilities of the Moslems. But he thought that the section of the penal law under which the accused the author of the pamphlet had been charged and sent up for trial did not apply to the case. And therefore the man escaped being punished. This greatly enraged the Moslem community of the Punjab. *The Muslim Outlook* one of their organs attacked the Judge in language which in the opinion of the Lahore High Court amounted to contempt of court. So its editor and printer have been punished with simple imprisonment and fine.

We do not think that either the kind of attack which *The Muslim Outlook* indulged in or the fury of the Punjab Muslims is at all justified. For the Judge far from justifying the author's conduct or extenuating his offence criticised his pamphlet severely. The man was let off because in the opinion of the Judge he was not guilty of the offence with which he was charged. Suppose one man hurls another man but is prosecuted for theft. If a judge lets him off on the ground

that he is not guilty of theft, it cannot be said that the judge has encouraged libel. We say this only by way of illustration, for the 'Rangla Rasul' case is of a different kind.

What in our opinion the Muslim community and its organs were legitimately entitled to do was to show that Mr Justice Dalip Singh's interpretation of the law was wrong. They might also have demanded a change in the law or in the wording of the particular section under which the Judge had to deal with the case.

The conduct of Sir Malcolm Hailey, the Governor of the Punjab, in connection with this case has been improper and indiscreet. He had no legal authority to sit in judgment on a High Court Judge, and even if he had he would have been under the necessity of hearing both what the Judge had to say as well as what his accusers had to say. It was highly improper on his part to take into his confidence a deputation which waited upon him, and to tell its members that a test case would be instituted and if the judgment in that case too, proved unsatisfactory in his opinion an attempt would be made to change the law. Sir Malcolm it is certain would have got very angry and would have been scandalised if a High Court Judge had done with reference to some of his executive actions what he has done with reference to a High Court judgment and he would have been quite right too. We think Sir Malcolm's improper conduct has encouraged the Muslims in their unreasonable and fanatical attitude.

The Indian Cotton Industry

One could predict from the unconscionable delay in the publication of the Tariff Board's Report that Government would give no protection to the cotton industry of India. The Sarkar has refused to give effect to the recommendations of either the majority or the minority in the direction of protection. Protection has to be given against Lancashire and Japan. The Government of India is a British Government, and the Lancashire textile industry is the British industry which exports to India goods of greater value than any other British industry. Directly and indirectly a majority of the British people profit by Lancashire's exports to India. So it cannot be expected that any effective protection would be given against Lancashire. If

protection had been given against both Lancashire and Japan, then, too, Japan would have been displeased. But to give India no protection against Lancashire while giving protection against Japan would have been doubly offensive to the latter. Owing to the Chinese situation it is necessary for Britain to keep Japan pleased as much as possible. Moreover the Singapore Base is not yet ready. So India must suffer. Our only protection lies in avoiding the use of foreign cotton cloth. This would be feasible if all of us could make up our minds to hear the slight inconvenience of using somewhat coarser and thicker cloth than the fine stuff imported from Lancashire. As for the payment of a slightly higher price the comparatively well to do people who use fine cloth can certainly pay something extra. And poorer people too, can pay for somewhat higher priced cloth if they give up the injurious and useless habit of smoking cigarettes. There is also no doubt the problem of a sufficient supply from our own industries. This is by no means insoluble. More mills may be started. That would, no doubt, take time. But the charka and the handloom are cheap and easily and quickly made. If the richer people would use home-spun hand woven cloth, leaving the mill products for the poorer classes, a sufficient supply could be ensured without much delay.

Some people are deceived by the cry that, the mill industry is mainly a Bombay industry and the consumers of cloth are spread all over India, why then should these poor consumers pay higher prices (which, it is said they cannot afford to do) in order to enrich Bombay capitalists? But the Bombay Presidency is in India and Lancashire is in England. Lancashire has become prosperous by destroying the cloth industry of India and England's political power has been used to bring about this destruction. It is better to enrich Bombay capitalists than to enrich Lancashire capitalists. It is true that when the Swadeshi agitation of Bengal was at its height, the Bombay cotton magnates took undue advantage of the enthusiasm and self-sacrifice of the Swadeshists. That was execrable and unpatriotic conduct. But as Lancashire capitalists are not angels, why should we side with them to spite Bombay? We would go on arguing with and even cursing Bombay, but would support Bombay all the same. Of course, the ideal is for

every region to be self supplying as regards its wear. But if and so long as that cannot be done we should take our supplies from the most convenient region in India.

India and China

The Chinese Nationalist press give great prominence to the fact that India's views on China are exactly the opposite of British opinions. *The People's Tribune* stresses the fact that India has no quarrel with the Chinese people and stands firmly for the struggle for the independence and freedom of all the oppressed peoples of the world.

Germany and China

While British firms and especially British bankers are facing ruin at Hankow Erich von Salzmann, China correspondent of the *Vossische Zeitung* says 'There is not a German in Hankow to day who is worried or scared. The German population in Hankow which exceeds 250 is just as large today as a year ago.'

There are no German gun boats in China.

Chittaranjan Seva Sadan

The Chittaranjan Seva Sadan is a women's hospital established as a memorial to Mr. C. R. Das. The report issued by its board of trustees shows that it has supplied a great need and has been doing good work. In fact, the demand for accommodation is so great that new buildings have begun to be constructed for 32 more beds. An appeal has been issued for five lakhs of rupees. It deserves to have a generous and prompt response. Contributions are to be sent to the Secretary, Deshbandhu Memorial Trust, 36 Wellington Street, Calcutta or to the Account of the Deshbandhu Memorial Trust, Central Bank of India Ltd, 100 Clive Street, Calcutta.

The Statutory Commission

The Statutory Commission to consider the success or failure of the Reforms and to advise whether more boons are to be conferred on the people of India or those already

given are to be taken away in part or as a whole is to be appointed not later than 1929. Should it be appointed earlier, it would be due to the desire of the Tories now in power to choose such members as would try their best not to promote the cause of self government in India. The Tories fear that a general election may take place before 1929 with the result of either the Labourites coming into power or of the Liberals sharing power with the Tories. In either case the personnel of the Commission might not be to the liking of the Tories.

We do not suggest, however, that a Commission appointed by a Labour Government would give us the "moon".

Our British trustees have started the cry that only such men should be appointed members of the Commission as have had hitherto nothing to do with India, because they might be biased one way or the other. Thus Indians are all slung out in a body, for are they not all likely to be partial to their own country? And those Englishmen who have served in India or in connection with India or have resided here as men of business or their assistants should also be considered ineligible. The real reason for seeking to exclude them would be that they have some knowledge at least of the country. Should there be among them by some chance some persons with some sense of justice it would not be easy to hoodwink them. So by eliminating all classes of obnoxious persons, the trustees arrive at the conclusion that only such Britishers should be considered eligible as have had nothing to do with India. But the people of Britain as a whole are interested in keeping India in at least economic dependence on their country and this economic hold on India cannot be maintained without keeping her in political subjection. For this reason we do not think that there is any class of people in Britain who are at heart in favour of India's full self dependence economic and political. Individual exceptions there may be. But they are likely to be known to any party in power and would not be appointed members of the commission.

Our own opinion is that the commission should consist almost entirely of Indian nationalists with only one or two foreign constitutional experts. They may be Britishers.

All imperializing or predominantly manufacturing nations of the world are interested

in keeping India economically dependent, more or less. They all exploit or expect to exploit her. Hence, a commission composed of entirely disinterested foreigners would be hard to form. If there be any small enlightened people who do not exploit India and cannot be bribed or intimidated by Great Britain, members should be drawn from them, assuming, of course, that Indians are not to be thought of.

We do not build any hopes on the appointment of the commission. We have written on it, because it is a current topic.

Prohibition for Mysore

The Representative Assembly of Mysore is to be congratulated on its declaring itself in favour of total prohibition. It wants a committee to be appointed to suggest methods for meeting deficits. An enlightened state like Mysore should not find it beyond its power to meet deficits. The Maharaja is a progressive Hindu ruler and his Dewan is an enlightened Mussalman. The religions of both, as well as of the majority of Mysoreans enjoin total abstinence from liquor. This should make reform easy.

Besides meeting deficits, there is the difficulty of preventing smuggling from the adjoining British territory which is not 'dry'. But it is not beyond the power of the Mysorean intellect to overcome that difficulty. We should feel proud to find an Indian State setting an example to British ruled India in this matter. And it would be so natural for it to do so.

Colour Ban in Edinburgh

The colour ban imposed in some Edinburgh restaurants and dance-halls has been naturally resented by our students and other countrymen there and elsewhere abroad, as well as in India. Many dance halls are not desirable places. But it is not with the object of safeguarding the morals of our students that the ban has been imposed. Had that been the object, it would have been natural for the shrewd and patriotic Scots to seek to prevent their own young men first from going there before seeking to do good to others. The Assemblies of the Church of Scotland and of the United Free Church of

Scotland have rightly condemned the imposition of this colour ban.

One should avoid going to places where one is not welcome. As there are centres of good education where living is as cheap as at Edinburgh it should be easy to shun that place. And so far as India is concerned, it would be desirable to keep aloof from Scots as far as practicable—not in a spirit of retaliation but for maintaining our self-respect.

A Medal of Rabindranath Tagore

We are indebted to Dr Bernhard Geiger, university professor of Sanskrit in Vienna, for the photograph of a medal of Rabindra-

A Vienna Medal of Rabindranath Tagore

nath Tagore reproduced here. It has been made by Hugo Tagliani, a very well known sculptor of Vienna. The poet's Indian admirers should all buy it.

B. O. C.'s Gift to Rangoon University

In recent months several big donations to Rangoon University have been announced. The highest of them all is the Burma Oil Company's gift of a hundred thousand pounds sterling for the foundation and maintenance of a college of engineering. The use to which this portion of its wealth, obtained by the Burma Oil Company by the exploitation

of Burma has been put is laudable It would not be ungracious to add however that this gift shows how enormous is the legalised plunder which is being carried away from Burma by her foreign rulers and exploiters Those who can easily give away lakhs must be making crores of profit.

Impressions of Java and Bali

Elsewhere in the present number of the *Modern Review* we have published the first instalment of Dr Kalidas Nag's impressions

Vishnu on Gari Ja
(A Masterpiece of the Hindu Art of Java)

of Java and Bali The Indian poet and seers voyage to Indonesia, which he will undertake this month to see the vestiges of Indian culture there will lend a special interest to Dr Nag's article

Calcutta's First Mayor's Programme

According to the *Calcutta Municipal Gazette* Mr C R. Das the first Mayor of Calcutta laid down the following programme —

- 1 Free primary education
- 2 Free Medical Relief for the poor
- 3 Purer and cheaper food and milk supply
- 4 Better supply of filtered and unfiltered water
- 5 Better sanitation in bustees and congested areas
- 6 Housing of the poor
- 7 Development of suburban areas
- 8 Improved transport facilities
- 9 Greater efficiency of administration at a cheaper cost

More than three years have passed since this programme was drawn up Mr C R. Das did not live long enough to carry out his programme In any case it would be both ignoble and fruitless to criticise a dead man who cannot defend himself We criticised him when he was alive But it is allowable to say that as from April 1924 onward the Swaraj Party has been in power in the Calcutta Corporation it should be able to demonstrate what it has done in furtherance of the aims of its departed leader So far as we are aware the first two items in the programme have been attended to to some slight extent As for the other items our food and milk supply is neither purer nor cheaper than before The editor of this magazine has been paying house rent for his office press and private lodgings for many years and can say from his personal experience that the supply of filtered and unfiltered water has not improved a bit nor has it become more copious than before The only tangible proof of better sanitation in bustees and congested areas can be found in a lower death rate But as far as we have been able to notice the death rate has not decreased We are not aware that more and better houses for the poor have been built by the municipality in recent years. Neither are we aware that any suburban areas have been developed or transport facilities improved in recent years by the *Calcutta Municipality* As regards efficiency of administration at a cheaper cost, we are not in a position to say anything But those councillors and aldermen of Calcutta who are interested in securing

an honest, economical and efficient municipal service, ought to be able to enlighten the public on the subject.

The South African Settlement

Mr C. F. Andrews has sent the following special cable to *The Indian Daily Mail* from Cape Town —

Both Indian Bills passed the final stage to-night without any hostile amendment being accepted. The Minister embodied the Congress suggestions in the committee stage carrying everything successfully. The Natal members' opposition broke down completely. This implies the full ratification of the Indian Agreement by the Union Parliament.

Looking back over the six months since the Agreement was signed it is possible to regard that the Round Table Settlement is gradually winning the way through intense opposition to general acceptance. It will now be given an honourable trial with success fairly assured.

One valuable amendment earned making the three years' absence, involving forfeiture of domicile, count from the passing of the Act and not retrospectively. This should be explained by the Gujarati papers because many Indians are affected.

I am meeting Mr Sastri at Pretoria on Tuesday and am embarking on July 22 reaching Bombay on August 8.

We have not been among the admirers of the Settlement. But if the two Indian bills passed by the South African Union Parliament be of greater service than disservice to the South African Indian community, we shall be pleased

The So called 'Indian' Delegation to the League of Nations

The selection of Lord Lytton to lead this year's misnamed "Indian" Delegation to the League of Nations has given occasion to *The Leader* and *The Amrita Bazar Patrika* to retell the story of the attempt made by some of our legislators to get the Government to appoint an Indian to lead the delegation. Having written and spoken much on the subject already, we do not feel inclined to repeat our assertions and observations, which no Imperialist boulder has been able to challenge or contradict.

India was made an original member of the League by getting her to sign the Peace Treaty. That was a trick to obtain one more vote for the British Empire. So, while India

pays the piper, the piper is always a Britisher and it is Britain which calls the tune.

Like many of our contemporaries, we, too, have expressed a wish for the appointment of an Indian as leader of the delegation. That is more or less to save our face, however. For, so long as we do not possess self-rule and so long as the alien Government of India has the power to choose and to issue instructions to the leading and other delegates, the substitution of an Indian leader for a British one would not be of any use. On the contrary, the Indian chosen to lead may be such that the Indian press may have to exclaim in disgust, "sa papisthas tatodhika." The only little improvement which is practicable in India's present political condition can be effected if the Central Legislature obtains the power to select and appoint all the delegates, including the leader. Otherwise it would be best for India to give up her membership of the League, as a few states have done already. We know even in this matter India cannot give effect to her will. But the elected Indian members of the Central Legislature can and ought to pass a resolution in favour of India's withdrawal, in case they fail to obtain the power to select and appoint the delegates, who, we repeat, must all be Indians, including the leader.

The Disingenuous Plea for Fresh Taxation

In commenting on the latest report on the administration of Bengal, *The Amrita Bazar Patrika* writes —

The author of the report has tried hard to white-wash things which are ugly and to shift responsibility on to the quarters where it does not lie. Yet what he was compelled to chronicle in the greater part of the book constitutes, without his knowing it, a grave indictment of the efficiency and the so-called beneficent nature of the British rule. And what is more distressing is that we find in it a clear *jabab* on behalf of the Government that, good or bad, what they have done for the material and moral advancement of the country is the limit to what they can do in the present state of their finances. If therefore more education, more sanitation or more medical relief is to be provided for the people to make them more fitted in the struggle for existence, the people themselves must have to do it. They must get rid of the general disinclination to face the fact that improved services and better conditions must be paid for by them. In other words, the people must be ready to bear the fresh burden of taxation.

Our contemporary then proceeds to point out that the extreme limit of taxation has been reached—people who cannot get two full meals a day ought not to be called upon to pay more taxes. That would sound like a heartless joke. We have no flaw to find in this argument so far as the majority of our people is concerned. But we wish to point out that we need not at all say anything at present which might sound like an argument *ad misericordiam*. As we have indicated in the article on Primary Education for Bengal, "we pay quite enough to enable our Government to make greater and more earnest efforts to make our education, sanitation, etc., what they ought to be. If after ruthlessly cutting down useless, wasteful and, sometimes, dishonest expenditure, and after making a right use of our taxes, it be urged that more or higher taxes must be levied, there would be then time enough to think of saying or not saying what might sound like an argument *ad misericordiam*."

Indonesia After the Insurrection

We have received the following communication from the Hague, Holland—

"In our last January bulletin we tried to give you from official Dutch sources an idea of the most miserable conditions in which the Indonesian people live, so that they were forced to take up arms as desirous as they were to put an end to their life of slavery. We also told you that the Dutch are accustomed to inform the world falsely about things, and instead of telling the bare truth about the bad conditions of their colony they designed the most ideal picture of their colonial system as the best in the world.

"But our attempt to shake off the yoke of Dutch domination has been unsuccessful. Does it mean that it is the end of our hope for a better life? To answer this question it would perhaps be useful to examine the conditions in which Indonesia now stands after the revolution.

"According to the lying Dutch press-agency, the rebellion" should be of no importance, but if we mention the great number of imprisoned revolutionists, which we derive from Dutch newspapers, we are sure that you will be convinced that indeed the Dutch are talking double Dutch.

"There are about two thousand Indonesian revolutionists imprisoned, 700 at West-Sumatra and 1300 at Java. Most of them do not fall under the terms to be condemned according to the colonial penal law, but yet they do not escape from punishment. This is possible, because, according to the colonial constitution, the Governor General has the right to banish all persons whom he judges, or, stricter, whom he thinks dangerous for the so-called 'public rest and order' to all places in Indonesia he wants. [This is like our Regulation III of 1818 or like the Bengal Ordinance.] Thus a great number of revolutionists (we do not yet know the right number, one says of about 800 persons) are expelled to the most horrible spot in New Guinea, where the revolutionists are exposed to savage cannibals and malaria fevers.

"Several revolutionists are sent to Nusa Kambangan, where they have to live with imprisoned criminals like murderers and thieves. Others are condemned to death and also to imprisonments of 10 to 20 years.

Besides these condemnations the colonial government has proclaimed that all "communist" action of the Indonesian people shall be destroyed by its military forces.

"What is the reaction of all these oppressions? Are the Indonesian people, the Indonesian fighters for freedom, conquered? Are they discouraged?

Far from that!

This failure of the Indonesian revolution does not form an obstacle in our way to national independence but it has given us a lot of experiences for better organization and action.

"The Indonesians will not cease fighting for the liberation of the mother country before they have reached their goal.

"Although so many of them have to offer their life and goods for the sake of that high ideal they are not discouraged. On the contrary, their action shall be more solid, stronger and stronger.

All revolutions need time to succeed, but they, as the new spirit, never fail to conquer the ancient regime.

So Indonesia shall succeed in spite of many reverses."

Government Encourages 'Communal' Mentality

The following paragraphs have appeared in *The Guardian*—

The Government of Bengal if its ministry is bankrupt in statesmanship is at least frank. In a Moslem Weekly appears a pretentious advertisement with the following headlines —

GOVERNMENT OF BENGAL
Department of Industries
Minister-in-Charge The Hon Hajji
Mr A. K. Ghaznavi.

The advertisement announces that a scholarship will be awarded annually, for a period of three years, to enable a student to take up the study of a course on Vegetable Oil and Oil Seeds or Sugar. All this is to the good, but the advertisement adds the following — The scholarship will be awarded to Mohamedan and Hindu students alternatively. We may well ask, on whose authority was a notice in these terms published? Or what is even more important, has Government gone back on the fundamental principles of religious neutrality? Are all other communities to be disfranchised just because a Hajji is in power? The columns of the *Guardian* have never lent themselves to advocating communal considerations, but the time has come to speak plainly when we are confronted with responsible Government action which results in disfranchising the smaller minorities. We shall continue to oppose any measure which gives the members of any community preference either on the grounds of race or religion. May we suggest to the representatives of both the Indian Christian and the Anglo-Indian communities in the Bengal Legislative Council to raise the matter either by interpellation or resolution. Apart from these considerations are matters such as fitness, intellectual and otherwise mere irrelevancies which can be sacrificed?

Yes certainly See the following note

No Qualifying Test Needed for Some Communities

The *Amrita Bazar Patrika* is responsible for the following paragraph —

It appears from the provisional rules just published to regulate the recruitment by examination for the Bengal Civil Service (Executive) the Bengal Excise Service the Bengal Police Service the Bengal Junior Excise Service and the Upper Division of the Secretariat Clerical Service, that the qualifying test for all candidates would be passing of Examinations except in the cases of Moslem European and Anglo-Indian candidates. In services other than the Upper Division of the Secretariat Clerical Service and the Income Tax Department Government has reserved the right to fill as many as 40 per cent of the vacancies by the appointment of Mahomedan candidates, if there are qualified candidates available. In the Upper Division of the Secretariat Clerical Service the minimum proportion of Mahomedans will be 33 per cent. Already the introduction of the principle of communal representation in the Police Service has led to deplorable results in communal riots, the communal feeling having prevailed over the needs of law and order. Its almost universal introduction in all public services cannot but lead to more communal quarrels and inefficiency.

Were we to say that it would be good in the long run for the Moslem and European and Anglo Indian communities themselves if their men entered all public services by the door of open competition, they would not believe us but suspect some evil motive. But we hope they will consider the suggestion that they should insist upon a competitive test for Moslems confined only to Moslem candidates and a competitive test for European and Anglo Indians confined to European and Anglo-Indian candidates alone.

Kindness to Third and Intermediate Class Passengers

From the audit report of railways for 1925-26 *New India* learns that a surprise check in one place revealed no less than fifteen first class eleven second class, thirty inter and 160 third class passengers travelling without tickets. 'Out of these,' it further goes on to say, 27 inter and third class passengers were prosecuted under the Rail way Act.'

As the total number of third and intermediate class passengers is very much larger than those of 1st and 2nd class ones, the figures do not prove greater dishonesty among the former than among the latter. Booking office arrangements for lower class passengers at many stations are so bad and illiterate third class passengers are so often cheated of the fares paid, that, in the case of many of them travelling without tickets is no ground for presumption of dishonesty. But there can be no reasonable excuse for 1st and 2nd class passengers to travel without tickets. Yet it was only some 3rd and intermediate class passengers who were prosecuted not a single first or second class one.

The Effects only of Swadeshi?

Under the caption, "The effects of Swadeshi," our Roman Catholic contemporary *The Week* publishes the following

Along Fischer in *Geopolitics* of last December had the following interesting table showing the numerical importance of the various races

There were	In 1899	In 1900	In 1925
Whites	239 p.c.	332 p.c.	303 p.c.
Indians	219	173	17
Oriental	77	58	51

	In 1800	In 1900	In 1923
There were			
East Asiatics	37.4	32.9	30.9
Negroes	5.2	5.9	5.8
Malays Americans and others	3.9	4.9	5.6

100 p.c. 100 p.c. 100 p.c.

of the total population of the world.

Amongst the "East Asiatics," the Chinese have dropped from 31.6 per cent to 25.4 per cent and 23.2 per cent, whilst the Japanese have risen from 2.6 per cent to 2.9 per cent, and 3.3 per cent. The French similarly have gone down among the Whites from 3.9 to 2.8 and 2.4 per cent whilst the Anglo-Saxons have gone up from 1.9 per cent to 6.4 per cent and 7.1 per cent. But the Indians *e. g.*, must not be taken as having decreased absolutely on the contrary the above figures are based on a population of 17 crores in 1800, of 27 in 1900 and 32 in 1923. They have gone down perceptually simply because others have increased even more rapidly particularly the Whites who have gone up from 19 crores in 1800 to 52 in 1900 and 66 crores in 1923.

And the reason for this White increase? Because these people have gone out of their country and colonized the empty spaces of the world. If Indiana had not had their wretched *kala pani* theory Africa would be an Indian to-day, as America is "White," and instead of being half of even the numerical importance of the Whites Indians would still be their equals. So much for *swadeshi* isolation!

We are as little in love with the *kala pani* theory as Dr Zacharias, the editor of *The Week*. So in pointing out that the *kala pani* theory alone has not been to blame, we must not be taken to be an apologist for it. The Minsalmans of India do not believe in that theory. They can and do emigrate, no socio-religious bar stands in their way. The Sikhs also are not prevented from emigrating by any such obstacle. Nor are the Indian Christians. Many literate and more illiterate Hindus emigrate. A still larger number would have emigrated but for— But for what? Surely Dr Zacharias knows. The anti Asiatic and anti Indian policy of all the British dominions, of many British Crown Colonies and of the United States of America stands in our way. Had we been politically independent, as we were when Indians colonised and civilised all South east Asia, including the islands and culturally and spiritually influenced Tibet, China, Korea and Japan, we could have gradually found a

way out of the difficulty. For our political subjection, we are to blame, though not we alone. Political subjection demoralises people, makes them timid and kills their adventurous and enterprising spirit. That is one of the reasons why Indians are a home-keeping people.

As for the White increase, the greater vigor, enterprise and freedom from socio-religious taboos of the White races, due in part to their political liberty, must be admitted. But it cannot be denied that their predatory and race-exterminating record has yet to be broken. One of the causes of their great increase is that they have deprived many other peoples of their land and liberty, and exterminated many peoples thereby increasing empty spaces.

Bank Failures in Japan and in India

The observations of *The Indian Messenger*, occasioned by bank failures in Japan and in India, are quite timely and apposite. It writes —

Japan is just now passing through a financial crisis of unparalleled magnitude. There have been bank failures on a very large scale, so much so that Government had to come to the rescue. A moratorium had to be declared and large advances have been made by the state to keep the banks going till the crisis is over. Telegrams to the press declare that the action of the Government has been supplemented by the voluntary sacrifice of bank managers and directors of all their personal property in order to save their respective banks from a catastrophic situation. They have surrendered their private cash, lands, even their houses and have embraced poverty in order to rescue their country from financial and commercial ruin. This is probably unique in the history of finance. It is this spirit that has made Japan so great and powerful. What a contrast have we here between how things are done here and in Japan! There have been bank failures here but who ever heard of our bank managers and directors being any the worse for them? It is the depositors and shareholders that generally suffer the big ones that handle other peoples' money somehow manage to remain unscathed—even coming out bigger and fatter than before. Nations become great and powerful by their virtues not merely by the circumstances in which they are placed. Circumstances do play a part, sometimes a very important part, but the determining factor *par excellence* is national character.

INDIA'S CONTRIBUTION TO JAPANESE PROSPERITY

An Examination of the Movements of Indo Japanese Trade

By ST NIHAL SINGH

I

A survey of Indo Japanese trade is of special interest at this moment

For a considerable time past the owners of cotton mills in and near Bombay have been unable to meet the competition forced upon them by yarn and cloth imported from Japan. The Government of India still preponderantly non Indian in personnel has recently declined to intervene in favour of our industrialists. In so doing it has turned a deaf ear to the advice proffered to it by a body of its own creation.

The refusal upon the part of our rulers to come to the aid of our most important industry can be explained only upon the hypothesis that the raising of the tariff from 11 to 15 per cent. might hit the English cotton industry in Lancashire which retains

the largest share of our cotton import trade. The only way in which the British can safeguard Lancashire interests would have the appearance of directly discriminating against Japan. If preference were to be granted to the English cotton industry, that grant would, moreover, follow in quick succession the special concessions lately made to the British steel industry, and, therefore, would prove doubly awkward.

II

A superficial examination of the statistics pertaining to Indo Japanese trade is likely to inspire the belief that we are by far the greatest gainers from such dealings. Japan buys from us much more than she is able to sell us. The balance of trade, in other words is heavily against Japan, as is apparent from the following table*.

Year	Imports from India into Japan Yen	Imports from Japan to India Yen	Balance in favour of India Yen
1913	173 173 861	29 873 414	143 300 447
1914	160 324 460	26 048 337	134 276 123
1915	147 580 310	42 202 400	105 382 850
1916	179 461 593	71 617 404	107 841 139
1917	223 941 304	101 364 154	122 577 150
1918	268 183 180	202 592 289	65 662 896
1919	319 477 561	116 878 729	202 598 832
1920	391 930 201	102 249 850	202 681 116
1921	210 365 194	84 003 630	125 861 559
1922	244 688 849	97 203 893	156 884 981
1923	300 718 603	99 619 696	206 098 907
1924	387 791 930	130 373 129	252 418 806
1925	373 563 812	173 413 207	400 150 600

* Throughout this article I have preferred to take the figures from Japanese sources, namely the *Financial and Economic Annual of Japan*, the twenty sixth number of which was recently issued by the Department of Finance in Tokyo. This Annual is invaluable to students of economics and

publicists in general. The information pertaining to public finance banking and money market agriculture industry and commerce and communications is authoritative and is lucidly set forth.

† A Yen may roughly be taken as equal to 2s. 0 58d, or say one and one-third rupees.

The balance of Indo Japanese trade it will be seen from this table has varied considerably during the thirteen years for which I have given figures. It has however been in our favour and against Japan all along. That was the case in the year preceding the outbreak of the hostilities in Europe. It remained so throughout the course of the war. It has been so even during the period of post-war depression and also through the years when she was hard hit by the terrible catastrophes which played havoc with her capital her largest port and other parts of the country.

III

An examination of the figures for import and export elicits certain interesting facts.

The value of goods purchased by Japan from us has with few breaks been steadily increasing during the thirteen years under review. There was a slight regression during the year the hostilities commenced in Europe and cast their sinister shadow over all the world. The fall became a little more pronounced the following year.

During 1916 however the Japanese capacity to absorb our products and to pay for them reasserted itself. It continued to grow in strength for four years.

In 1921 there was a considerable falling away. But the Japanese purchasing capacity improved the very next year and has kept on doing so until in 1925 it reached an unprecedented height. They paid us for the goods they bought of us in that year more than three times the money that they had spent similarly in the year preceding the outbreak of the war.

The value of the goods sold by Japan to us has shown somewhat more pronounced variation. There was a slight set back in the initial year of the war. Then she began to sell to us goods which in another circumstance we should have continued to buy from Britain Germany and other countries.

During the closing year of the war Japanese imports into India rose to a height (£en 20,52,289) which they never since have approached. During 1920 it looked as if they would do so but in 1921 there was considerable regression.

Imports into India from Japan showed a small tendency to improve in the two years but even in 1923 they were less than half of what they had been in the closing year of

the war. The falling off in Japanese imports was no doubt due partly to our depreciated purchasing capacity and partly to the reviving power of Britain and other nations which had been more or less incapacitated industrially during the war to compete once again in our market.

The hope entertained in Britain and other countries that Japan would not be able to retain the gains she had made during the war failed however to be fulfilled. During 1924 the Japanese imports into India increased appreciably and they registered further increase in 1925. The value of the goods sold by Japan to us in 1924 was almost six times that of her exports to India in the year preceding the outbreak of hostilities.

Putting the value of Japanese exports and imports together the Japanese trade with India was never so large as it was in 1924. Nor was the balance of trade so adversely against her as in that year.

IV

Despite this adverse balance it pays Japan to trade with us. Why? The most cursory examination of the principal items in the list of commodities imported from India into Japan and the goods sent to us by that country reveals the reason.

The following table of imports from India into Japan contains no more than eight items but they tell the tale.

Imports into Japan From India	
Cotton (raw)	Yen 475 663 000
Rice	48 624 000
India rubber etc	5 992 000
Pig Iron etc	5 172 000
Flax	4 993 000
Oil Cake	4 426 000
Beans and Peas	4 097 000
Leather	2 774 000

All but two of these items consist of raw materials or at least bases for the manufacturing industries of Japan. The two exceptions are rice and oilcake.

Rice continues to be the staple article of diet in that country. The land available for food production is inadequate to the needs of the large and rapidly growing population and hence the necessity for supplementing it with imported cereals. The supplies of rice drawn from us it may be added are about five twelfths of those obtained by Japan from other countries.

Oilkake, it hardly needs to be pointed out, is needed for the dairy industry which the authorities are taking special pains to build up.

The raw materials which Japan imports from India are vital to her industrial system. Raw cotton, which constitutes something like nineteen twenty thirds of the total Indian exports to Japan forms the life-blood of the Japanese cotton textile industry.

As will be seen from the next table relating to exports to India, cotton imported from India supplemented with cotton obtained from other sources enables Japan to drive a thriving trade with us. It plays an important part in the Japanese trade with China, Asiatic Russia, the Dutch East Indies, the Malay Straits Settlements, Africa, Australia and other countries. It even enables her to drive the yarn manufactured in Indian mills out of the Far Eastern market.

Cotton yarns and tissues exported out of Japan in 1925, indeed, totalled Yen 571,474,591 in value. They constituted the second largest item in the export list, being exceeded only by silk yarns and tissues. It must be remembered that rather more than half of the cotton which went into the making of these exports was derived from India.

The other raw materials imported from India, though not so important as cotton nevertheless play an important part in Japan's industrial scheme. She converts them into goods which she needs for her own use, or which she exports at terms as advantageous to her as possible.

Both Japanese capital and labour in fact, find profitable employment in the exploitation of the raw materials imported from India. That, indeed, accounts for the fact that she has not hesitated to incur an increasingly heavier bill for the purchase of Indian commodities, even during the years when she was hard hit by cataclysms of nature which forced her to seek loans abroad.

These disasters, instead of acting as a check upon the movement of raw materials from our country to Japan have on the contrary, actually accelerated it. Japan has been drawing upon our cotton and other industrial products in increasing quantities so that she could send out more manufactured goods than ever and through that means make up the losses inflicted upon her by act of God.

V

The notion prevails in India that Japan works up the raw materials that she imports

from us and sends them back to us as finished goods. That impression is correct only in a very limited sense.

As indeed it has already been indicated, Japan makes our cotton, usually mixed with American or Egyptian cotton, the basis of her trade in manufactured goods with many countries other than India. The same is true to a greater or less extent in respect of the other raw materials which she draws from our Motherland.

India gets back, in the shape of finished goods, only a relatively small volume of the raw materials which she exports. But that small volume she receives at a cost far higher than she was paid for the greater bulk of the raw materials. Japan naturally makes a charge for the process of manufacture and transportation and allied services.

VI

As will be seen from the following table the Japanese exports to India consist almost entirely of manufactured goods.

JAPANESE EXPORTS TO INDIA IN 1925

Cotton yarns and tissues	Yen 78,701,000
Silk yarns and tissues	12,656,000
Knitted goods	9,496,000
Potteries	3,476,000
Matches	1,791,000
Glass and glass ware	824,000
Buttons	809,000
Silk handkerchiefs	352,000
Coal	260,000
Portland cement	146,000

I have incorporated only the principal items in this table.

Coal alone can properly be described as a raw product. Its value, in any case, is almost negligible.

Portland cement is only a building material but the greater the quantity imported from abroad, the less the scope for that industry in India, and still less the incentive for the expansion of that industry. The value of the amount imported from Japan is, however, still quite small.

Cotton yarns are only semi-manufactured and actually constitute the raw materials for our hand weaving industry. The extent to which they are imported however, represents the displacement of orders which our own mills would, in another circumstance, receive.

All the other items consist of fully manufactured goods. Most of them are the products of large industries.

VII

There can be no question that these manufactures from Japan exercise a depressing effect upon our industrial movement.

The largest item, namely cotton yarns and tissues, competes with the largest industry in Indian hands, and confessedly to the disadvantage of that industry. Some of the other items compete with industries which have been recently started in India, or which can and should be established in our country.

The competition forced upon our industries by Japanese imports other than those of cotton is not a matter that can be lightly dismissed.

Some years ago when I was in Calcutta, for instance, I learned of the serious complications that Japanese glass and glass-ware were causing for a young friend of mine who after qualifying himself as an industrial chemist, had set up glass works in a suburb of that city. He told me that he was kept guessing the whole time as to exactly where the blow would fall upon him next. One time he would find that Japanese glass-ware would be dumped to a small town 250 miles from his factory and sold at rates which would damn his wares in the sight of the traders of that place for evermore. A few days or weeks later he would learn to his dismay that similar tactics had been pursued in a town perhaps 500 miles from there, in an entirely different direction. He could be sure that the very centres which he was trying to interest in India-made glass-ware would be subjected to such attacks. Had he not possessed pertinacity he would soon have been driven out of glass manufacture but with all his pluck and perseverance he could make little headway in the face of this policy of dumping.

As this instance shows, there can be no question as to the severity of the competition which the import of manufactured goods from Japan forces upon our industries. If cotton, our oldest industry, finds it impossible to meet such competition, how can industries which have recently been started—and in many cases, unlike the cotton industry, started on a small scale—effectively meet such competition?

Yet while pressure is being exerted upon the Government to shield the cotton industry from Japanese competition no thought is being paid to the protection of the other Indian industries hit by imports from Japan,

and for that matter, from other countries. It need for taking such action in respect of cotton is admitted, why should it not be of an all-comprehending character? It may further be asked why the scope of such action should be limited to Japan, when she, by no means, is the only country whose exports to India handicap us in consolidating and expanding our existing industries and setting up new ones.

VIII

If India is ever to become industrially great she will have to follow the example of other countries and build a tariff wall high and solid enough to protect her industrial system until they can do without protection. Japan, the United States and Germany have all had to provide such shelter for their infant industries. Even Britain has not, in the case of some industries hesitated to employ such devices, nor, if the need were to arise tomorrow, would she hesitate to do so more extensively.

Protection does, of course, raise the price of commodities within a country. For that reason it is hard upon the poor. That is especially the case with a nation which is still in the agricultural stage of development.

In every country agricultural labour is paid at a relatively lower scale than industrial labour. Agricultural products, moreover, have to be sold in an open market, which means low prices. A people overwhelmingly engaged in farming operations are, therefore, doubly hit when compelled to buy the manufactured goods needed by them in a protected and necessarily high priced market.

Unfortunately, however, no means anywhere nearly so effective as protection is available to enable India to become industrially great. That is the lesson to be learned from nations both Eastern and Western, which have achieved industrial prosperity. Every one of them knew that protection would inevitably raise prices and thereby work hardship upon its poor yet not one of them set its face against the employment of that expedient. If India by listening to the specious arguments advanced by individuals belonging to nations which now industrially exploit her, permits herself to be swerved from following the example of other nations which, within living memory, have achieved industrial greatness, she will continue to remain in the agricultural stage of development, and her

sons and daughters will continue to receive poor pay, and with that poor pay to patronize the Japanese, Americans, Britons, and other Europeans, who by engaging in industrial work of one kind or another earn comparatively higher wages and are able to maintain a much higher standard of life

IX

So far, however, our demands for a protective system that would accelerate the pace of Indian industrialisation so as to enable us to become a great industrial nation in something like the period it took Japan, the United States and Germany to achieve their industrial ambition have however not been met. And no wonder. We not only constitute Britain's 'sacred trust' but also her 'best market'.

From "discriminating protection" has been conceded to us grudgingly. Its application as, for instance, in respect of steel does not shield that industry from the competition of imports from Britain. Protection on similar principles has been denied to the owners and managers of our cotton mills.

X

If a discriminatory tariff were to be conceded it is said Japan might retaliate. Would she do so?

It is to be doubted if any one in Japan would be so unwise as to propose the enhancement of duties on the raw materials imported from India. Such action would tend to raise the cost of production in the Island Empire and *pro tanto* would make it difficult for that country to compete in the world market. It would be tantamount to Japan cutting off her nose to spite her face.

When an industrial nation is dependent for the supply of its raw materials upon another country in the sense in which Japan is dependent upon India for raw cotton it is not easy for that nation all of a sudden to arrange to secure its supply from another source. That fact is established by experience all over the world.

For years and years, for instance, the English manufacturers in Lancashire have talked bravely of throwing off the yoke of the cotton kings of America and using only cotton grown under the British flag. All sorts of schemes have been mooted. Some of them have been put into operation with

State aid—disguised or otherwise. The machinery of the Colonial office has been utilized to accomplish that purpose. But the mill owners in Lancashire are still a long way from the attainment of the goal they set before themselves.

Similarly, for several years past the Americans have been bitterly assailing the British rug which according to them, is artificially keeping up the price of rubber. They have been vowing vengeance, and advertising schemes that would make them independent. But the actual accomplishment so far has fallen woefully short of the requirements.

Japan's efforts to render herself independent of Indian cotton are likely to prove about as successful as have been the attempts of Lancashire and the United States to shake off hampering conditions in respect of securing their raw materials. She will indeed think twice before she permits a retaliatory mood to drive her to take action that might raise the cost of her raw materials upon which, to no small extent, depends her industrial prosperity.

Japan cannot likewise, afford to put heavy taxes on the import of rice from India. To do so would mean increasing the cost of living and thereby adding fuel to the fires of discontent which are already burning among the working classes.

There no doubt are the reasons which have prevented the Japanese from threatening retaliatory action along such lines. They have however threatened to buy up as many cotton mills as they can persuade the Indian owners to sell and failing in that endeavour, to set up new mills of their own in India.

That is not an idle threat. A Bombay mill has already passed into Japanese hands.

XI

The acquisition of Indian mills, factories and workshops by foreigners or the establishment of new industrial plants by outsiders, is, however, a tendency with which Indians have to reckon, whether a discriminatory tariff is set up and enforced against Japan or not. Moves in this direction are already being made and will be made by foreign industrialists with greater persistence.

A new era of industrial competition is indeed, opening. Industrially advanced nations are ceasing to be content with manufacturing goods in their own countries and

shipping them abroad. They are becoming more and more aggressive, and are actually setting up establishments for manufacturing goods in the very countries to which they hitherto were content to export their wares.

British industrialists have already taken steps in this direction. More will do so. It may, indeed, be confidently predicted that in the years to come the number of mills, factories and workshops controlled by Britons if not actually owned by them, will increase.

Japan is not likely to lag behind the British in this matter. She has already set up several cotton mills in Shanghai which are supplying the Chinese market. As already noted, she has even bought a cotton mill in the Bombay Presidency.

These are indications of what is coming. For this reason it behoves Indians to intensify their efforts to accelerate the pace of industrialization. If we lag behind others will step in. It will be a case of not only foreigners exploiting our raw materials by carrying them away to their own countries for purposes of manufacture there, but also of their setting up industrial establishments in India and exploiting Indian man-power as well as Indian raw materials. If we do not look out we may become a nation of coolies.

XII

In running an industrial race with Japan (and other countries) we, however, are severely handicapped by the fact that, unlike them, we lack a national government. That deficiency reacts upon every phase of our life.

Japan's industrial power has been both directly and indirectly developed by her national government. It is broad-based upon the policy of diffusing knowledge among the masses and providing technical instruction of every grade on a scale adequate to the needs of the nation. It has been acquired, to no small extent, by means of State initiative and active State assistance.

The foundation of the Japanese industrial system was laid through the despatch of large numbers of students to America and Europe for technical training, and even through the establishment of model mills, factories and workshops and their operation, often at a loss, by the national government. It has been fostered by means of encouragement provided through Government contracts and bounties of various kinds. Without such aids neither ship building nor the merchant

marine would, for instance, have acquired the strength that they possess, and with ship-building and the merchant marine wanting, the Japanese cotton and other industries would not have pressed so hard upon our industries as they are now doing.

Our rulers, on the other hand, have confessed, again and again, their inability to cope with the problem of Indian illiteracy with anything like the vigour that Japan displayed in dealing with her cognate problem. According to the latest authoritative estimate, at the present rate of progress "it will take at least forty years more to collect all the boys of school going age into school," while any "similar calculation for girls would be meaningless."

Much has been promised us in the way of technical education during recent years by our rulers. But measured in terms of accomplishment India is still a long way from being put on par with Japan in respect of these facilities.

In the matter of setting up State mills and factories, our rulers have either professed conscientious objections or have given up, shortly after starting operations of that character, upon which they had entered timorously.

The bulk of the orders for the government departments and State owned railways are still placed from London. Even the mail subsidy is not used to stimulate Indian shipping, and no effort in the direction of reserving India's coast-wise shipping for Indian enterprise has been made.

These and sundry other policies will have to be altered before India can compete on anything like even terms with Japan and other industrially advanced nations. The raising of the tariffs, though vital to our industrial existence, cannot, in itself, relieve us of all the handicaps under which our industries labour.

XIII

Only cohesion among our people can enable us to advance at this juncture. The industrial magnate must make common cause with the industrial worker. The capitalist and the clerk must pull together.

In the past Indians in the various walks

of life have not seen the necessity of joint action. Some of our industrial magnates have not, indeed, hesitated to sling gibes at our political workers.

There has been even a disposition among our captains of industry to fly in the face of universal experience and expect India to achieve commercial greatness while she remains a political serf. It is to be hoped

that the straits into which our greatest industry has been driven has convinced them that the political factor dominates the economic issue. Given a national administration such as Canada possesses, for instance, we can easily meet the menace of Japanese (and for that matter any) competition.

Colombo, July, 1927

DUTCH SOUTH AFRICA

By C F ANDREWS

THERE is one thing that has to be recognised very clearly indeed if the South African Indian Question is to be properly understood. It is not an English problem to-day but a Dutch problem. Only when this dawned fully upon me was I able to get forward and understand the true situation.

Let me give some of the noticeable facts. The Dutch population came to South Africa and began its colonisation in 1652 when Van Riebeck landed with a colony of settlers. The English made no deep impression on the colony until 1820 when the famous group of English, called the 'English Settlers of 1820' landed. I do not mean of course, that no English came before that date. On the contrary, Capetown was a port of call for every Dutch and British East India vessel, both going to and coming from the East. Many of these merchant sailors were so delighted with the climate and so tired of the sea that they settled at the Cape. Thus its dual population grew.

Something else was done in those early days. Slaves were brought on ships, both from West Africa and from Malaya by these Christian settlers. The Bushmen and the Hottentots were not enslaved to any great extent. It was cheaper to buy slaves, and imported slaves could not run away. It is interesting to note that Raja Rammohan Roy's visit to the Cape, on his way to England, almost coincided with the final abolition of slavery at the Cape. The Dutch, who had maintained the slave system longest, were never wholly reconciled to the

Abolition. This led more than anything else, to the Great Trek, which ended in the founding of the so called Dutch Republics of the Transvaal and Orange Free State. The name 'republic' is a doubtful one to use for a state, in which a tiny handful of white people hold down in complete subjection a vastly larger number of another race. In the Cape Province itself, the full tide of philanthropy which followed the Abolition Movement brought with it sweeping changes. The marked difference between Cape town, where the coloured man has full political rights and Johannesburg, where he has no political rights at all, is due chiefly to the humanitarian spirit in England during the Early and Middle Victorian era. If, when we read Raja Rammohan Roy's biography we are often impressed by his whole hearted co-operation with Great Britain at that special epoch, we must remember that perhaps never in all her long history had Great Britain stood out so definitely for human freedom and human brotherhood as in the full sweep forward of those Abolition days. Man's history is full of hateful selfishness, and self seeking. But there have been certain generous moments which have redeemed much that is base. Among these, the Abolition Movement, with its many and varied after effects of liberation, will stand out large in the annals of mankind.

The Dutch in South Africa were rarely cruel to their domestic slaves. But slavery is slavery and freedom is freedom. The dominant spirit remained as they trekked up country, and the gulf widened between

man and man. The first law,—the *grondwet* as it was called—of the Dutch Republics was written down—

'There shall be no equality between black and white either in Church or State'

The Dutch were God-fearing people. But they imbibed some dangerous lessons from the Old Testament. They learnt by heart, that the Africans were the children of Ham, of whose son Canaan, it had been said 'Cursed be Canaan, a servant of servants shall he be.' Thousands of Dutch farmers on the back veldt believe, even to-day, that this sentence is the word of God. The colour prejudice goes very deep indeed, when really good and kindly people justify it on the ground of their most cherished religious beliefs. It must be remembered that these religious Dutch people have lived away from the progressive regions of modern culture for many generations. They have been in a back water of human life.

I do not wish for a moment to imply that the British have emancipated themselves from colour prejudice and the slave spirit. They have fallen back since the Early Victorian days and are in many ways more prejudiced even than the Dutch. Especially those, who have gone out to South Africa and have quite recently seen inoculated with the colour hatred have often proved more bitter even than those who have been born in the country. Just as converts to a new religion are almost invariably the most fanatical, so these converts to race hatred prove in most cases the worst offenders.

One further point needs to be borne in mind very carefully indeed. The Bantus who now are the predominant aboriginal race in South Africa are themselves invaders and intruders into the southern sub-continent. The white people came to South Africa long before these Bantu warriors came down from Central Africa leaving a desolation behind them and emptying the land of its inhabitants. The Dutch *Vortrekkers* were the first to meet the onset of these savage hordes. Thousands of them perished, while stemming these terrible invasions. The Hottentots and Bushmen who were sparsely inhabiting the land when the Dutch came three hundred years before had been unwarlike and timid people. The Bushmen died out. The Hottentots submitted to hired service and by intermingling with the whites have now become *Kurafrikaners*, or 'coloured' people, as distinguished from the Bantus

who are called 'natives'. If the Hottentots had not come already under the sorrows and protection of the whites, they would have been exterminated like many other tribes which crossed the path of the intensely warlike Bantus. It was during the so-called 'Kaffir Wars' against these invading Bantu armies, that the Boers became embittered against them with a bitterness that still shows itself on December 16th, Dingaan's Day, the memorial of a terrible slaughter of the Boers, along with their women and children, by the Bantu chief Dingaan.

There is another bitterness, which rankles in the hearts of these Boer farmers with almost equal depth. It is their dislike of the English. The memory of the Boer War is still fresh. In spite of all that has been done to redeem the past by giving self-government to the Dutch in South Africa in such a manner that they are the virtual rulers of South Africa to-day, nevertheless the bitterness of the past still remains. Above all, the memory of the deaths of thousands of their women and children in the concentration camps (towards the end of the Boer War) stands between the Dutch and English.

Only one brave English woman, Miss Emily Hobhouse, who exposed the evils of the camps and righted a great wrong thereby, has a place in the hearts of the Dutch people of South Africa. Her ashes are placed at the foot of the Memorial at Bloemfontein, which commemorates the women and children who died in the Boer War. I was in South Africa when the last rites in honour of Emily Hobhouse were performed at Bloemfontein by the Dutch National leaders, and my thoughts went back to one unforgettable day at Groot Schuur, when I was called by Mrs. Botha at the request of Miss Emily Hobhouse to come out and see her on the Indian question in 1914. She, whose heart was ever with depressed peoples, all over the world, was ready to help to the utmost of her power Mr. Gandhi and his brave band of Passive Resisters, at the time when the Smuts-Gandhi Agreement was being framed. She lay back in her couch in Mrs. Botha's beautiful verandah, with Table Mountain looming in the distance and the pine trees surrounding the house on every side. Her frailty was so great that she looked almost as if a gust of wind through the pines would blow her away. Yet within, there was the indomitable spirit which had reduced the War Office of Great Britain to surrender even in the greatest

heart of the war passion. Hated by her own countrymen, she was loved by the Boers. In certain ways, she did more than anyone else to make possible the Smuts Gandhi Agreement, for both General Smuts and General Botha bowed to her command. And from her bed, as an invalid, she commanded them both.

Now we come to the Indian problem itself in relation to the Dutch in South Africa.

First of all, it must be understood that the majority of the Dutch do not come in contact with the Indians in any direct way. More than half the Dutch people have not even seen them at close quarters. For there are practically no Indians in the Orange Free State. There are only a few thousand in the Cape Province and also in the Transvaal. Over eighty percent of the Indian community lives in Natal, which is a British Province. Thus, though the Dutch have been accustomed to dislike the Indians and to rank them with 'coloured' people, and to call them 'coolies,' yet this dislike is rather abstract and theoretical than concrete and practical.

The presence of Mr. Sastri, with his perfect manners as a cultured gentleman and his dignity of outward form and status, was a revelation to the Dutch in South Africa, far more than to the English. It opened up to them a new kingdom of knowledge and illumination. For that reason their newspapers, day by day, when the question of an Agent General from India was brought forward, said in so many words, 'Given us Sastri, and no one else.' Indeed, so emphatically was this said, that I am quite certain there would have been a grievous disappointment if he had in the end refused.

One other fact is slowly dawning upon the minds of the Dutch in South Africa. It is this, that the people of India have suffered under the British Yoke no less than themselves. When the Indians kept calling themselves 'British', and appealing to Great Britain to help them, they incurred the odium of the Dutch. The Dutch people in South Africa felt that it was another British weight being thrown in the scale against them. They did not forget also, that the Indians in South Africa were active supporters of the British in the Boer War. For by their large ambulance corps, the Indians set free very many English soldiers to fight against the Boers.

Therefore, in the past, India has been

associated with Great Britain as an oppressor. But lately the direct dealing with the Indian Government, instead of through Great Britain, together with the presence of eminent Indians in South Africa, and also the visit of Dutch nationalists to India, has opened their eyes to the fact that Dutch and Indians alike have suffered under the pressure of the all dominating British Empire, and that they are now both winning their freedom together.

There is a feature of Dutch life in South Africa which may, in the long run, do more than anything else to bring India and South Africa into accord. The Dutch are essentially a religious people. In the centuries that have passed, since they left Holland, they have kept up with wonderful vigour their religious life. It is true, as I have shown above, that Calvinism combined with the Old Testament has caused a hardness and a literalness of interpretation, lacking that 'sweetness and light' which Matthew Arnold mentions as the centre of Christ's own teaching. There is too much of the law of Moses among them and too little of the Sermon on the Mount. Nevertheless, there is a godliness which is most impressive both in their homes and in their lives. From this side, I have often felt, there is an approach to India which will make for understanding and appreciation.

From the British in Natal, I have very little hope on the Indian Question. They have sedulously cultivated a dislike for the Indians that has reached the lowest depths of contempt. They resent intensely being called the 'coolie province' and would give the world to get rid of the Indian. The British in Natal dislike the Indian so much, that if they had their own way deportation would be a daily occurrence. Since they have been checked, their antipathy has increased. From the British, therefore, I have very little hope. Nothing would have been more stupid and servile than for some of the Indians in Natal, wishing to curry favour with the English, starting a Union Jack campaign, as though they were more British than the British. Such foolish Indians only roused the antipathy of the Dutch, and the British who used them as tools despised them all the more.

While, then, I have very little hope from the British, I am, by no means, hopeless about the Dutch. It has been possible for me to come very close to them indeed. In their Dutch University, at Stellenbosch, I have been in-

vited again and again as their honoured guest. The name of Rabindranath Tagore, whose works they have read in Dutch, has been an 'open sesame'. There seems to me very little except ignorance now standing in the way of friendship between India and Dutch South Africa, if once the colour prejudice against the Indians is removed. Since the Dutch already outnumber the English, and since their superior numerical proportion is rapidly increasing, it is Dutch South Africa that will

count in the future and Dutch South Africa that will rule.

Therefore, even if the present Agreement has not given all we want and all we may reasonably require, yet it represents an invaluable position won from which the whole future relations between the two countries may be reviewed. In that review of new relations it must always now be remembered that the Dutch will have the preponderating voice when the final settlement comes.

CHINA'S STRUGGLE FOR FREEDOM

By TARAKNATH DAS, M.A., Ph.D.

IV

MOST of the Chinese nationalists, who are certainly not communists, are grateful to Soviet Russia for her attitude to China. They want to cultivate Russian friendship, without being tools of the Soviet Government. Soviet Russia's policy towards China has been actuated by two principal motives (1) self preservation and (2) weakening of Great Britain politically and economically. It is an undisputed fact that, since the advent of the Bolshevik Revolution in Russia, the British Government has followed a policy which has been directly or indirectly against Russian interests. British troops intervened in South Russia and Archangel. The British Government supported every counter-revolutionary movement directed against the Soviet Government. Russia was plagued by the foreign and to a great extent, British sponsored invasions by Wrangel, Denikin, Udenitch Kulchak, Semenov and Ungern. British policy was to detach Siberia from Soviet Russia and to create a new State, thus cutting Russia off from the Pacific and the vicinity of China. The British Government tried to make a vassal of Persia and attacked Afghanistan to reduce it to a protectorate. British support to Greece against Turkey was an indirect measure against Russia. British support to Roumania against Russia on the question of Bessarabia was also an attack on Russia. Soviet Russia could not strike at Britain

directly, but aided Turkey, Persia and Afghanistan to overthrow British supremacy, thus creating new states friendly to her and opposed to British imperialism. Russian statesmen fully realize the value of Chinese friendship, politically, economically and internationally and particularly in relation to the safety of Siberia. From the point of view of population, strategic position and economic importance, Chinese friendship to Soviet Russia is more important than the combined support of Turkey, Persia and Afghanistan. From the standpoint of Russian statesmen, a Russo-Chinese friendly understanding may in time develop into a Russo-Chinese-Japanese understanding to oppose Great Britain's power in Eastern Asia. In any case, strengthening of Chinese sovereignty will mean that China will serve as a new and powerful factor in the 'balance of power' in the Pacific, and an awakened China will certainly thwart British imperialism in Eastern Asia.

From this spirit of self preservation, weakening of Great Britain and aiding China, Mr. Tchunghern, as early as 1919 started negotiations with China and particularly with Dr. Sun Yat Sen in a conference with Mr. Joffe, made it clear that the Soviet authorities must not expect that China would follow the path of communism. But he expressed his views on Russo-Chinese relations in the following way:

"Very soon will come the day when the Union of Socialist Soviet Republics of Russia will be able to greet in a powerful and free China a friend and ally and both of these allies, in the great struggle for the liberation of the oppressed peoples of the world, will go forward hand in hand."

The above message of Dr. Sun is to day hanging in the halls of the Sun Yat Sen University established by the Russian Government, at Moscow, under the direction of M Radek, for the training of Chinese young men

As early as 1919 and again in 1920 the Russian Bolshevik government made serious attempts to win Chinese support. In return for formal recognition Moscow promised to give up the Boxer indemnity, the settlements in Chinese treaty ports, extra-territoriality and tariff restrictions, besides converting the Chinese Eastern Railway into a purely commercial enterprise, which China would be able to buy out entirely at some future date. The negotiation for recognition was carried on by Yonrin, Joffe and Karakhan in succession, and in 1924 the latter gained the end of Chinese recognition of the Soviet regime in Russia, when the position of the Russian Minister to Peking was raised to Ambassador.

About this time Dr Sun Yat Sen asked the United States of America and other Powers to recognize the Chinese Nationalist Government at Canton and co operate with it, to bring about a unified nationalist China, but they did not pay heed to his proposition. Dr Sun then turned to Soviet Russia for advisors civil and military who were very gladly supplied. It was the Soviet military officers who aided in training the young Chinese military officers in the National Military College established by the Canton Government at Whampoa. Today these officers are the leaders of the Chinese nationalist forces. One will not have to be a communist or a Soviet agent to recognize the truth of the statement of an American student of Chinese-Russian relations

Soviet Russia's Foreign Policy towards Asia, particularly China, has been the most portentous piece of enlightened international philanthropy since France helped to make America-nation.

The Chinese nationalist movement has been characterised as violently anti foreign. The Chinese people are not angels, but humans. If all the important sea ports of

Britain were occupied by France and if the Pacific Coast of the United States were occupied by the Japanese, then the British and Americans will certainly fight to the last man to get rid of the foreign aggressors. Chinese sense of national honor demands that they should uphold their national sovereignty, even if it displeases some of the Great Powers. His Excellency Hon Sao ke Alfred Sze, the Chinese Minister to Washington, in a recent address has pointed out that Chinese are not inherently anti-foreign and foreigners are safe in China, if they wish to live within the Chinese law. He said —

Those of you who are not familiar with conditions in the Far East will perhaps be surprised when I tell you that of the Westerners in China at present moment that is not counting the Japanese there are more living under the Chinese law. In other words the number of foreigners having a specially favoured treaty status now in China is less than that of those who are without such special rights and privileges. This proves conclusively that foreigners can live and trade in China without special treaty status.

You have lately heard a good deal of the sending of war ships, marines and troops to China, ostensibly for the sole purpose of protection as if there were or had been loss of foreign lives through unwarranted attack by Chinese. Such is not the case. But Chinese blood has been shed and Chinese lives have been lost by the action of foreigners. While the British and certain other governments fear serious danger to the property and life of their nationals, the Germans, the Austrians, the Russians and nationals of other countries continue to live and trade in peace in China without their home governments ordering military or naval forces to China. One fails to hear Berlin, Vienna or Moscow sending naval units or military forces to protect their nationals in China. The controversies between China and the powers will not be settled by the threat of the use of gunpowder. But I trust and believe that they will be settled by according justice to the nation which invented gunpowder.

My people are not anti foreign but we are anti foreign aggression. There is as much difference between anti foreign and anti foreign aggression as between light and darkness. It is our earnest wish to respect the legitimate interests of foreigners. We have no desire to do injustice to or inflict hardship on anybody, but on the other hand, we wish others to treat us with justice and fair play and return to us these sovereign rights that they have taken away from us. What the Chinese have been struggling for is to get rid of a foreign imposed super state in China. The struggle will continue as it should, till the goal is reached when China will be truly independent within her own borders.

The Chinese nationalists are fighting for liberty and international justice, and they should receive support and recognition from all freedom loving peoples of the world.

LEGISLATION, RE THE MINIMUM MARRIAGEABLE AGE

By JYOTI SWARUP GUPTA

Valil, High Court, Allahabad

PRESENT POSITION WITH RESPECT TO EARLY MARRIAGES

"A tiny little tot embarking on the uncharted seas of matrimony without any knowledge of her destination or destiny—at an age when her little sister in the West is still in the kindergarten! How true this description of an Indian girl wife by the Illustrated Times of India, yet how sad and heart rending especially when one looks to the simple child like looks of an innocent prey to social tyranny and unfounded religious hogey. And yet this is not a solitary instance in the fair and hoary land of India. This is a normal feature of an ordinary Indian family. The Census Report for 1921 points out that the marriage of girls at an age when they are still children is a custom common among the Hindus." The Census Report of 1911 recorded that infant marriages are both customary

and common, the average age for marriage being 8-12." It went on to say that the marriage before the age of ten was most prevalent in Bihar and Orissa, Bombay, Baroda, Central India tract and Hyderabad. It records a custom of marriage performed of children even before they are born! The following tables, taken from the Census Report for 1921 will show at a glance the seriousness of the cancer that is poisoning our entire social system.

Table showing the proportion of unmarried, married and widowed per 1,000 of each sex in India

Age	Unmarried Males—Females	Married Males—Females	Widowed Males—Females
0-5	994	988	6 11 — 1
5-10	966	907	32 88 2 5
10-15	879	601	116 382 5 17
15-20	637	183	298 771 15 41
20-25	402	51	564 877 34 72

Table showing the total population and the number of married and widowed of each sex at different age periods

Age	Population			Married		Widowed	
	Persons	Males	Females	Males	Females	Males	Females
all	315 350 442	162 081 273	153 269 164	71 057 754	71 593 131	10 338 392	26 834 838
0-1	9 237 219	4 838 721	4 398 499	8 921	9 466	355	759
1-2	4 537 945	2 238 393	2 299 552	6 637	11 595	378	612
2-3	7 646 606	3 729 731	3 916 875	16 434	32 197	99	1 600
3-4	9 101 184	4 390 690	4 761 490	28 330	60 705	1 628	3 475
4-5	9 049 465	4 487 261	4 562 204	51 667	164 800	3 161	8 693
Total 0-5	59 656 410	19 484 801	20 171 609	110 654	218 463	6 481	15 139
5-10	46 747 388	23 846 133	22 901 205	75 400	2 016 637	40 679	102 293
10-15	36 741 892	20 171 326	16 570 526	2 341 066	6 330 207	109 384	2 912 4
15-20	26 144 890	13 648 824	12 496 066	4 077 400	9 630 340	198 273	517 898
20-25	26 066 102	12 563 827	13 502 280	7 038 397	11 314 920	4 27 23	866 617

Are the figures in the last four columns not blood curdling, heart rending such as will raise the hair of the most hard headed conservative and the worst bureaucrat? The total number of girls married before ten is over twenty two lacs and of widows over one lac seventeen thousand.

Report proceeds to say that infant and child marriage is still prevalent, but there is evidence to show that the age of

is increasing especially in the case of males. Only in the most advanced classes is there any tendency for the age of marriage after puberty to increase.

Thus the Census Report rightly observes that there is little evidence in the Census figures to suggest that the practice (of early marriages) is dying out. Under these circumstances if the wound is allowed to take its own time to heal, the poison will

spread in all parts of our system, there will be no resisting power left in us, all the limbs of our social system will cease to function and we shall all collapse much before the time comes—if it comes at all when child-marriages will be abolished. We can ill afford to be silent spectators to the ruin of our race. Like prudent surgeons, let us apply the sharp knife of a legislative enactment and powerful propaganda.

THE TWO BILLS

In order to put a stop to this suicidal policy of early marriages Dr Sir Hari Singh Gour—the indomitable fighter for social reform through legislation and Mr Har Bilas Sarda have introduced Bills in the Legislative Assembly. Under the terms of Section 375 of the Indian Penal Code any person who has sexual intercourse with his wife under thirteen years of age is guilty of rape and is punishable with imprisonment which may extend to ten years and also with fine. Sir Hari seeks to raise the age to fourteen.

According to the Hindu Child Marriage Bill of Mr Har Bilas Sarda no marriage of a Hindu girl under twelve years of age or of a Hindu boy under fifteen years will be valid (S S 3 and 4). The marriage of a Hindu girl between the age of 11-12 years will be valid if her guardian obtains a license from the District Magistrate of the place where the girl ordinarily resides authorising or permitting such marriage (S5). The Magistrate shall grant a license to the guardian who files a written application with an affidavit swearing to the fact that the girl has completed her eleventh year, and that the guardian conscientiously believes that the tenets of the religion, which the girl professes, enjoin that the girls should not be kept unmarried any longer.

The statement of objects and reasons attached to the bill says

1. The object of the Bill is two-fold. The main object by declaring invalid the marriages of girls below 12 years of age, is to put a stop to such girls becoming widows. The second object, by laying down the minimum marriageable ages of boys and girls, is to prevent, so far as may be their physical and moral deterioration by removing a principal obstacle to their physical and mental development.

2. The deplorable feature of the situation, however, is that the majority of these child widows are prevented by Hindu custom and usage from re-marrying. Such a lamentable state of affairs exists in no country, civilised or uncivilised, in the

world. And it is high time that the law came to the assistance of these helpless victims of social customs, which whatever their origin or justification in old days, are admittedly out of date and are the source of untold misery and harm at the present time.

3. According to the Brahmans the most ancient and the most authoritative book containing the laws of the Hindus the minimum marriageable age of man is 24 and of woman 16. And if the welfare of the girl were the only consideration in fixing the age the law should fix 16 as the minimum age for the valid marriage of a girl. But amongst Hindus there are people who hold the belief that a girl should not remain unmarried after she attains puberty. And as in this country, some girls attain puberty at an age as early as 12 the Bill fixes 12 as the minimum age for the valid marriage of a Hindu girl.

4. In order however, to make the Bill acceptable to the most conservative Hindu opinion provision is made in the Bill that for conscientious reasons the marriage of a Hindu girl would be permissible even when she is 11 years old. No Hindu Sastra enjoins marriage of a girl before she attains puberty, and the time has arrived and public opinion sufficiently developed when the first step towards the accomplishment of the social reform so necessary for the removal of a great injustice to its helpless victims and so essential to the interests of a large part of humanity should be taken by enacting a law declaring invalid the marriages of girls below 11 years of age.

5. With regard in boys, the Sastras do not enjoin marriage at a particular age. Thoughtful public opinion amongst Hindus would fix 18 as the minimum marriageable age for a boy. But as some classes of Hindus would regard such legislation as too drastic, the Bill takes the line of least resistance by providing 15 years as the age below which the marriage of a Hindu boy shall be invalid. Even in England, where child marriages are unknown and early marriages are exceptions it has been found necessary to fix the ages below which boys and girls may not marry.

It will thus appear that though the author in accordance with the thoughtful public opinion among Hindus would fix 18 as the minimum marriageable age for boys and 16 for girls. Yet he out of regard for the susceptibilities and feelings of the orthodox and conservatives and in order to meet their so-called religious and conscientious objections and as a first step in legislation affecting minimum marriageable age, has drafted his bill on moderate and non-contentious lines so that it might be plain sailing and take the line of no resistance or opposition. It may also be noticed that the bill does not provide any punishment, whatsoever to the parent or guardian who marries the child under age. It simply declares such marriage invalid.

GOVERNMENT OPPOSITION

It was understood that such a non-contentious and extremely non-contentious and yet

responsible government of the Chinese people

No one can predict the course of the conflict between the nationalists and militarists in China. But to all impartial observers it is apparent that the Chinese people in general are in sympathy with the ideals of the Chinese nationalists, and it is through the popular sympathy and co-operation that the forces of the Kuo min tang have been so eminently successful in their fight against the militarists. The nationalist army under General Chiang kai Shek has undoubtedly a military genius at its head and the rank and file are inspired by the ideal of freeing China from the tyranny of the Chinese militarists and their foreign supporters. However the weapon which has been most effectively used by the Kuo min tang is the weapon of propaganda among the people and the soldiers of the enemy ranks. The Chinese nationalists have extensively used the weapon of the general strike and sympathetic mass demonstrations, in their favour have preceded the victorious entry of the nationalist army in cities like Shanghai, Hankow and Nanking.

To secure the support of the Chinese people the Kuo min tang leaders have used their propaganda machines in the form of proclamations of military officers. The following issued after the fall of Shanghai to nationalist hand, is a typical example of it —

"Shanghai—March 23 —General Pai Chung hsi, Commander of the Southern forces in Shanghai and Chief of the Staff to General Chiang kai Shek, the Southern Commander in Chief, has addressed a manifesto to the Chinese people saying —

For 800 years the Imperialists under the protection of unequal treaties have reduced China to a state of vassalage. After the revolution of 1911 the Imperialists continually supplied the Chinese Imperialists with rifles and guns, with which they waged war for the past fifteen (15) years. On the one hand the foreign imperialists have checked the development of Chinese education and industries and on the other hand have secured for themselves special privileges.

But the Chinese have awakened and Shanghai the greatest commercial centre in the Far East will become not only a strong base for Chinese Nationalism but for the world revolution. The Chinese people must distinguish however between attacking Imperialism and foreigners. They must not insult foreigners or destroy their property. *The Times* (London) March 24 1927 page 14.

It may not be generally known (in India) that the Chinese nationalists, in co-operation with the Indian revolutionists abroad carried on systematic propaganda among the Indian

soldiers, and leaflets urging the Indian soldiers not to attack the Chinese, striving to free their country from foreign oppression, but to go back to India to work for the freedom of India were circulated among the Indian soldiers. Some of the Indians were arrested by the British authorities in Shanghai for carrying on such subversive propaganda. It seems clear that the British authorities thought it wise not to send any more Indian soldiers to China, fearing that they might be infected with the propaganda which might later on spread in the Indian army in India, after the return of the Indian soldiers to India from China.

The Chinese nationalists have carried on systematic propaganda among the English sailors and soldiers. The following is a sample of a leaflet widely circulated among the British sailors —

British sailors we must know that you are sent here to fight armless people who are inspired by ideals of independence and democracy. You are sent here to crush a revolutionary movement which struggles against militarism to form *Government by the Chinese People, Of the Chinese People and For the Chinese People*. This is not your business. Don't interfere! Go back to your homes!

Do not be fooled by your masters the British capitalists and their servants your officers and admirals. Do away with that damned superstitious race-hatred. We are your friends, and have more in common with you than you have with your own countrymen of that type who sent you. Either go back home or join us for the sake of the liberation of all the exploited masses of the world and for the sake of your own liberation.

British sailors you come to China at a time when a Democratic Revolution goes on here. You are sent to be Henchmen (of the British capitalists) against this Revolution. The Chinese workers and peasants will not stand it. They will put up a bitter struggle for their independence and liberty. Remember that! Do not think about us the Chinese toiling masses as about the Chinks whom you can slaughter like cattle. Those times have passed for ever. Do not interfere in Our Revolution. This is our own affair. *The Times* (London) March 24, 1927.

It is generally expected that factional fights among the Chinese nationalists will be soon over and the Chinese nationalists under the leadership of General Chiang kai Shek, supported by the majority of Chinese intelligentsia, merchants, students workers and peasants will be supreme. According to a Paris despatch of April 27 to the *Munchner Aeste Nachrichten* already the far sighted Chinese nationalists in Europe are in accord with the programme of General Chiang kai Shek. After a meeting of the Kuo-min tang

party in Europe held in Paris the General secretary of the party has made known his views officially to the French press to the following effect —

The Kuo min tang Party is for Chinese nationalism and not for the Third International. They are not following the teachings of Karl Marx or Lenin. On the contrary they are trying to fulfil the ideals of the late Dr Sun Yat Sen by securing complete independence of China from foreign control, abolition of all unequal treaties and end of all concessions. The Chinese people and the Kuo min tang Party fully appreciate the friendship of Soviet Russia which has given up extra territorial jurisdiction concessions and unequal treaties but they cannot allow the Soviet agents to carry on propaganda or activities in China which may be detrimental to Chinese interests. In future the Kuo min tang Party in Europe will follow the moderate course outlined by General Chiang Kai Shek who as a friend and disciple of Sun Yat Sen is trying to carry out his programme of united China ruled by a democratic popular Government for the interest of the Chinese people.

It seems to us that Great Britain and America, Japan and France will support Chiang Kai Shek with the expectation that through his efforts China will be prevented from championing Soviet Russian policy particularly in foreign affairs. It is conceivable that Great Britain and America might have learnt their lessons that because they failed to support the Government of Kerensky adequately the Bolsheviks secured the upper hand in the fight for control of Russia. Similarly if the moderate element of the Chinese nationalists led by General Chiang Kai Shek be not supported by the governments of Great Britain and the United States, and these governments follow the policy of intervention in China, as they tried in Russia, they will strengthen the hands of Soviet Russia and the Chinese radicals.

In fact, it is now an open secret that Mr Coolidge's government is not anxious to adopt any further coercive measures against the Chinese nationalists, to enforce the demands presented to the Hankow Government regarding the Nanking affairs. The

American government will prefer that Chiang Kai Shek overthrows the Hankow Government and follows a pro American foreign policy. General Chiang Kai Shek has proved himself to be a diplomat as well as a military genius. The Powers particularly Britain and America have been very loud against the Chinese nationalists on the pretext that they were tools of the Soviet Government in Russia and thus enemies of law and order. By taking steps to free the Kuo min tang Party from the control of the Chinese radicals and Russian influence he has taken steps to test American friendship and the sincerity of various declarations of the Baldwin Government. General Chiang's victory over the radicals will mean that the former will be able to demand considerate treatment from the Powers particularly America and Britain. General Chiang thinks that for the success of the nationalist cause it is necessary that the nationalists must avoid in every possible way foreign intervention in China. If through General Chiang's sagacity the Chinese nationalists can follow a course which may insure that there will be no intervention against the Nationalist cause by the Powers then the Chinese militants will either have to come to terms with the Chinese nationalists peacefully or the Chinese nationalist forces will march towards Peking.

The future of the Chinese nationalist cause depends largely if not entirely upon the termination of the Chinese Civil War. It is needless to say that the Chinese nationalists will not sacrifice the fundamental principles of their programme to purchase international support or to secure a truce with the militants and it is to be hoped that in the near future the object of the Chinese Revolution will be fulfilled with the victory of the Chinese nationalist cause.

(Concluded)

MUNICH GERMANY
May 1 1927.

V

Today the Chinese nationalists are fighting against foreign imperialists Chinese militarists and communists. Thus China is not only passing through a tremendous revolution but is torn with civil wars and factional fights. Foreign imperialists profess to be friendly to China, but claim that as long as China is under the grip of civil war and there is no stable government to deal with they cannot make any concession to China in the form of revision of the unequal treaties, on the contrary they must use force if necessary to protect the lives and property of their nationals in China enjoying the benefits from the unequal treaties to the disadvantage of the Chinese. Among the foreign powers it is now quite clear that Great Britain supported by America, is bent upon demonstration of force against China in violation of all practices of international law. Today there are over 30,000 British soldiers and marines field artillery and five squadrons of British air forces and a powerful section of the British navy within Chinese territorial jurisdiction. Mr Baldwin's China policy is no better than that of Lloyd George's Turkish policy. Lloyd George to crush the Turkish nationalists under the leadership of Kemal Pasha concentrated a large British fleet and forces and called upon the British dominions as well as France and Italy to side with Britain in her gallant fight to destroy the last semblance of the Ottoman Empire and today Mr Baldwin has sent a powerful British fleet and British forces and is seeking the co-operation of Powers to uphold British policy in China. As in the case of Turkey France and Italy did not support Great Britain and Russia aided the Turkish nationalists in every way so Britain to save her face had to take the initiative to sign the treaty of Lausanne and thus recognize full sovereignty of Turkey by removing the last vestige of "capitulations" similarly Britain in her China policy finds that Japan and Russia are not only unwilling to side with Britain but are ready to aid the Chinese nationalists. France under the leadership of M. Briand does not want to follow the policy of intervention in China, and thus alienate Japan, Russia and China. Italy as a matter of gesture and to assure the British Government that she will aid the British in any special contingency has sent a warship

and America is following the carefully defined opportunist policy of bullying China in co-operation with Britain and at the same time avoiding any commitment to an aggressive and coercive policy against the Chinese nationalists. It is well known and apparent to all who are carefully observant of British policy to the Orient that the Baldwin Government is making a show of force towards the Chinese nationalists to please the die-hards and at the same time has been finding a way towards peaceful settlement with the Chinese to please the British merchants who are suffering tremendously from loss of business due to boycott of British goods and the openly hostile attitude of the Chinese nationalists against all forms of British interests in China. An important section of the British Labor Party and Trade Union Congress is also opposed to the British imperialist policy in China as is evident from the following resolution adopted by the Trade Union Congress on April 28 1927

It is contended that the great naval military and air forces now concentrated in China constitute an immediate danger to world peace. The signatories urge immediate withdrawal of all British armed forces from China. We further urge support for the demands of British Labour that the privileges won from China by war shall be renounced including extra territoriality foreign control of the maritime customs and foreign Settlements and concessions.

The British Labour movement has welcomed the awakening of the Eastern races, who have been the great reserve army for capitalist exploitation and has denounced the exploitation of Chinese labour particularly of women and children realizing that low paid labour in China means depressed wages and employment in Britain.

The British workers are faced by a Government measure designed to destroy the power of the British Labour movement. It is, therefore, important that the British workers should unite to stop the war in China by every means in their power and give their whole-hearted support to the Chinese Nationalist movement which is developing trade unionism for the protection of the Chinese workers.

It is the same government, animated by the same motives which is attempting to destroy the hard won liberties of the British trade union movement and waging war against the Chinese workers.

—Times (London) April 29 1927

As the Government of Lloyd George had to give up its Turkish adventure so it is a foregone conclusion that the British Government, unless something unforeseen happens, will not follow the policy of carrying on war against China without full support from

other powers, particularly America, and may even take diplomatic steps to lead a conference in favor of restoration of Chinese sovereign rights. This will come, as soon as the British feel that the Chinese nationalists are gaining in power in their struggle against the Chinese militarists and communists. It is needless to say that Britain and America cannot afford to follow an aggressive policy towards China while Japan is following the policy of "enlightened peace towards China" and thus conquering Chinese market for the benefit of Japanese commerce and possibly for a Sino-Japanese understanding. The British Government had to change its Turkish policy because of the international situation and a United Turkey under the much denounced Turkish leader Kemal Pasha. So if the Chinese can present a united front, owing to the particularly favorable international situation, Britain will have to deal with the Chinese nationalists on their terms, and China like Japan and Turkey, will be freed from foreign domination.

VI

Civil War in China is a menace to the cause of Chinese nationalism, because in the face of foreign intervention the Chinese nationalists are forced to concentrate their energy to combat civil wars and factional fights. As long as Civil War will prevent China from presenting a united front against the foreign imperialists, there is no reason to expect that the Chinese people will be able to reap the full benefit of the Chinese Revolution.

Civil War in China is not due to 'communism or religious fanaticism,' but it is a fight for power between the militarists, nationalists and communists. The militarists, like General Chang Tso Lin, the Manchurian War Lord and the Dictator of the Northern Government at Peking, the poet General Wu Pei Fu and their adherents are opposed to the nationalist forces. The Chinese War Lord, like the Chinese nationalists, profess to be patriotic and believe that they are anxious to bring about a united China, free from foreign control. They believe that this can be accomplished through their leadership, which really means by the establishment of dictatorship and militarism. The Chinese Militarists do not believe in the so-called democratic form of government, and they are opposed to the nationalists as radicals.

To the Chinese Communists, who are led by the Soviet agents, the Chinese nationalists are not radical enough in their external and internal policies. The Chinese Communists want to abrogate all the existing unequal treaties and ignore all unjust foreign rights in China, even if they are guaranteed by the existing treaties. They want to establish a Government in China, following the example of Russia, which will be dominated by so-called peasants and workers. However, the Chinese Communists class themselves as "real" Chinese nationalists and opposed to all militarists.

All the Chinese nationalist factions are supposed to be following the path mapped out by the late Dr Sun Yat Sen. They are at present divided into four distinct groups.

(1) Those who are following the so called Christian General Feng, who, with his army, is now in North-western China, biding his time to take the leadership. Feng is friendly to Soviet Russia and recently visited Moscow where his son is studying in the Sun Yat Sen University, established by the Soviet Government, which is directed by M. Radok. (2) The Chinese nationalist group who belong to the extreme left and have established their government at Hankow and who are supposed to be following the communist trend, dictated by Soviet Russian advisors like M. Borodin and others. (3) The moderate Chinese nationalists, under the leadership of General Chiang Kai Shek who have established a new nationalist Government at Nanking. Chiang Kai Shek is opposed to the communists within the nationalist rank, and is determined to free the Chinese nationalist Party—huo-min-tang party—from the communist influence and is actually carrying on war against the Hankow Government. (4) The nationalist Government of Canton which has declared its independence of all nationalist groups, particularly the Hankow and Nanking Governments.

The Chinese nationalists believe that militarism or autocratic rule of various provincial War Lords, seeking to augment their own power for personal gain and prestige, is the true cause of the present chaos in China. Chinese nationalists advocate immediate abolition of military governorship for provinces and establishment of such a form of government, in which military authority should be sub-servient to civil power, which in turn must represent the will of the people, expressed through a truly

LEGISLATION, RE THE MINIMUM MARRIAGEABLE AGE

BY JYOTI SWARUP GUPTA

Vakil, High Court, Allahabad

PRESENT POSITION WITH RESPECT TO EARLY MARRIAGES

"A tiny little tot embarking on the uncharted seas of matrimony without any knowledge of her destination or destiny—at an age when her little sister in the West is still in the kindergarten." How true this description of an Indian girl wife by the Illustrated Times of India, yet how sad and heart rending especially when one looks to the simple child like looks of an innocent prey to social tyranny and unfounded religious bogey. And yet this is not a solitary instance in the fair and hoary land of India. This is a normal feature of an ordinary Indian family. The Census Report for 1921 points out that 'the marriage of girls at an age when they are still children is a custom common among the Hindus'. The Census Report of 1911 recorded that infant marriages are both customary

and common, the average age for marriage being 8-12." It went on to say that 'the marriage before the age of ten was most prevalent in Bihar and Orissa, Bombay, Baroda, Central India tract and Hyderabad. It records a custom of marriage performed of children even before they are born'. The following tables, taken from the Census Report for 1921 will show at a glance the seriousness of the cancer that is poisoning our entire social system.

Table showing the proportion of unmarried, married and widowed per 1,000 of each sex in India

Age	Unmarried		Married		Widowed	
	Males	Females	Males	Females	Males	Females
0-5	991	988	6	11	—	1
5-10	966	907	32	88	2	5
10-15	879	601	116	382	5	17
15-20	637	183	298	771	15	41
20-25	402	51	564	877	34	72

Table showing the total population and the number of married and widowed of each sex at different age periods

Age	Population			Married		Widowed	
	Persons	Males	Females	Males	Females	Males	Females
all	315 350 442	162 081 278	153 269 164	71 057 754	71 593 131	10 338 392	26 834 838
0-1	9 337 210	4 638 721	4 698 489	6 921	9 066	355	759
1-2	4 537 941	2 38 493	2 299 512	6 637	11 595	378	612
2-3	7 616 606	3 729 731	3 886 875	16 434	32 197	909	1 600
3-4	9 111 181	4 390 695	4 721 489	23 935	60 705	1 628	3 475
4-5	9 049 465	4 187 761	4 861 704	31 667	161 850	3 161	8 693
Total 0-5	39 056 410	19 484 801	20 171 609	110 684	218 163	6 481	15 119
5-10	46 747 388	23 816 133	22 901 255	75 405	201 637	10 079	102 293
10-15	36 741 832	20 171 326	16 570 526	2 311 066	6 330 207	109 394	2 911 74
15-20	26 114 830	13 619 874	12 496 966	1 977 490	9 635 340	199 278	517 898
20-25	26 666 102	12 563 322	13 092 280	7 035 997	11 810 920	4 22 723	966 617

Are the figures in the last four columns not blood curdling, heart rending such as will raise the hair of the most hard headed conservative and the worst bureaucrat? The total number of girls married before ten is over twenty two lacs and of widows over one lac seventeen thousand.

Report proceeds to say that "infant and child marriage is still prevalent, but there is evidence to show that the age of marriage

is increasing especially in the case of males. Only in the most advanced classes is there any tendency for the age of marriage after puberty to increase."

Thus the Census Report rightly observes that "there is little evidence in the Census figures to suggest that the practice (of early marriages) is dying out." Under these circumstances if the wound is allowed to take its own time to heal, the poison will

spread in all parts of our system there will be no resisting power left in us all the limbs of our social system will cease to function and we shall all collapse much before the time comes—if it comes at all when child marriages will be abolished. We can ill afford to be silent spectators to the ruin of our race. Like prudent surgeons let us apply the sharp knife of a legislative enactment and powerful propaganda.

THE TWO BILLS

In order to put a stop to this suicidal policy of early marriages Dr Sir Hari Singh Gour—the indomitable fighter for social reform through legislation and Mr Har Bilas Sarda have introduced Bills in the Legislative Assembly. Under the terms of Section 375 of the Indian Penal Code any person who has sexual intercourse with his wife under thirteen years of age is guilty of rape and is punishable with imprisonment which may extend to ten years and also with fine. Sir Hari seeks to raise the age to fourteen.

According to the Hindu Child Marriage Bill of Mr Har Bilas Sarda no marriage of a Hindu girl under twelve years of age or of a Hindu boy under fifteen years will be valid (S S 3 and 4). The marriage of a Hindu girl between the age of 11-12 years will be valid if her guardian obtains a license from the District Magistrate of the place where the girl ordinarily resides authorising or permitting such marriage (S5). The Magistrate shall grant a license to the guardian who files a written application with an affidavit swearing to the fact that the girl has completed her eleventh year and that the guardian conscientiously believes that the tenets of the religion which the girl professes enjoin that the girls should not be kept unmarried any longer.

The statement of objects and reasons attached to the bill says

1. The object of the Bill is two-fold. The main object by declaring invalid the marriages of girls below 12 years of age is to put a stop to such girls becoming widows. The second object, by laying down the minimum marriageable ages of boys and girls is to prevent, so far as may be their physical and moral deterioration by removing a principal obstacle to their physical and mental development.

2. The deplorable feature of the situation however is that the majority of these child widows are prevented by Hindu custom and usage from re-marrying. Such a lamentable state of affairs exists in no country civilised or uncivilised in the

world. And it is high time that the law came to the assistance of these helpless victims of social customs which whatever their origin or justification in old days, are admittedly out of date and are the source of untold misery and harm at the present time.

3. According to the Brahmins the most ancient and the most authoritative book containing the laws of the Hindus the minimum marriageable age of man is 24 and of woman 16. And if the welfare of the girl were the only consideration in fixing the age the law should fix 16 as the minimum age for the valid marriage of a girl. But amongst Hindus there are people who hold the belief that a girl should not remain unmarried after she attains puberty. And as in this country some girls attain puberty at an age as early as 12 the Bill fixes 12 as the minimum age for the valid marriage of a Hindu girl.

4. In order however to make the Bill acceptable to the most conservative Hindu opinion provision is made in the Bill that for conscientious reasons the marriage of a Hindu girl would be permissible even when she is 11 years old. No Hindu Sastra enjoins marriage of a girl before she attains puberty and the time has arrived and public opinion sufficiently developed when the first step towards the accomplishment of the social reform so necessary for the removal of a great injustice to its helpless victims and so essential to the interests of a large part of humanity should be taken by enacting a law declaring invalid the marriages of girls below 11 years of age.

5. With regard to boys the Sastras do not enjoin marriage at a particular age. Thoughtful public opinion amongst Hindus would fix 18 as the minimum marriageable age for a boy. But as some classes of Hindus would regard such legislation as too drastic, the Bill takes the line of least resistance by providing 15 years as the age below which the marriage of a Hindu boy shall be invalid. Even in England where child marriages are unknown and early marriages are exceptions it has been found necessary to fix the ages below which boys and girls may not marry.

It will thus appear that though the author in accordance with the thoughtful public opinion among Hindus would fix 18 as the minimum marriageable age for boys and 16 for girls. Yet he out of regard for the susceptibilities and feelings of the orthodox and conservatives and in order to meet their so-called religious and conscientious objections and as a first step in legislation affecting minimum marriageable age has drafted his bill on moderate and non-contentious lines so that it might be plain sailing and take the line of no resistance or opposition. It may also be noticed that the bill does not provide any punishment, whatsoever to the parent or guardian who marries the child under age. It simply declares such marriage invalid.

GOVERNMENT OPPOSITION

It was understood that such a non-contentious and extremely non-contentious and yet

1 All affairs of the state shall be decided by public discussion

2 Both rulers and ruled shall unite for the advancement of the national interests

3 All the people shall be given opportunity to satisfy their legitimate desires

4 All customs of former times shall be abolished and justice and righteousness shall regulate all actions

5 And knowledge shall be sought for far and wide and thus will the foundation of the Imperial policy be greatly strengthened.

The last mentioned "that knowledge shall be sought for far and wide" has constituted the basic factor in the foundation of the modern education policy of Japan. In obedience to this proclamation the government took the necessary measures to improve the social and political systems and institutions after the most enlightened models and the work in education received the greatest share of attention.

Four years later, in 1872 (fifth year of Meiji), another Imperial Edict was issued concerning universal education, which contains this interesting statement:

Henceforward education shall be so diffused that there may not be a village with an ignorant family nor a family with an ignorant member regardless of class. If a child male or female does not attend an elementary school the guardian is responsible for such neglect."

A large number of scholars and students were sent abroad to study the system of education in arts, sciences, and technical knowledge in different countries in Europe and America. And with the newly acquired knowledge of these students the Japanese educational policies and principles, and all activities of national life have been so moulded as to meet the requirements of the changed conditions. During the early Meiji era a large number of foreign scholars and technical experts were engaged by the Japanese Government to assist in the reconstruction of the national life. But it is quite evident that very few of them remain in the service today, for Japanese themselves are filling the positions formerly held by the foreign scholars and experts.

The fundamental ideals of education in Japan can best be understood from the Imperial Rescript on Education which was issued in the year 1870. All the children are required to commit this rescript to memory. A translation of it reads:

"Know ye Our Subjects
Our Imperial Ancestors have founded Our
Empire on a basis broad and everlasting and have
deeds and truly implanted virt. Our

subjects ever united in loyalty and filial piety, have from generation to generation illustrated the beauty thereof. This is the glory of the fundamental character of Our Empire, and herein also lies the source of Our education. Ye, Our Subjects, be filial to your parents affectionate to your brothers and sisters as husbands and wives be harmonious as friends true bear yourselves in modesty and moderation extend your benevolence to all pursue learning and cultivate arts, and thereby develop intellectual faculties and perfect moral powers furthermore advance public good and promote common interests always respect the Constitution and observe the laws should emergency arise, offer yourselves courageously to the State and thus guard and maintain the prosperity of Our Imperial Throne coeval with heaven and earth. So shall ye not only be Our good and faithful subjects but render illustrious the best traditions of your forefathers.

'The way here set forth is indeed the teaching bequeathed by Our Imperial Ancestors to be observed alike by Their Descendants and Subjects, infallible for all ages and true in all places. It is Our wish to lay it to heart in all reverence in common with you Our subjects that we may all thus attain to the same virtue."

The 30th day of the 10th month of the 23rd year of Meiji.

In this it can be seen that the ideals contained in it are mostly influenced by the teachings of Buddhism and Confucianism, and at the same time we find the best principles of the Occidental educational system embodied in it.

It will afford much interest to look into the system of educational administration in Japan. The department of education is on an equal basis with other departments and is under the direct control of the national government. The minister of education has charge of all matters relating to education, literature, arts, and religion of the country. The general policy of education is decided by the department, however, the management of the schools is left partly with the local public bodies. Under the system of compulsory education, all children at the age of six, are entered in the first grade of the primary schools for a six years' course. After graduating from the primary schools some of them enter the higher primary schools for a two years' course. However, the boys generally enter middle schools for a five years' course, and the girls enter girls' high schools for a four or five years' course. After that three years are further required to complete the work in the higher schools before they are eligible to compete in the entrance examinations for colleges and universities. Primary education in Japan is

given in elementary schools and continuation schools, secondary education in middle schools for boys and in girls high schools for girls and technical schools of second grade and higher education in the higher schools, colleges and universities. For the training of teachers there are normal schools for both men and women for the training of men of business and other vocations there is a number of vocational and technical schools.

Statistics compiled by the Education Department in 1921 shows that there were 43,790 schools. Of these 71 are government institutions, and 41,421 established and maintained by local bodies. There were also 1,730 private schools and 2,057 teachers. The entire enrolment of pupils and students was 10,135,261. (The population of Japan in 1921 was 79,757,960.) According to the census taken by the government at the end of March 1921 there were 4,331,400 boys, and 1,374,500 girls, a total of 5,705,900 children of school age that is from six to twelve years. Out of these children 91.90 per cent of boys and 90.3 per cent of girls—average 93.17 per cent are registered in schools. Taking these figures into consideration it cannot but be reckoned that the compulsory system of primary education is a phenomenal success in Japan. Even those American and European countries which boast of possessing highly developed education cannot compare with Japan in this state of education. If there is indeed any country more thorough going than Japan in the education of its children it will be the Scandinavian countries. On one occasion during a World Conference on Education held in San Francisco some years ago a lady from Norway said that 100 per cent of their children were educated.

The figures quoted above eloquently show how much the Japanese people are interested in the education of children and young people. The desire of the common masses of the country—both the parents and also the young people themselves—for higher education cannot be met by the authorities of the department. The sad feature of the educational situation in Japan today is the

fact that the government cannot build an adequate number of schools, owing to lack of funds, to take care of the vastly increasing number of students who seek higher education.

One of the most difficult problems Japan has been endeavoring to solve during the last fifty years is her overpopulation with a limited area of land. The entire area of Japan proper is no larger than the State of California. Japan being a country of volcanic formation the proportion of arable land is very small. Only 16 per cent of the entire land is productive. About five and a half million lambs and thirty million people which is roughly half of the population cultivate fifteen million acres, a little less than three acres per family, and half an acre per individual. During the last five years the population of Japan has increased three million and a half. The farm lands for cultivation in Japan proper are almost exhausted while the increase in the population is almost uncontrollable. The natural resources of the country are very poor. Under these adverse conditions Japan today faces a new problem in the re-establishment of her national economic status.

It is so interesting a fact to note that the United States has had much to do with the promotion of education in Japan. One of the noteworthy things which the American missionaries have done in the field of education has been the encouragement of education for women. A number of mission schools have been especially built for the education of Japanese women and they have produced many eminent leaders in the educational field as well as in social work. It is recorded in the history of education in Japan that an eminent scholar from the United States in the person of Dr. David Murray was engaged as an adviser to the Minister of Education from 1875 to 1897.

Through the aid of education only can a nation make progress and bring to the people a fuller realization of life. Through the aid of education the advancement of humankind is made possible and at the same time international peace and unity which is so much talked about today can be established.

highly beneficial measure would be welcomed by Government and would meet with no opposition whatsoever from it but its attitude has staggered us all

The Assembly has established a convention that it will not oppose the mere introduction of a bill. Bound by this convention the Home member did not—he could not oppose the introduction of this Bill but he could not restrain himself and laid the gauntlet at the feet of the Health, Maternity and Child welfare workers, the doctors and the social reformer by saying that he would oppose it at all future stages. It is very unfortunate that the Government has taken a very hostile attitude to the raising of the age of consent and the marriageable age since the question was first mooted in 1921 in the League of Nations on the question of traffic in white girls. Is it not very strange that a Government which is very fond of proclaiming that it is the *ma bap* of the dumb Indians should actively and consistently oppose all attempts to improve a pernicious practice which is cutting the ground from under their very feet? It is not very curious that Englishmen with all their proud feelings of respect for womanhood should not only connive but be actively participating in bringing about untold misery which is the necessary consequence of early marriages?

May I also bring to the Government's notice the following reply which was given to an interpellation in the Legislative Assembly only a few days after its inauguration:

"23. Lala Girdhari Lal Agarwala: On the Government intend to undertake legislation forbidding marriage of girls before the age of 11 and that of boys before the age of 14?"

Mr. S. I. O'Donnell: The answer is in the negative. Government consider that under present conditions in a matter of this kind which intimately concerns the social customs and religious beliefs of the people it is preferable that the initiative should be taken by non-officials rather than by Government. —Legislative Assembly Debates Vol. L P 193 for 1st February 1921

I would go to the whole length of saying that this declaration of Governmental policy by the then Home Secretary clearly shows that though the Government at that time was opposed to take the initiative in this matter it never contemplated to offer any opposition to such a measure if mooted by a non-official.

The Census Report is an official document prepared at considerable expense to the taxpayer under the direct control and super-

vision of a member of its own steel frame. The Government cannot lightly ignore the facts, figures and conclusions drawn in it. This is why I have taken care to quote from it. It observes:

It is difficult to gauge to what extent the statutory sanction contributes to the fall in the number of infant marriages but as was remarked by my predecessor the indirect effect on public opinion of a definite attitude of the state towards the practice cannot but be beneficial.

Might I also tell the Law officers of the Government that the marital tie carries with it the conjugal right for the husband to the immediate society of the wife. Under the general principles of marriage laws and the laws of all civilized countries a wife cannot refuse to live with her husband. The courts will always give a decree for the restitution of conjugal rights if even a child wife refuses to live with her husband. Now section 375 of the Indian Penal Code threatens to send the husband to jail for 10 years if he has access to his wife under 13 years of age. It therefore follows as a logical consequence that the minimum marriageable age should be the same as the age in this section. There is no fun in allowing a man to assume by law a certain status viz of husband which carries with it certain rights viz to the society of the wife and yet sending him to jail if he avails himself of those rights.

Bharatpur, Mysore and Baroda States have laws forbidding marriages below certain years. China has passed a law forbidding marriages of girls below 16 and of boys below 18. Many European countries have minimum marriageable age laws though the institution of early marriage is unknown to them. What then is there to prevent our Legislature from passing such a measure? What is there for the Government to oppose this bill? Is it its alien nature, its cussedness, its disregard for the welfare of the Hindus or something else? If we are denied political reforms can we also not have social reforms till the system of present Government lasts? Is it not its imperative duty to pass this bill as it passed the Suteo Abolition Act or the Widow Remarriage Act? Would it not be thus preventing over thirty lacs of children becoming girl wives and over two lacs of innocent temples of God becoming widows before they enter their teens? The least that the Government can do is to sit silent and leave the question to the vote of the Hindu members in the Assembly.

ADVANCED PUBLIC OPINION

While condemning the practice of early wifehood and motherhood in his book, Tuberculosis in India, Lankester meets the argument that a warm climate favours precocity and that girls in India develop at an earlier age than in more temperate climates thus

Let even as much as two years be conceded and in place of 18 years which may be reckoned as the lower limiting age in ordinary cases of marriage in the west let 16 years be the age which popular opinion shall regard as the normal one for marriage in this country. The result would be an incalculable gain in the health of women of India and also in that of the children whom they bear.

Following this advice the advanced social reformer would do well to keep in mind that 16 and 18 should be the minimum

marriageable age for girls and boys respectively. Let him move amendments to this bill to raise the age to this ideal or at least to 14 for girls and 16 for boys and also for the addition of a clause which would penalise the parent or guardian who violates the law. But if he fails in his amendments let him accept the present bill as a first step towards legislation providing a minimum age for marriages. Let the Health, Maternity and Child welfare organisations, the Hindu Sabha, the Arya Samaj, the Women's Association under the able leadership of Mrs Cousins and the *Mohila Samitis* and other social bodies all work incessantly till they have seen this bill in its present or improved form and also the amending bill of Sir Hari Singh Gour placed on the statute book.

EDUCATIONAL PROGRESS IN JAPAN

By T. K. VADIVELU

WITH the restoration of the Mikado (Emperor) to his legitimate rights as the supreme ruler in 1868 commences the new era of Modern Japan. The visit of the American Expeditionary Squadron under the command of Commodore Perry in 1853 marked an epochal change in the history of Modern Japan, with the result that the country was gradually led into closer association with the western world. For the previous three hundred years the actual administrative power of the country had rested with the Shogun (feudal lord). But with the restoration of the emperor the entire system of national life in politics, social order, and educational policies underwent radical reform.

The early history of Japan was mostly influenced by Chinese culture. The teachings of Buddhism and Confucianism constituted the basic factors in the development of Chinese civilization. The introduction of Confucianism into Japan dates back to 285 A.D. when Wang was invited to the Mikado's court. Buddhism was introduced about the middle of the sixth century of the Christian era. During this period frequent exchange of visits of priests and students took place between Japan and China and Korea.

The Nara epoch covered the eighth century followed by the Heian epoch which continued until the twelfth century. Art and literature flourished during these epochs. This period ushered in an era of military rule marked by the continuous rising and falling of different ruling houses. This may be called the dark age in Japanese history during which time education was entirely neglected. It was only enjoyed by a small group of people, viz., priests, courtiers and other non-military people. Ieyasu Tokugawa, the founder of the Tokugawa Shogunate in 1603 was one of the greatest military leaders and statesmen Japan has produced. Under the regime of the Tokugawas more liberal and universal education was encouraged. As a result classical studies were revived and many notable scholars appeared.

In 1868 His Imperial Majesty the late Emperor Meiji promulgated the famous charter oath of five articles which is called the Magna Charta of the Japanese Empire. The principles embodied in the Magna Charta are of a most radical nature—being a change from the most conservative feudalistic idea to the most progressive modern idea. These five articles read as follows:

MORE ABOUT SIND

By NAGENDRANATH GUPTA

THE 'SUNBEAM'

DURING my stay at Karachi Sir Thomas (afterwards Lord) Brassey visited India. While he travelled overland in the country his yacht, the 'Sunbeam', lay at anchor in the Karachi harbour. Visitors were admitted to inspect the vessel and along with some friends I went to see it. It was a dainty little thing and rested lightly on the water like a white sea gull. But it was roomy enough inside, luxuriously and tastefully furnished. I was struck by a bright brass plate fixed to the door of one of the cabins and hearing the inscription "Mr Gladstone's Room". On entering the cabin I found it was the library with a comfortable brass bed screwed to the floor. Mr Gladstone had on one occasion taken a sea voyage on medical advice round the coast of Scotland and Lord Brassey had placed his beautiful yacht at his disposal. On the voyage the great statesman had occupied the cabin that bore his name. The brass plate was an acknowledgment of the honour that had been done to the owner of the yacht. It was a graceful tribute of wealth to greatness.

NALIN BIHARI SIRCAR

Messrs. Kerr Tarruck & Co had a branch of their firm at Karachi and while I was there Nalin Bihari Sircar, the second son of Tarruck Chunder Sircar, came to Karachi to inspect the office. I had met him several times in Calcutta but we were not intimate friends. His youngest brother, Sarat, was a great friend of mine. At Karachi Nalin Bihari and I became close friends and he used to come to my house almost every day and frequently took his meals with me. Nalin was a capable man of business, and a very frank and modest man in society. After leaving Sind I met him at the Allahabad Congress in 1892, when we stayed together in the same house and travelled down to Calcutta together. I met him again in Calcutta some years later. Nalin Bihari was a Municipal Commissioner

of Calcutta and one of the stalwart twenty-eight who resigned their seats as a protest against the Municipal Act curtailing the powers of the Corporation. He was appointed Sheriff of Calcutta and died comparatively young.

SACRED CROCODILES

A few miles from Karachi there are two or three hot springs, though the water is not so hot as at Sitakunda, Mouhlyr. There are a few groves of date and coconut palms near the springs. At a little distance from the springs there is a pond into which the water flows and which is surrounded by a mud wall. In this pond there are a number of crocodiles which are considered sacred and are fed by visitors with goat's meat and mutton. The place is called Mungo or Mugger (crocodile) Pir. No one knows how the crocodiles came there, for they are not found in the sea and there are no fresh water rivers or lakes in the neighbourhood. The people in the village near by and the man in charge of the springs and the crocodiles say that the pond was not always walled round and formerly the crocodiles used to go out foraging at night and devoured stray sheep and goats, and even children were sometimes missing. Then the village people built the wall and the depredations of the crocodiles ceased. We watched them being fed by the visitors who brought legs of mutton and lumps of meat and threw them to the crocodiles. Seemingly sluggish and inert these saurians became amazingly active as they rushed about and fought for the meat. There was a huge male of a monstrous size which lay apart and disdained to take part in the general scramble and we soon found out the reason. Its snout and head were smeared with vermilion and we learned that it was worshipped as the Raja, or king of the crocodiles. One of the keepers took a lump of meat, crossed over the wall and fearlessly approached the brute, calling out 'Raja, Raja'. When the meat was placed in front of it the monster made no sign, because it was

excessively pampered and overfed. The man then actually caught the snout and opened the cavernous mouth of the Raja, displaying the formidable teeth, took the meat and thrust his hand to the elbow and shoved the meat down the animal's throat! It was only when the man had withdrawn his hand that the Raja closed its mouth and swallowed the meat. It knew the man and was quite tame.

A DEFECT OF MEMORY

Shortly after my arrival at Karachi I found that the Sindhis found it difficult to pronounce my full name, and I found it more convenient to retain my surname with an initial letter. This was a satisfactory solution. On the other hand Sindhi names sounded very strange to me. I had to come into contact with all educated Sindhis and also with others who did not speak English. When I met a new man for the first time I of course, heard his name but forgot it immediately afterwards on account of the unfamiliarity of the sound and form. And when I saw the same man the next time I recalled his face perfectly well but the name escaped my memory. I could not ask his name again for that would look awkward and I managed to make conversation until some one else mentioned my visitor's name. And this developed into a defect of memory and I have ever since found it difficult to remember new names. But this failing does not apply to earlier years for I remember perfectly names that I heard as a young boy.

MANNERS AND CUSTOMS

Sind has changed considerably in half a century though many old customs are still retained. The large majority of the people is Mahomedan by conversion. The Amils and the Bhaibandhs are in reality the same class of people divided by their occupations. The Amils served under the Mahomedan rulers known as Mirs and adopted Mahomedan ways just as English ways are now adopted by many Indians. Among the Amils the men wear at home pyjamas and a shirt, and the head is always covered with a small skull cap. The Amils are generally Nanakpanthis and read the Granth Sahib and recite the Japji. The *likans* or temples are Sikh Gurudwaras. There are a few Singhs, or followers of Guru Govind,

who keep long hair and retain the other symbols of the Khalsa. The women also wear pyjamas called *sulthans*, a long shirt and a piece of muslin cloth called *rao* (रौ) to cover the head. When going out they put on a gown called *Peshgair*, but *Saris* are now coming into use. They wore slippers into which only two or three toes could be thrust in, so that while walking women had to drag their feet as the slippers dropped off if the feet were lifted from the ground. Of the ornaments worn the most fearful were the hangles and armlets of ivory, a custom borrowed from the women of Marwar. These hangles were looked upon as a sign of wifehood like the vermilion mark between the parted hair and the single thin iron bangle in Bengal. A nose ring with a ruby pendant was also an indication of married womanhood in Sind. The ear rings, usually of silver and gold, were numerous and I counted as many as ten in a single ear of a little girl. The ivory bangles were almost an instrument of torture for they produced discolouration and ulceration of the skin and were taken out only rarely to be washed and cleaned. These hideous things have now gone out of use. When my wife first went to Hyderabad, Sind, where she stayed at the house of Navahai and Hiranand, she was invited to visit other Amil houses and everywhere she was greeted with a chorus of amazed consternation, "*Huth booth, nuh booth, lun booth, lu mudum ahe*—her hands (the gold *churis* and *balas* were not taken into account) her nose, her ears are bare, this is a madam (European lady)."

The elaboration of courtesy amused me while visiting Sindhi houses. The inquiries about health usually took several minutes and went the round of all the visitors. The Sindhi equivalent of Sir is *Sain* (Swami) and the interrogatories started somewhat in this fashion "*Sain, Khush ahyo, chango bhalo, taxa tarcana, mardana*—Sir are you cheerful, well, fresh and strong?" The words "*Kien ahyo*—How are you?" sometimes opened the battery, but all the guns were unmasked and fired without fail. It reminded me of the ancient custom of numerous questions regarding one's welfare that we read in the *Mahabharata*. The effects of Mahomedan influence are apparent among the Amil community in Sind.

The *F* and Bhaibandhs invariably wear a long coat with a

red turban for a headdress. The Banias of Hyderabad and Shikarpur are an enterprising community. They are to be found in Afghanistan, Central Asia, Africa, China and Japan and in large cities in India like Bombay and Calcutta. The Banias are numerically larger than the Amils and more prosperous. The Mahomedans are mostly agriculturists with a few large landowners.

LANGUAGE.

There can be no manner of doubt that the Sindhis are descended from a Sanscrit speaking people. In spite of a large admixture of Persian words due to a long period of Mahomedan rule, the Sindhi language remains the most direct and closest derivative from the Sanscrit. It has not been leavened materially by any form of Prakrit as is to be found in Bengali, Gujarati and other languages. The pronouns *we* and *you* in Sindhi are Sanscrit with a slight alteration. One of the Sanscrit words meaning a frog is *dardur* (दरदुर), and in Sindhi a frog is called *dedar* (ددار). The word *dittho* (दिथो) see is clearly the Sanscrit word *drishti* (दृष्टि). *Achho* (अच्छो) come is unmistakably *agachha* (अगच्छ). But the Sindhi language has been thoroughly Persianised in form, the declensions of words and the use of genders. The Sindhi alphabet is Persian with some modifications. Women use the Gurmukhi script for writing letters. There is no culture of Sanscrit in Sind and students at college take up either Persian or French for a second language.

THE RUINS OF BRAHMANABAD

In the desert district of Thar and Parker there are some ruins of an ancient Aryan city known as Brahmanabad. There are no historical data but there is a very old tradition that the city in the desert was prosperous and had a large number of Brahman residents. The last king was a young kshatriya of dissolute habits, who had no regard for

Brahmans and no respect for their women. He was cursed by a holy Brahman for his sinfulness and shortly afterwards the city of Brahmanabad was overwhelmed by a sand storm which buried the city under mountainous heaps of sand.

Umerkot where Akhar was born is also in the Thar and Parker district and is a town of some importance.

BUDDHISM IN SIND

When the great Chinese pilgrim traveller, Hsien Tsaog came to India in the seventh century he passed through Sind (Sindhu). The capital was called Vichavapura (Pi shen po pu lo). The agricultural conditions were much the same as they are now. The soil is favourable for the growth of cereals and produces abundance of wheat and millet. Rice is also grown in the Larkana district and in Lar Lower Sind in the delta of the months of the Indus. The traveller saw camels which are still the ships of the Sind desert. Very striking is Hsien Tsaog's testimony to the spread of Buddhism in Sind. He writes — They (the people) have faith in the law of Buddha. There are several hundred *sangharamas* occupied by about 10000 priests. They study the Little Vehicle (Hinayana) according to the *Sammattiya* school. This may account for the fact that there are no statues of the Buddha or Bodhisattvas in Sind as the Hinayana school of Buddhism was opposed to the making of images and all the Buddhist sculptures belong to the Mahayana or Great Vehicle sect. Of the king he writes — "The King is of the Sndra (Shu-to-lo) caste. He is by nature honest and sincere and he reverences the law of Buddha. The *Sangharamas* have disappeared as completely as the teachings of the Buddha from Sind and there are no reports of any archaeological discoveries of Buddhist relics. Hsien Tsaog also noticed Brahmanical temples. "There are about thirty Deva temples in which sectaries of various kinds congregate.

WHAT AMERICANS SAY ABOUT SUBJECT INDIA

By J T SONDERLAND

THIS article consists of two parts.

In part one I cite utterances of honored Americans about *all national bondage*, all forced rule of one nation by another—which, of course, includes India although India is not mentioned by name.

In part two I quote things said by distinguished Americans about *India itself* as held in subjection by Great Britain.

PART I

What have honored Americans said and what are they saying, about the *right of all nations and peoples to freedom and self determination?*

1 THE AMERICAN DECLARATION OF INDEPENDENCE

This most conspicuous utterance of this country to the world affirms

We hold these truths to be self-evident that all men are endowed by their Creator with certain inalienable rights that among these are life liberty and the pursuit of happiness That to secure these rights governments are instituted among men deriving their just powers from the consent of the governed that whenever any form of government becomes destructive of these ends it is the right of the people to alter or to abolish it, and to institute a new government laying its foundations on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness.

If words mean anything, the principles here set forth apply to India to day as directly as exactly and as fully as they did to the American Colonies in 1776, with these differences, however, that (1) the people who suffered oppression in the Colonies numbered only three millions, whereas those who suffer in India number three hundred millions, (2) the oppressions and wrongs of the Colonists were very much lighter as well as of shorter duration than are those of the Indian people, (3) the British had much more right to rule over the Colonists than they have over the people of India, because they (the British) had largely *created* the colonies and the inhabitants were largely British in blood and civilization, whereas the British did not in any sense create India, none of the people of India except a

bare handful are British or even descendants of the British and the civilization of India is far removed from that of Great Britain.

2 ABRAHAM LINCOLN

The word of no American carries more weight in his own country, or among all nations, than that of this great statesman and emancipator. Here are some of Lincoln's utterances, which while not mentioning India, are unanswerable arguments in support of the right of the Indian people to freedom and self government.

'No man is good enough to rule another man, and no nation is good enough to rule another nation. For a man to rule himself is liberty for a nation to rule itself is liberty. But for either to rule another is tyranny. If a nation robs another of its freedom it does not deserve freedom for itself and under a just God it will not long retain it.'

Again

In all ages of the world tyrants have justified themselves in conquering and enslaving peoples by declaring that they were doing it for their benefit. Turn it whatever way you will whether it comes from the mouth of a king or from the mouth of men of one race as a reason for their enslaving the men of some other race it is the same old serpent. They all say that they bestride the necks of the people not because they want to do this, but because the people are so much better off for being ridden. You work and I eat. You toil and I will enjoy the fruit of your toil. The argument is the same and the bondage is the same.'

Still further

Any people anywhere being inclined and having the power have the right to rise up and shake off an existing government which they deem unjust and tyrannical and form a new one that suits them better. This is a most valuable a most sacred right—a right which we hope and believe is to liberate the world.'

If Lincoln had had India directly in mind he could not possibly have covered her case more perfectly.

3 WOODROW WILSON

No man ever uttered nobler words in advocacy of the right of all nations to be free and to govern themselves, than this great American. Although he suffered partial defeat in his efforts to get them carried into

immediate practical realization (a defeat which cost him his life) some of his utterances are immortal, and will hearten fighters for liberty in every coming age

Said President Wilson in an Address to the United States Senate (April 2, 1917)

We fight for the liberation of all the world's peoples for the rights of nations great and small, and the privilege of men everywhere choose their way of life and of obedience"

If this means anything, it means India
In an Address to Congress (February 11, 1918)

National aspirations must be respected. Peoples may be dominated and governed only by their own consent. Self-determination is not a mere phrase. It is an imperative principle of action, which statesmen will henceforth ignore at their peril

This applies exactly to India

In a Message to Russia (May 26, 1917)

We are fighting for the liberty the self-government and the undictated development of all peoples. No people must be forced under a sovereignty under which it does not wish to live."

India again

In an Address to the Senate (January 22, 1917)

No peace can last or ought to last which does not recognize and accept the principle that governments derive their just powers from the consent of the governed. I am proposing that every people shall be left free to determine its own policy, its own way of development, unhindered, unthreatened, unaided, the little along with the great and powerful. These are American principles. We can stand for no others. They are principles of mankind, and must prevail"

If these great utterances do not apply perfectly and unequivocally to the case of India, then words have no meaning

PART II

I come now to declarations of honored Americans directly about India

1 WILLIAM T. HARRIS

United States Commissioner of Education

"England's educational policy in India is a blight on civilization. I have studied the problem pretty closely. In the latter part of the eighteenth century, Wutberforce the English philanthropist, proposed to send school teachers to India, but a Director of the East India Company objected, saying: 'We have just lost America from our folly in allowing the establishment of schools and colleges, and it would not do for us to repeat the same act of folly in regard to India.'"

There are no free public schools in India (in British India), and no compulsory system of even

primary education. Young Indians are hungry for education, and it is England's duty to do whatever she can to help the spread of education in that great country of ancient culture and wonderful philosophy"

These words are part of an address delivered by Dr. Harris before the American National Council of Education at its meeting in Cleveland, in 1903. The British Government has made almost no advance in popular education in India since these statements were made

2 CHARLES CUTHBERT HALL

President of Union Theological Seminary, New York

On returning from his second tour through India as 'Barrows Lecturer,' Dr. Hall gave an address in the New York Bar Association Club Rooms (January, 1908) in which he said

'There is no denying the fact that England is administering India for England's benefit and not for India's. It is hard for me to say this because until I went to India my sympathies were all on the English side. My early education was much in England and I have many dear personal friends there. But it is the truth and the truth must be told

'Mr. Morley made a speech in which he said that he hoped he would not be blamed for the Indian famine he did not suppose even Indians will demand of the Secretary of State that he play the part of Elijah on Mount Carmel' implying that the only difficulty is the failure of rains. But this is not true and it seems incredible that any intelligent, adequately informed man could so mistake the situation. There are factors in this terrible problem which I would not care to discuss in this room. But the obvious fact remains that there is at no time in no year any shortage of food substance in India, if all produce were allowed to remain where it was produced. The troubles is that the taxes imposed by the English government being 50 per cent of the value produced, the Indian starves that England's annual revenue may not be diminished by a dollar. Eighty five per cent of the whole population has been thrown back upon the soil because England's discriminating duties have ruined practically every branch of native manufacture and these tillers of the soil when they have over and over again mortgaged their crops and their bit of land, when they have sold themselves for the last time to the money lender are sold out' by the tax collector, to wander about until they drop by starvation

Once when I was in Ruzah, just after a terrible famine, I saw several small children viciously hitting another, a little girl and trying to take something away from her. It proved to be a lump of mud mixed with a little wheat chaff she had found in a shed. She was carrying it away to eat, and the others, brutal from hunger, were trying to get it from her. Later I was visiting in Robatan at the home of a well known mission-

ary He told me that in a field adjoining their house there had been a fire burning day and night for three months the fuel of which was dead bodies the harvest of famine and its inevitable companion plague. We send ship loads of grain to India, but there is plenty of grain in India. The trouble is, the people are too poor to buy it. Famine is chronic there now though the same shipments of food stuffs are made annually to England the same drainage of millions of dollars goes on every year.

3 HENRY GEORGE

In his well known book "Progress and Poverty" we find the following passage (P 15) which gives the result of Henry George's study of the Indian situation.

The millions of India have bowed their necks beneath the yoke of many conquerors but worst of all is the steady grinding weight of the English domination—a weight which is literally crushing millions out of existence and as shown by English writers themselves is tending inevitably to a wide catastrophe. Other conquerors have lived in the land and though had and tyrannous in their rule have understood and been understood by the people. But India now is like a great estate owned by an absentee and alien landlord.

4 ANDREW CARNEGIE

Mr. Carnegie made a visit to India and after his return contributed several articles to periodicals giving his impressions. From one published in *The Nineteenth Century* and *After* of August, 1900 and a second in *Der Morgen* a German paper (January 17, 1903) republished in English in *The Mahratta* of Poona India February 1903. I take the following brief passages.

"I have traveled through India and been introduced to leading natives as well as to British officials. To the Briton his master the Indian is naturally reserved but to the American he is drawn by sympathetic bonds thus I believe I obtained an insight into the situation in India which few Britons can secure. There is a strong desire on the part of the educated Indians to govern their own country. Education makes rebels against invaders and conquerors. Young Indians know the long and glorious struggle of the English people against absolute monarchy they also know the story of Washington and the American Revolution. These histories cannot be read by men whose country is under a foreign yoke without inspiring in them an invincible resolve to free and govern their own country. It is not Russia or any foreign attack that the British military officials dread. It is the strong home rule sentiment. It is not against the foreigners but against the Indian people that the legions are to be moved. It seems the fashion to speak of India as the brightest jewel in the British Crown. God grant that this gem may not one day glow flood red! If a native of India lives in contentment while his country is ruled by

foreigners we despise him. I do not believe God ever made any man or any nation good enough to rule another man or another nation.

5 WILLIAM JENNINGS BRYAN

Mr. Bryan made a trip around the world stopping for a somewhat extended visit in India, and on his return published a pamphlet on British Rule in India which had a large circulation in this country and England. In the pamphlet he says:

I have met in India some of the leading English officers (the Viceroy and the chief executives of the province of Bengal the United Provinces of Agra and Oude and the President of Bombay the three largest Indian States) and a number of officials in subordinate positions. I have talked with educated Indians—Hindus, Mohammedans and Parsis. I have seen the people rich and poor in the cities and in the country and have examined statistics and read speeches, reports, petitions and other literature that does not find its way to the United States and British rule in India is far worse far more burdensome to the people and far more unjust than I had supposed.

The trouble is that England acquired India for England's advantage not for India's she holds India for England's benefit not for India's and she administers India with an eye to England's interests not to India's.

6 CHARLES EDWARD RUSSELL

This diplomat and author of many books says (in an article in *Young India* New York August 1920)

I know of nothing more extraordinary than that any American could think or speak favorably or even tolerantly of political absolutism—political despotism—that which exists in India to-day or any other. If America does not stand for free government everywhere will some one kindly tell me what it does stand for? The idea that we are to applaud political autocracy because it is British is somewhat refreshing. Does wearing the British name change its character? We are not called upon to admire absolutism because it is Russian or Turkish or was at one time Prussian. There is no more reason why we should admire or tolerate it because it is British. The subjugation and rule of one nation by another wherever it may be found is loathsome, hateful, poisonous to the people who are compelled to live under it. Yet this is what we have in India—a foreign rule forced on a great civilized people by the power of the bayonet, and the bomb bearing aeroplane.

Sad as is the condition of India under British domination there is one phase of the discussion of the subject that is not without its grim humor. We are told that this domination of India is actually kind, benevolent, maintained by the British for India's good and that the Indian people like it, are grateful for it! Ah! yes! After 160 years of this sort of benevolence the gratitude of the people is so very great that they are hourly expected to rise and tear their benefactors to pieces! Is it

conceivable that if the Government were really good the people would be incessantly plotting and planning how to get rid of it? Or that it would be necessary to suppress free speech among them? Or forbid the right of assembly, or arrest thousands of them without warrant and send them in prison without trial? Or watch them always with jealous care lest they obtain any kind of weapon?

Every careful observer who has studied in India the problem of India knows perfectly well that nothing keeps the Indian people from driving their foreign rulers out of the land and back to their far-off home, but the rigorous care with which arms are kept out of their hands. And notwithstanding the great influence for peace of Mahatma Gandhi, there are many ominous signs of an uprising at no distant day compared with which the revolution of 1857 was but an incident unless, of course the British are willing to grant to the people whom they have so long exploited the self-government which is their right.

I traveled up from Ahmedabad to Jaipur with an open minded Englishman whose years in India had not obsessed him with race prejudice and fatuous confidence. As we went through villages and saw everywhere the scowling and sinister faces turned upon us the half-starved people, the wretched huts the children that do not play and the women who do not smile, and heard everywhere the same mutterings and curses I said to my companion,

When is this volcano going to burst forth?

He gripped me by the arm and looked me soberly in the eye and said

Any moment!

Can there be widespread discontent under a good benevolent and just Government? Will vast masses of people risk their lives to cast from them their own good? Do revolutions ever go backward? And above everything I ask again Can there be anywhere on the earth a tolerable autocracy an endurable domination by force of one nation over another?

7 UNITED STATES SENATOR, GEORGE W. NORRIS NEBRASKA

Much has been said at one time and another in both houses of the United States Congress, condemning the forced rule of one nation by another, especially the most conspicuous case of such rule now existing in the world, that of great historic, civilized India by Britain.

In a speech delivered in the Senate in February, 1920, Senator Norris defended the right of the people of India to freedom, and especially condemned the conduct of Great Britain in refusing to give India self government after she had sent more than a million men into the Great War of 1914-18 to fight on Britain's side.

"The fact that England treats Canada well," declared Senator Norris, "is no defense or justification of her when she

abuses India. No nation on earth should be ruled without its consent."

8 SENATOR JOSEPH L. FRANCE

On the 14th of October, 1919, Senator France, of Maryland, delivered a speech in the United States Senate, on the ratification of the Versailles Treaty. He opposed the ratification on several grounds, one of which was that the treaty practically guaranteed the perpetuity of British rule in India, a rule which, he contended, had reduced the Indian people from a great, rich and influential nation, to a condition of helplessness and abject poverty. He summed up by saying

Gentlemen of the Senate, We, the United States of America cannot justify ourselves in signing and sealing an international agreement which thus sanctions and aims to make permanent the practical enslavement of a great nation and which, making the situation still worse also gives and guarantees to Great Britain nearly 931,000 additional square miles of territory, to rule and exploit for British benefit, as India has been ruled and exploited."

9 CONGRESSMAN WILLIAM E. MASON

On March 2, 1920, Congressman Minson, of Illinois, carried the cause of India into the United States House of Representatives, delivering an address on Great Britain's misdeed in holding a great civilized nation, such as India is, in forced subjection, and the duty of this country to sympathize with the Indian people in their struggle for freedom, and to extend to them such moral support as may lie in our power. At the close of his address, he introduced into the House the following Concurrent Resolution, which was referred to the Committee on Foreign Affairs and ordered to be printed, with the expectation that later it would come before both Houses of Congress.

CONCURRENT RESOLUTION

Whereas all just powers of government are derived from the consent of the governed and

Whereas it has been the policy of the Republic of the United States to give recognition without intervention to the struggling peoples who seek self-determination and

Whereas the atrocities committed in India by British soldiers and officers which have met the approval of the British officials has shocked the sense of justice of the American people and

Whereas as a result of the great war many of the heretofore oppressed peoples of the world are being recognized by the United States as they seek to govern themselves and

Whereas the American people believe the same rule of self-determination should apply to peoples

who are subjected by force to the government of Great Britain that is applied to the other nations that have sought self determination and are encouraged by the United States and

Whereas the Government of Great Britain which now controls India and governs it by force without the consent of its people has tried to make it appear by its propaganda that it has given or is giving so-called home rule to India, which is substantially the same brand of home rule which has always been given by the master nation to the slave nation

Therefore be it

Resolved by the House of Representatives (U.S.)

Senate concurring) That it is the duty of the Government of the United States to carry out the will of the people to give such recognition without intervention to the people of India who are struggling for self determination as will assist them in their efforts for self government.

A large number of other utterances of eminent Americans expressing approval of and sympathy with India's just struggle for freedom and nationhood lie before me as I write all of them worthy of a place here. But the above are sufficient

[This article specially contributed to THE MODERN REVIEW is a chapter of Dr Sunderlands book on India, India's Case for Freedom and Self rule which is nearly ready for the press and of which the object is to help India to obtain self rule peacefully Ed M.R.]

ANCIENT PAINTING IN CEYLON

By MANINDRABHUSHAN GUPTA *Ananda College Colombo*

WHETHER in architecture in sculpture or in painting Ceylon has contributed wonderful things.

Whether in classical literature or in classical art, we find examples which are landmarks in human creation for all time

In ancient Ceylonese art we find such examples, which are classical in their type and will always remain a source of joy to all art lovers.

The ancient art of Ceylon as of other countries, grew with religion. The Buddhist

A View of the Sgama Mountain

kings thought it to be a highly meritorious act to build temples and decorate their walls and even the very ceiling with paintings depicting Buddhist legends

A Photograph of a Sigrira Fresco

and they had to work without wages, when summoned by the king. The people had no struggle for existence as they have now and had sufficient leisure so they could make their surroundings beautiful. They took the utmost care to beautify even the insignificant utensils of daily use.

In this article I should like to give a brief sketch of the temple paintings of Ceylon. I would divide them into three periods

A Sigrira Fresco

A Row of Pillars in the Dalada Mahagaya Temples of Kaud

First—The fresco painting of Sigrira which belongs to the 7th century A.C.

Second—The fresco painting of Demala Mahaseya at Pollonarawa, which belongs to the 12th century.

Third—The wall painting in various temples from the 18th century down to modern times.

It should be noted that the painting of the last period is mentioned merely as wall painting and not as fresco painting. This might need some explanation. Fresco paint

In ancient communal life the artists and craftsmen had their respective places in the social order. They were given rent free land

ing is quite different from the ordinary wall painting. It is exemplified best by the Ajanta and Bagh Frescoes. It is a species

has the quality of drawing in the colour, so that it does not disappear easily, though

A Demala Mahaseya fresco (Polonnaruwa
(12th Century)

of wall painting employing a certain process by which the painting is made permanent. First a back ground is prepared on the wall with a special kind of plaster. This plaster

A Demala Mahaseya Fresco (12th Century)

exposed to sun and rain for centuries. Dr Ananda Coomaraswamy has discussed the technique of frescoes fully in his book on the art of Ceylon.

The wall painting is an ordinary kind of painting done on the bare wall without any previous preparation. The colour is mixed with gum, so that it may stick to the wall. In Ceylon, generally starch (gum prepared from boiled rice) is used as the medium.

Now let us come to Sigiriya. The name Sigiriya or Sinhasiri perhaps has relation to the colossal figure of a lion, the shape of which we cannot make out now, as it has all but perished. Only a portion of the large paws of the beast, which still exist

A Demala Mahaseya Fresco (12th Century)
of a squirrel

A Demala Mahaseya Fresco

bears witness to the existence of such a figure indicating the relation to the name of the rock

Raja Kasyapa, who killed his father Dhatusena cruelly, built a palace fortress on the summit of the rock to evade the vengeance of his brother. He ruled the neighbouring provinces for 19 years from that rock fortress. But at last he had to meet his brother's army. We are told in the ancient chronicle that the two armies met with a shock as of the sea. When Kasyapa found that victory was impossible he cut his throat to escape from an ignominious death from his enemy's hand. Sigina is enshrouded in a veil of mystery.

The top of the rock is quite flat. The foundation of the ancient buildings can still be seen there. There are two granite

Steps to the Top of the Sigria Mountain

A Photograph of the Sigria Fresco

thrones from which the king used to greet audience. When the king was ruling there, it must have been a very busy place. Now all is silent. The royal pomp and dignity are over for ever. But all around is the lovely variegated colours of nature to the sweet notes of numerous kinds of birds which abound there. Nature's feast is going on incessantly.

A Fresco in the Kalani Vihara (3rd Century)

Sigria rises abruptly 800 feet from a mass of jungle. What a lovely sight appears before one's eyes when one stands on the top of the rock and looks around! Sigria like a monarch is lording it over the lonely glen which extends up to the horizon in waves of green forest.

Kalidasa has immortalised Himalaya the

god souled mountain, in his famous epic *Kumarasambhavam* Fuji has been a subject of many a poet and artist in Japan. Is there no hard to sing the glory of Sigiria, the charm of which one can never forget, if one gets a glance of it even for once.

I had in the morning the first glance of it from the rock of Damhulla. It was majestic—a blue shadow rising over the horizon. It seemed as if Siva was sitting in meditation.

In the evening I was sitting in the verandah of the rest house, which is half a mile away from the foot of the rock Sigiria, naked except for two trees on the top was standing against the pure blue of the sky. Its granite stone interspersed with green moss, was flushed with the sun set glow. The reddish glow on the granite changed into orange, the orange into purple and the purple into blue and finally all the colours were lost in a dark shadow. It was a sight of dying glory.

As gradually evening deepened into night the thin curve of the moon rose in the sky, tinging the blue background with silver. Then the silhouette of Sigiria stood out against the silver background.

The constant chirping of the crickets was heard. Occasionally the wild shriek of night birds rent the silence of the sky. They were flapping their wings in the vast expanse of the darkness.

So long I have said nothing about the paintings of Sigiria. The scenic beauty there is so superb, that if forms one work of art as it were with the paintings.

The frescoes of Sigiria are well preserved from the ravages of time and the vandalism of men, for they have been done in a very high place, quite unapproachable by men. The paintings were inside a chamber, the outer wall of which has collapsed altogether long ago. Very recently the archaeological department has made a rope ladder to reach up to it. Even that is dangerous to climb, as the rope ladder is hanging from a dizzy height. One who does not possess strong nerves should not attempt the climb. But once you get to the place, it is quite safe. There is a wooden platform, with a wire netting running along the wall where the fresco is done.

There are altogether 21 figures of women consisting of the queen and the ladies of the court. The figures appear to be about life-size and are drawn up to the waist only.

The upper part of the body is uncovered

or covered with a light thin jacket. The expression is extremely feminine. Its anatomy is correct and is perhaps more precise than the famous Ajanta frescoes. This

The fresco Painting of Demala Mahaseja at Polonnaruwa (12th Century)

precision only shows that Sigiria artists must have studied from life, and that the figures are not merely done from memory and imagination as often we are wont to say with reference to oriental art.

The beauty of Sigiria painting is in powerful and definite drawing. The artists who did it must have had wonderful control over the brush. There is no indefiniteness or hesitation anywhere. The artist has drawn his lines with free, bold sweeps of the brush. If there is any mistake in drawing, the correction is done in a darker colour. So both the wrong and correct drawing can be seen at once. The calligraphic quality of the drawing is remarkable. The Sigiria frescoes are very simple in colour, as opposed to Ajanta's richness of

colour. Very few colours are used light red and ochre being the most important. When ever dark colour has been necessary, as in the hair brows the eye balls, etc green earth (terre verte) has been used.

The Sigiria frescoes have certainly a place in world art. The facsimile of Sigiria frescoes kept at the Colombo museum is a very good one.

The traces of the wonderful frescoes of 12th century are to be seen only in the Demala Mahaseya Vihara in Pollonaruwa. In most of the Viharas at Pollonaruwa brick

present taking steps for their preservation but alas! it is too late.

The painting has become quite indistinct now. The copy of it kept at the Colombo Museum is far from satisfactory. It does not give the beauty and dignity of the original at all. The rhythmic flow of lines in the original is quite lost in the copy. Thus a great treasure of art 'which rivals some of the best at the cave temples of Ajanta', is lost.

The archaeological report says. Probably in no old structural Buddhist temple in Ceylon

A Sigiria Fresco

is used which is less permanent than stone. Hence the frescoes do not last so well.

The frescoes of Dumala Mahaseya were at the mercy of sun and rain for centuries as the roof of the building was destroyed long ago. The paintings have been recovered from the debris of the fallen roof. The archaeological department of Ceylon is at

—certainly in none left to us—was a greater wealth of exquisitely painted scenes from Buddhist legends ever presented than at this mediaeval Vihara of Pollonaruwa. What the stone carvings at Sanchi at Bharhut, at Amaravati at Boro Buddar and elsewhere adumbrate often doubtfully has been here set out in coloured frescoes with a naturalness,

A Sigiriya Fresco

spirit and technique that tell the story with unerring fidelity. There are paintings still left at Demala Mahaseya which rival some of the best at the cave temples of Ajanta.

The painting of the last period which begins from the 18th century is very conventional devoid of force of life. But it retains its decorative sense to the fullest extent. Spacing from floor to roof is distributed well. The human figures are sometimes out of proportion. But it does not take away from the artistic value of the painting as particular objects in the painting do not have much specific significance of their own but emerge into a sort of decorative pattern work. When looked at from a distance without attention to details the artistic sense of decoration and that of the distribution of space become quite apparent.

The painting of this period may be said to be done by craftsmen as opposed to artists who worked at Sigiriya and Polonnaruwa.

The artists of this period can be compared to the potto artists of Bengal. They may be described as folk artists.

The work of these potto artists of Beogal is more delicate and soft than that of their Sinhalese brethren. But they fail to approach them in the field of decorative work and craftsmanship.

The painting of Dambulla temple is the best of this period. Its style is a little different from the painting of the other temples of this time. Kirti Sri the Kandian King had it repaired and repainted. We cannot guess from the existing paintings what the style was before the 18th century.

The paintings in Kandian temples as of other craftsmen of this place are influenced by South India. The reason is that the Kandian kings under whose patronage the arts and crafts of this place flourished were not natives of this place but came from South India. The Kings might have brought craftsmen from their own country.

Some of the Kandian temples are —The

century! Everywhere Government officials engineers and scientists are saying there must be no more. But what is to be done, and how?

If one day late last April you could have stood in Memphis Tennessee watching the crest of the flood sweep slowly by you would have realized something of its overwhelming power. Two million cubic feet of water flowing past every second—more than a billion gallons every twenty four hours the volume of ten Niagaras in a single stream.

And if a few days later you had been a few miles from Vicksburg where one of the strongest of the river levees gave way you would have seen

Scenes Of The Mississippi Flood

the Mississippi then as an immense overburdened storm sewer fed by 240 tributaries with the drainage of two-thirds of the nation's territory.

In that one stream you would have witnessed the joining of many distant waters, drained from an area of more than a million and a quarter square miles brought down from as far west as the Rockies, as far east as the Alleghenies, and as far north as the Canadian border. The

Missouri from Montana and the Dakotas, the Platt from Wyoming and Nebraska, the Arkansas from Colorado, Kansas, and Oklahoma, the Ohio from Pennsylvania, the Illinois from the region of Chicago, the Des Moines, Wabash, Tennessee, Cumberland—these and hundreds of other lesser rivers and streams you would have found mingled there in devastating flood tide. Small wonder that embankments of earth and sand should fail to bridle them all!

Yet experts believe that final mastery not only is possible but practical. Plans are already under way for a scientific survey of the flood regions. The chief of Army engineers, Maj. Gen. Edgar Jadwin, after a personal inspection has predicted that the present Mississippi levees will be heightened at least five feet. Others have proposed rebuilding the entire 2,000 mile levee system making it stronger, higher and uniform in structure. At a cost representing one-half the losses of the latest flood we are told the levees could be built strong enough to assure safety for all time.

Secrets of Cold Light

Scientists are on the verge of far-reaching discoveries which eventually may make the incandescent electric light as out-of-date as the old fashioned kerosene lamp. They are learning the secrets of a lighting system used by Nature for ages, yet always a mystery to man—the production of light without heat.

In a laboratory at Princeton University Dr. E. Newton Harvey, professor of physiology, recently utilized the materials employed by fireflies in the summer to flash their lamps and by fishes in the seas depths to light their lanterns to produce continuous cold light. Doctor Harvey believes that science will be able soon to create these materials artificially.

At the United States Bureau of Standards in Washington, two other scientists, Dr. W. W. Coblentz and Dr. C. W. Hughes have just succeeded in analyzing and recording the intensity of the light emitted by various luminous animals and plants. By studying the spectrum—that is, by dividing the light into the rainbow of various colors or wave lengths that compose it they have demonstrated that this living light is virtually a hundred percent efficient in its radiation. In comparison, our best electric lamps, wonderful as they are, are woefully wasteful. In the laboratories of some of the larger electrical companies

still other experimenters have made lifeless substances glow without heat under strange invisible rays.

This luminous jellyfish found in the Sargasso Sea, is one of thousands of creatures that illuminate the ocean. The beautiful corona, or halo, is thrown by its own living light.

Since the beginning of time men have produced light by heat, by burning substances such as wood, tallow, oil or gas. The higher the temperature the brighter the light. In the modern electric lamp we use electrical energy to heat a metal filament to the highest possible temperature and make it glow.

The incandescent lamp, a marvellous invention though it is, shares with every other form of hot light the drawback that most of its radiation is in the form of heat, and not light at all. Less than two percent of it is visible light. The rest is wasted for the reason that the heat cannot be separated from the light.

Luminescence, or living light, on the other hand, contains nothing but visible light, as Doctor Coblentz's experiments have proved. The firefly's light is all light. It is fifty times as efficient in light radiation as the finest incandescent lamp.

The glow of living creatures is only one of several different kinds of cold light, produced in widely different ways. Place your hand under a strong electric lamp and your skin and finger nails will give off a glow. This glow is not reflected light, but is actually produced in the skin and nails. If the lamp light can be screened from view the strange glow will become visible. Your hair, teeth, eyes or almost any other part of your body can be made to give off a similar light. This is fluorescence. It is explained by the theory that the body tissue has the mysterious faculty of converting rays of one wave length into rays of another wave length.

Light as we commonly know it is simply the part of radiant energy visible to our eyes. In common with radio waves, ultra violet rays and other forms of radiation it consists of other vibrations or waves. The differences between all of these lies simply in the length of their waves. Thus the wave lengths of ultra violet rays and X rays for example are shorter than those of visible light, while heat waves and radio waves are longer. The different colors of the rainbow

vary in wave length too from the shortest waves of violet to the longest waves of red.

Usually in fluorescence short wave lengths are converted into longer wave lengths. Thus many substances including silk wool bone horn and numerous kinds of living matter have the ability to convert invisible ultra violet light which has extremely short wave lengths into visible fluorescent light.

On the earth in the sky and in the sea are countless living things that manufacture light. Passengers on ocean liners often see the sea apparently burst into a vivid glow when stirred by the passing ship. This light, commonly called phosphorescence comes from millions of light making animals most of them so small that they can be seen only with a microscope. And in the depths of the ocean are strange fishes that dangle gleaming lanterns from long stalks projecting from their heads others with rows of lights along their sides like a ship with lighted portholes.

There are marine worms that turn on their lamps when attacked luminous sponges jellyfish earthworms centipedes starfish glowworms shrimp crabs and many others. They number tens of thousands. In all at least forty orders of animals incide one or more forms capable of producing cold light.

EXPLORATION IN CENTRAL ASIA

By DR. NIRANJAN PRASAD CHAKRAVARTI M. A., Ph.D. (Cantab)

THE first modern traveller venturing into the deserts of Central Asia was Dr A. Regel, a German botanist in the service of Russia. His expedition to the oasis of Turfan in 1879 did not produce any practical results, but furnished proof of the existence of numerous ruins and other remains in the locality.*

After him the Russian brothers G and M. Grun Grzhimaylo explored parts of Chinese Turkestan particularly the Turfan oasis. Their work, were published in 1896-1907,† but being written in Russian did not attract the notice of scholars, as many of them were not acquainted with this difficult language.

In 1893 Messrs Donner and Baron Munck of Helsingfors, Finland, undertook an expedition to Turkestan and Western China.**

In the same year Dr Klementz† of Russia undertook a journey to Chinese Turkestan and worked in Idikutshahri also called Dakians, Qocho or Kao-ch'ang, 17 miles to the east of modern Turfan and some other ancient sites near by close to the modern settlements of Astana and Kara Khoja, ancient kao-ch'ang Turfan capital of Tang and Uigur times and also in Toynq, Murtuk and different other ancient sites.

Though his results were unsatisfactory his reports gave a fresh impetus and directed the attention of many western scholars to the antiquities of Chinese Turkestan and that of the German scholars to Turfan particularly. The credit of forming the plan of systematic expeditions to Central Asia must however be given to the Russians when in 1899 Mr Radloff suggested in the Oriental congress at Rome the formation of an International Association for expedition to Central and Eastern Asia.

* Petermann's Mitteilungen 1879 Heft. V. VI 1880 Heft. VI. 1881 Heft. A. Gotha, J. Perthes
† G and M. Grun Grzhimaylo—Description of a journey to West China. St. Petersburg 1896-1907 3 vols.

** Otto Donner Reise Central Asien 1898 Helsingfors 1901

† A. Klementz, Turfan und seine Alterthumer Publicationen der kaiserl. Acad. d. Wiss. St. Petersburg 1893

Even before the journey of Dr Klementz the acquisition in 1891, of the famous birch-bark codex by Col. Bower caused a great sensation amongst Indologists, whose doubts about the importance of archaeological expeditions to Central Asia were thereby dispelled. The history of the discovery of this invaluable manuscript is rather interesting*. In the year 1890 two Turks had found a birch bark MS in a *stupa* near Kunm-Tura, in the neighbourhood of Kucha. They sold it to Col Bower who was then in Kucha. He sent it to the Asiatic Society of Bengal and in 1891 Dr A. F. R. Hoernle who was then the Philological Secretary of the Society, published a report on the MS†. The MS was complete and very well preserved and was written in Gupta characters. Its place of origin was North Western India and paleographically it was declared to belong to the second half of the 4th century‡. It should be remembered that the climatic condition of India is not at all favourable to the preservation of MSS. The earliest palm leaf MSS belong only to the western part of the country and to Nepal and date back mostly to the beginning of the 11th century. Earlier than these, so far known, were the two isolated palm leaves now preserved in the celebrated Hōryū monastery of Japan, which found their way to that country through China in the beginning of the 7th cent. A. D.

The Bower MS which is now preserved in the famous Bodleian Library of Oxford, contains 7 texts of which three have medical contents. The author of the MS was a Buddhist and in this we have at least the oldest datable medical text preserved to us. One of these texts speaks of the origin of garlic, which according to the author, is able to cure many diseases and can extend the life to 100 years. Besides the MS speaks about digestion, about an elixir for a life of 1000 years, about the correct mixing of

* For details cf. Proceedings of the Asiatic Society of Bengal, November, 1890

† cf. *Ibid.* April, 1891,

‡ cf. *I. J. A. S. B.* 1891 p. 79 ff.

ingredients about other medicines, lotion and ointment for eyes etc. A second fragment contains 16 medical formulas for external and internal use. The biggest portion is the Navanitaka (नाननीतक) i. e. cream which contains an abstract of the best earlier treatises and which in 16 sections deals with the preparation of powder decoctions oils and also with injections, elixirs aphrodisiacs nursing of children recipes etc. As the concluding portion of the work is missing the name of the author is not preserved. All these works are partly metrical. But they have throughout an antique expression. The language is Sanskrit mixed with many Prakritisms. Many authorities on medicine are quoted in the Navanitaka, particularly Agorvasha Bheda, Harita, Jatukarna, Ksharapana (क्षारपाणि) Parashara and Shushruta. We have now found MSS belonging to a still earlier period like the dramatic fragment of Asvaghosa collected by the German mission and published by Prof Luders and the MS of the Udanavarga a Sanskrit version of the Dhammapada brought by the French mission. Both are written in quasi Kharoshthi character of the 2nd century. Of the latter work I have the honour to be entrusted with the publication along with other MSS of the same work reserved in the French collection. In a subsequent monograph I have a mind to discuss these MSS. in fuller details.

Thus the desert sands had things conceal ed in their bosom which were long lost to India. After this more interesting discovery there was a regular campaign among scholars of different nationalities to collect MSS through the representatives on the spot of the various Governments and some of the more energetic ones began to collect independently. These MSS technically known by the names of agents through whom they were collected such as Ietrovski Macartney and Weber MSS. were sent to Ictograd and Calcutta. A report on the British collection of antiquities was published by Rudolf Hoernle in the Bengal Asiatic Society's Journal of 1883 and 1891. The documents were distributed amongst the specialists in Europe and one volume was published with many facsimiles in 1916 under the title *Manuscript Remains of Buddhist Literature found in Eastern Turkestan*. The publication of the subsequent volumes was delayed by the death of this eminent scholar and I have been told by Dr F. W. Thomas of the India Office

Library that though the MSS were ready they have not yet been sent for publication for want of revision by some competent scholars.

In the meanwhile another very important discovery was made in the southern part of the Chinese Turkestan. A French mission to Tibet was sent in 1892 under the leadership of Dautreuil de Rhins. Ho secured in a place not very far from Lhotan a part of a very old birch bark MS. The find spot has been identified with the Goshringa vihara of which Huan Tsang gives a vivid account and which is known as Goshirsha in the Tibetan records. The MS was written in Kharoshthi character prevalent in the N. W. India and in parts of Central Asia particularly in S. Eastern Turkestan till the 3rd and the 4th century of the Christian era. It belongs paleographically to the 2nd century A. D., and represents a version of the Dhammapada. But its language is a form of Prakrit which has not been hitherto found in any other Buddhist literary works. It was also the first Buddhist work in Kharoshthi. When M. Senart the French savant to whom it was sent for examination communicated its importance and contents to the delegates of the 11th International Congress of Orientalists in Paris, in September 1897 it created a sensation in the Aryan section. Soon after the communication of the find had been made to the French Academy M. Senart learnt through M. Petrovski the Russian consul general at Kashgar that fragments of a Kharoshthi MS of the Dhammapada had also been taken to the Russian capital by a Russian traveller. Prof. Serge d'Oldenburg also submitted during the Paris Congress facsimile of a leaf out of these fragments to the Indologists. On examination M. Senart at once came to the conclusion that both the Paris and the Russian fragments formed parts of the same original MS. The fragments in the French collection were published by M. Senart but those in the Russian collection have yet to be published. During a conversation with me last summer the French scholar intimated that he was trying to get hold of the Russian fragments and was hoping to give a complete edition of the work.

We have seen so far that such discoveries were dependent more or less on chance and it was not till a few years later that the first regular expedition to these parts was undertaken. Tradition about painted grottoes in Kucha and Turfan was very strong and the

natives of Central Asia wanted to profit by this zeal of rival scholars in securing MSS and other finds. Manuscripts from Central Asia began to reach Hoernle, many of which later on were detected to be forgeries. Necessity of a regular search was strongly felt. The British Government was the first to organise a systematic expedition.

As a result of this, the first British Indian expedition was undertaken in the year 1900-01 by order of the Government of India in the southern portion of Chinese Turkestan, particularly in the province of Khotan, under the leadership of Sir Marc Aurel Stein who was then in the Indian Educational Service as the Principal of the Calcutta Madrasah. He had already a thorough knowledge of the North-Western frontier provinces, the Punjab and Kashmir and his zeal for such an expedition was quite well-known*. The admirable results of this expedition have been incorporated in Sir A Stein's monumental work, "Ancient Khotan". Even a glance at these volumes would suffice to assure us of the importance of that ancient civilisation which the joint influences of Buddhist India, China and the Hellenistic Near-East had fostered in the scattered oases of these remote Central-Asian passagelands.

About the same time as Stein, Sven Hedin the Swedish expeditionist visited the Northern portion of Loh nor, a ruined city of the 1st cent. A.D. which he mistook as the old city of Lou lan. He brought back a number of papers and inscribed tablets.

The success of Sir A Stein gave a new impetus to German scholars with the result that in 1902 the *Koenigliche Museum fuer Voelkerkunde*, proposed to send out Prof Gruenwedel, Dr G Hirth and Herr Bartus to Central Asia. As Sir Aurel's expedition was led mainly to Khotan, in the south-western part of the desert, the German one was taken to Turfan in the Northern part of it, in 1902-3. Besides Turfan Prof Gruenwedel examined several old settlements to the North-West of Kucha.

In the meantime through the untiring

efforts of Prof Pischel of the University of Berlin, the Government came forward to render financial help for these expeditions. A committee was formed for the purpose and the Second German or the First Royal Prussian expedition to Turfan was undertaken in September 1904, under the leadership of Dr A Von Le Coq and Herr Bartus. Dr Le Coq's excavations were mainly confined to Turfan and the neighborhood, but before he had finished his task the second Royal Prussian Expedition was sent under Prof Gruenwedel in September 1904. Six important sites in Kucha, Karashahr and Turfan oases were more or less thoroughly searched [Ming or near Qumtura Qyzyl, Kiris, Shorchuq, Biziklik (Murtuq) and Toyoq Mazar] till the return journey was taken early in April of 1907. As a result of these two expeditions various important specimens of Buddhist art were collected and Manuscripts in Chinese, Sanskrit, Syriac, Soghdian (in Manichaean and Soghdian characters) Middle and Neo Persian languages (Manichaean alphabet), Tangut and 'Runio' Turkish, including the unknown languages commonly known as Tocharian or Kuchean, and North Aryan or ancient Khotanese were recovered in large numbers.*

The second Central Asian expedition was taken by Sir Aurel Stein under the orders of the Government of India in 1906 with the same object in view as before. It proceeded further to the East, through Khotan and from there right up to the Northern extremity across the Taklamakan desert. Excavations were made chiefly in Khotan, the ancient capital of the Oasis, Domoko to the East and Niya. His greatest discovery, as has been rightly pointed out by Prof Lueders, was in the district of Tun-huang. Here he discovered the western part of the famous Chinese wall built as a defence against the invasions of the Huns. It was here that he also found the artificial caves numbering about 500 cells of various dimensions which are known under the modern name of "Caves of the Thousand Buddhas". In one of these cells, which had been walled up but was opened by chance in 1900, was found a very handsome collection comprising a whole library of Manuscripts and hundreds of fine paintings on silk which had been hidden away early in the 11th

century together with other relics. The manuscripts were partly examined and collected by Sir A. Stein and partly by M. Pelliot, the French Sinologist, who visited Turkestan in 1906-8 and the rest were transferred to Peking under Government orders. The detailed report on the scientific results of this second expedition of Stein is contained in his newly published masterpiece in five volumes, *Serindia*. In these volumes, to quote his own words, he has very carefully noticed the "topography of the ancient routes which had witnessed that interchange of civilisations between India, Western Asia, and the Far East, maintained as it was during centuries in the face of very serious physical obstacles through trade, religious missions and the Chinese Empire's intermittent efforts at political and military expansion into Central Asia."

During this expedition the more important excavations were undertaken at

1. Khotan * the capital of the oasis, where a rich harvest of small antiques was obtained.

2. Domoko to the East, in which place were found antiques and Manuscript remains in Sanskrit, Khotanese and Chinese, dating from the close of the Tang period †.

3. Niya (where the excavation was resumed in October). This site has been abandoned to the desert sands since the third century A. D. Here he made rich discoveries of wooden documents in Kharosthi script and in a Prakrit dialect besides "other ancient records in Chinese and a mass of miscellaneous antiquities helping further to illustrate the life and civilisation prevailing in the oasis of the Tarim basin, at that early period" §.

4. The exploration of the Lou-lan site (the walled Chinese station) and of an outlying smaller settlement, yielded an abundance of written records in Chinese and Kharosthi, dating mainly from the 3rd century A. D., and many interesting remains of architectural and industrial art of that period **.

5. During the excavations at Miran, Tibetan records on wood and paper were obtained and also fragments of Turkish "Runic" documents. These mostly belonged to the 8th century A. D. But much older remains were obtained by the clearing of certain Buddhist shrines, which showed fine wall paintings with legends in Kharosthi, which, according

to Sir A. Stein, "offered striking testimony to the powerful influence which Hellenistic art, as transplanted from the Near East to Gandhara, had exercised even on the very confines of China" *.

With the same end in view and in order to undertake more detailed explorations in the sites already visited or left out and extending further to the East and North, a third expedition was taken by Sir Aurel Stein in the summer of 1913. This time he started from the South and proceeded Eastward as far as Kanchou, visiting on his way the sites of antiquarian interest in the neighbourhood of Khotan, Niya and Tunhuang. He then crossed the desert of Pei Shan from South East to North West, and visited Barkul, Guche and Jimsa to the North. On his way to Kashgar he examined the sites of Idikut Shabri, the ancient capital of Turfan during Tang rule (7th and 8th centuries A. D.) and the subsequent Uigur period and other important sites (Yi-p'an to the West of Lou-lan, Kucha, Aksu and various other smaller sites) which were not already very carefully examined by the German scholars. In July 1915 he left Kashgar for his journey across the Russian Pamirs and the mountains to the North of the Oxus. But his activities were not confined only to mountains and deserts of Central Asia.

On his way back to India he visited Samarkand, Khorasan and the Persian portion of Sogdiana the ancient Sakastana, or the land of the Scythians. His finds in the last mentioned place, which served as an outpost of Iran and the Hellenistic Near East towards Buddhist India, were none the less interesting.

There, among other interesting finds he discovered on the isolated rocky hill of the Koh-i-Khwaja, the remains of a large Buddhist sanctuary, the first of its kind traced on Iranian soil. Here he found behind the later masonry, fresco paintings of the Sassanian period. On the wall of a gallery were also found paintings of a distinctly Hellenistic style. The importance of these pictorial relics lies mainly in the fact, as remarked by Sir Aurel himself, that they "illustrate for the first time *in situ* the Iranian link of the chain which, long surmised by conjecture, connects the Graeco-Buddhist art of the extreme North-West of India with the

Buddhist art of Central Asia and the Far East. This connection was reflected with equal clearness by the architectural features of the ruins which were also of great interest. The details of this most interesting expedition are shortly to be published in his forthcoming work "The Innermost Asia."

Besides the French, German and British Indian missions there were three more Russian missions sent out to Turkestan. The second Russian mission under Mr. Bernitsky went to Kucha in 1906 but its result was rather unsatisfactory. In 1908 the 3rd Russian mission was led by Kazaloff who discovered the ancient city of Kharakhoto. He brought home a mass of mediaeval Tangut (a language of the Turco-mongol family) works and Chinese documents of great importance. These have partly been published in Russian by Prof. Serge d'Oldenbourg. In 1914 the fourth Russian mission visited Tsinhang the results of which have not yet been published.

While Europe and India were sending out missions the Far East also was not silently watching the progress. As early as 1901, the first Japanese mission under Count Otani visited Russian Turkestan, Kashgar, Khotan, Kucha and Turfan. The mission collected many prehistoric remains, primitive pottery, terra cotta seals going back to the Han period, remains of Gandhara art and several important MSS. in Chinese, Uigur and Soghdian. A second Japanese expedition under Tachibana visited Mongolia, Tien-shan, Turfan, Kucha, Lobnor and Khotan, collecting various documents in Chinese and Kuchean. Some of

Rekcut Buddha Claves of Central Asia

these have been published from Tokyo with grand plates but unfortunately the works are in Japanese and are not accessible to most of the scholars outside Japan.

Last of all I come back to the French mission which I only incidentally referred to in connection with the Stein expedition. But here also I shall mainly confine myself to the discovery made by the French mission at Tsinhang.

This mission was organised by the *Comité Français de l'Association Internationale pour l'Exploration de l'Asie Centrale* with M. Senart as President. Free help was rendered by the French Government, the Académie Française, the French Geographical

essor at the College de France left Paris on the 15th June 1906 and passing through Moscow and Tashkhand reached Kashgar on

the N of the Pamirs This site was studied from geographical and linguistic points of view rather than archaeological and the party left for Kucha, where the German and Russian missions were already present After some excavation work at Tum shuk, a small village full of ruins already noticed by Sven Hedin they reached Kucha in January, 1907 Excavation work was undertaken at Ming ois which is a Turkish word signifying thousand habitations. This consists of a series of curious and artificial grottos in sandstone which were dug up into Buddhist sanctuaries before the introduction of Islam There were Ming ois on the slope to the S of Tien shan popularly known under the name of *Ts'ien so-long* or the caves of 1000 Buddhas. These caves were famous in Chinese works

and the French School of the Far East at Hanou (Indo-China) The party under the leadership of M Paul Pelliot, now a Pro-

known under the or the caves of 1000 Buddhas. These caves were famous in Chinese works

and were also noticed by European travellers. They were full of mural paintings belonging to the period within 7th-10th centuries. The Germans, the Japanese and the Russians had already exploited the site but still there were some which were neglected by them. Here the French party collected some MSS in Sanskrit and Kuchean and on the whole the work was satisfactory. Early in February, 1908 the party, reached via Urumtsi Tunhuang, at the western extremity of Kan shu, where Fortune favoured them with a wonderful discovery and it would be worthwhile to give the description in the words of M. Pelliot.

"At our departure from Paris", says the French savant, "Tun huing was fixed as one of the big stages of our travel. It was known that there was, about 20 kilometres to S E. of the city, a considerable group of caves known as *Ts'ien fo-tong* or the 'grottoes of the 1000 Buddhas', dug out at dates not precisely known till then but which were covered with mural paintings which Islam had not yet disfigured. We wanted to devote ourselves to their study which no other archaeologist had done till then, though their importance was known all the time. We were not deceived in our expectation and found that the caves of Tunhuang preserved some of the most precious monuments of Chinese Buddhist art between 7th and 10th centuries. But another interest was added to the visit in course of our travel. At Urumtsi I heard about a find of MSS. made in the caves of Tunhuang in 1900. I came to know gradually how this discovery was made. A Taoist monk, Wang tao, digging one of the big caves, had by chance opened a small cave, which he had found quite full of MSS. Although our colleague Stein had passed Tunhuang a little before us, I had the hope of still reaping a good harvest. Just after our arrival there, I made enquiries about Wang-tao. It was easy to find him and he decided to come to the caves. He opened for me, at last, the niche, and at once I found a small cave which was not even a metre in every direction, crammed with MSS. They were of all sorts, mostly in rolls but some in folios, too, written in Chinese, Tibetan, Uigur and Sanskrit. You can imagine easily what an emotion had seized me. I was in front of the most formidable discovery of Chinese MSS, the like of which was never recorded in the history of the Far East. I asked to myself, have I only to be contented

with having a glance at them and then go away empty handed, and let these doomed treasures go to destruction little by little? Fortunately, Wang-tao was illiterate and needed money for the reconstruction of the shrines. everything was arranged and I sat down in the cave with feverish excitement. Devoting three weeks I made an inventory of the library.

"Of the 15000 rolls, which had thus passed through my hands, I took all that had by their date and contents struck me as of primary interest—about one third of the whole. Amongst these I put in all texts in Brahmi writing and Uigur, many Tibetan but mostly Chinese. There was for the sinologist some invaluable treasures. Many of these were on Buddhism without doubt but some also were on history, geography, philosophy, classics, literature proper and again deeds of all sorts, accounts, notes taken from day to day, and all were anterior to the 11th century. In the year 1035 the invaders came from the East and the monks had stocked books and paintings in a hiding place which they walled up and plastered and the opening was adorned with decorations. Massacred or dispersed by the invaders, the knowledge of the library perished with the monks, to be rediscovered by chance in 1900."

Thus the Pelliot mission ended in triumph and all honours were accorded to it on its return to Paris. The ancient Chinese manuscripts are rare in China itself and there was none in Europe till then. Now for the first time a sinologist can work on the archives, in imitation of the historians of Europe. During my stay in Paris I had the good fortune of examining over 3000 fragments written in Central Asian Brahmi, on different Buddhist manuscripts in Sanskrit, Kuchean and Khotanese. Of the Chinese collection also, which may be called now decidedly the best in Europe, those from the grottoes number about 3000.

The bulky reports, full of most interesting details, which have so far been published, furnish a proof of the repeated hard toils and untiring energy of the great seekers after truth and how all their troubles and risks have at length been crowned with glorious success. They have furnished to the students of ancient civilisation materials, interesting from every point of view, of the culture of a country which, as we have already noticed, formed the connecting link between the West and the Far East on the one hand, and India on the other, and thus

witnessed perhaps, for centuries, the mutual influences of Indian, Iranian and Chinese culture. These innumerable antiquities discovered in such a great variety of places, times and character are not only interesting to students of history, art, and architecture, but equally so to those of ethnology, geography, geology and philology. Numberless manuscripts have been discovered in Sanskrit, Prakrit, Sogdian, Manichaean, 'Runic' Turkish, Uigur, Tibetan, Chinese and the forgotten languages of Khotanese and Kuchean or Tocharian, as well as in scripts which have not yet been deciphered. Hundreds of specimens of arts, pictorial and plastic, mostly Buddhist, have been recovered and thousands of other articles of archaeological and ethnological importance have been unearthed which by their characteristics, mark Chinese Turkestan as the meeting ground of Hellenistic, Indian, Persian and Chinese currents of civilisation.

I have indicated above the preponderant role played by Indian civilisation in Sindhia and this happened mainly through Buddhism. We know that to a great extent, China received her Buddhist art, not directly from India but from Chinese Turkestan, and Khotan has been at times an important agent in that work of transmission from China the same form of art passed to Japan through Korea. Chinese texts have preserved the names of *Wei ch'ie Pa ch'e-na* and of his son *Wei ch'ih Yi seag* who were in the service of the Chinese Emperor Yang ti (A.D. 605-17) and enjoyed a great reputation as Buddhist artists. M. Foncher has shown how the portrait of a seated woman dressed in tunic with a child in her right arm, which was formerly mistaken as a picture of the Virgin nursing the Child Jesus, is nothing but a copy of the Buddhist Madonna Hariti of Mahayana iconography, who appears in China also, already in the time of Yi tsing as *Kouei tseu mu shen* or 'the portrait of the goddess-mother of demon sons',

and is also identical with Kishimoyin of Japan, later on, she has been more or less mixed up with the feminine form of Avalokitesvara, the Chinese Kuan-yin, Japanese Kwanon, Anamese Quan-Am mistakenly surmised as the Holy Virgin*. This single illustration will show how the knowledge concerning 'the progressive diffusion of Buddhist art throughout the Far East' may be acquired through the recent finds in Khotan.

The same is true with regard to the other aspects of the history of civilisation. Buddhist Sanskrit manuscripts, the originals of which are lost in India have been found here either in original or in translations in Chinese, Tibetan, Kuchean or Khotanese. The desert sands have yielded scripts which were unknown or ill known in India or were simply local developments of some old Indian scripts. We have also come to know of the existence of an Indian Prakrit, spoken over a large area, about which we shall have occasion to say more hereafter. It has been truly remarked by an eminent scholar, that 'the archaeology of Central Asia has to be drawn from the chaos of its materials† and we must yet wait for decades till all these materials have been properly utilised in order to establish the history of Central Asia and her connection with India on the one hand and the Far East and the Western regions on the other. It will then not only throw light on various complicated problems of Indian history but we may have even to recast many of them in the light of these new resources.

"I TOUCH THE LONE ETERNITY"

I've left the world behind me with its cries
Shadows and crowds
To touch the deep eternity of skies
In flowery clouds
Forgetful of the mad and fleeting mirth
Of fleeting hours

I touch the mute eternity of earth
In silent flowers
Behold ere shadows fall upon the tree
And hilt and plain—
I touch the lone eternity of mo
In quiet pain

UNEQUAL TREATMENT OF THE PROVINCES UNDER THE REFORMS

Substance of a Lecture Delivered

By RAMANANDA CHATTERJEE

I want for my country the fullest political and economic and social and religious freedom hitherto attained, or attainable by man in the years to come. But I do not know exactly how it can be attained. The paths that may lead to freedom seem different to different minds. As it is not right to dogmatise, no righteous and legitimate means should be ruled out. Some Indian politicians appear to think that the Montagu Chelmsford "Reforms" contain within them the seeds of a free constitution for India. I do not think so. I do not think that they are either intended or bound to lead to full self rule. But as some good may be done and some mischief prevented by working them, though at the cost of a disproportionately large expenditure of time, money and energy, I intend to show how in some important matters the provinces have been treated differently under the 'Reforms'. I do not know whether this has been done intentionally. I do not know whether it was foreseen that such unequal treatment would give rise to discontent and to provincial jealousies. But the fact cannot be gainsaid that the provinces have received differential treatment at the hands of the authorities.

Mill on Representation

The first point to which I wish to draw attention is the representation of the provinces in the Central Legislature. I do not intend to discuss all the theories and methods of representation. It will suffice for my purpose to refer to some principles which, according to John Stuart Mill, should govern the extension of the suffrage and its limitations. Some politicians may consider Mill's *Representative Government* out of date and old fashioned, but it still holds the field as a classic on the subject. He regarded the representative system as the highest ideal of polity, though his ideal was by no means that popular government should involve a mere counting of heads or absolute

equality of value among the citizens. While holding that "no arrangement of the suffrage can be permanently satisfactory in which any person or class is peremptorily excluded, or in which the electoral privilege is not open to all persons of full age who desire to obtain it," he insisted on certain exclusions. For instance, he insisted that universal education should precede universal enfranchisement, and laid it down that if education to the required amount had not become universally accessible and thus a hardship arose, this was a hardship that had to be borne. He would not grant the suffrage to any one who could not read, write and perform a sum in the rule of three. Further, he insisted on the electors being taxpayers, and emphasised the view that, as a condition annexed to representation, such taxation should descend to the poorest class 'in a visible shape'. He was in favour of a form of plural voting so that the intellectual classes of the community should have more proportionate weight than the numerically larger working classes "though every one ought to have a voice, that every one should have an equal voice is a totally different proposition". The well informed and capable man's opinion being more valuable than that of the barely qualified elector, it should be given more effect by a system of plural voting, which should give him more votes than one. As to the test of value of opinion, Mill was careful to say that he did not mean property—though the principle was so important that he would not abolish such a test where it existed—but individual mental superiority which he would gauge by the rough indication afforded by occupation in the higher forms of business or profession, or by such a criterion as a University degree or the passing of an examination of a fairly high standard. It will be clear from the above summary of some of Mill's views that, in order to judge whether a province is adequately represented due regard should be had to its population, to

the spread of elementary and high education in it, and to the total revenues collected in it as indicating the property its inhabitants possess

Basis of Representation in U S A., Australia, Canada and France

Though according to the constitution which India possesses at present it cannot be spoken of as a federation of autonomous states, like the United States of America or the Australian Commonwealth, yet it cannot be gainsaid that almost all our politicians are in favour of provincial autonomy and a federal system linking the provinces under a central government. It will not therefore be improper to compare the representation of the Indian provinces in the central legislature with the representation of the states constituting the U S A in the Senate and the House of Representatives of the states constituting the Australian Commonwealth in the two chambers of its federal parliament, and of the states of Canada in the two houses of the Canadian parliament. I shall refer also to the Chamber of Deputies in France.

In the United States of America much controversy had raged over the conflicting principles of the equal representation of states and representation on the basis of numbers, the larger states advocating the latter, the smaller states the former principle. Due recognition was given to both principles by the adoption of a bicameral system. One house, the Senate, contains the representatives of the states, every state sending two, the other, the House of Representatives contains members elected on a basis of population the representation of each state being in proportion to its numbers.

The parliament of the Australian Commonwealth consists of two houses, the Senate and the House of Representatives. The former consists of six representatives from each state, the latter of seventy five members elected by districts as nearly equal in numbers as possible (but ranging from 30 000 to 45 000) except in Tasmania to which five members are allotted irrespective of its insufficient population.

In Canada the Dominion Parliament consists of an Upper House, styled the Senate, and the House of Commons. The Senate originally consisted of 72 members 24 from

Quebec, 24 from Ontario and 24 from the maritime provinces, but this number has been from time to time slightly increased as new provinces have been added. The House of Commons consists of a number of members originally 196, which is subject to change after each decennial census. The basis adopted in the British North America Act is that Quebec shall always have 65 representatives, and each of the other provinces such a number as will give the same proportion of members to its population as the number 65 bears to the population of Quebec at each census.

In France, the Chamber of Deputies consists of deputies elected on the basis of one deputy per 75 000 inhabitants.

The Council of State

From the brief description of representative bodies in different countries given above it will be seen that the upper chambers of federal or central legislatures generally consist of an equal number of members from the provinces or states and the lower chambers consist of members elected by the provinces or states on the basis of population. In India's mock parliament or debating society, the Council of State is considered the Upper House and the Legislative Assembly the Lower House. But the provinces do not send an equal number of members to the Council of State as on the federal plan they ought to, the number varying from 6 each for Bombay and Bengal to 1 each for the Central Provinces and Assam.

The Legislative Assembly

As regards the Legislative Assembly one finds that the basis of population has not been followed in assigning to each province its number of elected members, as the tabular statement given below will show. In it the population is given according to the census of 1921, and the number of members according to the parliamentary Return showing the results of elections in India, 1923."

The Basis of Population

As the elected European members do not represent the people of India, I have shown the number of European representatives in a separate column.

Province	Total No of Elected mem- bers in L & A	No of Euro- pean repre- sentatives	Population
Madras	16	1	42 318 985
Bombay	16	2	19 348 219
Bengal	17	3	46 695 536
U. P	16	1	45 375 787
Punjab	12	0	20 685 024
Bihar & Orissa	12	0	34 002 189
C P	6	0	13 912 760
Assam	4	1	7 606 230
Delhi	1	0	488 188
Burma	4	1	13 212 192
Ajmer Merwara	1	0	495 271

The table shows that on the basis of numbers, some provinces have been under-represented and some over represented. That fact will be clear whatever province we may take as the standard according to which the representation of the other provinces is to be judged. As Bombay is the least populous among the Presidencies and major provinces and its citizens are good fighters for their rights, the representation of Bombay may be taken as the standard. Its population is twenty millions in round numbers and the number of its elected members in the Legislative Assembly is 16. So for convenience of calculation, I may say that the rule is that there is to be one elected member per $1\frac{1}{4}$ million (or 1250 000) inhabitants. Calculating according to this rule we have the following table —

Province	Present No. of elected members	The No as it would be
Bombay	16	16
Madras	16	34
Bengal	17	37
U P	16	36
Punjab	12	18
Bihar & Orissa	12	27
C P & Berar	6	11
Assam	4	6
Delhi	1	Nil
Burma	4	10
Ajmer Merwara	1	Nil

It may be thought that even at present Bengal of all provinces has the largest number of elected representatives. But that is not true so far as the Indian inhabitants the people, of Bengal are concerned. The European elected members (and, of course, the non elected European members, too) do

not represent the people of any province. Omitting them the provinces have the following numbers of elected representatives —

Province	Elected Representa- tives of Indians.
Madras	15
Bombay	14
Bengal	14
U P	15
Punjab	12
Bihar & Orissa	12
C P	6
Assam	3
Delhi	1
Burma	3
Ajmer Merwara	1

This table makes it clearer still that the representation of the provinces has not at all been according to population. That, on the basis of numbers the Europeans would not have been entitled to return a single member in any province, supposing even that they all lived in each province in some single area is too well understood to need detailed exposition. Yet, of the eleven provinces which send representatives to the Legislative Assembly, six namely Madras, Bombay, Bengal, the United Provinces, Assam and Burma have been saddled with representatives of the European community. This incumbrance is the heaviest in the case of Bengal. As the interests of Indians and Europeans conflict, the efforts of the European representatives in the Legislative Assembly go to counter the efforts of the Indian representatives in many vital matters. This injury to Indian interests is greatest in the case of Bengal as the number of European representatives is greatest in this province. It is true Bengal is to blame for furnishing the excuse for handicapping her with the largest European representation for, by her business incapacity or inattention or lack of energy, she has allowed almost the whole of her commerce and industry to be almost monopolized by outsiders. But for this fault and neglect on her part, her punishment, in the shape of her wealth being drained away, has been already more than adequate. The under-representation of her Indian inhabitants and the over representation of her European birds of passage are an additional punishment which she should have been spared.

Predominance of the Minority

We are all acquainted with the expression 'tyranny of the majority'. Similarly

there can be a tyranny of the minority. But tyranny is a harsh word and I do not suggest any kind of tyranny. What ought to be prevented so far as that is practicable is the predominance of the minority over the majority when the minority and the majority consist of the same kinds of persons. The latter clause is important as there may be a minority of mentally and morally very superior persons whose voice may in some circumstances prevail without harm over the voice of the majority. But the inhabitants of the different provinces of India may be taken I think to be on the whole of the same mental calibre. Such being the case no arrangement can be said to be right which gives the minority a greater voice in public affairs than the majority. But that is exactly the case under the Reforms in the Legislative Assembly. The total population of the British Provinces of India is 247,003,293. Out of this total 134,390,308 that is the majority live in Madras, Bengal and the United Provinces and 109,750,073 that is a minority in Bombay, the Punjab, Bihar and Orissa, the Central Provinces and Berar, Assam, Delhi, Burma and Ajmer Merwara. The majority are represented in the Legislative Assembly by a total of 49 (forty nine) elected members and the minority by a total of 56 (fifty six) elected members. Here therefore is a case of the minority having a larger number of votes than the majority. There is no mental superiority to justify this giving of a larger number of votes to the minority as it can not be contended that the people of Bombay, the Punjab, Bihar and Orissa, the Central Provinces and Berar, Assam, Delhi, Burma, and Ajmer Merwara are intellectually and morally superior to or more and better educated than the people of Madras, Bengal and the United Provinces of Agra and Oudh.

Basis of Literacy

Let me now see whether the number of elected representatives assigned to each province is in proportion to the number of its literates and literates in English. The table given below will show that it is not so. Taking Bombay as the standard I have shown what the number of elected representatives of each province would be in proportion to the number of its literates.

Province	Literate	Literate in English	Present No of Elected Members	What the No Would Be on Literacy Basis
Assam	483,105	70,801	4	1
Bengal	42,46,601	7,73,161	17	42
Bihar Orissa	15,86,267	1,32,062	12	15
Bombay	16,45,533	2,63,333	16	16
Burma	36,52,043	1,13,413	4	36
C P	6,33,293	62,736	6	6
Madras	36,71,908	3,98,883	16	36
U P	16,88,872	1,75,239	16	16
Punjab	8,33,492	1,39,535	12	8

Instead of taking the numbers of those who are merely literate or merely literate in English (according to the census of 1921) as I have done I might have taken the numbers of graduates and under graduates in each province say in the year 1924-25 which is the latest for which they are available.

Province	Number of Graduates and Under graduates in 1924-25
Madras	12,570
Bombay	9,755
Bengal	25,832
U P	6,126
Punjab	9,029
Burma	979
Bihar and Orissa	3,475
C P and Berar	1,838
Assam	1,380

The tables I have given have I hope shown that the representation in the Legislative Assembly given to the provinces under the Reforms is neither in proportion to the numbers of their inhabitants nor in proportion to the numbers of their literates or of their better educated persons.

Taxation Basis

It is not possible to give the numbers of persons in each province who pay any tax rate or cess — no such figures are available. Hence I cannot discuss whether representation has been given on the basis of the number of such persons in each province. But I hope the figures of the revenue collections in each province which I am going to mention shortly would show that representation under the Reforms has not been given to each province on the basis of the revenue collections in each province.

The Qualifications of Electors

The Council of State

The qualifications of electors are neither the same nor equivalent in all the provinces.

cannot now discuss this subject in detail. But I shall illustrate my remark simply by referring to the rules relating to electors paying income tax in the different provinces. A person can become an elector for the Council of State if he was in the 'previous year' assessed in *Madras*, on an income of not less than Rs. 20,000, in *Bombay*, on an income of not less than Rs. 30,000, in *Bengal*, on an income of not less than Rs. 12,000 in the case of *Non-Muhammadans* and Rs. 6,000 in the case of *Muhammadans*, in the *U. P.* on an income of not less than Rs. 10,000, in the *Punjab* on an income of not less than Rs. 15,000, in *Bihar and Orissa*, on an income of not less than Rs. 12,500 in the case of *Non-Muhammadans* and Rs. 6,400 in the case of *Muhammadans*, in the *Central Provinces*, on an income of not less than Rs. 20,000, in *Assam*, on an income of not less than Rs. 12,000, and in *Burma*, on an income of not less than Rs. 5,000. There are similar inequalities between the provinces in the qualifications of those who are holders of land, cultivators, tenants, &c. I cannot enter into details now. I shall only mention how, as in the case of the income tax, *Non-Muhammadans* are discriminated against and *Muhammadans* favoured in *Bengal* and in *Bihar and Orissa*. A *Non-Muhammadan* in *Bengal* becomes an elector if he pays land revenue amounting to not less than Rs. 7500 in the *Burdwan or Presidency Division* and not less than Rs. 5000 in the *Dacca, Rajshahi or Chittagong division*. But a *Muhammadan* becomes an elector everywhere in *Bengal* if he pays land revenue amounting only to not less than Rs. 600. In *Bihar and Orissa*, a *Non-Muhammadan* can become an elector if he pays land revenue amounting to not less than Rs. 1200, but a *Muhammadan* obtains the same right by paying not less than Rs. 750 land revenue. Note also the difference between the amounts in *Bengal* and in *Bihar and Orissa*.

The Legislative Assembly

As regards the *Legislative Assembly*, I shall mention only the inequalities in the qualification relating to the payment of the income tax. In *Madras U. P.*, the *Central Provinces*, *Burma*, and *Bombay* one becomes qualified if he was in the previous year assessed to income tax (the possession of the minimum assessable income would do). But in *Bengal*, *Delhi* and the *Punjab* he must have

been assessed on an income of not less than Rs. 5,000, in *Bihar and Orissa* on an income of not less than Rs. 3,810, and in *Assam* not less than Rs. 3600.

Thus do political and civic human values differ from province to province, and in some provinces according to the creed one professes. A *Muhammadan* is *ipso facto* more qualified to exercise the right of citizenship than a *Non-Muhammadan*.

The Meston Award

I shall now make some observations on the *Meston Award*, according to which revenues from some sources have been assigned to the provinces and those from some other sources to the central government. For some years past, in my two *Bengali* and *English* magazines, I have drawn attention to the very inadequate amounts which have fallen to the share of *Bengal* under this arrangement. Let me once again show by means of a tabular statement how, though *Bengal* is the most populous province, it gets the least sum of money for all its administrative and other purposes. I need show the population and budgetted income of only the five most populous provinces.

Province	Population (1921)	Budgetted Income, 1921/22
Bengal	46,695,536	Rs. 10,73,39,000
Madras	42,318,985	" 16,51,80,000
Bombay	1,33,48,210	" 15,08,00,000
U. P.	45,375,787	" 12,94,50,000
Punjab	20,685,024	" 11,13,00,000

One result of the most populous of these five provinces getting the smallest amount for its expenses is the chronic starvation of its "nation building" departments. Take education, for example. In 1924-25, the latest year for which figures are available, the expenditure on education from different sources was as follows —

Province	From Govt. Funds.	From Fees
Madras	1,71,38,548	8,13,29,991
Bombay	1,84,47,165	60,13,969
Bengal	1,33,82,962	1,46,26,126
U. P.	1,72,28,490	42,14,351
Punjab	1,18,34,361	52,87,411

Bengal gets from the Government only a little more than the *Punjab* (of which the population is less than half that of *Bengal*) and less than each of the other major provinces.

Note also that Bengal is the only province which pays for its education more in fees than it receives from the Government.

If Bengal contributed less revenue than any other major province one could under-

stand the niggardly treatment received by her but her contributions are not insignificant as the following statement for 1924-25 compiled from the *Statistical Abstract*, will show —

Sources	Madras	Bombay	Bengal	U P	Punjab
Jute	0	0	375,639.20	0	0
Income tax	131,56,365	4,03,77,094	54,73,933	78,87,089	60,67,102
Salt	1,89,91,727	1,73,33,907	235,90,897	70,00,000*	30,00,000*
Land	6,15,05,867	5,16,52,815	3,10,73,587	6,71,03,534	3,53,63,120
Excise	4,90,59,071	4,15,09,132	2,15,53,443	1,32,29,792	1,19,47,490
Stamps	2,41,51,274	1,78,06,484	3,36,67,757	1,74,40,031	1,16,61,337
Forest	55,73,781	73,07,964	24,75,599	69,31,987	37,27,312
Cotton	9,03,764	1,87,03,383	2,62,518	688,558	19,768
Total	17,33,41,879	19,46,90,774	20,56,61,584	12,07,75,991	7,17,90,669
Irrigation	2,62,54,234	1,28,51,915	23,613	1,31,93,834	6,86,16,428
Grand Total	20,15,96,063	20,75,42,689	20,59,90,197	13,34,69,835	14,04,07,097

I have not been able to find out from the *Statistical Abstract* revenues from other heads shown separately province by province. But I hope the table I have compiled will indicate roughly the position of the provinces as revenue bringers.

Irrigation

I have given two totals first, excluding, second including irrigation revenue. The reason for my doing so is that as the Government has done practically nothing for irrigation in Bengal compared to what it has done for the other provinces it cannot justly penalise Bengal for the smallness of its irrigation revenue. There are large areas in Bengal particularly in the districts of Bankura, Burdwan, Midnapur, which badly require irrigation but very little has been done by the Government in this direction. That Bengal is not considered fit for the production of wheat and cotton at least of good qualities may in part explain the mal'ection of the Government to irrigation in this province. In their own interests the British people attach great importance to the production of wheat and cotton in India and their export to Great Britain.

Under the heading Productive Irrigation Works I find the following the figures indicating miles —

Province	Main Canals and Branches	Distributones
Madras	4,049	8,303
Bombay	5,698	794
U P	1,459	8,805
Punjab	3,438	13,119
Bengal	Nil	Nil

*In the *Statistical Abstract* the salt revenue is not shown separately for the Punjab and the United Provinces a total of Rs. 1,07,03,368 is shown against Northern India Salt Revenue Department. Out of this amount I have given credit for 70 lakhs to the U P and 30 lakhs to the Punjab in proportion to their population leaving 7 lakhs odd for other north Indian areas.

Under the heading Unproductive Irrigation Works I find the following —

Province	Main Canals and Branches	Distributones
Madras	751	705
Bombay	1,898	1,106
Bengal	69	254
U P	428	1,862
Punjab	160	152

But even if irrigation revenue were included Bengal would not make a poor show, as the grand total shows. If the total revenue collections of the provinces were made the basis for representation a readjustment would be necessary.

Bengal Governor's Opinion

Recently, in his reply to the address of the Mahajan Sabha, the Governor of Bengal said

There is I think general agreement that Bengal has cause for complaint of the financial settlement arrived at under what is known as the Mestoo Award. As regards finance the experience of this Presidency during the years of the Reforms has more and more demonstrated that it is impossible to be content with a theoretical demarcation of spheres of taxation provincial and central. Practical working has shown that for the proper administration of this Industrial Province some share of the revenues now allotted to central finance must be allocated to the Province.

If there is general agreement, why does Bengal continue to starve?

The Permanent Settlement

In order to explain away the starvation of Bengal by Lord Mestoo and others, it is

said that, on account of the Permanent Settlement of the land revenue in Bengal it pays less proportionately than other provinces and consequently gets less. But in the form of other tax it pays more. Why is that fact not taken into consideration? Moreover neither the Government of Bengal nor the people of Bengal are responsible for the Permanent Settlement. It was the Government of India which was responsible for the Permanent Settlement. It is an admitted fact that it was advocated and made because it was understood that it would place the finances of the Government on a more stable basis. The parties to it who have benefited thereby were the Government of India and the revenue farmers or landowners called Zemindars. The generality of the people of Bengal were not responsible for it and have not reaped the main advantage from it, if they have at all been benefited by it. Directly or indirectly most of them live by agriculture, and have to pay in the shape of legal, non legal and illegal demands not less than their fellows in the other provinces. If the Permanent Settlement has been a mistake it would be neither honest nor honorable for the Government of India to indirectly compel either the Government or the people of Bengal to raise an outcry against it by starving them. It is the Government of India which ought to find the proper remedy. It is not my purpose to pronounce any opinion upon or discuss the pros and cons of the Permanent Settlement. What I want to show is that whether it remains or goes Bengal is entitled to get at least as much money for its expenses as any other province.

Jute Export Duty

Just as land revenue has been rightly and locally assigned to the provinces so ought the jute export duty as it is derived from what grows on the soil. I have never been able to understand on what just grounds Bengal has been robbed of the jute export duty. It has been argued that the jute export duty is not paid by the people of Bengal but by the foreign purchasers of jute. This is not axiomatic. For as pointed out by Mr. H. C. Neogy in the Legislative Assembly on the 10th of March this year in the opinion of the Fiscal Commission, page 100 of their Report, "some portion if not the whole of an export duty falls on the home producer." The same gentleman pointed out

in the same place and on the same day that the Taxation Enquiry Committee observed in paragraph 150 of their Report —

In spite of the monopolistic character of the product, there exists a possibility that in certain conditions of the trade a portion of the export duty may fall on the producer.

Even *The Statesman* writes thus in its issue of July 21 last —

The members of the Bengal National Chamber asked that the proceeds of the jute export duty should be handed over to Bengal for its local purposes. Sir Basil is reported to have said that while he is not personally in favour of maintaining the duty if it is maintained the proceeds must go to the Central Government as the duty is paid not by the producers but by the consumers. There Sir Basil Blackett runs counter to what we had supposed to be the least controverted doctrine in economics—that the ultimate incidence of an export duty was always upon the producer. It may be that jute being a monopoly of Bengal the Finance Member believes that the foreign buyer will always have to pay the Bengal price plus the duty, but if that be the argument it is legitimate to say that the Bengal price is kept lower than it would otherwise be by the effect of the duty. There is a limit beyond which the foreign purchaser will not buy. If he is willing to pay a sovereign for a particular parcel of jute and no more and the seller must sell then the seller pays the duty and receives the sovereign. The buyer would still be willing to pay a sovereign for the goods were there no duty included in the price. The purpose of an export duty is to keep goods in a country just as the purpose of an export bounty is to send them out. The effect is to lower prices in the home market practically by the amount of the duty and it is the producer who gets the lower price. Obviously if the foreign purchaser will only pay a sovereign with the duty included and could still afford to pay a sovereign if the duty did not exist, the home purchaser if he wished to get the goods would have to pay a sovereign for them, whereas he now obtains them for an amount below a sovereign equal to the duty which would have to be paid upon export.

So Bengal is entitled to at least part of the proceeds of the jute export duty. But assuming that the producer does not pay any part of the duty according to what principle of justice or equity, except the hero's right of might, does the Government of India lay hold of the entire proceeds? It is in Bengal that the thing is produced. It is the Bengal Government which does something however little it may be for the improvement of the cultivation of jute. It is the people of Bengal who toil to produce the raw jute. It is they who suffer from the contaminated water and the maldours resulting from the steeping of jute. It is they who suffer from the pollution of the river

waters by the septic tanks of the jute mills. It is the public health department of Bengal which does something however little for counteracting the injurious effects of the production of raw and manufactured jute. The Government of India simply looks on from its serene heights all the while, and it is only when the proceeds of the export duty are collected that it swoops down and carries off the booty in its mighty talons. The Meston Award which has legalised this plunder is absolutely iniquitous. Bengal ought to have the whole of the jute export duty. According to Mr K C Neogy up to the 31st March 1927 the Government of India have by means of this tax, netted at least 34 crores of rupees starving all the nation building departments of Bengal.

Income Tax

The grounds on which it is said Bombay and Bengal are deprived of the proceeds of the income tax require to be examined.

It has been argued that as the whole of the income tax revenue collected in Bombay and Bengal is not really paid by their inhabitants they have no claim to it. Perhaps it is meant that the purchasers in other provinces of the things made or imported by manufacturers or importers in Bombay and Bengal pay part of the income tax collected in these two provinces for these manufacturers and importers include the income tax in fixing prices. Assuming the cogency of this argument at least the portion of this revenue which is paid by private individuals out of their incomes in Bombay and Bengal

can certainly be claimed by Bombay and Bengal. And as for the portion of this tax paid by manufacturers and importers surely the provinces which are able to give them a local habitation and opportunities of enterprise owing to their geographical and other advantages ought to be entitled to what they pay as income tax. Great Britain is mainly a manufacturing country and its manufactures are for the most part sold in various foreign lands including India. In fixing prices British manufacturers take into consideration the income tax they would have to pay. Therefore in reality it is the foreign purchasers of British goods who pay most of the British income tax. But does the British Treasury for that reason send to the public treasuries of the purchasing countries the bulk or any portion of the British income tax collections? If that were done we Indians should be very glad indeed to have our share.¹

Conclusion

For all these reasons I have no hesitation in coming to the conclusion that Bengal should be given as much money as Madras, or as Bombay which has less than half of its population. I do not in the least suggest that Madras or Bombay or any other province should be robbed to do justice to Bengal. Nothing of the kind. There is ample room for economy in the spending-departments of the Government of India. Let there be retrenchment there, and all will be well.

RECENT HINDI LITERATURE

By ILA CHANDRA JOSHI

SELF PRESERVATION is the first law of nature and self deception is the foremost law of the spirit of nationalism as it is in most countries. A typical nationalist deceives himself by believing that everything that belongs to his nation is excellent. Even if he feels in the innermost depths of his heart that his nation is inferior in many

respects to a great many nations of the world he spares no pains in throwing dust into the eyes of the people of other nations and tries his best to prove to them that his nation is far superior to theirs in matters of art, culture, philosophy and everything else. For the modern cult of nationalism is, beyond doubt, the cult of hatred. It has

never been and will never be the cult of truth. This venomous spirit is purely a product of the West and our political leaders have now begun to confess that the dream of the "political salvation" of India can only be realized if we can fully assimilate this western spirit.

Owing to this very spirit of nationalism (or, in this case, may we call it provincialism which is the twin brother of nationalism?) the critics and writers of Hindi literature have been deceiving themselves, for sometime past, by believing that modern Hindi literature is in no way inferior to any other literature of India, if not of the whole world. This self-deceptive, envious, and suicidal belief is so strongly current throughout the Hindi reading public, that if anybody, shocked at this crude and naive exaggeration, ventures to disprove the fact, he is supposed to be a heretic, a *kafir*, a traitor to the cause of his mother tongue. Oaths and abuses are hurled upon him from all sides and he is left terror-stricken like a man standing amidst a furious and enraged mob.

Now, let us look facts squarely in the face and try to judge the merits and demerits of recent Hindi literature without any prejudice or ill will. *Premashram* is supposed to be the best work of fiction in our literature. This very work of fiction has made our men of letters (I am speaking as a member of the Hindi reading public) realize for the first time the greatness of our literature. The author of this novel has exercised such a great influence upon the Hindi reading public that he is supposed to be the "master novelist" of our age. Now let us see what are the merits of this master piece that led the public to speak highly of it in rapturous outbursts. Our leading literary critics who guide the public in the matter of artistic tastes are unanimous in their statement that one great cause that accounts for the greatness and popularity of this work of fiction is this that the true spirit of nationalism pervades the whole work. To judge art according to this standard is to strangle the very spirit of truth. It is to bring down art to such a low level as is beyond comprehension. The one and sole aim of art is to make man acquainted with the greatest ideals of humanity by analysing the mysteries of the human soul. One "great problem" which the author of *Premashram* had attempted to solve, when he began to write the book, was quite an ephemeral one. It was the problem of

council entry. The book was published before the Swarajists sought to enter the councils. Now that the problem has been solved somehow or other, in one sense the utility of this novel has been lost. But a few more problems have been tackled in this "masterpiece", the most important of them being the problem of *Zemindari* or landlordism. The author has shown how the Zemindars or landlords of our country oppress their miserable tenants, and he has tried to draw the sympathy of the public towards the poor victims. He has doubtless succeeded in his attempt. But what we want to say is this that from the artistic standpoint this "masterpiece" of fiction is an utter failure.

All the greatest artists of the world have always tried to solve the problems of humanity in their works. They have written for all countries and for all ages. They have condemned all those writers who have tried to "nationalize" their works. Romain Rolland, the great French writer, says in his *Theatre du peuple*, "If we would create strong souls, let us nourish them with the strength of the whole world, for, the nation alone is not enough." Schiller, the great German dramatist, used to say "I write as a citizen of the world. Early in my life I exchanged my fatherland for humanity." Goethe, the greatest German poet, said almost a hundred years ago, "National literature means very little to day. World literature is at hand and each one must labour to make it an accomplished fact." He also said somewhere, "It is evident, and has been for a long time, that the greatest geniuses of all nations have kept all of humanity before their eyes. You will invariably perceive this general idea standing out above national ideas and the peculiarities of the writer. The most beautiful works are those that belong to all mankind." This he said at a time when speaking anything against national belief was supposed to be blasphemy, almost a crime. But our critics and men of letters do not want to see the truth and they have shut their eyes to the light. Popularity, and not truth, is their sole criterion. We would have let them remain undisturbed in their paradise. But they have corrupted and vitiated the taste of the public and have made its aesthetic sense and faculty of appreciating art quite blunt. It is quite a deplorable state of things, no doubt. The critics of the Hindi world of letters have led the public to believe that the works of Tagore, the enlight-

and and serene poet of love and joy, and of Gorki "the master of sorrow and of pathos, are nothing but a means of political or social propaganda. One wonders what these most venerable writers would have thought had they been informed of this charge brought against them. The public has been misled by the false criticisms of these critics and takes every word spoken by them to be true.

Mr Premchand the author of *Premashram* has lately written another big novel entitled *Rangabhum* or *The Stage*. According to Shakespeare the whole of the world is a stage in which scenes of love fear hope pity and other tender emotions of man are seen day and night. But in this *Stage* of our master writer horrible scenes of political and social trifling, petty nonsensical national sentiments have been displayed. Only the bright illumination of its enthusiastic style has dazzled the eyes of the spectators.

The short stories written by Mr Premchand are counted among the best stories in Indian Literature if not in the literature of the world by our literary men. I have read not more than two volumes of his short stories. This I must confess. But the stories contained in these volumes are counted among the best he has written. In one of these stories he has endeavored to show that the bonfire of foreign clothes is no objectionable on both ethical and political grounds. In another he has shown that it is very dangerous to be seduced by the lores and wiles of a harlot, or a woman of a loose character. In yet another he has tried to prove that God punishes those men who rob other people of their money or property by treacherous means. The subjects of almost all the stories are as trifling and common place as these. And despite all this he is supposed without any scruple or hesitation to be the worthiest rival of the masters of the art of story writing! A certain publisher of Mr Premchand actually published the following statement in the preface to one of his books that Mr Sarat Chandra Chatterjee the Bengali novelist, thought the stories of Mr Premchand in no way inferior to those of Dr Tagore. Our literary men were of course much flattered by this statement, and it was made much of in the periodicals. When however this was brought to the notice of Mr Chatterjee he contradicted it vehemently and felt ill at ease. Such is the condition of the current Hindi literature. The young

writers are great admirers and staunch devotees of Mr Premchand. All of them follow in his footsteps. If any one manages somehow or other to get out of that beaten track he is swayed by dilettantism.

As with fiction so with poetry. The poets are guided by some trifling and petty conventions and nobody ventures to transcend the limits of conventionalism. *Priyaprasada* written by Mr Ayodhya Singh Upadhyaya is supposed to be the greatest poem in the Hindi literature of the present day. Some set phrases hackneyed similes and metaphors and conventional expressions borrowed from some old Sanskrit books of verses are heaped up in this poem. Nothing vital original and substantial can be found in it. *Bharat Bharati* another great poetical work of another great poet, is nothing but a narration of facts. In it the author has described the past glory of India in a chronological order and has deplored in a melodramatic way her present downfall. The poems of young poets that appear occasionally in monthly magazines and weekly papers are either national in spirit or full of dilettantism.

There are many small circles in the Hindi world of letters of the day and each circle has its own foolish conventions in matters of art. There was a time in Russia when there an editor of a certain magazine refused to publish the remaining one-third of Tolstoi's greatest work of art *Anna Karenina*, after having published two-thirds of it serially in his magazine. The reason of this sudden surprising refusal was that the editor differed from the author "on the Serbian question" which was being discussed in the political circles of Russia at that time. Tolstoi, who was struck with amazement by the attitude of the editor published the remaining part of his masterpiece in a separate pamphlet. Such exactly is the case with the Hindi literary circles of to-day. There also the editor of a certain journal will not publish your article no matter however excellently it is written if he differs from you on that accursed Serbian question. Darkness reigns there supreme. Nobody wants to see the light and every literary man desires to live in a fool's paradise. Every writer is actuated by the sole motive of money making and popularity. The Hindi reading public is stilling under the pressure of a despotism of the most furious type—literary tsarism—that ever prevailed in the realm of literature. The voice of truth is being mercilessly smothered.

Nothing short of a great revolution will bring this tsarism to its senses. All men of genius are centrifugal in temperament. They shatter the walls of petty conventions of their nations to pieces and always transcend the conventional ideas without caring about the furious howling of the mob. Such a real genius—a Napoleon, is wanted who will revolutionise the whole of the Hind world of letters from one extremity to the other. We are acquainted with four great literary revolutionists of modern times. These are Goethe, Tolstoi, Romain Rolland and Tagore. These great revolutionaries have throughout their lives combated falsehood and they were victorious in the long run. In their love of truth they never cared about

other people's opinion. They never sought popularity, they always sought truth. In the preface to his world famous revolutionary writing *Au dessus de la Mêlée*, Romain Rolland writes, 'Ma tâche est de dire ce que je crois juste et humain. Que cela plaise ou que cela irrite, cela ne me regarde plus.' That is 'My task is to say what I believe to be just and humane. Whom it pleases and whom it grieves, that has nothing to do with me.' Yes we want such a brave-hearted man in our midst. We want a Romain Rolland—a Jean Christophe. We are in doubt whether the spirit of Jean Christophe will ever be roused in our hearts and the present tsarism will ever be overthrown. Yet let us hope for the best.

BLIND

By SAROJINI NAIDU

I

I pray you keep my eyes
Till I return one day to Paradise
Bereaved of you Beloved I am blind,
A broken petal drifting in the wind
A sightless song bird with a wounded wing,
Forlornly wandering

II

O Love, how shall I know
If Spring has kindled the high, hooped snow
Into rich crucibles of amethyst,
Or in far meadows lulled in silver mist,
Wild poppies waken to the tender rune
Of the frail, pearl blue moon?

III

I shall not see alas!
Sumptuous and swift, life's bridal pageants pass,
Or radiant martyr youth serenely ride
In death's gay cohorts mailed in dazzling pride,
Watch mystic hordes assail like pilgrim seas
Time's ageless sanctuaries

IV

No lambent rays retrieve
The brooding dark in which I grope and grieve,
Banished, remote from the consoling grace,
The wise, compassionate radiance of your face.—
When will you call me back to Paradise,
Love, to redeem my eyes?

COMMON ELECTORATES

By C RAJAGOPALACHARI

THE agreement over the common electorate proposal is a great achievement, which alone may suffice to give lustre to Mr Srinivasa Iyengar's regime as Congress President. Reactionaries and persons interested in keeping up the atmosphere of communal discord may still oppose the proposal. Whatever may be the result, that such a proposal has been influentially supported is one of the most noteworthy triumphs of good sense in recent times. There is nothing so effective as a long rope for people to learn lessons. The wisdom of the exclusivists has been given a full trial and found by all to be most damaging in result. That way lies no hope for the nation or any community for that matter.

Voluntary forms of untouchability are no better than that enforced variety which is known as a blot on Hindunism. Untouchability is an evil not only when it is a social bar between high and low caste, but also when it takes the shape of a political bar between two components of a population that must live together for good or evil. Though not imposed by ancient custom, but invented by modern politicians the system of separate electorate, is a form of untouchability. Untouchability is bad socially, so also is it bad politically. In both cases both sides suffer.

From exclusive and separate electorates to a joint electoral roll is a great advance. There may not be intercommunal confidence enough yet for men to give up the divisional idea altogether and to accept complete identification with other communities. An easy path-way to personal position and power which communal exclusivism opens out to fortunate members of a minority community is yet too much of a temptation for individual ambition to resist in the larger interest of national growth. But any step in advance is in itself to be welcomed. We must wait patiently for all the lessons to be learnt. The full course of affliction must be gone through for truth and good sense to triumph completely. Wisdom learnt that way is burned into us and will be permanent.

Let us, then not be impatient. When

men get really to govern themselves through their representatives, when our democratic institutions are not as now mere clubs of the pushful, but real institutions responsible for the happiness and misery distributed among the people, the latter, i.e. the governed, will see that there is no particular advantage in having men of this or that persuasion to manage their affairs. They will then see that it is more important to put good and noble men in charge and that a man of one's own caste or faith, if bad or foolish, does terrible injury, not to be compensated for by the consciousness that a member of one's own faith or caste is enjoying power.

Even if seats are still reserved for particular communities, there are distinct advantages in a joint electoral roll. Candidates, both Mussalman and Hindu, will come forward whose conduct has obtained the approbation of Mussalims as well as Hindus. Those who have set the one against the other community must lose the votes of the one or the other, and cannot hope to win the majority of votes in a joint electorate. It will gradually bring men to see that the path to political position and power lies through broad minded and non sectarian activities and true service, and not by playing to communal passions and prejudices. Every aspiring public worker will see that narrow interpretations of patriotism serve to diminish one's opportunities for being chosen to render public service.

It may be thought that even if we have joint electorates men will go on working up communal prejudices and appealing to voters on the basis of caste or religion privately, if not publicly. This cannot long continue, for anything done on a large scale cannot but get known and bring its consequences with it. Some may try to secure the votes of a solid mass of voters by appealing to communal patriotism and may thus successfully defeat rival candidates working on more difficult and non sectarian lines. This may be so as long as there is a paucity of candidates. But as time goes on, the natural result of opportunities afforded will be that a number of candidates will come forward

from the same community, and they will perceive that in the competition among themselves he who by his non-clannishness secures votes from the electorates of both communities, has an advantage over one who plays to religious or sectarian prejudice. This will tend certainly in course of time to lead the activities of public men in the right direction. Let us therefore hope that all men of

far-sighted patriotism will support the principle of communal electorates. This is not merely a phase of the working of the present Montford reforms or a question only for the Royal Commission for the revision of the Reforms but is a substantive principle affecting the permanent fate of India. It is a step towards Swaraj.

TRUTH ABOUT THE POSITION OF THE HINDUS IN THE UNITED STATES

By MARY K DAS

WHEN I wrote the article on Truth About the Position of the Hindus in U S A published in the April issue of the *Modern Review* (Calcutta), through the kindness of Mr. Ramananda Chatterjee, the famous Pandit case had not been decided by the United States Supreme Court. Since then Mr. S G. Pandit, Attorney at Law of Los Angeles, California, has won his case before the U S. Supreme Court. Mr Pandit's victory has established a precedent in favour of those Hindus against whom cases for cancellation of naturalization were pending before various U S Courts. However, so far nothing has happened to change any of the conclusions expressed in my former article on the subject.

Many misinformed Americans as well as Hindus think and write in newspapers in America and India that the 63 Hindus who were naturalized are now restored to their former American citizenship as an outcome of the Pandit case.

In a letter from the U S Department of Labor, Washington, D C, May 20th 1927, Hon Raymond C Crist, Commissioner of Naturalization, gives information, which is entirely different from the general impression on the subject. The Government of the United States, according to the Department of Labor, is not anxious to keep its faith with all the Hindus who were duly naturalized. The Department of Labor does not recommend, so far as we can judge, the restoration of citizenship of all the Hindus who were duly naturalized, but it recommends

that the cases should be withdrawn only against those whose cases are still pending. Of the 63 Hindus, duly naturalized, in 45 cases, through the efforts of the Department of Labor and the Department of Justice, naturalizations have been cancelled. These forty-five persons are rendered stateless, because the United States Government saw fit not to keep faith. The letter reads as follows —

Mr Walter N Nelson
Attorney and Counsellor
1433 Dime Bank Bldg
Detroit, Michigan

Dear Sir

Answering your letter of May 7, you are advised that recently the Attorney General in accordance with this department's recommendation, authorized the respective United States Attorneys to discontinue suits to cancel the naturalization of certain Hindus which has the status of pending cases. This probably is the subject matter to which the press report in question had reference.

Very truly yours
Raymond C Crist
Commissioner of Naturalization "

The position of the United States Department of Labor, regarding the status of the Hindus in the United States, as to their right to become citizens and also if the 63 Hindus who were once naturalized by the U S Courts (fourteen U S District Courts) are citizens or not, has been further explained in the following letter of the Acting Secretary of Labor, Hon. Mr. White, addressed to Senator Royal S. Copeland of the United States Senate. The letter reads as follows —

Department of Labor
Office of the Secretary
Washington

265 c-44 1063
May 21, 1927

Hon Royal S Copeland
United States Senate
Washington D C

My dear Senator

This is to acknowledge receipt of communication of Mr W W Blakely of Dexter Michigan dated the 8th instant requesting information concerning the naturalization status of Hindus which your secretary Mr Chesley Jurney left at the Bureau of Naturalization on the 10th instant.

For Mr Blakely's information the Commissioner of Naturalization informs me that recently the Attorney General in accordance with this department's recommendation authorized the respective United States Attorneys to discontinue suits which had been instituted to cancel naturalization of certain Hindus and which had the status of pending cases. This probably is the subject-matter of the press report to which Mr T D Sharman called Mr Blakely's attention. The action taken by the Attorney General has no bearing upon the cases of those Hindus who's naturalizations have already been cancelled. The decision of the United States Supreme Court in the case of U S V Thund 261 U S 204 that Hindus are ineligible racially for naturalization is in no wise affected by the Attorney General's action. The recommendation of this department to the Attorney General was submitted in letters dated March 2, and April 2 1927.

I take great pleasure in returning Mr Blakely's letter herewith

Cordially yours
Robt Carl White
Acting Secretary

From Hon Mr White's statement it is clear to us that the U S Department of Labor wanted that 69 Hindus who were duly naturalized should be deprived of their citizenship and according to the wishes of the said department, the U S Attorney-General—representing the Department of Justice—started suits to cancel their American citizenship. In 45 cases naturalization certificates were cancelled by U S (lower) courts and these Hindus did not have sufficient means and influence to fight their cases up to the Supreme Court of the

United States. These 45 Hindus had been duly naturalized as others against whom cases for cancellation of citizenship were pending. However, they have been deprived of their American citizenship and rendered 'stateless', because the United States Government has failed to keep faith with these Hindus and have persecuted them and the rest of the 69, by starting suits to cancel their naturalization. None should forget that this was done, in accordance with the recent settled policy of the United States, that an Asiatic should be a citizen of the United States. Secondly, Hon Mr White makes it clear that the U S Supreme Court's decision that 'Hindus are ineligible racially for naturalization' remains unaffected. So in future, unless the situation changes no Hindu can become a citizen of the United States and it is because he is an Asiatic, in other words, "racially ineligible."

First of all the people of India should take into consideration what can be done to restore these 45 stateless Hindus to their rightful position of American citizens. We thought that, through proper legislation by the U S Congress this injustice could be remedied. Last year my husband and I, at considerable personal sacrifice and expense, tried this method but we failed. It may be that, further efforts, directed towards the same purpose, will fail again. In that case what should be done by the people of India and the Indian Government? Lastly, what are the Indian people going to do to remove the existing discriminatory legislations against them in various parts of the world—within the British Empire and the United States of America, Panama etc.—? The Indian people cannot expect to secure help from other quarters unless they are willing to do their share in the fight to retain their rights as human beings and effectively oppose racial discriminations of all forms.

Munich, Germany

"WHY DO I SIGH"

Why do I Sigh
When there is so much splendour in the sky?
Why do I grieve
When there is so much sweetness in the eve?
Why do I weep
When jewelled stars adorn the voiceless deep?
Why do I cast
A mournful shadow on the ancient vast

Of this great world
With multitudinous serene unfurled?
Is it because
Beauty is prisoned in relentless laws,
And I and stars
Gaze at each other through dividing bars?

Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer etc. according to the language of the books. No criticism of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

THE PYTHAGORIAN WAY OF LIFE By Mrs. Hattie Watters (Theosophical Publishing House, Adyar) Pp 70 Price Rs. 1 1/2 (Board)

In the Introduction the authoress discusses the sources of information in regard to Pythagoras and the Pythagorians.

The second chapter deals with the biography and position and influence of Pythagoras as Philosopher, Scientist and Religious Reformer.

In the third chapter she describes the school of Pythagoras and two Pythagorean schools.

In the fourth chapter the authoress has given an English translation of the Golden Verses which are generally attributed to Pythagoras. She has also discussed the authorship of the verses. Her commentary on the verses is excellent.

There is a bibliography (pp. 60-70) at the end of the book.

It is a precious volume.

SPENCE TRAINING COLLEGE ANNUAL, 1926 Pp 100 Price 8 as. for students and Re 1 for others

This interesting Annual contains a short history of the Spence Training College, Jubbulpur and also some articles of pedagogical interest.

OUR SPIRITUAL WANTS AND THEIR SUPPLY By Pandit Sitansh Tathabhusan Pp 24 Price as 4

Presidential address delivered at the forty-ninth Annual meeting of the Sadaran Brahms Samaj, Well thoughtout and well written.

RETRANSFORMATION OF SELF By Shyam Lal B. A. Published by G. S. Niras Lashkar Gwalior Pp 219 + X.L.A. Price Rs. 2

The author writes in the Prefatory Note that in this book "the condition of the whole of the Universal Existence and of its parts with their formation, transformation and re-transformation has been described in a logical coherence step by step from beginning".

He further says—"The book will doubtless, immensely benefit the reader even if he finds himself unable, for any reason, to go a step beyond reading."

Gnosticism By Mary W. Burke M. A. (Theosophical Publishing House, Adyar) Pp 115 Price 1 1/2 (Wraypers) Rs. 2 (cloth)

It contains the substance of lectures delivered in the Brahmadividya Ashrama, Adyar, Madras.

A popular exposition of pre-Christian and Christian Gnosticism

GOS IN EXILE By J. J. Van Doer Leeuw LL.D. (Theosophical Publishing House, Adyar) Pp 129 Price Rs. 1 8 (Board)

This booklet is based on an awakening of Ego-consciousness which came to him some little time ago.

It contains the following chapters—(i) The Drama of the Soul in Exile (ii) The Way to the Ego (iii) The World of the Ego (iv) The Powers of the Ego (v) The Return of the Exile and an Afterword.

Theosophical Standpoint

A REVIEW OF THE HEART OF JAINISM By Jagmandarl Jain, Chief Justice, High Court, Indore. Published by Shri Atmanand Jain Trust Society, Ambala City Pp 64 Price. 4 as

"The Heart of Jainism" belongs to the series "The Religious Quest of India" and is written by Mrs. Sinclair Stevenson.

Justice Jagmandarl shows that this book is full of mistakes and misrepresentations and is marred by the Christian Prejudice of the authoress.

NIRVANA By George S. Arundale Published by The Theosophical Publishing House, Adyar, Madras Pp 219 Price Rs. 2 4 (Board)

This Nirvana has nothing to do with Buddhist Nirvana. It is one of the stages of Theosophical consciousness. The author has just been born into Nirvana (p. xii) and this book contains the outpourings of that consciousness.

DECLARING HINDUISM AND HOW TO REVIVE IT By Prof. Ganga Diksh and Prof. Aniba Datta (R. S. D. College, Ferozepur) Pp 30

Partly historical. According to the authors "Hinduism can be best revived by leading the life as our forefathers led before. By this life they mean four asramas."

HINDU VEDS By G. N. Ananta Ramayya Sastri Pp 17 + 11

"Rendered from Sanskrit stray thought verses."

MISINGS ON LIFE By P. V. Chalapati Rao Pp 33 Price 8 as

Written in verse.

SREE RAM CHANDRA *By M Sitarama Rao,*
B.A., L.P.P. Pp 72 price 7 as
Biography of Rama of Ayodhya.

ROUSSEAU'S EDUCATIONAL THEORY *By Shamsul Ghani Khan, Headmaster Government Training School, Ajmer* Pp 39 (Price not known)

It contains a short life and a lucid analysis of the educational theory of Rousseau.

THE MEDIATOR AND OTHER THEOSOPHICAL ESSAYS
By C Jinarayadasa (Theosophical Publishing House) Pp 95 Price Rs 1-4 (Board)

Theosophical thoughts of the Vice-President of the Theosophical Society

THOUGHTS ON FORMS & SYMBOLS IN SIKHISM
Edited by Giani Sher Singh Lahore Pp 89 Price 8 as

Contains views of some Sikh thinkers

RAJARSHI RAMMOHAN ROY *By Mamlal C Parekh B.A. (Oriental Christ House Raykot Kathiawad)* Pp 111+186 Price Rs 2 (Board) Rs 3 (Cloth)

There are 15 chapters in the book dealing with the various aspects of Raja's life. The author has adopted Trinitarian Christianity but is an admirer of Rammoohan Roy. The Raja published the Precepts of Jesus omitting the birth story, miracles, crucifixion and resurrection. But our author thinks that this to say the least, was like acting the play of Hamlet without the part of Hamlet and hence was tantamount to taking away its life and soul (p 45). That the doctrines of Trinity and Incarnation were 'stumbling blocks' to him was our author thinks, owing to his Mahomedan training and bias (p 53).

VOICES FROM WITHIN *By Rai Sahib Gobin Lal Bonnerjee* Published by Jitendraji Banerjee 11 Patangtola Lane Calcutta 5th x 4 P 92 Price Rs. 1 4

250 short paragraphs Good thoughts

MAHES CHANDRA GHOSH

THE INDIAN COLONY OF SIAM *By Prof Phanindranath Bose M.A. Published by the Punjab Sanskrit Book Depot Lahore*

In the present volume Prof Bose gives us an useful resume of the researches of European scholars into the history and literature of ancient Siam which was once an important Hindu Colony and which is at present the only independent Buddhist power of Asia. Dr Probodhchandra Bagchi in his learned preface has explained the character of Indo-Thai contributions which went to make Siam what it is to-day. Prof Bose has in the narrow compass of 170 pages succeeded in giving us a clear and interesting picture of the Hindu civilisation in the Menam valley. The religion and literature the archaeological monuments and political institutions of ancient Siam have been described in a way that is sure to rouse the interest of the general public in the history of Greater India beyond the seas. We recommend the book to all lovers of Hindu culture history.

INDIA AND CHINA *By Dr Probodh Chandra Bagchi M.A., D Litt (Paris)* Greater India Bulletin no 2

In this monograph Dr Bagchi has given a masterly summary of the extensive cultural relations of India and China. Dr Bagchi had the unique opportunity of studying the original Chinese texts with Great French Sinologists like Prof Sylvain Levi, Prof Pelliot and others. Consequently his presentation of the propagation of Buddhism and Indian culture in the far East is the result of a critical and exhaustive analysis of the original Chinese sources which he is the first Indian to handle. He brings out with a rare clarity and conviction how the cultural collaboration of India and China was an event of extraordinary importance in the history of Asia. We are thankful to Dr Bagchi for reminding us of this great historic truth and strongly recommend the book to the public.

INDIAN CULTURE IN JAVA AND SUMATRA *By Dr Bhanwar Chatterjee D Litt (Punjab), Ph.D (London)* Greater India Society Bulletin no 3

Dr Chatterjee has specialised in the history of Hindu cultural colonisation in Indo-China and Indonesia. He gives here a much needed summary of the history of the Hindu colonies of Java and Sumatra, which were ignored by Indian scholars on account of their unfamiliarity with the Dutch language in which the principal studies are written. Dr Chatterjee has done a great service to us by giving in a simple yet attractive English style the results of the researches of the Dutch and the French scholars in that domain. His Chapter on the Javanese and Malayan Ramayans is of enthralling interest. Indian readers would get much pleasure and profit by reading this essay. The Bulletin would be had by ordering in the Greater India Society's Office 91, Upper Circular Road, Calcutta.

NIRVANA *By Rai Bahadur G C Ghose, C.I.D Darsanasastri* Published by A S Ghosh Esqr., 140 2 Upper Circular Road Calcutta

Rai Bahadur G C Ghose is well known to the public of Bengal through his magnificent gifts to the cause of higher education and social service. He is a leader of the Indian Christian Community. His metrical musings on Nirvana bear a striking testimony to the fact that the soul of an Indian Christian is sensitive to all the deeper spiritual realisations of India. In every line we feel the profound sincerity and directness of a religious mind.

The Light which is lightened
by the Super Light
The eye is opened which is
the third
The life which is unified
with the Brahmic
As a water drop with the ocean
That which is in words
unspeakable—
The burying of the Self
is Nirvana

Through the various scriptures of different ages the author glides on to the religion of spiritual synthesis beyond dogma and creed—

That which is the end
of Saints
The supreme ecstasy of their
hearts

Here he takes his stand on the eternal and unshakable foundation of Peace and Harmony towards which Humanity is ever striving through centuries of trials and tribulations. We recommend the book to all serious students of spiritual progress.

K. N

JAINA JATAKAS, BEING AN ENGLISH TRANSLATION OF BOOK I CANTO I OF HEMACHANDRA'S TRISHASTHI SALAKAPURUSHACARITRA Translated by Prof Anulacharan Vidyabhusana and Revised and Edited with notes and introductions By Prof Banarsi Das Jain M.A. Published by the Punjab Sanskrit Book Depot Lahore Price Rs 4 only

The Buddhist Jataka stories have now become well known to the scholars through the efforts of Fausbol and Rhys Davids. But the Jaina Jatakas have not yet gained as much publicity. We therefore welcome the *Jaina Jatakas* published by the Punjab Sanskrit Book Depot of Lahore. The present work is a translation of the first canto of Book (Parvan) I of Hemachandra's *Trishasthisalakapurushacaritra*. It contains the history of sixty three heroes—both mythological and historical—of the Jaina religion. There is some difference between a Buddhist and a Jaina Jataka. In a Buddhist Jataka, the future Buddha is always represented in a benevolent character but in a Jaina Jataka or Purabhava the life of the future Jina is often depicted in dark colour. In various scriptures we get the representations of the Buddhist Jatakas but unfortunately no sculptural representations of the Jaina Jatakas have as yet been discovered. In an able introduction Prof Banarsi Das Jain discusses various topics relating to the text and gives a short biographical sketch of the poet Hemachandra. The book is an addition to the Jaina literature. One only wishes that the translator would undertake the complete translation of the Jaina Jatakas and thus render them accessible to the general public. The book does credit to Moti Lal Banarsi Das who are rendering good service by their Punjab Oriental Series of books.

P. B.

ARCTIC SWALLAWS By Swami Sri Ananda Acharya Gaurisankar. Published by the Brahmakul Gaurisankar Math, Scandinavia

The Swami Sri Ananda Acharya Gaurisankar author of these imaginative swallow flights from the east to the west and back again whose sturdy figure on his horse Balkari both prefaces the verses and closes them and to whom are strictly secured "all rights especially that of translation" is today known mostly to anthropologists. These aerial fancies from the land of the Midnight sun will it may be hoped contribute towards his popularity among the reading public. The Swami is prolific in imagination and the list of his works appended to the book at its close is impressive enough varied in topic and published from Norway and Sweden London and New York dating from the year 1913 till today. The long series of errata is a little disquieting though. But when we take courage in both hands and dip into it we may be

assured of finds that will satisfy our sense of poetry. The authors use of words like *Sajiyuntum*, *Gouriguru*, *Barsa* etc is an attempt to impart a strange and exotic air to his performance but striking touches of originality are not wholly absent e.g. speaking of Rameswar Setubandha, says the poet

It is the bridge of love twist me and Bharat ever expanding as far and far I wander towards the northern pole

Again a little girl smiling at swallows flying round her head reminds him that there is a thread of love between earth goes and sky goes.

A forest of blossoming Kadamba is likened to happy life gazing at paradise in the beyond. But it is difficult to find the chain which links nor holds the quatrains together from end to end now he is speaking of the all soul now of his mother's prayer in his days of infancy. In one place, he praises the deer feeding the tiger for its act of self-offering (page 73). Writing on metamorphosis, cataclysm, crematorium our uninitiated self the emergent many mirrored forth by the one absolute Me' and the beam-moment, he could not be expected to keep his verses always to the level of poetry. There are many commonplace lines.

Winter rouses reflection and consolidates friendship. Marking the contrast in the Son as at the source and at the Den he muses—why do things so gentle at birth become so violent in youth? Sentences like—

Life is like an autumn cloud speeding to what unknown sky? will hardly pass the purity test.

All things considered the book is inviting because of its excellent and unconventional get up (excluding the numerous errors in printing scattered throughout with a generous band) its eastern way of putting things its occasional gleam of true poetic glow—and the writer is a personality well calculated to arouse interest.

X

AN OUTLINE OF THE HISTORY OF SANSKRIT LITERATURE By Dr T Chaudhury M.A., Ph.D. A.I.C. (Chakravarthy Chatterjee & Co. Ltd. 15 College Square Calcutta) Priced at Rs 18 (Indian) and 3s 6d (Foreign) fourth edition

It is a book of about two hundred pages and within this small compass the author has attempted to give a brief outline of the typical phases of the history of Sanskrit Literature dealing with the literature of the Vedic period and that of the post-Vedic period technically called the Sanskrit period, the mutual influence between India, the West and the East, the condition of the Society, manners and customs as can be generally gathered from the internal evidence of the literature. Dr Chaudhury is under no delusion and points out (page 57) the "mobile condition of the ancient Hindu Society which became gradually obsolete with the preponderating influence of more and more caste—stagnation or was purposely ignored in the later Brahmanical times." He has differed from Western authors in some minor respects not without reason. The author's criticism is fair and pointed. The language of the book is pleasant to read and the book is nicely printed and its get up is good. Although the book is meant for students of Indian Universities and Colleges, we

think that the subjects under Chapter XV might be more generously treated.

G S

HINDI

BIHARI—RATNAKAR By Mr Jagannath Das Ratnakar, B.A. Published by the Ganga Prasthans Office Lucknow 15th edition, 1926 Pp XXXIV+236+46 Price Rs 5

We at once recognise this work as a landmark of literary scholarship in modern Hindi. The *Satya* of Bihardas, the best writer of love poems in Hindi is here edited perhaps for the first time with all the care labour and accuracy which it deserves. The Bihari literature in Hindi is not insignificant, as according to the *Hindi Nazaratna*, no less than 25 writers have written on it both in prose and verse. But this edition which is the result of the author's labour for over a quarter of a century has supplied the critical apparatus for the study of the master. Of the six MSS of the text five are laid under contribution. The oldest manuscript which is in the Durbar Library of Jaipur has been tackled for the first time. The number of *dohas* recognised to be of the poet is 713. In an appendix there is a list of 143 *dohas* which are attributed to the poet. As in the text so in his explanation the editor differs with the other writers and gives his reasons. We await with anxiety for the introduction which the editor promises to publish in another volume. The portraits of Bihardas and Mirza Raja Jayashah commonly known as Maharaja Jaysingh which are reproduced in colours were brought from Jaipur where the poet and his patron lived.

This work forms the first volume of a contemplated series on the old masters of Hindi literature. Judging from the merits of the volume under review the editor and publishers will thus not only do honour to the masters but also to themselves.

SACHTRA HINDI MAHABHARAT—PART I Published by The Indian Press Ltd Allahabad Pp 104 Price Re. 14

The Hindi knowing public are indebted to the publishers for this nicely got up and profusely illustrated translation of the Mahabharata from the original Sanskrit. The style is simple and charming. There are five coloured plates besides a number of pictures in black and white. This publication is up to the standard of the Indian Press Ltd. It should be treasured in every household for instruction and enjoyment.

RAMES BASU

MARATHI

HINDUTACHE BOL OR WORDS FROM THE HEART By S. B. Patil of Belgaum Pages 112 Price Pa. 1

The economic and moral decline of Indian villages is described in this book. The style is vigorous and highly figurative.

GHARACHA VAKIL OR ONE'S OWN LAWYER By S. A. Danile, B.A. LL. B. Publisher—D G

Khandekar Law Printing Press, Poona City Pages 140 Price Rs. three

That the knowledge of laws and regulations of the country is indispensable to every resident, whether a citizen or a villager in these days is a truism which nobody will question. The varied transactions, monetary and others as well as the frequent harassments to which peaceful citizens are subjected by the little hordes armed with administrative powers makes it incumbent on every person to have at least a superficial knowledge of the laws which govern his worldly affairs. Such knowledge can be easily gained by a perusal of this book, which gives in a small compass the gist of principal sections of over forty Acts and laws such as the Hindu Law, Mahomedan Law, the I.P. Code, Transfer of Property Act, Land Revenue Code, the Municipal Act, the Police Act, etc. As a book of ready reference the value of the publication cannot be exaggerated.

JEEN AN RASAYAN SHASTRA OR A TREATISE ON BIO-CHEMISTRY (TWELVE TISSUE REMEDIES) By Dr V. M. Kulkarni, M. D. Publishers—Messrs Roy and Co. Pages 168+36 Price Rs. Two

Of the various pathies or schools of medicines prevalent in India at present that of the Twelve Tissue Remedies is one which deserves to be popular owing to the cheapness, harmlessness and efficaciousness of the drugs as well as the facility with which a proper remedy can be found by reference to the books on the subject. The book under notice is written with care, and the present reviewer can testify from personal experience to the usefulness of the book as well as the remedies suggested therein for several diseases. Some 30 pages are devoted at the end to the enumeration of Homeopathic medicines and the complaints they remove. The book will prove highly useful in every family as a book of reference in Bio-Chemical treatment.

V G ARTE

GUJARATI

We have received the following booklets from the Vidyadhikari Baroda State—1 STORY OF ROCKS 2 ENGLISH SHOOTING 3 WATER, 4 HEAT 5 THIEF 6 ANKASHEL (in Hindi) and 7 CHAKRAVARTI ASHOKA. They belong to the Sayan Bai Jnanmulla and are printed and published at Baroda and priced Rs. 0.6-0 uniformly. The majority are translations but they all bring out the subject very well though in places very difficult words occur as in the booklet on Ashoka. Juvenile students by themselves would find it difficult to grasp ideas conveyed by such words and hence the help of teachers cannot be dispensed with if that is the object of publishing the series.

BODHAK SEVODH BEAN By Chhaganlal Thakur Das Modi, B.A. printed at the Surat City Press Surat. Text card board Pp 16 unpriced (1926)

In this small pamphlet Mr Chhaganlal has garnered a number of happy pieces of advice on behaviour of men and women in the world. They are very valuable and if followed are sure to result in benefit to all and sundry.

RASAYAN By Rammiklal Gudharlal Modi M.A.
printed at the Harshar Press Surat Pp 136 Cloth
bound Price Rs 1 12 0 (1926).

Time salt, pearl mercury tal gold, silver, copper and many such other articles have their medicinal uses. Their different preparations were being used extensively in old times and even now are not out of use. An interesting, and scientific exposition of the processes of their preparation and use is to be found in this book which will repay perusal.

1 URBAN CO-OPERATIVE BANKS 2 BANKING By
V C Jaday B.A. Managing Director Surat
Peoples Co-operative Bank (1926)

These two small pamphlets mark a departure

in the history of Co-operative work in Gujarat. The Co-operative Movement is making rapid progress in Gujarat thanks to the organising capacity of men like Dewan Bahadur A. U. Mahi. Mr Jaday is also a distinct organiser and as such having felt the want of books in Gujarat on the subject in order to facilitate the dissemination of the knowledge thereof he has produced these two pamphlets which give complete information in simple language both about these Banks and the banking system observed there. They are priced moderately 0-4-0 each.

We have received copies of a Weekly CALLED BE GHADI MOR or Indian Tit Bits. We do not review Weeklies

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact clearly erroneous views, misrepresentations etc. in the original contributions and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject this section is not meant for the airing of such differences of opinion. As owing to the kindness of our numerous contributors we are at all times hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor The Modern Review.]

Hungarian Peasants

In a recent number of the *Modern Review* it was stated by a correspondent that the peasants in Hungary under the present regime have been reduced to a condition of abject debasement bordering on serfdom inasmuch as when they see a landlord they go down on their knees and prostrate themselves before him and kiss the track of his motor car.

Having lived in Hungary for eight years previous to the Great War during it and after from 1912 to 1920, and having witnessed the great changes which swept over the country during the war and subsequent revolutions and anti revolutions I am in a position to refute the utterly absurd and baseless statement of your correspondent who either does not know the Hungarians or he omits to come close mimical to the country.

I shall not in this brief communication touch on the details of the changes and attitudes of the different communities but can tell you from personal knowledge that the Hungarian peasant who is a most dignified and self respecting person; proud and withal polite like a born gentleman is incapable of cringing to anybody or behaving in an abject fashion. He came to the country as a conqueror with the Hungarian leaders a thousand years ago from Asia, and even during the age of serfdom in Europe was a free man under his own ruler and shook off all vestiges of alien serfdom after the Revolution of 1848.

During the four months of Bolshevistic regime he stood opposed to the Soviet in Hungary and it is incredible that since the re-establishment of the

present regime which he supported, he should have been reduced to such abject degradation as your correspondent describes. And this in the face of the fact that under the present Parliamentary Constitution which Admiral Horthy protects as a Governor against Communism the peasant now more than ever forms one of the main supports of the Government with his agricultural party. I never saw or heard of any degradation of the Hungarian peasant, who is now more prosperous than ever—which cannot be said of the city workman—since the Great War and its economic changes for the conquered people especially. The peasant gets more for his products than before and lives as simply as ever and is thus becoming richer—and he was never poor in Hungary. Although I left Hungary about six years ago when the present regime was well established friends have kept me well informed about the state of things there and recently I have learnt from friends who came to India that there has been no change for the worse so far as the peasants are concerned. I am told that not long ago an English traveller in Hungary was perplexed to find a peasant who came to his rescue after an accident to his motor-car behaving just like a well mannered and a polished gentleman, courteous and withal proud and self respecting as if he did not belong to a foolish or unrefined class to which the peasants and workmen belong even in civilised Europe and America. He could hardly believe that his host was after all a peasant and a villager.

I can assure you that your informant is either misinformed or has some object in misrepresenting

INDIAN PERIODICALS

Was Ashoka a Buddhist ?

Prof. B M Barua subjects the opinion of the Rev H Heras S J that Ashoka was not a Buddhist but a Hindu, to critical examination in *The Mahabodhi* and comes to the conclusion

Asoka was a man a member of Hindu society an Indian king and above all a Buddhist. His inscriptions themselves as I have sought to show contain evidences proving his Buddhist faith. These evidences may now be summed up as follows —

1. Asoka went on pilgrimage to Lumbini and worshipped there because as he knew it was the village where the Buddha Sakyamuni was delivered. A Brahminical Hindu is never known to have gone on pilgrimage to Lumbini because it is the birth place of Gautama Buddha.

2. Asoka undertook a pilgrimage to Nigali Sagar on the road to Nepal for the consecration of the Stupa of the Buddha Konagamana enlarged by him five years back.

3. If Asoka had been a supporter of the Buddhist sect founded by Devadatta he would have gone to the Stupa of a previous Buddha such as Konagamana and avoided going to Lumbini the birthplace of Gautama Sakyamuni the Buddha whose name was *ex hypothesi* repugnant to a follower of Devadatta.

4. Asoka bestowed certain cave-dwellings upon the Ajivikas. But there is no evidence to show that he formally consecrated them. In the votive inscriptions Asoka has referred to the donee simply as Ajivikas without such honorific prefix as Bhadanta while in the votive inscriptions of Dasa ratha, the grandson and successor of Asoka they are invariably honoured with such a prefix.

5. Asoka's statement that for a little over two and a-half years he remained a *upasaka* and subsequently became associated with the Buddhist Sangha, is clear enough to indicate that he embraced the doctrines of Gautama. If it be not taken to imply his change of faith in favour of Buddhism the successive periods of time during which he remained a *upasaka* and became associated with the Sangha are rendered unmeaning.

6. The first Minor Rock Edict which is an instance of *Dhammavajjana* avetiya or the Buddhist cardinal principle of *Parakrama* or *Apramada*.

7. Asoka in his Bhabru Edict assures the members of the Buddhist Brethren of his deep and extensive faith in the Buddhist Triad which he could not have done if he were not a Buddhist.

8. In the same Bhabru Edict, Asoka has been concerned to recommend seven texts selected out of the Buddhist scriptures then known to him for the constant study and meditation by the Bhikkhus Bhikkhunis Upasakas and Upasikas of the Buddhist community and that with a view to making the Good Faith long endure. If he had been a non-Buddhist, he would not have referred to Buddhism

as *Saddhamma*, nor interested himself to make it long endure and ventured to recommend the selections made by him out of the Buddhist scriptures for the constant study among the Buddhists.

9. Asoka honoured all the sects with various kinds of honours in the sense that he showed various kinds of favours to them. If he had tolerated the different faith and impartially protected the law, he did so as a wise Indian monarch.

A Suggestion for Muhammadans

The editor of *The Vedic Magazine* writes with reference to the Muslim agitation to secure punishment for attacks on their prophet

It were far better to trust in the morals of the Prophet himself than in any uproar which the Muslims could raise against attacks on his life. For the former alone can stand the onset of time, while the latter is invariably found to be only a flimsy safeguard.

History is bound to sit in judgment on makers of history of whom Muhammad was surely one. Instead of strangling the voice even of his enemies let all have their say on the subject. The present is an age of liberty. Sometimes adverse criticism even if malicious has been found to pave the way to ultimate adoration.

It appears the faith of the Muslim in the intrinsic greatness of the Prophet is not deep enough or else the intellectual level that the Islamic community has yet reached is miserably low. The insensate campaign they have launched against both the Hindu community and the Punjab judiciary is doing the cause of Muhammad a distinct disservice. The book which they are denouncing has been read and re-read throughout the provinces in the course of this lengthy trial of M. Rappal in court. And now that the Muhammadan row against it is growing louder and louder attention even of persons indifferent to religion is being drawn to it, and men of non-partisan mentality are getting confirmed in the belief that Muhammadan intellect must have found itself incapable of answering the attacks of non-Muslims in open polemics so as to have taken recourse to uproarious protests and frantic appeals to the Government.

German Trade and Shipping in Asia

Mr St Nihal Singh has contributed an article to *Welfare* to show how the Germans are gradually recovering their Asiatic trade with amazing rapidity and success. Here are some extracts

What business had those intensely patriotic Britons on board a German ship? Why were they

not travelling on a British steamer? Surely there were ships flying the Union Jack going from the Far Eastern to European ports of call. They, however, would have had to pay more had they travelled by a British instead of a German liner.

Even the Jap' mail costs more,' said a lady of British extraction while discussing this matter with me. Another passenger—also an Anglo-Saxon—had calculated that if he had taken a British boat from Shanghai to Genoa instead of this it would have cost him nearly £20 more. Quite a consideration, especially when a man is travelling with his wife and two or three kiddies" was his comment.

In the chase for economy sight is soon lost of patriotism though *patriotism* bobs up in talk now and again. Inasmuch as Britons permit practical considerations to outweigh the patriotic impulses I am not a bit surprised at their proclivity to ascribe an action taken by members of another nationality to anything but a patriotic motive.

The Germans are winning back their trade because they possess many sterling qualities. They are both intelligent and industrious. Despite all libels upon their character they give remarkably good value for the money. They do not above all, become easily discouraged but persist in using every resource at their command until success crowns their efforts.

The *Derflinger* serves as a good example to illustrate the individual and national traits that are enabling Germany by degrees to overcome the handicap imposed upon her people by the war. The economy of labour with which efficiency was secured was really remarkable.

The steward who looked after my cabin cleaned it and also several other cabins near by. He helped, besides to wash the windows and polish the brass. He awaited at table each meal time. The man who made my bath ready every morning went to the printing office when all the baths were over and set up the type, printed the menus for the day and the news bulletins received by wireless and at meal time waited on table. So far as I could discover none of the stewards performed just one function but had other jobs to which he must apply himself when one was finished.

There were only two stewardesses for the whole ship—one for the first and the other for the second class. They had to prepare the baths for all the women and the children passengers clean the bath rooms and lavatories even to the extent of scrubbing the floors, and attend to any ladies who might be suffering from sea-sickness or other ailments.

I never saw such economy of labour on any British ship by which I travelled. The owners of such steamers usually resort to a different expedient in order to cut down the running expenses. They employ Indians or Chinese at ridiculously low wages instead of paying the union scale to their own countrymen, who would, as well, refuse to work beyond the union hours.

On the *Derflinger* the entire crew was German with the exception of the six Chinese employed to do laundry work.

Despite the economy of labour the service was quite good—certainly no worse than that I have had from British stewards on the Atlantic and elsewhere. The cabin was always cleaned, the

beds made and the washstand attended to by the time the officers made their tour of inspection daily, round about eleven o'clock in the morning.

Bengal Villages and revival of Cottage Industries

Mr Haradaya Nag writes in *Welfare*

Every one irrespective of sex and age has to pay some money in purchasing Lancashire cloth which may be fairly termed as tax. Even a poor family consisting of say five members must pay at least fifty rupees a year this it can hardly do without borrowing because it can hardly save any money for such a purpose. The destruction of cottage industries has thrown the bulk of village labour out of employment. There is no profitable use of this unemployed labour. The village people fully understand these difficulties but they do not know how to get out of them. Nothing but economic reconstruction of our villages can save them from their imminent economic ruin and such economic reconstruction must be based on the regeneration of our cottage industries. For such a purpose our village people are badly in need of intellectual strength and organising capacity. It is urged on behalf of the supporters of British Imperialism in India that cottage industries do not pay and cannot compete with the machine industries. Cottage industries may or may not bring riches to the villages but they are sure to provide the impoverished villagers with sufficient food and clothing which they are so badly in need of. The question of competition does not arise when one who has not money to buy cheap foreign goods, has to provide himself with the bare necessities of life. Under the existing circumstances nothing but revival of cottage industries can save them from the all devouring jaws of foreign exploitation. This should be brought home to the people of our dying villages by our selfless intellectuals and sacrificing patriots.

Pauni's Excellence as a Grammarian

Prof. I J S Taraporewala writes in *The Calcutta Review*

Pauni avoids the confusion naturally caused in the Western system of grammar. We, who have learnt according to the Western system, have an idea that there is some inherent power in the concept itself in other words that there is a sort of *sabdo sakti*, which determines the part of speech. This confusion arises, as we have seen because the compilers of grammars in the West have had no special terminology of their own but have borrowed it from the science of thought. In fact, until quite recently, there had been practically no investigation of grammar *qua* grammar in the West. Pauni on the other hand, keeps the science of thought strictly apart and confines himself solely to the analysis of the *language*. And in the course of his investigations

students Students get up early in the morning and after finishing their morning rites sit meditate for 15 minutes like young *Rishis*. After their individual meditation they all gather together in a circle and sing a hymn from the *Upanishads*. This is again performed in the evening after sunset Every Wednesday being a holiday all the students and teachers attend the sermon in the *mandir*. Rabindranath himself when he is not absent from the *ashram* conducts the sermon. All the inmates anxiously wait for Wednesday to hear Rabindranath revealing the depths of many problems of the world in his peculiar fluent and poetic language. Those who have not heard him speaking cannot have any idea of how he delivers his sermons. That one hour of Wednesday in the *mandir* will be the happiest and noblest hour in the whole week and they leave the *mandir* feeling that they have learnt something tangible. Every day before they begin their class-work they have *Bairah*, a religious song from Gitanjah or some other book sung in a chorus and another song before they go to bed after their daily routine. Thus religious instruction is imparted to the students.

The recent Great War had horrified Rabindranath a great deal. He had seen how every country in the West had fallen a victim to the heinous crimes of war which are with great pride performed in the name of patriotism and nationalism. He also had found out how detrimental the spirit was to the establishment of world peace. This demon of false patriotism and aggressive nationalism had not allowed him to rest in peace and he was greatly troubled by it. He had thought about the problem deeply and had come to the conclusion that unless these countries are tied with silken cords of cultural unity world peace could not be established. He thought that an exchange of the knowledge of different cultures would make the people understand each other thoroughly by which there would be an end to these wars.

With this idea in his mind, he founded the Vishva Bharati or International University at Santiniketan in 1921 to provide a centre where scholars from East and West could gather together and exchange their thoughts. Scholars from France Germany Italy Norway China Tibet Russia and other countries have already responded to the bugle call of Vishva-Bharati.

There are no class rooms or lecture-halls at Santiniketan. Classes are held in the open air under the green shade trees and in the verandas or dormitories during rains. Class work is conducted from 7 to 10-30 in the morning and from 2 to 4-30 in the afternoon. Only Wednesday full moon and new moon days are observed as holidays. There is regular arrangement for teaching from infant standard to B. A. and also there is the Vidyabhavan department where students are given facilities in Indology philosophy and comparative philology etc. There are both boys and girls in all classes and special arrangements are made for lodging and boarding for the girls. The small boys and girls have their own special departments and they are kept under direct supervision of expert educationalists. They have their own library association game, poultry gardening masonry etc. and are the objects of envy for all the inmates of the *ashram*, not excluding even the founder. They live in perfect happiness and cheerfulness and love

the *ashram* more than their homes. Specific arrangements are made for painting and music and this is the most successful department in Santiniketan. This forms the pivot of the congenial atmosphere of the place which is at the same time artistic poetic and musical yet very simple.

Students leave Santiniketan reluctantly as the social functions are so varying and interesting.

Every day there will be some entertainment or other literary associations recitation competitions, picnics feasts musical entertainments enacting dramas and so many other varieties of activities which keep the inmates ever active and cheerful. Poet Rabindranath himself very many times takes part in these functions specially in musical entertainments and dramas.

Santiniketan students are known as very good sportsmen in Calcutta and other mofussils. Football hockey cricket and tennis are their favourite games and they will be winning trophies every year. Very many students do exercise regularly both in the morning and evening and they are expert boxers wrestlers and fencers. There are well trained volunteers who go and render their services in all big gatherings in the vicinity.

We have expressed our difficulty in undertaking this great task of writing this article about our alma mater and we hope that this brief survey will give an idea of Santiniketan its ideals and activities to the readers.

The Staff of Veterinary Colleges

The editor of *The Indian Veterinary Journal* says

A lecturer on Rs 120 or even less is a common sight in some of the veterinary colleges. Is it not necessary that a certain amount of dignity or shall we say sanctity should be attached to the post of a lecturer? If the Veterinary Advisers themselves can submit to the present state of treating their lecturers as such cheap men who else would regard them (the lecturers) as men worthy to train the future Veterinary Surgeons of this land? How will the Alumni of such colleges be valued in the world? Cheapness is generally associated with bad labour. But it is unfair to suggest that the present incumbents are in any way lacking to justify the confidence placed in them. Our contention is that by merit and the responsible nature of the work alone if by nothing else they deserve to be raised to the Provincial gazetted rank. Prudence, necessity and professional dignity all point in the same direction. How many Veterinary Advisers have moved in this matter?

Every province must have its own centre for production of Sera. The necessity for this is being felt more and more every day. What aggressive proposals have been placed before the Local Governments by their respective Veterinary Advisers? Will the Government dare to oppose such a measure? We hope not. Only we fear the matter is not pressed upon them as it ought to.

A comprehensive scheme of the extension of rural areas should be

he has fully understood the nature of the language he is analysing he has grasped firmly the fact that the sentence is the unit of language and he has therefore laid down that the grammatical worth of a word (in Sanskrit) is not dependent upon the concept embodied in it but is to be determined by the ending which has been added to it

Hinduism and Proselytisation

Professor Dr Sunilkumar Chatterjee writes in the *Hindu Mission Bulletin*

One of the most noteworthy epigraphical documents of ancient India is the Besnagar Pillar Inscription in Gwahor state. It is in early Prakrit and in ancient Brahmi characters of the second or third century B.C. and is inscribed on a stone column which had the figure of Garuda, the divine bird vehicle of Vishnu on the top. The inscription records that this pillar this Garuda-dhvaja of Vasudeva, the God of the Gods (*Devadevaya Vasudevaya Garudaadvaya*) was set up by a Greek named Heliodoros, the son of Dion, who was the ambassador (Duta) from a Greek king of the North Western Frontier of India named Antalkidas to the court of a Hindu Rung Kasinutra Bhacabhadra. Heliodoros called himself a Bhagavata, that is a follower of Vishnu a Vaishnava.

This inscription is an incontrovertible evidence of Orthodox Hindu (i.e. Brahmanical as opposed to Buddhist, Jain and other heterodox non Brahmanical form of Hinduism) proselytisation of foreign Mlechha peoples in times before Christ.

Other evidence is not lacking. The Sakas, the Parthians and other foreign tribes like the Greeks were completely Hinduised and in most cases they were accepted as Kshatriyas in the Orthodox Hindu community. In two or three generations non Indian names like Zamotika, Damazada, Kamishka, Huvishka, Mihiragula etc. give place to Jayadaman, Rudradaman, Vasudeva and other Sanskrit names showing their Hinduisation. Large Indian communities which are now regarded by all as Orthodox and Hindu have been shown by historians to be of foreign and non Hindu origin. Even within recent centuries, the Ahoms of Assam a Shan tribe allied to the Siamese, have become completely Hinduised names like Sukapha and Suklenpha for instance are given up for Visvesvara Sinha and Gadadhara Sinha.

Conversion of original non Hindu to orthodox Hinduism with the authority of the Brahmins has ever been a common event in the History of the Hindu people. The History of India in the early phase is in its cultural side is the History of the expansion of Hindu organisation and Hindu spiritual and philosophical ideals from the Punjab and the upper Ganges valley (the true Aryavarta) to the outlying tracts. This cultural expansion is still at work—silently slowly and surely without any heat or conscious propaganda through the innate force of the Hindu world of ideas among the rude peoples on the borders of the Hinduised tracts in Chota Nagpur in Assam, in Nepal in the Central Provinces—among the Kols, the Bodos

the Nagas, the Magars and Gurungs the Gonds and others.

Orthodox Hinduism in the ancient days when it had not lost its vitality overflowed spontaneously the natural boundaries of India and was carried to the outlying lands—to Burma (Suvannabhumi) to Siam (Dvaravati) to Cambodia (Kamboja) to Cochun China (Champa) to Malaya (Kataha) to Sumatra (Srivijaya) to Java (Javadvipa) to Bali to Borneo (Barina). The original peoples were converted to orthodox Brahmanical Hinduism with Brahman priests from India and Vedic sacrifices and this we know from Sanskrit inscriptions found in those lands later Buddhism followed suit. Even at the present day the people of Bali retain their Hindu religion with the Hindu Gods, ritual of worship and philosophy and even the Hindu caste system. Brahmanical Hindu Gods and Goddesses like Yama, Indra, Kubera, Sarasvati etc. are even to-day worshipped and honoured in Japan. Hinduism spread as a cultural force no doubt but its ethical and philosophical doctrines brought about no less a civilising and humanising influence on the outlook of the peoples (whether in India) who adopted it, spread along the path of peace only there is no evidence anywhere to suggest that it followed the path of the sword.

Santiniketan

Mr B G Reddy writes in *The Volunteer*

Rabindranath has a religious temperament from the very beginning which we can trace in his earlier poems. He is very well versed in Hindu scriptures, and he is second to none in his great admiration for Vedic India. Nevertheless he never failed to discern the degeneration of Modern India, from his Himalayan summits of learning and wisdom. He found that the clear stream of reason instead of fertilising the minds of people, has lost its way into the dreary desert sands and dread habits. And in founding his small ashram at Santiniketan he had laid the foundation stone for a big aqueduct to make the stream take its course through its former channels.

The second intention of the founder was to give perfect freedom of thought to his students. He himself was a great lover of that liberty and tasted its delicious fruits even in his monage. He wanted to give the same liberty he enjoyed to his pupils and allow them to have their own course of study thus giving them scope for a full expression of their thought and creative power. In other institutions when a boy is found to possess different taste and capability his teachers will take particular care to check and curb them so that he may not fail in his history or geography examination. The result will naturally be a dis-pleasure towards any sort of learning in Santiniketan the students are saved from such misery.

Students have their own elected captains who look after their discipline. The teachers have practically nothing to do with their general conduct. Any misbehaviour of any student will be considered by the Panchayat or the committee of the

students. Students get up early in the morning and after finishing their morning rites, sit meditate for 15 minutes like young *Jashis*. After their individual meditation they all gather together in a circle and sing a hymn from the *Ipanishads*. This is again performed in the evening after sunset. Every Wednesday being a holiday all the students and teachers attend the sermon in the *mandir*. Rabindranath himself when he is not absent from the *Ashram* conducts the sermon. All the inmates anxiously wait for Wednesday to hear Rabindranath revealing the depths of many problems of the world in his peculiarly fluent and poetic language. Those who have not heard him speaking cannot have any idea of how he delivers his sermons. That one hour of Wednesday in the *mandir* will be the happiest and noblest hour in the whole week and they leave the *mandir* feeling that they have learnt something tangible. Every day before they begin their class work they have "Baitalik, a religious song from Gitanjali or some other book sung in a chorus and another song before they go to bed after their daily routine. Thus religious instruction is imparted to the students.

The recent Great War had horrified Rabindranath a great deal. He had seen how every country in the West had fallen a victim to the heinous crimes of war which are with great pride performed in the name of patriotism and nationalism. He also had found out how detrimental the spirit was to the establishment of world peace. This demon of false patriotism and aggressive nationalism had not allowed him to rest in peace and he was greatly troubled by it. He had thought about the problem deeply and had come to the conclusion that unless these countries are tied with silken cords of cultural unity, world peace could not be established. He thought that an exchange of the knowledge of different cultures would make the people understand each other thoroughly by which there would be an end to these wars.

With this idea in his mind, he founded the Vishva Bharati or international University at Santiniketan in 1921 to provide a centre where scholars from East and West could gather together and exchange their thoughts. Scholars from France, Germany, Italy, Norway, China, Tibet, Russia and other countries have already responded to the gentle call of Vishva-Bharati.

There are no class-rooms or lecture-halls at Santiniketan. Classes are held in the open air under the green shade trees and in the verandas of dormitories during rains. Class work is conducted from 7 to 10.30 in the morning and from 2 to 4.30 in the afternoon. Only Wednesday full moon and new moon days are observed as holidays. There is regular arrangement for teaching from infant standard to B. The Staff of Veterinary Colleges

The editor of *The Indian Veterinary Journal* says

A lecturer on Rs 120 or even less is a common sight in some of the Veterinary colleges! Is it not necessary that a certain amount of dignity or shall we say sanctity should be attached to the post of a lecturer? If the Veterinary Advisers themselves can submit to the present state of treating their lecturers as such cheap men who else would regard them (the lecturers) as men worthy to train the future Veterinary Surgeons of this land? How will the Alumni of such colleges be valued in the world? Cheapness is generally associated with bad labour. But it is unfair to suggest that the present incumbents are in any way lacking to justify the confidence placed in them. Our contention is that by merit and the responsible nature of the work alone if by nothing else, they deserve to be raised to the Provincial gazetted rank. Prudence, necessity and professional dignity all point in the same direction. How many Veterinary Advisers have moved in this matter?

Every province must have its own centre for production of Sera. The necessity for this is being felt more and more every day. What aggressive proposals have been placed before the Local Governments by their respective Veterinary Advisers? Will the Government dare to oppose such a measure? We hope not. Only we fear the matter is not pressed upon them as it ought to.

A comprehensive scheme of the extension of Veterinary rural areas should be arrived

There ought to be a Provincial gazetted officer at the head of each district as in the case of the medical department. He should be held responsible for efficient control of any contagious disease with in his district. He can help research work from the field and direct the activities of the assistants under him in the best interests of the ryots at large.

Hand and Mind

We pick out at random the following passages from D Spencer Hatch's stimulating article on Hand and Mind in *The Young Men of India*

Misguided youths and possibly certain communities will hardly understand these recent words of President Coolidge

I like to dispense with the kind of service that is necessary for me to have at the White House and wait on myself. If I find a strap is broken I like to get out the tools that are used by shoe makers and harness makers make a wax end and repair it. I like to do a little blacksmithing around what is left of our old shop try my hand again with the carpenter's tools go out and repair the fence when it is breaking down and mend the latch on the kitchen door. Most people in this country do these things themselves and do not hire them done. I want to keep in mind how people live and what is necessary for them to do to get along and meet their bills out of their ordinary income. My father and my people led that kind of a life which is altogether natural and wholesome. It seems to me to be the foundation of independence.

The Board of Educational Survey in its recently published survey of the Educational System of the Philippine Islands has this to say

The building in which the school is to be housed should be erected by the pupils under the guidance of the teachers. In certain places this is done now and is found to be entirely feasible. Thus by placing responsibility for the construction of the buildings squarely on the shoulders of the pupils a twofold educational result is achieved. The pupils are made to acquire certain desirable carpentry skill and through the example of teachers whom they respect are taught a respect for manual labour.

For similar reasons the upkeep of the school plant should be a charge upon the pupils. All repair work should be undertaken by them under the direction of proper instructors. There should be no janitors in these schools. One of the fine things in the elementary school noted by the members of the Commission was the pride exhibited by the pupils in keeping their buildings clean. Each building had its various squads for sweeping and polishing the floors and for the removal of waste. In sharp contrast was the situation found in the regular high school. Here there was a rule to prohibit the part of the pupils in a clean and well-ordered physical plant. Instead there was a well-ordered antipathy towards manual labour. In their minds the life of the student is incompatible with work with hands. If such a

spirit creeps into the rural high school its doors may as well be closed.

In 1921, commodities were produced in Philippine school gardens and on school farms to the value of 500,000 (approximately Rs 1,00,000) but, of course the value of the product in money is nothing to the value of the instruction given to the country.

The Government Unemployment Committee are now asking us what changes can be made in our system of education to prevent such an unemployment problem as we have among the educated classes of Travancore State where we have so much education. First and foremost, by all possible means, let the schools teach the dignity of labour.

At our Rural Demonstration Centre we find that the boys of the Weaving School really enjoy thatching the school themselves when thatching is necessary. The night school has had to meet in the Weaving school among the looms. The inconvenient place impressed upon the students the need of a better place for the night classes. They decided to build themselves a building and they are building it meeting in their spare time each day and putting it up with their own hands. When the deep well needs cleaning those who receive the benefits of the Demonstration Centre join together and clean it.

I have just been working out with the secretary in charge how much money must be provided for the new reading room, the daily weekly and monthly periodicals and the circulating library which is to serve the central village and the villages around. After estimating cost of books, periodicals, furniture and lamps I said Now what will be small building we must build for the library and reading room cost?

The answer was Oh we need provide nothing for that. The night school boys our Boy Scouts and the readers will put up the building themselves.

Serie-comic Aspiration of a Graduate

Parbati Kinkar Chatterjee writes in *St Xavier's Magazine*

After weary days of strenuous labour and toil through hope and despair I am at long last a graduate. From dreams let me turn to facts. I am not the son of a rich man and hence I cannot go in for a costly course of training. The medical and engineering lines are thus out of my reach. Post graduate studies are a fine cluster of grapes but of a kind that would set my teeth on edge. How about the Law College with its wide open doors and roomy passages? After three short years I could pass out with flying colours, but the envious eyes of starving colleagues would prove too much for me. The very thought of justifying in my own case the ruthless principle of 'the survival of the fittest' would drive me mad for it is one of the ideals of my life to live and let live. Clearly I am cut out for commerce. But how to begin? I have no almighty *Ishra sahib* among my relations to elbow me into a job, and worse luck, I own no widowed aunt who calls me sonny. Still,

I have not given up hope. Wealth may come from some unexpected source. Aladdin's lamp or an uncle from Australia. While there is life there is hope. If Othello could win the fair Desdemona could I not with my tolerable appearance find favour with some speculative father-in-law who would present me with his only Rebecca and half his kingdom. Never say die is my motto and I live on the glory of being a graduate.

A Remedy for Factionalisation of Holdings

Prof Radhakamal Mukerji observes in *Indian Journal of Economics*

An exchange or consolidation of holdings is imposable under the existing Tenancy Law of the United Provinces since occupancy tenants cannot be bought out. Where the land system stands in the way of restripment and consolidation we have to depend on the traditions of voluntary social co-operation. Such methods of solution are witnessed in the south where there are villages which are re-divided annually. But the tendency here is more marked because of the established communal tradition. Thus in Tanjore there are larger fields and holdings than in other districts. This points to a gradual consolidation of holdings under the supervision of the village *panchayats* which also supervise the equitable distribution of irrigation water, the maintenance of village public works etc. The exchange of plots of land so as to give the different owners contiguous blocks so far as possible is called *parivartanas* (Sanskrit—exchange) in Tanjore. It is difficult to come to an agreement because the advantages of plots as regards fertility, distance, irrigation facilities etc. have to be equalised and sometimes the rich peasant would refuse to exchange in such a way as to convenience a small neighbour and the small owner is often at the mercy of his rich neighbour. Similarly in Travancore consolidation of holdings is taking place, the tendency being for the owner of very small plots of land to sell them or to take more land on lease from others and thus enlarge the unit of cultivation. It may be advisable for the Government to initiate an experiment by acquiring villages under the Land Acquisition Act, realigning the land properly, providing proper drainage and irrigation channels and then reletting to the original tenants. This would furnish a valuable object lesson though such lessons can not serve the purposes of legislation or voluntary adjustment by the villagers themselves.

That is particularly true of the American industries which consume rubber—firms engaged in making tyres, hosiery etc.—which between them absorb four fifths of the world's annual supply. Investigation has shown them that the rubber plant thrives in certain islands comprised in the archipelago and they are intent upon the production of rubber in them under their own control, as that is the only way in which they can outwit the producers of rubber in Ceylon and the Malay Straits Settlement where the application of a scheme of restriction of output has led to a considerable rise in price.

As the industries expand in the United States and the system of mass production tremendously increases the output the need for new markets becomes clamant. Control of the Philippine tariff which the Philippine legislature cannot change without American consent, enables the American manufacturers and exporters largely to monopolize the Philippine market.

The retention of the Islands under American Tutelage serves even a more useful purpose inasmuch as they lie near the trade routes connecting the New World with the Orient, and can be utilized as a jumping off ground for the acquisition of the Chinese and other Eastern markets with almost limitless potentialities for the absorption of American goods markets for which Americans are hankering.

The domination of the Philippines puffs up the pride of the pre-joying American. It makes him feel that his people too, are the arbiters of another nation's fate. Contact with Europe during the war and the acquisition of wealth during and after the conflict have resulted in the development of these tendencies to a degree undreamt of by stay at home Indians.

Americans who call themselves Democrats are as much affected by these or at least some of these tendencies as Americans who delight in proclaiming themselves as Republicans. The movement for freeing the Filipinos from American tutelage has therefore received a rude set back.

The struggle in which the Filipino leaders and the Americans are at present interlocked shows for one thing that a legislature composed of members of one race which lacks effective control over the executive composed of men of another race cannot work harmoniously nor can it be the arbiter even in respect of affairs in which it is supposed to possess autonomous powers. It also demonstrates the folly of entertaining the hope that through the establishment of conventions and extra legal organs a subject people can graduate out of their tutelage to another people.

Railways and Air Transport

We read in the *Indian and Eastern Engineer*

Mr St. Nihal Singh thus concludes an article in *The Hindustan Review* on American imperialism in the Philippines

The Big interest in the United States are opposed to giving independence to the Philippines

All parties are cordially in agreement in acknowledging the wonderful feats of the arm of today and their achievements in the past few years but it is well not to let our eyes be so dazzled by the brilliance of their achievements as to blind us to the tremendous accomplishments of railway

Half an Hour's Daily Outdoor Exercise

Dr S L Bhandari advocates deep breathing in the D A V College Union Magazine and gives detailed instructions as to how it is to be done. He says

Average span of human life in India is 25 years only. Nature has guaranteed it up to 100 years. Is it not a good news young reader if I tell you that every one of you can live up to 100 years. If you are too idle to give half an hour daily to an outdoor healthy exercise it is no body else's fault. It is foolish economy to grudge giving half an hour daily but to give 72 years at the end. Remember consumption is a disease of the young. It is very rare after 30 years of age. Don't say there is no time. Surely we get plenty of time when sickness knocks at the door.

Death and disease hear no excuses

Reminiscences of Vivekananda

Mr A Srinivasa Pai B.A. B.L. gives some reminiscences of Swami Vivekananda in *The Scholar*. There are some of them

Informational talks in the mornings and answering of questions were arranged for in a pandal put up on the Marina, near the old Capper House Hotel somewhere near the site of the present premises of Queen Mary's College. Now the leaders of Hindu Society in Madras, the Officials and Vakils and people in hundreds came and we students found it hard to get near to the Swami. One morning a European Lady (a Protestant missionary I believe) came and spoke somewhat disparagingly of the enforced celibacy of a Sanyasin's life and of the harmful results of the starving of a noble instinct (noble when rightly regulated). After a short psychological and philosophical explanation of the necessity of celibacy in a Sanyasin (which perhaps was not quite appreciated or understood by the lady) he turned to her and said half humorously. In your country Madam a bachelor is feared. But here you see they are worshipping me a bachelor.

Once he said to a number of young students in the audience that it was their first duty to cultivate physical strength and health. You may have the Geeta in your left hand but have football in your right. He expressed on one occasion the view that it was the men who were physically weak that yielded to temptations easily and that those with plenty of physical vigour and strength were far better able to resist temptations and exercise self-control than the former.

When the effect of religious beliefs (Hindu and Christian) on the masses came up for discussion Vivekananda said. If like me you had visited the slums of Europe and America and seen how near to brutes the inhabitants of those slums are and then compared them with our masses in India your doubts as to the effect of Hindu religious beliefs on the masses would have vanished.

School Education and the Stage

Mr S Subramanyam B.A., L.T., writes in the *Educational Review* —

I think I will be raising a storm of protest from the citadel of orthodoxy in our Hindu society if I were to say that the stage also takes a prominent place in the education of children. All the more so an Amateur Saba in educating the ignorant adults of our poorly educated country. Or rather I might be allowed to state at the outset placed as we are under a foreign country which has paid scant attention to education is still talked of and bringing it into force is left to the sweet whims and fancies of the Taluk Board Presidents and Chairmen of Municipal Councils while the all-solitude Education Ministers would not make it the policy of the Government, it is the only programme for India.

To return to the subject, not to speak of the appeal in sight to children the dead past becomes a living present at the hands of a resourceful teacher who instead of simply visualising an incident, can make the boys act and feel the incident themselves. So then it should become the important programme of every school to train boys to take to the stage even from childhood, lest they should cultivate the abhorrence at a later period of life. Of course I do not mean everybody in a school should be an actor but those that have the aptitude should be properly guided and encouraged. The end of a term the school anniversary day and other important events in the school should not be missed to stage a play either in English or in English or in Tamil or in both.

Then we come to the choice of plays suited to the age. What kind of play suits the children best, the boy best and the adult best? The question can be straightaway answered that staging farces and small plays having short duration would gladden the young minds stir up their imagination and provoke thoughts. Historical incidents even concerning a hero and social dramas would be well suited for the boys. As for the grownups the tragedies and the comedies plays involving great moral truths and plays intended to eradicate pernicious social customs and superstitions might be availed of.

Relationship of Canal Irrigation and Malaria

In the *Agricultural Journal of India* Lieut. Colonel C A Gill I.M.S. examines the widely current belief that an increased incidence of malaria is an inevitable accompaniment of canal irrigation and comes to the following definite conclusions

(1) Canal irrigation is not a factor of any importance in determining the incidence or severity of epidemics of malaria.

(2) It can be asserted with equal confidence that open field irrigation has not been responsible for any appreciable general increase of endemic malaria.

(3) As a general statement it may safely be

concluded that the salubrity (so far as malaria is concerned) of irrigated tracts compares favorably with unirrigated areas.

(1) As a partial exception to the general rule it is certain that wherever canal irrigation gives rise to water-logging a vicious circle is set up in which endemic malaria leads to bad health, bad health to economic stress to further privation and more sickness and finally to the combined result of a high death rate, a low birth rate and emigration to the depopulation of the affected tract.

(2) It is concluded that an appreciable increase in the incidence of malaria is not a necessary concomitant of canal irrigation but that canal irrigation may become gravely prejudicial to health when it is wrongfully applied or improperly carried out.

(3) There is ample justification for the statement that canal irrigation has proved a great blessing (save in a few areas) and that systematic water lowering is not allowed to arise. It is calculated to increase the wealth and prosperity of the Punjab and to promote the health and well-being of its inhabitants.

Begging in London

In the course of his chatty article an Indian in Western Europe in *The Carland* Mr A. S. Pinchpape a *Day* says —

While going about London sight seeing I had occasion to observe causally some things which threw a flood of light on certain aspects of English life. Begging in the streets is prohibited in London and the police arrest beggars. But the begging instinct is too strong in some men to be eradicated altogether. Hence I found two or three ingenious devices by which the spirit of begging was preserved while discarding the letter. These several men mostly ex-service men were grinding hand organs at peoples doors producing an intolerable noise mis-called music. Generally the house-owners preferred to pay something than allow the dreadful noise to afflict their ears. Another method is by drawing some ridiculous figures or pictures on the pavement and taking whatever charitable passers by give. I told one such man after giving him a three-penny bit. Why this is sheer laggery.

No sir replied he. It is an appeal to your artistic charity and generosity and that is no offence. A third device is by pretending to sell boxes of matches. To one who pestered me to buy a box of matches urging that I would require it for lighting cigars and cigarettes I replied that I didn't smoke and so I didn't want his matches. It won't hurt you sir to pay a penny for a poor man seeing that you save a lot by not smoking. was the resourceful reply. Needless to say I paid a penny and went my way. Other disguised laggery sell picture cards, sensors, etc in a similar fashion.

FOREIGN PERIODICALS

The student Movement in China

Paul Chih Meng a Chinese Christian considers the effects of foreign education received by Chinese students in *Current History* and says —

Whether returned students are still needed in China has been a popular subject for discussion. Some ventured the opinion that the returned students usually import only Western manners and superficialities. Those who studied in France have brought the swimming, limbo, shrugging shoulders and a few pleasant vices. Those from Germany introduced the beer, the military bearing and the close-cropped hair. England has given them though not the monocle, the brocel and the aristocratic air. Returned students from America are most not only with carapuz, flares, cal lenges and slogans. Their American speech is more nervous noise while their feminism does not go beyond bobbed hair, sport skirts and the new dance steps.

But in history the Chinese student migration has influenced China's national life in various ways during various periods. It brought the influence of Western Europe immediately after the opium war until the Sino-Japanese War from

the rise of Japan with the revolution of 1911 Japan's modernization and reforms influenced China through the returned students. America's expressions of friendship as evidenced in the open-door policy of John Hay and the return of the indemnity credits in 1908 have attracted a large number of Chinese students each year for the last twenty-five years. Since the Republic of China was formed returned students from the United States have become the most influential group in the different fields of China's national life. In 1921 Soviet Russia recognized her special privileges in China and raised with Chinese students the question of a industrial revolution to emancipate the oppressed nations and peoples of the Orient. With the founding of Sun Yat sen University in Moscow the number of Chinese students has tripled since 1913. Whether Russia will displace America in cultural influence in China depends upon whether America will make good the ideal of political self-determination which she imparted to the Chinese students.

The Chinese student migration therefore has stimulated reforms helped in the making of a new China, and above all it has brought to China new cultural elements that made possible creative thinking, social progress, an enlarged outlook and national and racial consciousness.

engineers or the quiet rapidity with which they are extending the iron road all over the world. The airplanes intended for the Cairo-Karachi service are probably capable of carrying about 3,000 lbs each dead weight of passengers and luggage whereas the corresponding figure in a railway train might well reach between two or three million pounds. However engrossing a future our imaginative writers may draw of a world in which transit and transport will all take place in the air we feel convinced ourselves that it is only a future and not a very near one at that. There is no need to sell railway shares on this ground as yet or to speculate unduly in airlines. There is yet a tremendous future of expansion for the railways of the world ere circumstances call. Halt! and extensions are no longer the order of the day.

various races and cultures. It is only in the periods of its decay that it seems to forget its universal character and mission and becomes a bundle of negations. Once again it is waking up and calling forth its pristine nature, and its present communal struggle is really the first onrush of its resurgent life.

It is our deliberate opinion that the realisation of the Indian national unity and also of international unity is peculiarly and mainly the concern of the Hindus. They of all people are best fitted by history to accomplish it. It is not by the equal co-ordination of the self-contained communities but by the leadership of one and the obedient following of the rest that all great unions become possible. Hinduism has to provide this great leadership.

That is why we do not consider the present communal troubles as absolutely evil. Evil they are but a necessary evil. For through these clashes with other communities and through sufferings from their onslaughts Hinduism is learning to divest itself of its credal limitations and discover the greater hidden unity behind its negations. The requirements of the situation are teaching it to discover its historical purpose and its immortal strength.

Hinduism and Indian National Unity

The editor of *Prabudha Bharata* observes

In the realisation of the Indian national unity Hinduism must supply the nucleus and pattern of crystallisation. What is our national ideal? It is as we have pointed out before the spiritualisation of life. No other culture or religion has stood for it so clearly and unflinchingly as Hinduism. This has been her one constant main endeavour through the course of her long history. All other Indian communities also must accept this as their ideal. We know that unless this motive is already existent among the different communities, Hinduism cannot force it into them. But this is already present in all men all over the world in greater or less degree. The tendency to spiritualisation is the fundamental motive of all human life. Hinduism only emphasises it and seeks to make it consciously active in order to a rapid development. Therefore this would be no innovation with the other communities. And there is that in India's atmosphere which slowly induces all to follow the sacred path to spiritual self-realisation. By and by all come under the magic spell of her great ideal. Besides the turn of the world events has made it more imperative than ever that all life individual or national must be concerned spiritually if we are to escape final disaster. No communities in India therefore have any valid reason to deny the ideal that Hinduism holds forth.

But in order that Hinduism may become the basis and the guiding spirit of Indian nationalism it is absolutely necessary that it should conceive itself as super credal as the meeting ground of all the different cultures. So long as Hinduism thinks of itself as a stereotyped form bound and limited by infinite details of negation it cannot be the foundation of that which is the Indian nationality and which is also consequently the international unity—for India is really the epitome of the world. Hinduism must shed its crude limitations and must become again the grand synthesis of the age. Hinduism in its original character is always super credal. Acceptance as it does the truth of all spiritual experience and the validity of all honest methods for its realisation it has always provided infinite scope for the accommodation of

The Buddhist Revival in Ceylon

The Rev C H S Ward writes in *The National Christian Review*

The Buddhist Revival is stirring the hearts of Buddhists in every part of the Island and their enthusiasm for reforms grows in intensity from year to year.

Great interest is being shown in the reform of the *Sangha*, the Buddhist Priesthood. It is generally deplored that so many Bhikkhus have burdened themselves with worldly goods. Let the monk throw the goods overboard and save the ship from sinking. We view with concern this alarming increase of the number of Buddhist monks (7,000) who ultimately have to live on the charity of the land idling away the livelong hours not fulfilling their duty to their family or their obligations to the Order to which they have dedicated their lives.

There is an increasing desire for the better education of the Bhikkhus. More attention is now being devoted to their studies but it is felt that holy living and high thinking ought to be cultivated along with scholastic studies. It is pleasant to note that English is being taught in some classes but it is too early yet to pass any judgement on the results.

Some Buddhist laymen desire to have their Bhikkhus given a thoroughly up-to-date education and training for their work, such as is given to Christian ministers. This scheme however does not meet with general acceptance. Many Buddhists fear that such a training would be too unsettling and would be much more likely to render the young men unfit for their future work than to prepare them for it.

Regular public services are held in some Buddhist halls at which sermons are preached.

from Pale texts and a big Buddhist Street preaching Campaign was attempted some years ago in Colombo, on the lines of the Colombo City Mission's work. This movement aroused a good deal of enthusiasm at first, and there were many speakers and big crowds. But soon the novelty wore off and it was given up.

Since about the year 1890 when Madame Blavatsky and Colonel Olcott came to Ceylon as the champions of Buddhism against Christianity it has been the settled policy of the Buddhists to establish a vernacular school in every village where a Christian school had been opened. The movement was slow at first, but now there are hundreds of such schools, and they have been so successful that a very large number of Christian schools have had to be closed in consequence.

But notwithstanding all these movements and the energy that is being expended upon them I have been able to find little evidence of genuine revival of Buddhism as a religion and a system of ethics.

The revival of Buddhism does not appear to have penetrated to the innermost lives of the people, and the reason for this is clear. The movement did not originate in a widespread sense of spiritual need. Fear of Christianity and the new spirit of Nationalism are chiefly responsible for the Buddhist activities of the last fifty years.

1. The almost universal prevalence of idolatry and demon worship

2. The prevalence of crimes of violence in the Buddhist sections of Ceylon.

Importance of small Gains in South Africa

Mr C F Andrews discourses in *The Indian Review* on the real problem in South Africa. He says

At the very beginning of the struggle in South Africa, Dr Norman Leys wrote to me from England and said, that if only a very slight gain could be obtained against the imposition of segregation in South Africa at a time when the tide was running so strongly in its favour all up and down Africa, it would indeed be well worth while fighting on to the end. For a victory however small, gained in South Africa in the struggle against segregation would have its reactions right up as far as Kenya and Uganda.

My hope is that though under this India Agreement, we have not obtained for resident Indians all we asked for or required, nevertheless something has been done to stem the tide of segregation. In the long run therefore we may hope that the good work now begun may be continued and that the effects of it may be felt far beyond the boundaries of South Africa into Central Africa also and all along the East Coast. For if it is possible even for one generation, to prevent the enforcement of segregation then human nature with its kinder instincts will in the long run, be likely to get the upper hand and among the younger people who are growing

to manhood and womanhood those kinder instincts will prevail that are the saving graces of man kind

So called Transfer of Merit in Buddhism

Mang San Tha writes in *The Bymeah High School Magazine*

Buddhists believe that after performing an act of piety they should share the merit of a craving therefrom with other living beings. This act is termed *pāṇidāna* (sharing) which is made public in an audible tone by the world. Take a share. The hearer on his part accepts the share and exclaims 'Well done I accept it.' This act constitutes *pattanumodana* (acceptance).

Regarding this most Buddhists themselves do not know how they acquire the merit, though Pousin's riddle seems no riddle at all to them.

Pousin alludes to some of the Buddha's statements when he says that Merit is strictly personal. Probably it means the last words of the Buddha on his death bed.

Appamadena Sampadetha — Exert yourselves diligently

Elsewhere too mention is made to the effect that in life we must work out our own salvation by ourselves. For Buddhas can only point out to being the right path. The exertion lies within the power of the beings who desire merit.

If the above statements are true there can be no question of transfer or share of merit. No one can have a portion of another's merit. It is a double edged puzzle.

To understand thoroughly any intricate point in the religion of the Blessed Master a seeker after knowledge is to bear in mind one main principle: the volition will or action in the mind. The importance of the play of mind cannot be over estimated. Almost all questions in Buddhism can be explained in terms of mind power.

When a devout Buddhist has accomplished an act of merit he calls on the living beings to take share in it in the prescribed formula mentioned above. This is merely a form of intimation. He announces to them that he has done a meritorious act. The hearer on his part is glad to learn what his co-religionist has done in a moment many pious thoughts flash across his mind. He thinks of the good deeds the sharer has done. He begins to remember all the virtues of the Buddha. With a heart full of joy he exclaims 'Well done. A volition has occurred, an action is made in the mind. He has willingly exerted to his heart's content. His acquisition of merit is proportionate to the extent to which he has exerted mentally. The term 'transfer of merit, or share of merit' is a misnomer. No body can in fact share his merit and there is none who is in a position to acquire it as gift. Personal exertion is necessary. The true idea ought to be aspiration after merit.

International Morality

We read in *The Japan Weekly Chronicle*

It was after Bismarck had retired from politics that he decided that each Government takes solely its own interest as the standard of its actions, however it may drape them with deductions of justice or sentiment," and the remark recurs to memory after reading what Mr Inahara has to say in the *Diplomatic Review* (translated elsewhere) on the relations of Japan China and Russia. Mr Inahara says that the isolation of Japan caused by the abrogation of the Anglo-Japanese agreement made it impossible for her to do anything else than seek an agreement with Russia but it may be pointed out that Japan was seeking an agreement with Russia during the war while the Anglo Japanese alliance still existed so it can hardly be considered that it was the abrogation of the Anglo Japanese alliance that forced Japan into two arms of the Soviet. Japan moreover is yielding to the embraces of the Soviet so very reluctantly that at the present rate of progress it will take a long time before complete accord is reached.

The profession of the Powers good will to China including that of Japan must be taken in a diplomatic sense. As Mr Leonard Woolf points out in an interesting little essay on international morality Hobbes' remark that in the relations of independent States right and wrong justice and injustice have no place still holds good and is likely to hold good. The world was conscious of this fact in good many years before the time of Hobbes for Mr Woolf quotes from Thucydides the words put into the mouth of an Athenian Ambassador to the effect that the question of justice only enters into the discussion of human affairs where the pressure or necessity is equal and that the powerful exact what they can and the weak grant what they must. The only reason why the powerful do not exact more than they do is that sometimes it is not to their own interests to take all a fact which seems to have escaped the Allies at Versailles when they laid such a heavy burden on the defeated that it has plunged the world into trouble ever since. They were showed themselves less acute than Wellington who asked to arbitrate over the questions of reparations at the end of the Nipponic wars gave the Allies far less than they were entitled to on the ground that the sacrifice was necessary and we should have got nothing if we had not made it which sounds like hard commonsense. Even a generous gesture like this appeared to have therefore at the back of it a basis of self interest, and it is still far removed from the ideal of a nation doing good to another for the sake of doing good an idea that almost arouses laughter, so quixotic it seems. Yet all Governments according to their own professions are solely bent upon doing good to their neighbours. All the Powers have expressed the most benevolent intentions towards China—within the bounds of course of their own interests—not being destroyed. Even the proviso has a moral air for evidently it is to the interests of China that she should keep her promises and not go back on her word. This is what Bismarck described as draping the actions with deductions

of justice or sentiment" a course which he himself pursued so successfully.

First Woman Judge in Germany

The appointment of a woman to a judgeship in Germany for the first time has led *The Woman Citizen* to write thus —

On May 18 the papers carried a despatch from Berlin saying that Dr Mari Hagemoeyer has become the first woman judge in Germany.

It brought memories. Just about twenty five years ago the first woman to study law in Germany Anta Augsburg finished her course. At that time Germany did not admit women to the practice of law. Women were not admitted to political organizations nor permitted to speak at political meetings nor even allowed to attend political meetings. Anta Augsburg proceeded to organize a suffrage committee in the free city of Hamburg with members elsewhere as well and to hold occasional meetings. She had said laughingly that the study of law had taught her to evade the law, and now she candidly called her organization by the innocuous name Hamburg Committee. Even so she had to secure the formal consent of the police before she could hold her meetings. Between that carefully guarded beginning and the granting of suffrage to German women stretched only sixteen years from first women law student to first woman judge only twenty five. The world does more—

Underpaid Teachers in America

Even in rich America teachers are underpaid and students are underpaying as would appear from the following passage in *The Literary Digest*

Colleges are turning students away because there are insufficient funds to provide facilities for teaching them. Why not charge more for tuition? The query is put by the Institute for Public Service in New York and the suggestion may cause some shock to parents and prospective students until the real conditions are examined. As it stands now with college teachers underpaid and college students underpaying so much that many of them spend on luxuries more than they spend on tuition the largest donor to colleges is the underpaid college teacher still the lowest paid of all white collar workers in proportion to native ability.

English Translation of Buddhist Scriptures

The Young Last reports

In view of the earnest hankering after the knowledge of Buddhism among the Western people, the West Honganji missionaries in America have recently filed a formal request with the West Honganji head quarters in Kyoto for immediate

translation into English of Buddhist scriptures. This was decided at a recent conference of those missionaries. The West Hmongan authorities are now studying the proposal because it is a matter of importance for the propagation of Buddhism among the English speaking nations. They say that the Hmongan authorities are going to attach to the English Buddhist scriptures an explanation of Mahayana Buddhism of creeds and ceremonies for Buddhist believers etc. Meantime the Buddhist world of Japan is considering the compilation of Buddhist scriptures in English German French Russian etc. in commemoration of the 2500th anniversary of the birth of Buddha which falls in 1934. It is said that the West Hmongan authorities will shortly appoint an editorial staff for the translation of Buddhist scriptures.

'Give us Men'

The following poem which the *China Journal* reproduces from *The North China Daily News*, may be read with profit in India also —

God give us men. The time demands strong
in his Great hearts true faith and willing hands
Men whom the lust of office does not kill
Men whom the spoils of office cannot buy
Men who possess opinions and a will
Men who have honour men who will not lie
Men who can stand before a demagogue
And dawn his treacherous flatteries without
winking
Tall men sun crowned who live above the fog
In public duty and in private thinking
For while the rabble with their thumb-screw creeds
Their large professions and their little deeds
Vizilo in selfish strife lo! Freedom weeps
Wrong rules the land and waiting Justice sleeps'
J G Holland

Buddhism and Christianity

The British Buddhist writes —

Thirteen hundred years ago Roman Catholic Christianity was planted in England. About the same time Mahammad established his religion of Islam and Japan received Buddhism from Korea. Nearly a thousand years ago Central Turkestan Buddhism was destroyed by the Moslems and Indian Buddhism was destroyed by successive invaders belonging to the cult of Islam. Afghanistan was at one time full of Buddhists and so was Kashmir. The Catholic Church borrowed many of its rituals and ceremonials from the Buddhists of Turkestan. Jesus did not establish any of the ceremonial that are current to-day in the Roman Church. The altar the lighting of candles the incense the flowers the flowing robes all are borrowings from the Buddhist Church of Turkestan. From Turkestan Buddhism went to China. The present day dress of the Moslems of Afghanistan and the North Western frontier Provinces, formerly known as Gandhara was copied from the Buddhists of the pre-Moslem period. The fresco paintings rescued

by Central Asian archaeologists, are evidence to show the origin of the Catholic rituals. The Catholic Church copied from the Buddhist church the institution of Bhikkhuni nuns.

Many of the alleged sayings of Jesus are really echoes from the sayings of the Lord Buddha. As yet no attempt has been made to discover the origins of the sayings of Jesus. A guild of Pali scholars who have made a thorough study of the New Testament should sit in conclave and make an effort to find the origins of the New Testament ethics. A number of them can be traced in the Pali texts. Some of them are interpolations where in the meek and gentle Jesus is made a monarchical despot.

The American Occupation of Haiti

India is, no doubt the only member of the League of Nations which is both in name and reality a subject country. But another member, Haiti is in reality a subject country, though nominally independent. For writes Paul H. Douglas in the *Political Science Quarterly* of America

The relationship between the United States and Haiti is full of interesting paradoxes. Thus the constitution which Franklin D. Roosevelt then Assistant Secretary of the Navy wrote for that country in 1917 declares that the Republic of Haiti is one and indivisible free sovereign and independent. Its territory is inviolable and cannot be alienated by any treaty or by any convention. Haiti is indeed a member of the League of Nations and maintains diplomatic representatives abroad. In fact, however the United States has controlled the country by military force since 1914. A regiment of American marines is quartered behind the President's palace and Brigadier General John H. Russell acting as the American High Commissioner gives the directions as to what shall be done. An American Dr. W. W. Cumberland appointed by the President of the United States is the Receiver of Customs and the Financial Adviser. He not only collects the customs but draws up the budget and controls expenditure. The Haitian gendarmerie which is a combined army and police force is mainly officered by commissioned and non commissioned American marine officers and the gendarmes as a whole is constantly under our direction. Americans appointed by our government are also in charge of the sanitary and the public works services and of agricultural education.

Modern India and the Drink Traffic

We read in *Ikkari*

Dr. Rutherford's book is a plea for Self Government for India and while we are not concerned with the political issues with which the book deals his descriptions of the poverty and degradation of the vast majority of the Indian peoples must challenge our attention and careful thought. The stark reality of Dr. Rutherford's book shows us India

in the mass shorn of all amanté glamour. In the chapter 'Public Health and War Against Disease' the author includes Drink with disease as being an important factor in the production of disease and second only to syphilis in the list of racial poisons. The chapter 'Public Health and Prohibition' shows the immeasurable harm done by the liquor traffic and shows too, that all over India there is a demand for prohibition.

India is ripe for prohibition and her great religious being so strongly opposed to Drink should make the difficulties of successful enforcement much simpler and easier than in America. The book as a whole emphasises the fact that every effort to forward the cause of prohibition is blocked by the British Government. The policy of the Government with regard to the Opium Traffic is also warmly criticised.

Prevention of Diseases and Social Insurance

Andreas Griener observes in *International Labour Review* —

There is nothing which is not capable of improvement.

In future the campaign against infectious diseases must be carried on by social insurance with even more vigour than in the past. In tuberculosis for instance not only the sick person but also the danger of infection must be considered. Thought must be given to the members of his family to his environment and to his fellow workers who may be injured by him. It is therefore essential to provide curative treatment in good time to lessen the risk of infection and to increase the share of the insurance institutions in the general work of social hygiene.

The rational organisation of preventive measures in the undertaking calls for the foundation and the activities of some form of joint organisation to ensure collaboration between the various insurance carriers and especially to regulate the relations between sickness funds, invalidity insurance institutions and doctors. Joint organisations are also necessary to ensure contact between insurance carriers on the one hand and public health authorities and private welfare organisations on the other. The right to membership of these organisations will entail the obligation to accept freely the conditions they impose.

'Timboel'

Timboel which is an Indonesian journal conducted in Dutch has given a translation of the Note in our March number in which we showed how great a portion of the earth is under European control and how the preservation of the *status quo* by the League of Nations is practically equivalent to perpetuating the subjection of the majority of mankind.

Poetry 'a Drug on the Market'

John Gould Fletcher writes in *The Modern World*

There can be no doubt that just as much poetry is being written in this age as in any other and that in future histories of literature some one will be mentioned as being the representative poet of our time. The problem that concerns us all poets and non poets is how to distribute our work to best advantage. The problem is rapidly becoming the leading problem of our age in poetry as in other fields and the multiplication of publishing houses, newspapers and periodicals does not settle it. Ask any dozen publishers and they will all tell you that poetry does not pay that it has no commercial value despite the fact that they all probably publish it to some extent.

If your acquaintanceship extends also to the poets you will find that the shifts and dodges the young poet is put to today to obtain a hearing are endless. I know of at least two young poets both Americans who are trying to get a publisher in England in the pathetic hope that their work will somehow be favorably received there. Poetry which quite a number of people were ready to talk about in this country twelve years ago is now a drug on the market.

The writer suggests that there should be an endowment fund for the publication of new books of poetry.

The details of administering such a fund could be easily worked out. Suppose the fund provided for the publication of ten fair sized books of poetry in a year. An advertisement could be inserted in a few of the leading literary journals asking for manuscripts and stating that no poet was eligible who had already published more than one volume. A jury would be selected of practicing poets to pass on these manuscripts. The manuscripts submitted would be sorted out by a sub jury in the first instance with the object of eliminating the obviously impossible the thin and the true. The remainder say fifty manuscripts would then pass into the hands of the main jury. Out of this remainder ten manuscripts would be selected which would represent the best of the year's poetry.

Love and Wisdom

Message of the East reproduces the following English translation of a poem by Bhair Vir Singh —

(Note: A nightingale imprisoned by a gardener escapes from her cage after long confinement only to find the garden despoiled and in ruins and her heart's love, the rose, gone. In absolute despair she stops a wayfarer with her lament and asks what has become of that all owner of the loveliness of youth, her rose. A dialogue ensues of which we give the concluding portion. The wayfarer asks why the eye of the nightingale failed to discern that one day both the garden and its

blooms gay would die that spring would pass
and the autumn of dead and decaying leaves
take its place. In a song of soul the nightingale
cries out for death and in pity the wayfarer strives
to comfort her with the assurance of ever returning
spring. Again the purple leaf buds. Again the
green leaves shall appear in millions! Again the
buds blow and the armies of flowers come and
encamp again! Why weepst thou O bird!
The nightingale sings

"If beauty lasts not forever
Of what worth then is beauty?
If my garden waves not forever
If all is the sport of time
If time conceals him we love behind its ever
enwrapping sheets and reveals him at will
below its folds

And conceals him again from us.
If love is not our own but time's
If time is supreme and we only propose for time
To dispose, and our heart

Is merely to run to waste in time's sands
Then all wanderings in search of him ay even
life and goodness, all are as death

To thirst for love to roll through despair and
Separation for the hope of meeting him is all
illusion

If the lightning flash of love shows itself only
to kill us then where where is love

If all is change and there is naught save waiting
or thirsting and waiting and thirsting for
nothing to be

If this is the law eternal as thou sayest
If we are but the passive balls that a mock up
destiny rolls

Then let me tell you that too sad is life
The wayfarer replies

"Leave! Leave! O lovely bird
There is the rose still perfuming thy tender heart.

If it be thy wish to see the glory that fades not
If it be thy longing to be with thy rose forever
Turn within turn within thine own self thy love-
thirsty glance!

In vain is thy search for thy rose in this visible
world of change.

The eternal spring is those who have entered in
and seen him within their soul

If it be thy wish to dwell in the eternal glances
of thy love, then be at peace with thyself

Let the flame of the heart burn slow and steady
Let the mind be calm like an unrippled clear
transparent lake

And pass O bird, into the being of the beloved
whence come these forms of beauty

Thou hast indeed thy rose when thy heart falters
not—sure, unmoved.

O bird!

The worlds are all within thyself
There blossoms thy rose which no hand of might
can rob or destroy

Thy eye of the soul so fixed on the beloved,
drinks deep at the fountain of life

Good bye O bird! This is the ancient wisdom!
The law of beauty that ye learn and the young
brood in the nest

This is the law of true life, which is the life above
this life

The life of rapture caught from the lips of the
rose

The rose that blossoms within where eternal spring
doth roll

There as thou sayest and only there—only there
It is a subtle subtle feeling
An unbalanced and balanced joy
An unconscious and conscious love's soft delicious
reeking a little rippling and a slow breeze
The heart is full of glory
And the life full of peace.
Within that *Golden Land* there is neither night
nor wrong.
And might is frail and love is strong

Sea Power at Geneva

The New Republic observes

It is essential that the redistribution of sea power which was recognized by the Washington conference of 1921 should be confirmed by and, if possible rendered still more explicit by the Geneva Congress of 1927. As long as an American Asiatic and a European sea power all exist side by side and independent of one another European world imperialism, as it existed towards the end of the nineteenth century and as it was encountered by British maritime supremacy not only cannot recover its momentum but is bound steadily to lose ground. The British imperialists, are chafing under the limitation and with the help of the Singapore base and their preponderance in commerce-destroying cruisers they are trying to regain for the Empire a fraction of its former exceptional position. But the American representatives at Geneva will have every reason to insist on a confirmation of the principles which underlay the agreement of 1921 rather than a modification of it for the benefit of British sea power. The British behaved with admirable wisdom and forbearance in 1921 in recognizing that they had to share with Japan and the United States their former supremacy. They will we hope behave with similar forbearance and statesmanship in 1927

The Late James Bryce

We read in *Unity* of Chicago—

The late James Bryce was an extraordinarily learned man. Mr J. A. Holson in his review of H. A. L. Fisher's recent biography of Bryce in the *Nation* (April 20th) declares that

"He knew more than any other man of his own or any other time. There may be tucked away in the seclusion of some university or other home of learning two or three scholars who have read and remembered as much booklore as Bryce but when one takes into account his first hand intercourse with men and things in all parts of the habitable globe he assuredly stands out like all competition. In the light of this impressive statement, we are tempted to wonder as to what learning amounts to anyway. What is its use? What does it all come to? To quote the question John Morley used to put to any one who praised a book or other achievement? For the same biography of Bryce shows that this most learned of men went stark mad during the War. He swallowed hook line and sinker the ridiculous myth that Germany had precipitated the conflict in a gigantic endeavor

Some Chinese and Some Foreigners

The following extract from an article by Dr Edward H. Hume M.D. in the *International Review of Missions* goes to show that the minds of all Chinese are not full of hatred of all European foreigners even of the British race —

Word comes from all over China of the sincere and continued friendliness of the people. All classes have vied with one another to prove their friendship during the past six months of stress and confusion. What could have been finer than the spirit of the girls at Ginling College in Nanking, on March 24th last as they took matters into their own hands, hiding their teachers, advising them, escorting them out of danger and in every other way proving their loyalty. Was there ever greater friendliness than that of the people around the grounds of West China Union University in

Chengtu where British, Canadian and American forces co-operate? They brought in food by night when a boycott was in force, suggested means for escape, and aided in countless other ways to preserve the normal status in the work of the institution. There is no single point on which all are so much agreed as on the desire of the people that their western Christian friends should continue among them.

The knowledge that Dr. John Williams had been killed threw all the Chinese Christians in Nanking on to the side of their missionary friend at the very moment when their own homes were being ransacked and, in many instances, burned to the ground while their very lives were threatened. The efforts made to save the foreign missionary community in Nanking by Chinese Christians and non-Christians alike is a story of fine Christian achievement and one which makes worth while sacrifice and service of devoted lives over many years.

GREATER INDIA

(Translated from the Bengali of an Address delivered before a fairwell gathering organised by the Greater India Society by Rabindranath Tagore)

I am heartened by the address that you have presented to me on the eve of my voyage to Java. We discover our inner strength only when we meet the elms of our neighbours. We are able to give what is in our gift, only in consequence of other people's eagerness to take. If the demand is strong the way to give becomes easier.

Where the claim from outside is a reality it kindles the power to give lying within us. Even when we have gifts within us we cannot give them so long as an eager desire for them is not born in society. To-day a longing has taken birth among us—the longing to search for the greater India outside India. This longing has taken the concrete form of the Greater India Society. It is this longing that is voicing its own expectations in the address of welcome offered to me. May your wishes make my efforts attain to success!

It is the mark of a savage that his self-consciousness is confined within very narrow limits. He cannot know himself in a wider region than the present time and his immediate environment. Hence, his weakness in thought and action. The Sanskrit verse has it: As a man thinks so does he achieve. Loftiness of conception—about our indivi-

dual selves or our country,—lies at the root of the creative power of endeavour. A feeble aim and a lowly achievement carry us to failure. It is the historic endeavour of every civilised nation to exalt its own character in its own eyes—to liberate its nature from the narrow bounds of a particular country or age.

In my boyhood seated at the window of our house I could see only a small bit of the natural features of my country. I had no opportunity of beholding the comprehensive expression of our country's self from outside. This city of Calcutta built by foreign traders cannot give us a deep and far extensive revelation of India's soul. I was so eager to see for myself the great self of India because I had been as a boy too often confined within the four walls of a house.

Then at the age of eight or nine I went to live for a time in a garden house on the bank of the Ganges. My heart was filled with a sense of bliss. This river conveys a grand revelation of India. Its streams carry the harmonious blending of many ages, many provinces, many hearts of India. It conveys a message making India known to others.

Again a few years later my father took me with himself to the Himalaya. This was

the first time when I made an intimate acquaintance with my father—and with the Himalaya. There was a harmony of spirit between the two.

Then in early boyhood I began to study the history of India. I had to commit daily to my memory a list of names and dates of the unvaried tale of India's defeat and humiliation in political contest, from the days of Alexander the Great to those of Clive. In this historical desert of national shame, there were a few oases formed by the heroic deeds of the Rajputs and these latter alone could satisfy my blazing hunger to learn about the greatness of our nation. You all know, with what desperate eagerness Bengali novelists, poets and dramatists ransacked Todd's *Rajasthan* in that age. This fact is a clear proof of our unsatisfied craving to know our country's true self. Country does not mean the soil, it means a body of human characters.

If we are taught about our country as eternally weak then that sense of lowliness cannot be driven out of us by reading about the heroism of foreign nations.

A star whose light has become extinct is coagulated and constricted within itself. This self confinement is a humiliation. Such an extinct planet has no place of honour in the galaxy of blazing stars. It is unknown, uncelebrated, nameless. The shame of this obscurity is as bitter as that of prison life. Light alone can deliver it from this shame—light in the form of an emanation that will join it to the universe, light in the form of a truth that the world will honour.

It is the burden of our Scriptures that he alone realises truth who perceives the Universe within himself and his own Self in the Universe. In other words, the soul confined within its own individuality is not in its healthy normal condition. This great principle is as true of the historic efforts of a nation as it is of every individual man's life's work. The devoted endeavour of every great nation is to make itself known to the outer world. Otherwise, God would cast it forth as useless in the creation of human civilisation.

The voice of India that we hear was not confined within the verses of the Upanishads. The highest message that India has preached to the world has been conveyed through renunciation, through sorrow, through love, through the spirit—and not by means of soldiers and arms, oppression and plunder.

India has not boastfully recorded in her history in capital letters any tale of her acts of brigandage.

In ancient times our country too must have sent forth heroes who conquered foreign lands. But, unlike other nations, India does not count the names of such conquerors with veneration on her rosary of historic celebrities. Indian *Purans* do not sing of strong robbers (*Dasyus*). India has carefully obliterated from her records the story of their achievements as a thing to be ashamed of.

The man who thinks of Self as the highest and ultimate truth is lost. This selfishness is the root of all sin and all suffering. The light of our soul reveals the truth that universal love kills this self-centredness. This light India did not keep to herself. She revealed herself to the world outside her natural boundaries in the light of this truth. Therefore the true expression of India consists in this.

The India in which we have been born is the India of this spell of liberation the India of these ascetics. If we can keep this truth steadfastly before ourselves, then all our acts would be pure. We shall be able to call ourselves characteristically Indian and we shall not need to set up a new standard.

In these days the passion for political self-expression is raging among our people with the greatest vehemence. Therefore, we are only dreaming the dreams of gratifying it, and we contemptuously reject all greater matters as 'irrelevant'. But the stream of this political self-expression will only take us to foreign history,—to Mazzini, Garibaldi, and Washington.

Similarly, in economics our imagination is moving about in the puzzling mazes of Bolshevism, Syndicalism or Socialism. But these are mere mirages, they are not rooted in the eternal soil of India, they are all marked "Made in Europe".

Our national self does not reveal itself in the unknown paths where we are madly chasing these unrealities. And yet, as I have already said, our national success is possible only if we build upon the true individuality and character of our nation. If we can realise that we had a sphere of glory outside the political and economic, then only shall we succeed in founding our future greatness on truth.

India has revealed her true self by what she has been able to give to the world. She is known by the exuberance of her spirit.

after world conquest. His prodigious knowledge and wide travels left him as glibly at home in London as in his native slum! All his exhaustive historical investigations didn't save him from being fooled as easily as the simplest citizen in a country village. All through the War Bryce was a die-hard. It was on to Berlin! for him with Germany ground prostrate in the dust. His travels the world around his knowledge of men and places and languages everywhere had taught him no lesson of tolerance and understanding. Why he learned and traveled and met it all if this be the result? Why bother with education and farfetched? We never get quite so low in our mind never feel quite so hopeless for the future as when we see a man like James Bryce running amok under the mad influence of patriotic passion. Here in the person of such a man is already seen the collapse of civilization.

Local Self-Government in Asia

The following passages are taken from an article by Dr. Sudhindra Bose in the same journal —

Every man and every body of men on earth possess the right of self-government. They receive it with the ruling from the hand of nature. Individuals exercise it by their single will. Collections of men by that of their majority for the law of the majority is the natural law of every society of men — Thomas Jefferson.

It is not true that the government which is best administered is best. That is the maximum of tyranny. That government is best which makes the best men in the training of manhood has the certain pledge of better government in the future. — David Starr Jordan.

Democracy is direct self-government over all the people for all the people, by all the people. — Theodore Parker.

Democracy is not the exclusive monopoly of the West. It is to be found in the East as well. Oriental democracy has its roots in the communal life of the people. The political thinkers of the East — notably of China and India — have seldom recognized absolute and indivisible sovereignty. In the Orient sovereignty has always been shared by local bodies and communal groups. The Asian state may be thus described as a political federation with a very large share of local autonomy in village communities, communal assemblies, guilds and village unions. The local organizations over which the central government exercised but a slight control until recently have from the time of venerable antiquity looked after the internal administration of the community. The people had thus the right of democratic control over their political, economic and religious life. Nor are these ideals altogether obsolete in today's world of Asia.

Japanese Food

The *Japan Magazine* for June contains the first part of an informing article on Japanese food from which we learn

Rice (*barley and millet*) *hige* (barn yard grass) soyabeans small beans, etc. were used as food by the Japanese in remote antiquity as they are at present. The *Nihon Shoki* and other of the oldest books in Japan state that the Imperial ancestral goddess Amaterasu mikami who obtained seed of these cereals from Ukemochi no-kuni spoke of them as vitally important for human beings to live on. Since then these cereals or *godo* (five cereals) have formed staple articles of food in Japan. Rice was of primary importance among them. Its seed was taken with him by the Sun Goddess and son on his descent to her command. The seed suited the soil very well and the crop was abundant. This was the source of the name of *Hi no no-kuni* (the land blessed with rice) by which the country was called since then.

In old times unhusked rice was commonly eaten by heating or boiling, although the noble families on rare occasions took it after cleaning. Rice was not eaten only by upper class people, as for the middle and low class people it was too costly and they usually took such cheaper cereals as barley and *hige* instead. Then they ate only two meals a day.

As side dishes they had vegetables, meats or fruit. These vegetables were mostly *nauna* (celery), *hishi* (pumpkin), *ni-jin* (carrot), etc. which were called *sa-radish*, *garlic*, etc. which were called *karana* and *sealame* *lanbu* and other seaweeds. There were some other kinds of vegetables eaten.

As meats they took beef, horse-flesh, brawn, deer flesh, other animal flesh, chicken, fish and shell fish. They did not dare to slaughter oxen and horses for eating as these animals rendered useful service to them helping them in farming.

They ate mostly wild bear, deer and other wild animal flesh which was called *teno-aramono*, as distinguished from bird-flesh which was called *teno-omono*.

Religious Trends in India

The Rev. A. M. Chirgwin observes in the *London Quarterly Review* —

The *outcast* in India is at present moving primarily in the realm of politics and not of religion. The real deity whom Indians worship to-day is Mother India, for her they are willing to suffer and if need be to die. Most young Indians feel that the gods and goddesses of Hinduism are the most satisfactory expressions of Mother India available. Accordingly the young men are powerfully attracted just now to Hinduism. However it may repel them intellectually it has a certain emotional appeal as the religion of the Motherland. The rising tide of nationalism is leading to reaction against organized Christianity as being Western. It is the more significant that in spite of this the most striking progress that has been made in recent years in the realm of

religion in India is undoubtedly in a Christian direction.

It is not to be inferred from this that great numbers of educated Indians are accepting Christianity as their own personal faith. As a matter of fact, the number doing so is not considerable. The numerical growth of Christianity in India is mainly among the lower castes and the outcaste community. In modern India as in the early years of the Christian era, Christianity makes headway mainly from the bottom up. Fully one hundred thousand people chiefly from the lower strata of Indian society are becoming Christians every year. The Indian Christian Church shows an increase of 22.5 per cent in the last ten years as against an increase of 1.2 per cent in the general population—a far more rapid growth than that of any other faith in the land. But it is not the numerical growth of the Church which has led to the almost complete capture by Christ of the citadel of India's thought.

Educated India does not seem to find much that is attractive in the Christian Church to-day on the contrary it appears to be repelled alike by Christianity as a system and by the Church as its Western organized form.

Successful Marriage

Frederick Harris writes, in part in the *World Tomorrow*—

The ordinary theory is that man and wife form a partnership in which all of life is shared. If this completeness of sharing were taken as the test of successful achievement, there would be little success to record. As a matter of fact, casual observation tends to impress one with the narrow range of the interests which most husbands and wives do share. To whom does the house usually belong? Whose taste is displayed in its furnishings? In the midst of modern city life children may actually command little interest on the part of either parent. Companionship and recreation are essentials of a balanced life. Taking a dozen married couples selected at random, what is the proportion of actual sharing in these activities? Religion has been a puzzle of many children because practices which one parent seems to regard as fundamental are entirely neglected by the other. The sex experience itself may be highly distasteful to one while it is eagerly sought by the other. There is plenty of evidence too of another type of difficulty. A man and woman who share much at the start grow older, new interests emerge and suddenly they awaken to the fact that they are leading separate lives. Again some striking experience may transform one partner and leave the other cold. Even under the best of circumstances, there are ranges of experience which are not shared between husband and wife and some few perhaps which never can be shared.

The facts are plain enough but the matter can not be left at this point. How much sharing is necessary? Where does success leave off and failure begin?

There are no fixed points. We can estimate success in such a personal relationship only

with regard to the persons concerned. One can imagine that in the early days of most marriages romantic affection is the supreme interest and for a while this may be sufficient. Success at the moment makes an intense but very narrow demand. As the days go on, husband and wife begin to face real situations. Homely needs arise, place to live in, food, companionship, recreation, religion, love and then there emerge the new interests. As this experience proceeds from the wedding presumably different people are reasonably well satisfied at different levels. Since we have to consider not only range but also depth of interest, in some cases the sharing of a very few vital concerns may create a stable arrangement. It is extremely precarious to make positive statements where our knowledge is so strictly limited, but one may suspect that the marital relationship between a man and a woman becomes more and more successful as the number of shared interests steadily increases. Such a procedure suggests that these two have found partnership such an interesting experience that they are continuing their explorations. Each new interest of one is submitted to the other as a possible basis for further extension of the relationship.

The picture usually drawn of a successful marriage represents a mild peace gradually deepening to deadly monotony. This is not the case with those who are ever expanding the area of their shared interests. Life is adventurous and exciting. The whole attempt to form a real co-operation involves many disagreements, some trivial some really serious—the tragic tension of marriage of which Count Heysler speaks. It is the personal adjustment over many contacts that is difficult and dangerous, holding alike the possibilities of the noblest satisfaction and of the deepest degradation. Let our too confident radicals overbear in mind that the profound conflicts of life appear not where each goes his own way but where the two are trying to work together.

The Late Dr Estlin Carpenter

The Inquirer of London contains a beautiful and discriminating tribute to the late Dr Estlin Carpenter by Miss Helen Darbishire of Oxford which appeared in the *Times*. We take the following passage from it—

No one who received his teaching would use words lightly and I say only what those who knew him will wholly endorse. He spoke the word of God with the authentic voice of one who knew its meaning; he had the divine sympathy that knows the secrets of the human heart and reaches to the farthest depths of grief. Religious passion is not common, a pure and austere religious passion is the rarest thing we meet. In Estlin Carpenter it was one with a singularly strenuous intellectual life but its roots were in the human experience that is common to us all.

beyond her own territory and people. We can truly give to others only when we admit others as no less than ourselves. Therefore if you would know India's wealth of truth, you must leave India and visit the seecies of Indias giving in lands beyond the sea. Today our vision of India is dimmed by the dust of contemporary local events but the clear radiant eternal aspect of India will be revealed to us if we go to Further India.

In China I found a race entirely different from the Hindus—in features, language and manners. But I felt such a deep sense of community with them as I have found impossible towards many people of India itself. This union was established not by political ascendancy, not by the sword, not by patronage, but by embracing sorrow,—on the part of ancient India. The truth that has linked an absolutely alien race like the Chinese to the true self of India—finds no place in the history of European politics and therefore we do not heartily believe in it. But the evidence of its reality is still extant in Further India.

In my travels in Japan whenever I marvelled at the deep patience, self-control, and aesthetic sense of the people even in their daily life, they have again and again told me that the inspiration of these virtues came mostly from India through the medium of Buddhism. But that inspiration is today all but extinct at its source in India itself. These lands (outside India) are places of pilgrimage to modern Indians, because the eternal true expression of India's character can be found in these lands only.

In the middle ages of India there were religious conflicts between the Muslim royal power and the Hindus. But in that epoch a succession of saints were born—many of them Muslims by faith—who bridged the gulf of religious discord by the truth of oneness of spirit. They were not politicians; they never mistook a political pact prompted by expediency as a true bond of union. They reached that ultimate point where the union of all men is established on an eternal basis. In other words they embraced that secret principle of India which lays down that they alone can realise the truth who see others as one with their own selves. In that age many warriors fought and earned glory; their names were recorded in histories of India written on foreign models. But they are forgotten to day, even as their triumphal

monuments have crumbled into dust. But the deathless message of these saints is still flowing like a life-giving stream through the heart of modern India. If we can derive our soul's inspiration from this source, then only shall we succeed in invigorating our politics, economics and action.

When a message of truth deeply stirs our soul, its self-expression attains to success in many directions. The impact of truth on the soul is proved by the activity of that soul's creative power.

Buddhism was a religion of poor monks. And yet it inspired an exuberant display of costly artistic work in caves and *chaityas* and *stupas*. This only proves that Buddhism awakened such a consciousness of truth in man's inmost heart that it gave fruition to all his nature, and saved his character from being crippled in any direction. Wherever India's magic wand of universal love has touched any foreign land, what a marvellous display of art has come to life there! That country has become radiant with the splendour of a new artistic creation.

And yet look at the people of exactly the same ethnic stock living in neighbouring countries which were not visited by ancient India's missionaries. They are cannibals utterly devoid of art. India lit up the dark hearts of such a savage race by the sublime message of her religion of mercy, reconciliation and love. It is not that Indian influence has resulted in certain changes in dress, speech and manners in Cambodia and Borneo, Java and Sumatra, the latent power of artistic creation among these peoples has been awakened. And what a marvellous creation it is! There are many other islands around the India-colonised Java and Bali. But why do we not find any Borobudur, any Angkor Wat there? It is because the rousing call of Truth did not reach these neighbouring islands. There is no glory in stimulating the imitative spirit in men, but there is no nobler work than that of liberating the latent creative energy of others.

If we content ourselves with boasting of our nation's achievements to the far off past and do not apply in our own lives the truths that led to those achievements, then our shame will know no bound. To use a truth as a material for our self-glorification, is to insult it. My earnest desire is that we may search for the eternal truth of ancient India and devote myself to the attainment of it—not for self-advertisement, not for dazzling

the eyes of foreigners—but for inspiring our own innermost spirit and shaping our daily conduct.

When I visit Java may my mind be free from [national] pride may it learn meekness by witnessing the operation of the death conquering spell (*amrita mantra*) of Truth

May we realise within ourselves that great principle of universal love and then only will temples spring up in forests fountains of beauty will bubble up in deserts in our hearts—our life's devotion will attain to success

JADUNATH SARKAR

GREATER INDIA REVISITED

By KALIDAS NAG

II

FROM BATAVIA TO SURABAYA

BATAVIA is a modern commercial city with every possible modern comfort and it palled on me from the very beginning. To escape from its aggressive modernism I took refuge in the splendid Museum of the city. It contains the richest collection of the products of Indonesian culture and at the same time some of the most important archaeological links between the art and iconography of India and Java of old. I shall come back to a detailed appreciation of this museum which is a glorious tribute to the Batavian Society of Arts and Sciences

The Museum of Batavia

(Bataviaasch Genootschap van Kunsten en Wetenschappen). Meanwhile let me proceed to describe how the propitious smile of Lord Ganesha who greeted me first at the threshold of the Museum gave an extremely happy turn to my chance driven adventure

ACADEMIC COLLABORATION BETWEEN INDIA AND JAVA

I saw Dr F D K Bosch director of the Archaeological department and he received me very kindly. He had been revising the text of the famous Sanskrit inscription from central

Gallery of Indo Javanese Sculptures

Java (found in the temple of Chandi Kalasan) which had been already edited by Dr R. G. Bhandarkar and Dr Brandes. A new fragment of the inscription had been found and Dr Bosch was getting ready to publish a revised text from fresh facsimiles. We discussed certain technical terms in the Sanskrit slokas and gradually drifted into a general discussion on the possibility of a more intimate collaboration between Indian scholars and Dutch savants. Dr Bosch warmly supported me saying that in two departments help from sound Indian scholars would be specially welcome first for the proper appreciation of the

Indo-Javanese art it is absolutely necessary that a comparative study of the Javanese and the Indian series of monuments should be made with reference to the *Shilpa Shastras* like *Mayamata*, *Manasara*, *Vastuvidya* and such other texts which are being found in increasing numbers. To ascertain as to what extent the art of India influenced the art of her cultural colonies and also what were the independent contributions of the colonial artists and artisans to the

Avalon are too subjective to be utilised for historical purposes. Dr. Bosch strongly urged the systematic study of the *Tantras* and hoped that Indian scholars would respond to his call promptly.

Primitive totemistic art of Polynesia

borrowed or imported motifs, it is absolutely necessary to make an intensive study along the lines suggested above. But it was a great pity that very few texts of the *Shilpa Shastras* have been scientifically edited and published.

The same difficulty is realised, continued Dr. Bosch, in handling the old manuscripts of Java and Bali. Most of them appertain to the *Tantras* and the cult of Tantrism. It would be a capital study to compare the Tantric literatures of India and Indonesia. But the critical study of the *Tantras* has not yet begun. The writings of Arthur

Polynesian Antiquities

PROJECTED TOUR TO THE BALI ISLAND

I consulted Dr. Bosch about my tour programme and he very kindly gave valuable suggestions, letters of introduction and other help for which I was grateful. Incidentally he mentioned that a very important celebration would take place in the island of Bali. A local Raja would celebrate the *shradha* ceremony of his ancestor, in the right royal and orthodox style.

the like of which was not to be seen for many years 'I had a mind to go to Bali if chance favoured me but I did not dream that the call of the gods and the Brahmanas of that island would be so peremptory. Finding me a little confused Dr Bosch generously offered to write to his colleague Prof Dr B J O Schrieke director of the Ethnographic department, who happened to be then in Bali to study the *shradha* rituals on the

A village scenery

spot I thanked Dr Bosch profusely for offering me such an ideal guide and I rushed to make enquiries about my passage etc to that romantic island. I came to know that the steamer for Bali would sail soon from Surabaya, the eastern port of Java and I left Batavia for Surabaya to avail myself of the earliest boat. Mr Corporaal the Principal of the School of Goenoeng Sari did a great service to me by wiring to one of his Balinese pupils (for he had pupils from every part of the archipelago) who resided in Siogaradja, the capital of Bali. He further advised me to halt at Bandoeng and see the place on my way to Surabaya. Thanking my friends of Batavia I boarded the train to Bandoeng at 2.30 pm buying a ticket for 5-50 guilders.

BANDOENG, THE CAPITAL OF PLANTER'S PARADISE

It took me full five hours to come to Bandoeng from Batavia, the distance being about 100 miles. The trains in Java run only between sunrise and sunset so we must previously arrange to halt in a convenient place during the night. My friends of Batavia kindly made all arrangements for my short stay in Bandoeng and so with a mind free from all cares I began to survey the splendid Indonesian landscape from the train.

The alternation of hills and plains with the traces of the cultivators' hand everywhere gives an impression of charm and plenitude rarely paralleled in any other part of Asia. We were passing through the Preanger Regencies where native landlords euphemistically called Princes still continue to exercise sovereign rights cleverly circumscribed by the Dutch residents. However the country is rich in agricultural products. On the one hand we find modern big tea coffee and cinchona plantations in the higher regions and on the other the old *Sauas* or rice fields cultivated and irrigated by the terrace system so famous in Javanese economic history. Rice as in India is the universal favourite and is worshipped as a divine grain. Who knows if the Indian grain goddess *Lakshmi* emigrated with other gods of India to Java and brought along with her the Indian science of cultivation together with the tradition of pondrous plenty which is still written on place names like

Lord Ganesha the remover of obstacles

Sukabumi (*Sukha bhumi*) or the land of Prosperity.

Bandoeng is next to Batavia the most important city of Western Java. It is along with *Sukabumi* one of the headquarters for the planters; it is also the capital of the Preanger Regencies. The native Moslem regent is a pensioner of the Dutch Government, and consequently, as an ornamental figure head, continues the tradition of the bygone age with its puppet plays and gamelan music in the large palace or *dalem* in the centre of the town. But it seems to be out of context when compared with the up-to-date Dutch settlements the quinine factory and the gigantic wireless installation in the city. The population of over 100,000

souls shows only 10,000 whites, who however are the dominating elements. The relation between the natives and the Eurasian community, as was reported to me, was quite cordial and the cultural discrepancy not so sharp as here in India.

My brief stay in Bandoeng was in the quiet hospitable home of Mr. Fournier and Mr. Van Leenwen who had visited India and Santiniketan and were great admirers of Tagore. In their select family library there were standard works on Java and Bali and I spent most my time glancing through them.

Sundanese Dance

law and I was informed by the teacher that once the influence of Manu's Code was as pronounced as it is to be found in Bali to day; but at present the Islamic and the Dutch Codes are preponderating factors in the legal training of the Javanese officials. The successful candidates, are recruited into service with grades ranging from 25 florins to 400 florins per month according to qualification. Those who aspire after higher posts must go over to the Dutch Universities in Holland and secure Imperial (as opposed to the colonial) service. I shall have occasion to describe the Imperial Service type later on.

Sundanese Bride and Bridegroom

A SCHOOL FOR GOVERNMENT OFFICIALS

Higher University education is unknown in Java. The secondary schools are pretty numerous and well-organised. The bulk of the aspirants for Government service have to pass through a type of school test represented by the Bandoeng one, where the Javanese youths study the elements of arts and sciences, of drawing and surveying, nay even economics and law! While visiting the school I chanced to come across a manual of

A Museum of Indonesian Musical Instruments

A MUSICAL EVENING

Mr. Van Leenwen kindly took me one evening to a remarkable Dutch scholar who had devoted his life to the study of Javanese music. Mr. Mevrouw Kunst received us in his room, which struck me as a miniature museum of musical instruments coming from Sumatra, Java, Bali, Borneo, Celebes and other parts of the archipelago. Mr. Kunst had travelled extensively through the

Dutch Indies and made this valuable collection with a view to write out an exhaustive history of Malay Polynesian music. He discussed his programme of work with me and I came to discover in Mr Kunst a musician who shows in him the rare combination of the musical intuition with a sound historical sense. He showed me the excellent photographs he had taken of those reliefs of Borobudur wherein we find the musical instruments, performances and dances, demonstrating the innate sense of rhythm and harmony displayed by the Javanese people throughout history. I felt how the silent stone sculptures might bear eloquent testimony to the musical genius of a people. The musical instrument, depicted in the bas reliefs of Borobudur (8th-9th century A.D.) might supply certain links in the chain of cultural relations between India and Java. Mr Kunst told me how his studies along these lines had brought out an unexpected corroboration of the intimate cultural relations between Indo-China

covered about 400 miles in 14 hours. This is the southern line which passes Djibouti, Tasi Malaya, Bandar Abbas and Djakarta reaching the final stoppage Surabaya about 7.30 p.m. The whole route is marvellously rich in tropical scenery whose softness was occasionally broken by the rude and terrific faces of volcanic rocks. On either side of this route lie the Hindu monuments and temples like Borobudur and Prambanan but

and Indochina. Some Chinese musical instruments penetrated Laos and passing through Cambodia and Siam came as far as Java and Borneo. Where is the historian to write out an account of this musical matrimony between different races? Mr Kunst struck me as a remarkable personality and I left Bandoeng thanking him for this new vision of human music. He introduced me to Tjokorda Ode Rika a Balinese expert in Indonesian music living in Sukawati (Sukharati) who is the Panggawa (King) or Chief of Odeod in South Bali.

FROM BANDOENG TO SURABAYA

To reach Surabaya by the evening I had to catch the early morning train which

I had to postpone my archaeological pilgrimage through these sites in order to witness the rare *shradha* celebration in Bali. While devouring the contents of a book on Bali I suddenly discovered that a Japanese youth was looking at me from the opposite seat. After exchange of courtesies I enquired and came to know that Mr Narutomi belonged to the Agricultural College of Tokyo and that he had come to Java to study the systems of cultivation special to that island. The Japan Government grants travelling fellowships for such studies which they consider important. When will our Government Agricultural Institutes and our Universities come to realise the value of such direct studies nearer home under Asiatic conditions before sending students to Europe and America?

Arriving in Surabaya I had to buy my tickets etc. for Bali. I add a few prosaic details on that item for the benefit of future visitors to that island. The railway fare from Batavia to Surabaya comes to about 34 guilders and a ticket to Bali and back cost 33 guilders. Telegraphic charges to Bali came to about 10 guilders. So about 137 guilders were spent to meet the bare charges on the road for this humble Indian pilgrim. But the moment I boarded the steamer I forgot all about exchequers and sea dues and such other unpoetic yet inevitable things. The

INDIA'S WOMANHOOD

News and Portraits

MISS SYAMKUMARI NEHRU who has this year passed both the M A. (Previous) and LL B (Previous) Examinations of the Allahabad University in the first class standing first in both at the outset of her academic career passed the preliminary Cambridge examination in Honours with distinction in Mathematics and Urdu and passed the Senior Cambridge with distinction in Urdu. She then

Miss Syamkumari Nehru

joined the Muir Central College, Allahabad with a view to entering the Medical profession but non co-operated in I.A.O. appeared for the Intermediate Examination in 1914 and passed first among the girls winning a Government scholarship of Rs. 20 per

ensem passed the B A in 1916 standing first in the first class among all candidates winning the University silver medal and a Government scholarship of Rs. 30 per mensem will now complete her M A and LL B Finals and then take to Law as a profession. She was elected unopposed Secretary and Vice president of the Allahabad University Union and was elected its President after a keenly contested election. She is the first girl to hold office in a university union. She was declared to be the best speaker in the Inter hostel Debate of her university and also in the All India Convocation Debate. She was also awarded three medals for speaking two of them being of gold. In all she is the recipient of seven medals.

Miss Sulabha Panandkar

MISS SULABHA PANANDKAR has this year passed the M A examination of the Bombay University in philosophy obtaining a first

class and winning the Chancellor's medal and several prizes. To get a first class in philosophy in the M A examination is a rare thing in the Bombay University. Miss Sulabha Panandikar has achieved this rare distinction with a learned thesis on the Personality of God. She is the first student to get a first class in philosophy after Prof. R. D. Ranade who took his M A degree 13 years ago. She has now obtained a Fellowship at the Indian Institute of Philosophy, Amalner and is the first woman student to join the Institute as a research scholar. Miss Panandikar's academic career has been brilliant throughout, and we are assured by one of her professors that her studies have been both extensive and profound.

MRS. TARABEN MANEKLAL PREMCHAND J. P. is another Hindu woman to be appointed one of the honorary magistrates for Bombay this year. She is connected with various institutions for the welfare of Bombay's womanhood. She is the president of the Bhagwati Samaj.

Mrs. Taraben Maneklal Premchand J. P.

DR. MISS KUMUDA MEHTA, L. M. M. R. C. P. of Bombay went to England after obtaining

Dr. Miss Kumuda Mehta

the L. M. S. diploma of the Bombay University to prosecute higher medical studies and passed her L. M. (Edin.) and M. R. C. P. in Great Britain. She is the first Gujarati Hindu woman to achieve this distinction.

MISS JULIANA BAYU, daughter of Nawab Zaidi Pearl Bano and grand daughter of the late Nawab Ahsanullah of Dacca has this year passed the B. A. examination of the Calcutta University with distinction. She is believed to have secured very high marks in Sanskrit.

A woman student Miss Biswas has been

admitted into the first year law class of the Dacca University. She is the first student of her sex to do so at Dacca.

MISS ASI MAJID daughter of Mr Abdul Majid interpreter Akyab Court has passed the J A examination of the Calcutta University in the first class from Chittagong College where she attended lectures with her male fellow students.

MISS MOVELSHA SEN daughter of Mr Sannanda Sen of Calcutta has been awarded a senior scholarship of the Trinity College of Music for playing on the piano.

Miss Moncesha Sen

Several women students have this year joined the Dacca Intermediate College for pursuing scientific studies as there is no provision for scientific education at the Dacca Intermediate Eden College for girls.

Nine Bengali women some of them Hindus have obtained employment at the Howrah railway station as booking clerks. Bengali women ought to receive employment at Telephone Exchange offices also.

Four lady students have this year passed the Matriculation examination of the Aligarh Muslim University. Among them Miss SARWAT BEGUM has topped the list of successful candidates. Miss AMINA BUTI, another lady candidate aged only 13 years, has also passed the Matriculation Examination of the said University in the first division.

Mrs. A. Catherine Sutharayadu

Mrs. A. CATHERINE SUTHARAYADU has been appointed by the Government of Madras to be a Member of the Taluk and District Board, Kistna.

Mrs. LALITHAM BALASUNDARAM has recently been nominated a Member of the District Educational Council, Coimbatore. She belongs to a very respectable Doranga family and had a brilliant educational career. She is a prominent social service worker in the town and is an active member of the Child Welfare and National Indian Association.

Mrs Lalitham Balasundaram

In Girl Guide Activities Indian ladies are not lagging behind Mrs. INDRANI BALASUBRAMANYAM, (wife of Mr M Balasubramanyam) Snpdt. Junior Certified

Mrs Indrani Balasubramanyam

School Rajahmundry) has been made the lady Assistant Cumbmaster in the Madras Presidency. She is the first lady to attain this honour in the presidency.

INDIANS ABROAD

MR SASTRI'S ARRIVAL IN PRETORIA

It appears that inspite of doubts Mr Srinivasa Sastri has received a very hearty welcome from at least some sections of the South African Indians. The *Indian Opinion* a sympathetic journal gives the following account of Mr Sastri's arrival in Pretoria.

The Right Hon V S Srinivasa Sastri Agent of the Government of India in South Africa, arrived in Pretoria on the morning of June 28 by the Delagoa Bay Mail. Notwithstanding the early hour of 7 there was a large gathering of Indians at the railway station to welcome Mr Sastri.

Mr Sastri was accompanied by Mr Henry Veno Commissioner for Asiatic Affairs who met him at Delagoa Bay. Messrs Kolanda Rao J D Tyson of the Indian Civil Service and C S Ricketts. This party was joined at the station by Mr Pring Under Secretary for the Interior and they subsequently breakfasted together at the station. Mr Dobson Acting Registrar Immigration Office was also present.

When the train drew in Mr Sastri stepped on

to the platform and after greeting leading Pretoria Indians was garlanded by Mr A C Tayob on behalf of the local Indian Association by Mr A I Kapee on behalf of the South African Indian Congress and by Mr Sorabjee Rustomjee on behalf of the Natal Indian Congress. Many Indians who had travelled also from Johannesburg to welcome Mr Sastri also garlanded him.

It was interesting to note that amongst those gathered to welcome Mr Sastri were also representatives of the Natives namely Chief Sikukuni (who read the native address to H R H. the Prince of Wales) four of the chiefs councillors and Messrs T P Thompson and L Bud M belle members of the Native location advisory board.

In the course of an interview with our representative Mr Sastri said that he had little expected to be here and was least inclined but Mahatma Gandhi had as it were set the ball rolling and he had no alternative but to accept the office. He had come at the bidding of Mahatma Gandhi and would try to do his bit.

Mr Sastri's health is of course, very delicate and he looked therefore as best as could be expected in the circumstances. It is advisable, in

MR. GOPAL KRISHNA DE ADHAR, MA (I.E.V.) co-President and Senior member of the Servants of India Society, has just been elected President of the Society vice Rt. Hon. Mr. Sastri resigned. Mr. De Adhar is a well known worker in the field of co-operation, women's education and social reform. No better selection could have been made.

MR. D. K. MUKHERJEE of the New College Patna, has successfully obtained the diploma of the College of Handicrafts (England) with Honours. Mr. Mukherjee joined the Shoreditch Training College the special subject of his study being educational handicrafts.

* Photos in this section have been supplied by The Indian News Agency Mr. R. Venkoba Rao and others.

CORRESPONDENCE

CALUMNIATORS OF MUHAMMAD

The *Pargula Rasul* case appears to have stirred the Muslim Community deeply. It is natural that it should. No religiously minded people can take an insult to its prophet lying down. In our student days we had to read a book on English Composition—*Studies in English* by a Missionary gentleman which contained illustrations of a very objectionable character. Here is a sentence which I still remember—*Krishna was a debauchee and a thief and Siva was no better yet many Hindus delight in worshipping them as deities.* These may not have been the exact words, but the gist was undoubtedly this. We had to commit sentences like these to memory as specimens of good English. I have not yet come across any

copy of the condemned *Pargula Rasul* pamphlet but I can guess the trend of this objectionable piece of composition from its very name.

I wish to draw the attention of my Muslim brethren to similar vilifications of the Prophet in some recent English publications. One is a study of the *Hadis* literature by Prof. Guillaume professor of Hebrew and Oriental Languages in the University of Durham. Readers of this Review are probably aware that the *Hadis* literature records traditions about the Prophet's doings and sayings and its aim is to provide an authoritative standard of belief and conduct based upon the word and deed of Muhammad which shall be binding upon the whole of the Muhammadan world. Some maintain that the sayings of the Prophet were written down by a few of his

contemporaries while others deny this. At any rate, the bulk of the traditions was preserved in memory and handed down from generation to generation until about 250 years after the death of the Prophet Bukhari made his grand collection which passes under the name of *Shahih Bukhari* and is regarded as authoritative all over the Muslim world. Prof. Guillaume's book professes to be based on a study of Bukhari and other standard works on *Hadith*. Here is a passage from this book—

Probably nothing is more illustrative of the Prophet's greatness both among his contemporaries and with posterity than the fact that his reputation could survive the publication of the following story by his wife Aisha—'I was jealous of the women who gave themselves to the apostle of God and said—Does a woman give herself? Then when God revealed: Thou mayest decline for the present whom thou wilt of them, and thou mayest take to thy bed her whom thou wilt and whomsoever thou shalt long for of those thou shalt have before neglected and this shall not be a crime in thee. (F.N.—V 51) I said—'I see your Lord does nothing but hasten to fulfil your desire' (Pp. 103-154).

The compiler says again in a foot note—It must be counted unto the traditionists for righteousness that this did many other *Hadiths* so damaging to the Prophet's reputation were not expunged from the canonical collections. It would seem that the Prophet's character among the Faithful

was above criticism otherwise it is difficult to see how such traditions could have been tolerated in a community which claimed to have received a revelation from God.

I suspect that there must be something wrong in Prof. Guillaume's interpretation of those passages of *Hadiths* on which he bases these aspersions on the Prophet's character. A very comprehensive and exhaustive index to the *Hadith* Literature has just been published by a German scholar Prof. Wensinck of the London University (*A Hand-book of Early Muhammadan Tradition* by Prof. Wensinck London 1917). Curiously in this book also there are references to *Hadiths* which record that women came and gave themselves to the Prophet (*Op Cit* p 159). Here is the passage—

Women that offered or gave themselves to Muhammad—Bu 40 9 66 21 22 67 14 32 33 37 40 44, 50 7 49 8 79

Op cit P 57 Muhammad divorces women who refuse to have connection with him Bu 68 3 but of 74 30

It behoves all serious students of *Hadith* literature all the learned Maulvis and Ulemas of India, to refute these allegations by true interpretations. All Muslims should try their utmost to get the works of Professors Guillaume and Wensinck suppressed and all lovers and followers of Muhammad and his faith should try their best to bring the offenders to book.

Dacca July 10 1927

A SYMPATHISER.

G B. SHAW ON INDIA'S CIVILIZATION

By RAMAVANDA CHATTERJEE

As a dramatist Mr. George Bernard Shaw has done quite the right thing in contributing a preface of some forty pages in memory of his friend William Archer to a posthumous volume of plays (*Three Plays by William Archer* Constable) which has been recently published. But, while writing the preface, it was not wise on his part to forget the proverb which advises the cobbler to stick to his last. For in this piece of composition Mr. Shaw has chosen to write about India and her civilization of which it is obvious from what he writes, he knows little and understands less. Mr. Shaw's ignorance of India, added to his general character as a writer should disqualify me to take him seriously and undertake a serious refutation of his views. But in India he seems to have been taken by some Britishers and others as an authority even on India. That is my excuse for the observations which follow.

With reference to the opinions expressed by Archer in his book *India and the Future* Mr. Shaw writes—

Archer went to see for himself and instantly and uncompromisingly denounced the temples as the shambles of a barbarous ritual of blood sacrifice and the people as idolaters with repulsive rings through their noses. He refused to accept the interest of Indian art and the fictions of Indian romance as excuses. He remained invincibly faithful to Western civilization and told the Indians flatly what a civilized western gentleman must think of them and feel about some of their customs.

Archer was not deceived by what "the occidental renegades had written about India. So he came to India "to see for himself" and "instantly" denounced the temples etc. It was a case of 'I came I saw and I opined' or rather 'I denounced'. India is a big country, inhabited by various races in different stages of civilization and with a long history. Archer did not require any time to observe and study—he instantly began to denounce.

view of this for those who visit Mr Sastri to give him the least possible strain Mr Sastri has put up at the Grand Hotel.

Pretoria Indians were busy throughout the day arranging the function to be given that night at the Town Hall in honour of Mr Sastri. The telegraph office of Pretoria also seemed to be exceptionally busy for in the midst of the work telegrams welcoming Mr Sastri were simply pouring in.

THE HINDOO GYMKHANA, ZANZIBAR

We have received the following communication from Zanzibar —

The Rt. Hon V S Shastri, P C performed the opening ceremony of the Hindoo Gymkhana Institute on the Kikwayuni Quarry near the English Cemetery at 10.30 a.m. on the 19th June. The place was tastefully decorated. After introduction to the President, Mr C M Patel, the Life members and the captains of the various branches the guest was led to the dais where leaders of all communities also took their seats. Dr A H Spurrier, C M G, O B E, was one of the distinguished guests.

Mr B N Anantani, Life member of the Gymkhana, requested Mr Shastri to be good enough to perform the opening ceremony.

In declaring the Gymkhana open, Mr Shastri said that he enjoyed a real pleasure in performing the opening ceremony of the Hindoo Gymkhana at the bidding of Mr Anantani.

It was a matter of congratulation for the community that it possessed such an important institution in such a prosperous state. Cricket was so well known a game in the sporting world that it had been made a synonym for fair play and honesty. The Anglo-Saxon, he said, was proud of his cricket for these qualities. He forgot there were others also who could maintain that great standard in sport as well as in wordy life. He enumerated his own experiences when a student and teacher in sports. He explained to the audience the value of discipline which could be acquired so well from sports.

He was very glad to hear that there was no communal question in Zanzibar. They must understand that besides themselves there was a large section of other people, and that only by merging with them could a great nation be built.

He thanked the members of the Gymkhana

for the honour done to him and wished the Gymkhana every success.

After refreshment had been served on the lawn, Mr Shastri left in the midst of the vociferous three cheers proposed by the Cricket Captain of the Gymkhana.

EUROPEAN STANDARD OF LIVING 2

A continued press campaign has almost convinced the world that the Indians in Africa live such a life of filth and savagery that it has become practically impossible for the "whites" to breathe the same atmosphere with them, much as their Christian virtues urge them to do so. The "whites" have, it has been advertised, tried their level best to lift the Indians (and probably the native Africans also) up to a higher level of culture and habits, but have, alas, failed on account of the Indians' tenacious backwardness! The world was beginning to feel sorry for the African whites when the following news appeared in the Press.

Charged with keeping insanitary native quarters a European, J. C. Van Rensburg, Railway Street, Maritzburg, appeared before Mr W P. Maxted at the Maritzburg Magistrate's Court last week. Evidence went to show that the native living on the premises was housed in an iron shed with less than 100 square feet of floor area. The floor was not constructed with wood, tiles or other materials and the roof was less than nine feet above the floor. There was no window in the room. In finding Van Rensburg guilty, Mr Maxted said: "I realise that some white people consider that anything will do for a native, but they are made of flesh and blood and suffer from just the same ailments as we do. They are entitled to housing that will not endanger their health. If you cannot supply suitable quarters you should not keep the servant." Van Rensburg was cautioned and discharged.

A very direct example of exploitation of a "native" by a "civilised" man. If we look deep enough, however, the low standard of living of most exploited races would show up as the result of exactly similar exploitation, only on an international scale.

INDIAN EMIGRATION FROM NATAL

The position in regard to Indian emigration from Natal is stated to be as follows —

In the period April-June 631 emigrated, the figures being made up as follows — 312 men, 12 women and 193 children. At present the Department of Immigration has 400 applications from Indians wishing to leave the country. Each adult receives a bonus of £20 with an additional £10 for each child.

OUR PORTRAIT GALLERY

Dr. T. N. MAZUMDAR, D. T. M., D. P. B., F. C. S. (London), I. C. S. (Entry) has been appointed Health Officer of the Calcutta Corporation after Dr. Craik deceased. Dr. Mazumdar is the first Indian to hold this office.

Mr. HIRANMOY BANERJI another Bengali successful candidate in the I. C. S. examination.

Mr. ANVADA SANAYAL RAY, a Bengali candidate, has stood first in the I. C. S. examination held this year in India. Mr. Ray has secured 1214 marks in the aggregate, beating previous records.

Mr. DWIVENDRALAL MAZUMDAR has also passed the I. C. S. examination held in India.

The method followed by the ancestors of the Hindus in dealing with the backward races of India and Indonesia was somewhat different from the method followed by occidentals in America Oceania and, to some extent in Africa. It may be said in general terms that the occidentals have exterminated many backward tribes, the Hindus have not. It is not my purpose to defend or condemn what the Hindus have done instead of exterminating. What I wish to point out is that if, instead of exterminating the aboriginal population say, of America, the Europeans had allowed them to live and multiply, there would have been at present in America numerous peoples in various stages of evolution, just as there are in India. In that case, some basty and arrogant oriental Archer or Shaw might, after a brief visit to America or even without one have *instantly* denounced some of the American cults and customs. When races at different stages of evolution live in the same country for centuries, interpenetration and intermingling of cults customs, etc cannot but take place.

Archer denounced the temples of India as the shambles of a barbarous ritual of blood sacrifice. Some but not all temples are really such. Animals are not sacrificed at Jaina temples, and they are among the most beautiful in India. There is no animal sacrifice in Vaishnava temples, and they form a very large proportion of temples in India. Some of the largest and most famous temples, such as the temple of Jagannath at Puri are Vaishnava temples. Far famed places of pilgrimage like Benares Allahabad Hardwar and Brindaban and the principal shrines therein have no rituals of bloody sacrifice. The temples of any importance where animals are sacrificed are a minority. Therefore, to characterise all temples in India as bloody shambles is to be guilty of culpable ignorance or carelessness, born of imperialistic arrogance.

It is an irony of fate that the land where alone the doctrine of *ahimsa* (non killing) has been taught and logically practised by millions of people for ages should come in for sweeping condemnation at the hands of the people of a country of meat-eaters.

The temple at Jerusalem where Jesus among others offered animal sacrifice, was famous for the large number of animals sacrificed there. One is curious to know whether Archer and Shaw have ever denounced the Jews and Jesus as barbarians.

The real question is whether it is right

to kill animals which do no harm to man for food or for sport. If it be wrong, it is wrong whether such animals are sacrificed at temples or killed by butchers or sportsmen. It cannot be said that more animals are sacrificed by the Hindus in India than are killed for supplying meat to the people of Great Britain—a much smaller country than India, or by British sportsmen. Nay, in India itself more animals are killed for supplying meat to the small communities of Europeans and Anglo Indians than are sacrificed by Hindus. If the animals had and could state their own point of view, they would have said that it did not make any difference to them where they were killed—at shambles or at Hindu temples. The barbarousness of the thing lies in the killing, not in the place where the killing is done.

But, it will be said, religion is such a pure sublime and spiritual thing that the killing of animals should not be associated with it.—God cannot require or be pleased with the sacrifice of animals. I perfectly agree. And, therefore, I ask, whether it is barbarous to associate religion with the killing only of lower animals or with the killing of human beings also. Obviously it is not less barbarous to associate the killing of men with religion than the killing of some lower animals with it. But in many Christian countries divine service is performed in some Christian churches when the soldiers go out to fight, and again services of thanksgiving are held when they return victorious from the battle field. And this is done whether the wars are righteous and justifiable or not. (I assume without arguing the point that there may be righteous and justifiable wars.) If the killing of men were not held by some Christians to be pleasing in the eye of God, they would not ask for God's blessings on their arms before setting out to kill and thank Him after success in killing nor would they keep and display battleflags in churches and chapels or inscribe the names of successful killers on marble slabs fixed to the walls of such temples or keep therein the effigies of great killers of men. Churches, chapels, cathedrals and abbeys are not indeed reddened with the blood of the human sacrifices offered at the altar of Mars, mis-called God but if the foemen killed were not in essence considered sacrifices acceptable to him, there would not have been any divine services before and after battle or war.

To many who are not Christians, the doctrine that Christ sacrificed himself for the sins of mankind to propitiate an angry God and the doctrine that the consecrated bread and wine become really or figuratively Christ's body and blood for the communicants, are reminiscent of human sacrifice. I have no desire to give pain to any Christian. I only wish to say that many transfigured or spiritualized ceremonies probably had their origin in savage rites, and, therefore, civilized occidentals should not think that they are really very superior to real or mis-called non-European savages.

Indians have been spoken of "as idolaters with repulsive rings through their noses." I am coming to "idolaters" shortly. As for nose-rings, I am not at all in love with them, though I cannot agree that all nose-rings are repulsive any more than that all ear rings are repulsive. I have in fact seen little girls wearing nose-rings called "*nohol*" looking quite pretty. But that is a digression. Archer and Shaw write as if all Hindus of both sexes and all ages wore nose-rings. That is a ridiculously wrong statement. Only some women and girls wear nose-rings—and rarely a very few male babies. The vast majority of the people of India do not wear nose-rings. Ancient Indian art and literature show that nose-rings were not used by the Indo-Aryans. These either came from abroad or were used by the non-Aryan aborigines of India.

Mr. Shaw observes that "the eastern toleration of nose-rings is not justified by the western toleration of ear-rings." One might in imitation of Shaw observe "The western toleration of ear-rings is not consistent with the western condemnation of nose-rings."

The extreme condemnation of the worship of or through images or idols is of Semitic origin. Among Hindus there are both relative disparagement and relative toleration of idolatry. According to the highest Hindu scriptures, the worship of or through images is for the less spiritually advanced people—the *aimna adhikaris*. The authoritative Upanishada do not countenance image-worship.

It is a common failing of men that they look down upon the cults or customs of others, not considering that similar things exist among themselves. Hindu gods and goddesses are, no doubt, very strange to occidentals—some of them looking like human beings, some not. But it is not their appearance which is the essence of image-worship. The essence is the use of material

things either as objects of worship or as aids to worship. Now, Hindus are not singular in using material things for such purposes. Among Christians, too, the Catholics use images, etc., for such purposes. In Europe 274,760,000 persons profess Christianity. Out of these 181,760,000, that is, two-thirds, are Catholics and use images in worship. In North and South America 139,300,000 persons profess Christianity, of whom 73,900,000, that is to say, more than half, are Catholics and use images in worship. This shows that among occidentals the majority are image-worshippers. No doubt, they do not wear nose-rings. Making due allowance for that fact let Mr. Shaw decide whether they are barbarians.

The worst kind of idolatry is that of which inhumanity or licentiousness forms a part, and even of the higher kinds of idolatry I am neither a follower nor a defender. But neither do I despise or condemn idolaters as such. For men are to be judged by their life and character and many idolaters have led blameless, noble and beneficent lives.

The worship of Kali by the Thugs, both when they set out on their expeditions of murder and plunder and when they returned from such wicked adventures, was one of the worst and most wicked forms of idolatry. But those who are of the same way of thinking with Archer and Shaw should consider whether worshipping, praying to and thanking God in some Christian Churches before and after many empire-building commerce promoting and revenge-taking military expeditions do not in all essential respects bear a family resemblance to the worship of Kali by the Thugs. I think they do bear such resemblance.

I know of the immoralities connected with some cults in India. I abhor them with all my heart. The existence elsewhere of such cults, in the past or at present, is no excuse for them. I have no desire to rake up the scandalous things true or false, told by some Christian sects in connection with the practices of some religious houses or religious orders of some other Christian sects. But I may be permitted to draw attention to the fact that among the paraphernalia of Western aggressive imperialism are army chaplains, privates, prostitutes, barracks and brothels. If *detachments* and priests in some southern India temples are an abominable combination, are not army chaplains and army prostitutes an equally abominable combination?

The interest of Indian art and the fiction of the "Indian romance" which Mr Shaw mentions slightly, can take care of themselves

In the opinion of Mr Shaw, If Western civilization is not more enlightened than Eastern, we have clearly no right to be in India" This implies that Britishers came to India on a philanthropic mission, namely, to civilize India and that they continue to be in India in pursuit of that object. This is as far removed from the truth as black is from white. Should all the means and methods used for the occupation of India and for the maintenance of British supremacy in India be claimed as civilized, civilization would have to be first very clearly defined. I might then discuss the claim.

In the opinion of Shaw, all Europeans who have had some good things to say of Indian civilization are 'occidental renegades.' This variety of renegades was not in existence a century ago nor can any British empire builder of the first or second decade of the last century be considered such a renegade even by Shaw. Let me, therefore, quote such an empire builder's comparative estimate of British and Indian civilizations. I may be allowed incidentally to observe that western civilization and British civilization are not convertible terms.

Among British empire builders of the last century Sir Thomas Munro holds a high place. As he did not keep aloof from the people but moved among and mixed with them he came to acquire an intimate knowledge of them. He won fame both as a warrior and a civil administrator. Such was the man who said in his evidence before the Parliamentary Committee in 1813 in answer to a question about the civilization of the Hindus —

I do not exactly understand what is meant by the civilization of the Hindus. In the higher branches of science in the knowledge of the theory and practice of good government and in an education which by banishing prejudice and superstition opens the mind to receive instruction of every kind from every quarter they are much inferior to Europeans. But if a good system of agriculture unrivalled manufacturing skill capacity to produce whatever can contribute to either convenience or luxury schools established in every village for teaching reading writing and arithmetic the general practice of hospitality and charity amongst each other and above all a treatment of the female sex full of confidence respect and delicacy are among the signs which denote a civilized people—then the Hindus are not inferior to the nations of Europe and if civilization is to become an article of trade between the two countries I am

convinced that this country (England) will gain by the import cargo.

Much water has flowed down both the Thames and the Ganges since this evidence was given. It is not my purpose to discuss Munro's opinions. But Mr Shaw may consider whether, if the Hindus have become barbarians since the days of Munro, that is a proof of the civilizing mission of Britishers in India, who have enjoyed supreme power here throughout this period. Mr Shaw holds that if Western civilization is not more enlightened than Eastern we have clearly no right to be in India. Munro expressed the opinion that in some respects the Hindus were more civilized than the British yet he did not feel called upon to leave India. Mr Shaw should be able to explain the reason why.

I am inclined to think that in some respects the Hindus are still superior to the occidentals, and the occidentals, too, are superior to us in some other respects. It would be very difficult to decide who on the whole were more civilized.

Mr Shaw condemns suttee. So do we. Even in those cases where the widows willingly burned themselves with their dead husbands, nay, insisted upon doing so, I think they acted wrongly. But suttee is a bygone custom. It never prevailed throughout India nor in all ages. It was confined for the most part, to Bengal, Oude and Rajputana and some adjoining areas. It was forbidden throughout southern India. The Emperor Akbar prohibited it. And when during the British period it was abolished by law it was the better mind of the Hindu society represented by Rammohun Roy which stimulated and strengthened the resolve of the Government. That shows that if those who thought with Rammohun Roy had the power of the state in their hands instead of the British rulers, they would have found some means to put a stop to the inhuman practice.

Suttee was not peculiar to India as anthropologists and sociologists know. The custom of cremation or burial of wives, slaves, mothers, servants, high officers, etc. with dead ordinary individuals or kings prevailed in all continents including Europe in some age or other of human history. If the Hindus alone are to be branded as savages for a bygone custom which never prevailed throughout India or in all periods of Hindu history, would it not be quite easy to brand occidentals too as savages for the burning of numerous heretics by many Christians in

the past and for the lynching of Negroes in America in modern times?

The practice of throwing oneself under the wheels of the car of Jagannath ceased long ago, and never caused even a hundredth part of the loss of human lives caused by the rash driving of automobiles in the West. But it seems, the suicide of a small number of persons in the past from religious superstition is a mark of greater barbarism than the present day killing of persons other than oneself due to the superstitious worship of speed!

Mr Shaw reaches the nadir of the ridiculous when he seeks support for his views from a comparison of the British occupation in India with the Roman conquest of Britain. Every schoolboy knows that at the time of the Roman conquest of Britain the Britons were not a civilised people. They had no literature no philosophy, no science, no advanced architecture, sculpture or other fine arts. To speak in the same breath of the uncivilised Britons and of the Hindus with their striking achievements in all spheres of human culture, betrays an ignorance and want of judgment which will not add to Mr Shaw's reputation, though they may not take away from it either.

Neither British nor Hindu civilisation should be judged by some of the worst things that may be said of Britishers or Hindus. They are to be judged by the highest thoughts, ideals, social systems and achievements of the two civilisations through the ages. So judged, the Hindus will not have cause only to be ashamed. Particularly are the two peoples to be judged by what they have done for other peoples than themselves. Like Britishers and other Europeans, the Hindus were in bygone days a seafaring people, they were great colonisers. But they were not like the European peoples described by George Macaulay Trevelyan in the following paragraph of his *History of England*, pp 74-75

"The Scandinavians had always been traders as well as pirates in their dealings with one another in home waters and so they remained in the larger field of foreign enterprise now open to them. They combined the pride of the merchant with the very different pride of the warrior as few people have done. In a tomb of the Hebrides a pair of scales has been found buried in a Viking churl's tomb

alongside his sword and battle-axe. Their first thought when they founded a colony in England or Ireland was to build fortified towns and to open markets. By land or sea they were prepared to trade with the newcomer or to cut his throat according to circumstances or to the humour of the hour. Such indeed for centuries to come, was the custom of sailors from every port of mediæval Europe not excluding Chaucer's Shipman and some of the Elizabethan heroes' (Italics mine R C)

Nor were the Hindus imperialists given to exterminating enslaving and exploiting other peoples. Hindu influence went to evoke the best that there was in the ancient indigenes of Burma, Siam, Cambodia, Anam, Java, Sumatra, Bali, etc. The results can still be traced in the marvellous architectural, sculptural and other cultural remains in many of these lands which are still extant, baffling the ravages of Time and human vandalism. Can Mr Shaw point to a single non-European uncivilized people raised culturally to the level to which the ancient Javanese, Balinese, etc., were raised by the Hindus? Hindu influence is still manifest in and acknowledged by the people of Tibet, China, Korea and Japan. It is not at all my intention to boast of the achievements of our ancestors. But, ashamed as I am of the many evil customs and shortcomings of the people of the land to which I am nevertheless proud to belong, I cannot allow ignorant critics to throw mud at us with impunity. Were we ourselves satisfied with whatever lowers us in the scale of humanity, we should deserve to be castigated even by ignoramuses. But we have all along been fighting our own battles. No doubt, the number of reformers among Indians as among other peoples, has been small. But there is no evil in our country against which some Indians have not fought or are not fighting.

Mr Shaw tries to throw ridicule on the 'occidental renegades' who according to him, picture India as inhabited by Rabindranath Tagore and Mahatma, etc. But should he not have stopped to think why and how even in her enslaved and depressed condition India has been able to produce even one Tagore or one Gandhi? Are men like them plentiful as blackberries in the superior West? Or are such men ever mere freaks, or sports, in any country?

NOTES

"What Americans Say About Subject India"

Among Americans as among many other peoples there have been panegyrist as well as adverse critics of British rule in India. But as the British people and British rulers are wealthier, more energetic and better organised propagandists than the critics of British rule in India, the world, including India, is perhaps better acquainted with the panegyrics than with the indictments of the British governance of India. Not for a balanced and impartial judgment, both sides of the shield should be seen, both the advocates and critics should be heard. Most politically-minded Indians attach greater importance to what the critics say, as most Britishers consider only the praises to be true. But if one does not know both the pros and cons it is best to suspend judgment till one has had an opportunity to calmly hear both sides. When we say this we do not imply that if the British administration of India were admitted to be very good India would have no right to self rule. No India's case for freedom is independent of the goodness or badness of British rule. Self rule is an essential part of the highest political good. The best other rule cannot deprive us of our right to this highest political good.

As all Indians now living were born and have been brought up in subjection and breathe the atmosphere of dependence even the most freedom loving among them have to some extent become accustomed to loss of freedom as if it were quite a natural thing. It is, therefore, necessary for us to know exactly what free people think of our political and economic condition.

Though it is well known that editors do not necessarily endorse every bit of what their contributors write or quote, and therefore it is not usual with us to comment on contributed articles yet as a few sentences quoted in Dr Sunderland's article may be misunderstood we think we should say a few words about them.

Dr Charles Cuthbert Hall speaks of 'a fire burning day and night for three months,' at Rubitan (which we have not been able to locate) the fuel of which was dead bodies etc. Those foreigners who do not know that

the Hindus cremate their dead may make the mistake of thinking that dead bodies were used as fuel for some purpose whereas the truth probably is that during some devastating epidemic of plague so many people died everyday that the funeral pyres continued to burn during three months.

Mr Charles Edward Russell writes that "after 160 years of this sort of benevolence the gratitude of the people is so very great that they are hourly expected to rise and tear their benefactors to pieces." 'Expected' by whom? Perhaps some British sojourner or other in India told Mr Russell that Indians "are hourly expected to rise and tear" the British sojourners to pieces. But we are not aware of any such expectation or well founded apprehension. Again, the same writer refers to the people incessantly plotting and planning how to get rid of 'the British Government. That the people are constantly plotting may be only a C.I.D. story, though it is true that there is grave discontent in the land. If there have been plots now and then, only a small number of men took part in them. Again, Mr Russell says that his fellow traveller, an Englishman, told him that the 'volcano', i.e., the alleged pent up rebellious fury of the Indian people, might burst forth any moment. Questions of the practicability, the wisdom, or the need of a rebellious outbreak apart, we do not think there is any probability of any such outbreak—if for no other reason than that the mass of the people are too ignorant, too poverty stricken, too disease ridden and too unorganised for such an adventure.

Sir Ganga Ram

The Punjab in particular and the whole of India besides are poorer by the death of Sir Ganga Ram the eminent man of action and philanthropist of the land of the five rivers. He was a distinguished engineer and agriculturist social reformer and philanthropist. Says *The Tribune* —

A man of rare courage ability and enterprise, Sir Ganga Ram would probably have made his mark in any sphere of life. The sphere that he actually chose was one where his natural talents found the freest play and the fullest scope with

the result that quite early in life he attained a distinction which in most cases is the reward of mature years. He was undoubtedly the most successful man of his time in his own profession in this Province and perhaps one of the two or three most successful men in that profession in all India. In one respect, however—the application of his engineering skill to India's premier industry and the adoption of scientific methods of cultivation—he stood absolutely unique. It was here that he both had the opportunity of exhibiting to the fullest extent the rare gifts with which nature had endowed him and earned that immense wealth the liberal and judicious use of which was the prime source of his power over his fellow men. This is not the place to refer in detail to his many activities in this direction. Nor is it necessary to refer to activities which are a matter of common knowledge. Suffice it to say that whether in the establishment of model farms on plots of land which from time to time were granted to him by Government or in equipping with irrigation channels and up-to-date machinery for cultivation more extensive plots of land which Government leased to him on conditions which in one case at least, were far from favourable to him he achieved complete and almost phenomenal success.

The same journal observes truly that it is not for these things that Sir Ganga Ram will be best remembered. As *The Hindu Herald* observes —

He will be best remembered in this Province for his practical philanthropy on a truly princely scale. To this most outstanding aspect of his life His Excellency Sir Malcolm Hailey while opening the Hailey College of Commerce on the 4th March last paid the following eloquent and well deserved tribute — One had to deplore the fact that our University has not attracted that rich stream of private bounty which has created and maintained our great universities of the West. In Sir Ganga Ram's gift of this site and building we have an example which will I hope, attract a long line of benefactions in the future. For him it is no first effort in philanthropy or public spirit a widows home and school a hospital a commercial institute and library an endowed scheme for assisting widows remarry are among the many causes which his liberality has assisted. I know no man in our province to whom charity seems to make a clearer call and who obeys that call with a readier hand or a more cheerful heart. His success in life has been the fruit of rare courage and enterprise, but, as I have said elsewhere, if he has earned like a hero he has spent like a saint.

He also founded a students career society, an industrial shop and an *Apahay Ashram*. *The Tribune* draws attention to a special feature of his benefactions.

Many men have been known to bequeath large fortunes to the nation at the time of their death. With the single exception of Sardar Dyal Singh the founder of this paper and of the College and library that bear his name, no one, at least in this Province, has given away such large sums of money for the permanent good of the public during his life-time. The properties placed by Sir Ganga Ram

at the disposal of the Trust created by him for the carrying out of his philanthropic aims are worth no less than Rs 30,00,000 and the annual income yielded by them is more than a lakh and twenty five thousand. And yet these did not exhaust the whole of his philanthropic activities. A large measure of his charity was reserved for individuals. His charity besides was of the kind that while helping the needy and the distressed did not demoralise them. As often as possible he would instead of making a large money grant to such people place them in the way of earning money for themselves. The passing away of such a man even though he died full of years and honours would at all times be a public calamity. In the present case the sense of grief at his death is bound to be the keener because he died away from his home and his country.

To another aspect of his personality and career Prof S S Bhatnagar draws attention in *The Tribune*. Says he —

The passing away of Sir Ganga Ram is a serious setback to the progress of applied chemistry in our province. There are comparatively few who know how deeply Sir Ganga Ram was interested in Chemical Research. I am glad to know that in the public meeting held at Lahore on the 14th of July 1927 Sir Abdul Qadir made a brief reference to Sir Ganga Ram's latest researches. The two schemes on which he was spending a great deal of his time and attention were —

1. A new fodder from the peeled off skin of the sugarcane — The scheme aimed at softening the skin by a chemical process and injecting it with molasses and other nutrient material so that it would be palatable and nourishing to the animal. The scheme was in a fairly advanced stage and samples were prepared and shown by Sir Ganga Ram to His Excellency the Governor and approved of by Mr Warth the animal nutrition expert at Bangalore.

2. The making of white shakkar — Not satisfied with the taste of crystalline sugar Sir Ganga Ram made us evolve a process by which a greater portion of the shakkar could be retained in the crystal sugar and yet the product would be white. This was successfully accomplished in our Laboratory and Sir Ganga Ram carried with him to England samples of the product.

Jogindranath Basu

Babu Jogindranath Basu who in his long life of 71 years has filled many roles was in the early stages of his career known best as a good teacher who not only filled the minds of his students with knowledge but influenced their characters for good. While headmaster of the high school at Baidyanath he interested himself in a project for the establishment of a leper asylum. He was drawn to this kind of philanthropic work by the presence at Baidyanath of a large number of lepers, who go to that place of pilgrimage

in the hope of being cured and by the then recent death of Father Damien who gave his life for the lepers at Honolulu Mr Basu wrote a life of Father Damien in Bengali in collaboration with his friend and namesake the late Babu Jogindranath Basu son of the venerable sage Rajnarain Basu. The leper asylum was established mainly with the help of the late Dr Mahendra Lal Sircar who endowed it. It was named the Rajkumari Leper Asylum after the famous doctor's wife.

Mr Basu is well known as a poet and a prose writer. His best known poems are *Shrujan* and *Prithuraj* (both epics) and *Manava Gita*. His best known prose work is a biography of the poet Michael Madhusudan Dutt in which he did pioneering work in the fields of critical literary appreciation and critical biographical composition. He also wrote biographies of the saint *Tularam* and of the sainted queen *Ahalya Bai*.

Jyoti Bhushan Sen

Jyoti Bhushan Sen who worked as Librarian of the Servants of India Society in Poona for over four years and who died last month in the same city of typhoid fever was not widely known mainly perhaps owing to his modesty plain living and unobtrusive manners. But fame is not a standard by which the true worth of men can be gauged. We had the privilege of meeting him only once but that sufficed to impress us with the worth of the man. *The Servant of India* writes of him —

Jyoti Babu had a distinguished academic career being an M.A. of the Calcutta University in History and Economics. He was attracted to the Society by an appeal which the then President of the Society Mr Sastri made in his public addresses to young men to join the Society on listening to which he immediately came over to Poona and offered himself for such use as the Society could make of him. After the customary probation for a year the Society decided to admit him to membership but Jyoti Babu himself desired to be given more time in order that his political views might crystallise still further though in general principles he agreed entirely with the Society. So utterly conscientious was he and so sedulously anxious to set life in the blaze of the truth that although four years had elapsed since his arrival he still wanted more time before he could allow himself to be enrolled in the Society. Just before the Anniversary it was proposed to him that he should reconsider his former decision and again his answer was that the vows administered to members had a terrifying effect on him

and he would prefer to remain if only the Society would allow him a loose and unattached member. The Society of course thoroughly understood and respected his scruples and though they felt that few young men could be more worthily included as members than Jyoti they never pressed him. One of the members of the Society once dared to mention to him as a reason justifying his giving the precarious position of the Society financially, whereupon he felt great injustice was done to him as indeed it was for no one could be more indifferent to considerations of money than Jyoti Babu. Nor would he go out and seek a career for himself though he had many tempting offers. He had decided to live and work in the Society as a non-member so long as the Society would permit, or till he felt sure he would never change his views and thus could join the Society. Still members of the Society felt that he was one of them and that he was to them more than their blood brothers. A more loving and lovable soul never breathed. Of his intellectual powers it would be impertinent to write here. The Library of the Society always a matter of pride to us has undergone many improvements during the last four years all of which are the sole work of Jyoti Babu. His writings in this paper are well known to our readers. His death has caused in the hearts of the Society's members a void which can never be filled.

Detractors of Muhammad

In a letter published elsewhere, a correspondent draws attention to two books which contain passages likely to displease the followers of the prophet Muhammad. The letter contains two suggestions one is that the books should be suppressed and another that Muslim divines should expose the errors of the two European authors. The second suggestion we can at once unhesitatingly support. As for the first, as we have not seen the books we can only say that if the works are scurrilous indecent or obscene their import to and circulation in India may be stopped — the Government of India has no power to suppress books published in England or Germany. If the books be not scurrilous indecent or obscene the second suggestion is the only one that can be acted upon.

We have not read the *Rangila Rasul* or any other book or pamphlet which calumniate the prophet Muhammad or any other prophet saint or religious teacher. With regard to such pamphlets we feel that they had best be treated with contempt or be refuted if necessary. As regards the *Rangila Rasul* even if it were

assumed that all that its writer wrote was true it would still have to be explained how a man who was merely *rangila* could be the founder of a great religious movement which has counted among its adherents so many truly saintly men and women. As non-Muhammadans it may not be difficult for us to believe that he had his faults. But may it not also be that some Muhammadan compilers of the Traditions have not understood him aright and some may have even invented or easily given credence to unworthy stories relating to him? Muhammadans may not like a non-Muhammadan to give detailed illustrative examples. But it may be permissible to refer to what has been done with regard to the life of Sri Krishna. Many immoral actions are ascribed to him. But if he was really the author of the *Bhagavad Gita* these cannot all be true. And therefore authors like Bankim Chandra Chatterjee have felt called upon to examine all scriptural materials relating to Sri Krishna and rejecting interpolations and spurious additions place his personality in a true light. Devout followers and lovers of Christ there are who do not accept everything narrated in the New Testament as actual historical truth. We do not know whether any Islamic scholars have thought it permissible proper or necessary to adopt modern critical methods with regard to the Islamic scriptures. But so far as the Traditions (*Hadis* or *Hadith*) are concerned we find it stated in the preface to the Rev. William Goldsack's "Selections from Muhammadans Traditions"

In modern days intelligent Muslims place less reliance on many of them. It is known that in the first century of Islam Traditions were forged for political and religious reasons. The late Sir Sayyid Ahmad accepted very few as genuine. The Hon'ble Sir Abdur Rahim says "Nothing has been a more fruitful source of conflicting opinions in matters of law among the Sunni jurists than the question whether a particular tradition is to be regarded as genuine or not, though it may be one for whose authority one or more of these writers (Bukhari or Muslim) may have vouchsafed (*sic*)" (*Muhammadan Jurisprudence* p. 31)

So if it be permissible even for orthodox Muhammadans to consider some traditions as not genuine they may prove that those which are used to calumniate Muhammad are not genuine and thus reject them.

The Suggested Law Against Religious' Calumniation

Various demands have been made by Muslim papers and at Muslim meetings in connection with the *Rangila Rasul* case among which the only one which deserves to be discussed is that the law should be so changed as to make the vilification of the founders of religions and other religious leaders a penal offence. Living men who are defamed can sue their libellers; dead men cannot. Hence it ought to be part of gentlemanliness not to libel dead persons whether they be religious leaders or not. But the discussion of the opinions, ideals, character and conduct of important personages is necessary for the writing of such historical and biographical works as would be useful to society. Therefore there ought not to be any legislation which would stand in the way of the proper discharge of their duties by biographers and historians. Religious teachers and leaders are as a class not less but sometimes more important persons than others. Hence to curtail even indirectly the right of criticising such persons would be nothing short of a disaster. And we do not see why a distinction should be made between religious leaders and others. Why should any man or class of men enjoy immunity from criticism? Immunity of this kind has not done any good. If the ancient Hindu law givers were at any time literally obeyed then it must be admitted that a time there was when Brahmins could not be executed for capital offences though others could be. Did such immunity do any good to society? Could it prevent the degradation of the Brahmins as a class? In some if not all Christian countries there was at one time what is known as benefit of clergy. The clergy could not be tried by secular courts. Did such exemption do good to Christian society? Did it do good even to the clergy?

If it were possible to ensure fullness of criticism while providing for the punishment of the vilifiers of dead persons we should vote unhesitatingly for such legislation. But we doubt whether that is possible.

All those who believe in a Supreme Being also believe that He is inconceivably greater than the greatest of human beings. But He has not made Himself exempt from criticism by means of any natural laws. It is not a natural law that as soon as a man blasphemes or denies the existence of God

or falls foul of Him he at once falls down dead or is punished automatically in any other way. Even the man-made laws against blasphemy have become inoperative in enlightened countries. Seeing that God has not exempted Himself from criticism it does not seem reasonable to seek to bestow that sort of immunity on any human being, however great. As God stands in His own majesty really proof against any attacks, so should the personality of the man of God be so great as to be incapable of being lowered in human estimation by any kind or amount of vilification. A great character is its own defender; no other armour or bulwark is needed. The insistence on providing artificial means of defence would tend rather to raise doubts regarding the greatness of the character sought to be immunized.

The Christian peoples of the world are at present predominant over the greater portion of the world. But they have not made any even the most rabid and unreasonable attacks on Jesus or the Virgin Mary a penal offence. Has Jesus or His Mother suffered thereby? Not at all.

Adverse criticism or vilification of a religious leader is a sort of difference of opinion. Some people think of a religious leader in one way, some others do not. Differences of opinion in religious matters have often been styled heresy and heretics have been burned at the stake. But has even such extreme punishment succeeded in preventing the rise and spread of various opinions in religious matters? It is vain to chain the human mind by penalties.

We are not at all pleading for the liberty (if it can be called such) to vilify religious leaders. Rather in the interests of human progress and for preserving the real dignity of religious leaders we are pleading that the innate strength of their personalities be allowed to defend them.

But should the Muslim community insist on giving to their prophet any artificial means of defence which he should not require we would urge that the slandering or vilification of a religious leader or a prophet be made a penal offence only in the case of Muhammad. And that for various reasons. One is that no other religious community has demanded such protection for its prophet or prophets, saints or other religious leaders—those who have refrained from making such demands have acted very wisely and quite courageously and therefore the less freedom

of thought and opinion is circumscribed the better. Another reason is that the number of religious communities and sub-communities in India and of their founders, prophets, saints, teachers, leaders, etc., would be almost impossible to calculate and fix definitely. A third is that if these persons are to be placed above adverse criticism and vilification it stands to reason that the objects of worship of some of these religious communities such as the Hindu gods and goddesses, the Jaina Tirthankaras, the different Buddhas and Bodhisattvas, etc., should also be given similar protection, but it would be a very difficult if not an impossible task to prepare an exhaustive or tolerably exhaustive list of them.

The Rangula Rasul 'Agitation in England

The Amrita Bazar Patrika has written a reasonable article on the way an offshoot of the *Rangula Rasul* agitation has been engineered in England. It says in part—

The echoes of the *Rangula Rasul* agitation appear to have reached the shores of Great Britain. Reuter informs us that a number of Englishmen amongst whom we find such names as those of Sir Conan Doyle and Sir William Simeson have joined with a large number of Mahomedans and are going to submit a petition to the Secretary of State for India protesting against the attacks by certain Hindus upon the Founder of Islam and acquainting the author of *Rangula Rasul*.

We have no mind to question the honesty of these estimable English gentlemen who have taken upon themselves the task of expressing the abhorrence of the British people of the conduct of some Hindus. We ourselves have condemned and would always condemn the actions of all men irrespective of their religious or political creeds who wound the religious susceptibilities of others by falling foul of persons revered by the latter. Nor is the feeling of the rest of the responsible Hindu Press in the country in any way different.

Again—

Let there be no misunderstanding. We have said again and again that we condemn the action of the author of the *Rangula Rasul*. But when our Mahomedan countrymen are making such a mountain out of a mole hill and some Britishers at home have joined them it becomes necessary to say a few plain words.

The signatories to the petition to the Secretary of State have apparently taken it as unusual step because they have been shocked at the attack made on the Prophet in the book *Rangula Rasul*. We may well take it that many of them at least their British friends have neither read nor seen

SIR GANGARAM

JOGINDRANATH BASU

what is written by the author in the book. But probably they have read what Gibbon has said about the Prophet in his *Decline and Fall* of the Roman Empire and Mr H G Wells in his *Outline of History*. One cannot have any doubt about the scurrilous nature of the attack which they have made on the character of the Prophet. What steps have the Faithfuls taken so far to get the authors punished and what are these zealous British friends who have taken the cudgels to-day on their behalf going to do? It would be interesting to see how many followers of the Prophet have the courage to demand the British Parliament to eliminate the offending passages from these two world renowned books.

Lecture on Unequal Treatment of the Provinces under the Reforms

In noticing Babu Ramananda Chatterjee's lecture on unequal treatment of the provinces under the Montagu Chelmsford Reforms *The Bengalee* has casually observed that it is not sure whether the speaker quoted the views of Mill on representation with approval. It is true that nothing was said in the lecture to indicate the speaker's acceptance or non-acceptance of Mill's views. That was because Mill's views were quoted only to refer to the different bases of representation which may be taken into consideration. The speaker's object was not to urge the acceptance of any particular basis but to show that no basis has been consistently followed in fixing the number of representatives assigned to the provinces. He said in the course of the lecture that he had not suggested how the provinces should be represented but might do so if a suitable opportunity presented itself in future but this observation of his was not embodied in the printed summary.

A few other points have not found place in the summary printed elsewhere. For instance the speaker said that raw and manufactured jute was not only produced in Bengal but was exported from a Bengal port for which Bengal had to incur expenditure. But Bengal was not given any the least share of the jute export duty. As regards the educational grant received by Bengal from the Government, he showed that Bengal paid in fees more than any other single province and consequently was punished for its self-reliance with meagre educational grants.

A Hindu Condemns the League

Under the above heading *The Literary Digest* (of America) for June 25 1927

publishes a brief article which is quoted below —

A League of Robbers' is the phrase applied to the League of Nations by a cultured Hindu who has just returned to India from Geneva, and who has decided that the new institution is merely a device invented by the Imperialist nations to consolidate and extend their ill-gotten gains. Babu Ramananda Chatterjee M. A. a highly intellectual Brahmin of Bengal is the man and he is the editor of *The Modern Review* and *Prabasi* of Calcutta. He went to Geneva at the invitation of the League of Nations itself which offered to bear all his expenses. His inquiry we are told, led him to become so disappointed with the aims and activities of the League that he preferred to pay his expenses out of his own pocket and since his return home he has given frank and vigorous expression to his views. According to a speech delivered by Mr Chatterjee in Calcutta, as reported in the *Amrita Bazar Patrika* of that city—

The League practically means a League of white people. An ex-President of the League (Mr Benes) frankly confessed in a League meeting 'The work accomplished by the League of Nations in the past year constitutes a step forward in the evolution of Europe and the improvement of the world. If the robber nations of Europe gave up robbery the new organization might lead to the improvement of the world but if it aims merely at the evolution of Europe without giving up international robbery it means practically the enslavement of the world.

The Covenant, according to Mr Chatterjee makes it impossible for the League to help any nation that is struggling to be free. He declares

In these days of advanced civilization people have imbibed the habit of hiding the true color of everything and at present whenever a big Power annexes a territory and thus becomes its virtual ruler they are apt to call it a mandated territory. Exploitation and enslavement nowadays go by the name of sacred trust of civilization.

Mr Chatterjee adds that there are other man-dates than those issued by this league of robbers' including the mandate from God which ordains that all are to be free in every walk of life.

The day after the delivery of the lecture a report appeared in some dailies under the caption 'A League of Robbers'. The speaker at once wrote to say that he had not used the expression league of robbers as that would not be justifiable and the contradiction was published in the papers. It is true no doubt that the League is dominated by some imperialistic predatory nations but all or most of the nations which are members of the League are not predatory.

As for Mr Chatterjee's non-acceptance of expenses from the League it had nothing to do with his being disappointed with the aims and activities of the League. As has been explained in a previous issue of this *Review* he did not accept any expenses because he wanted to be free from the least conscious

or unconscious pressure of a sense of obligation on his mind. As he did not go to Geneva with any high hopes he had no reason to be disappointed. Nor did he go with any fixed preconceived notions.

Public Health Scheme For Bengal

It is understood that the Government of Bengal has put into operation what is known as the late Mr C. R. Das's scheme of Public Health organisation and actual work in more than 100 centres has begun.

Sir James Donald, Finance member, during the last session of the Bengal Council virtually accepted the scheme elaborated by the late Mr Das and the Council sanctioned Rs 3 lakhs to begin operations during the current year. It is hoped that by the end of the current year over 200 police stations will be equipped with trained assistant health officers and the necessary staff.

The scheme inter alia provides that each of the 600 thanas in Bengal will have a medical officer with the necessary staff.

The Bengal Government has sanctioned Rs 12 lakhs. It is now learnt that all the districts have been given the option of applying the scheme to 25 per cent of the thanas during the current year, and one district has put it into full operation throughout the whole area during the year.

It is stated that the staff will mainly devote attention to cholera and other epidemic diseases and look to the general sanitary condition of the area and the question of supervision of food supplies. Besides this they will attend to child welfare work and will purify water tanks and wells suspected of being contaminated. They will also carry out disinfection in case of infectious diseases. By the careful inspection of their areas the staff will be able to discover incidence of kala azar, malaria, etc.

It is stated that the actual annual recurring expenditure of the Public Health Department incurred by the 25 districts in 1925 was Rs 5,88,590. It will be seen that this expenditure together with Rs 12 lakhs now proposed to be allotted for public health works makes a total of close upon Rs 18 lakhs, the sum required for the Das scheme.

Lessons in Schools on the League of Nations

The following is a verbatim copy of Circular No 16, dated the 23rd May, 1927, sent by the Inspector of Schools, Presidency Division Bengal to the Head-masters of all Government and Aided schools in that Division—

Sr., I have the honour to invite a reference to this office Circular No 10 dated 7th January 1927 forwarding a copy of the publication 'The League of Nations' and to request you to issue definite

instructions to the history teachers of your school that they should give lessons on the back (sic) in the four upper classes.

2 You are also requested to give an address on the subject occasionally.

3 You are further requested to submit to this office a brief report indicating what has been done in your school towards the dissemination of a knowledge among the children in the nims and objects of the League of Nations.

1 Your report should reach this office by the end of July next.

In the first paragraph, 'lessons on the back' is probably a mistake made by the typist for 'lessons on the book,' the book, we are told, being Sen and Hall's booklet on the League of Nations published by Macmillan and Co and priced Re 1-12. Those who believe in omens or in unconscious humor may apprehend or suspect that the unintentional mistake of putting down 'back' for 'book' is due to the French having dropped bomb lessons on the 'backs' of the people of Syria, a 'mandated' territory of France which is bound to accept French 'advice' whenever France feels it necessary to give such help. It is to be hoped our schoolboys will have a pleasant time of it during these 'lessons on the back'.

It is understood that politics which means politics of the kind which criticises the British Government, is taboo in Government and Aided schools, if not in all schools recognised by the Calcutta University. But as the League of Nations is not an immaculate organisation and as it and the British Government are not identical, would it be permissible to give critical lectures and lessons on the League in these schools? Is it suggested that lessons are to be given only on the book named? Why are not the teachers not told in the alternative at least to obtain copies of the pamphlets issued by the Information Section of the League, priced a few pence each and sold by the Oxford University Press in Calcutta? In this Review and *Prabasi* we have supplied some information and offered some criticism on the League from time to time. No one has yet been able to show that what we have written is inaccurate or unfounded. Teachers may use our articles and notes. And if Mr Oaten agrees, we may undertake to write a booklet on the League from our point of view and supply copies at cost price to teachers and students. We would give full and exact references for whatever we might write in the booklet.

The Labour Organisation of the League of Nations

At the conclusion of a lecture on the League of Nations delivered by the editor of this Review in hangon a young gentleman connected with the Scindia Navigation Company asked him why he had not referred to the work done by the Labour Organisation of the League. The question was answered.

Some people are or profess to be under the impression that the International Labour Office of the League at Geneva has done and is doing great things for labour in India. Our idea is that if the British Government in India wishes to do any good to our factory hands according to any researches or investigations made or ideals established by the League the cheapest way to do so is to spend a few shillings and buy the publications of the Labour office containing these researches etc and act according to them, instead of sending delegates to Geneva to increase the British vote and paying from the Indian treasury a contribution of more than seven lakhs a year to the League. We have also asked more than once why, if the great nations who guide and control the deliberations of the League mean to do good to Labour have not the greatest manufacturing nations ratified the Hours of Work Convention though India was made to ratify it six years ago?

As to the good done to factory labourers in India, here is something from *The Bengallee* —

A conference of the United Textile Factory Workers Association sent out a delegation in India last year to inspect Indian labour conditions in the textile industry. A delegate speaking at Blackpool recently declared that "the home life and on side conditions of the Indian worker are a scandal to the civilized world. The material conditions and surroundings of the work people off the working hours have been condemned by every observer & representative of The Times of London once told us at Bombay after his inspection of the mill area. The wonder is not that there is discontent in the land & that there has not been a revolution to alter the conditions prevailing in that area.

And yet Sir Atul Chatterjee and other representatives of the Government of India progressing morally and materially year after year the reputed patron saint and protector of Indian labour, never tired of condemning the Japanese conditions as if the Indian conditions are better or even equal. We published on the 3rd of July an article from Miss A. M. Karlin giving particulars of the conditions of labour of Japanese work girls in the cotton mills there. But who cares for truth? Surely not

the patron saint, who cannot escape a share of the condemnation published at Blackpool.

We do not agree with the Blackpool speaker that the comparative low stamina of the Indian textile worker was due to his or her living on rice and vegetables. The truth is that they do not get enough grain or vegetables. And the Indian vegetarian has no objection to taking ghee if he can pay for it. Grain vegetables and butter if taken in proper proportion should produce as much stamina in the tropics as bullock. But does the Indian worker eat food enough or proper sanitary environments? Go to the patron saint for an answer.

The Opium Trade at Geneva

Miss Ellen A. La Motte, known for her book on the opium trade, has exposed the real attitude of some governments interested in the opium trade, in *The Nation* of America. She tells the world that

The ninth meeting of the Opium Committee of the League of Nations was held in Geneva from January 17 to February 1. On this occasion the committee threw overboard all pretensions to the contrary and came out boldly as the upholders of the opium trade. For this time the fight is not on drugs rather than opium. Drugs it would seem pay even better than opium and it is evident that the drug interests are able to exert powerful pressure on their various governments and upon the delegates sent by those governments to this Opium Committee of the League. But, bad as it was a mighty fighter has been raised up in opposition to these sinister interests. Italy has come into the arena, and Italy—and Mussolini are in earnest. Their spokesman was Signor Cavazzoni and never once was the Italian delegate daunted in his fight against the Opium Bloc. Never once did he fail to address himself directly and earnestly straight to the British delegate, recognizing in him the leader of the opposite camp.

Miss La Motte gives the reasons why Cavazzoni the Italian delegate fought so stoutly against the drug traffic.

Italy he said was a country that neither grows opium nor makes drugs yet it was being flooded with drugs in common with the rest of the world. But Italy did not like it and wanted to protect itself. He reminded the committee therefore that the countries they represented were all tied in the Hague Convention and that Article 9 of that convention calls upon the contracting Powers to limit drug manufacture to the medicinal needs of the world. He said not one of them had done that that they were all manufacturing vastly in excess of those needs and that an international obligation like the Hague Convention should be binding upon its signatories.

Such being his views one morning Mr Cavazzoni burst in with the following resolution

The Advisory Committee taking note of the fact that the manufacture of drugs is unquestionably carried on on a scale vastly in excess of the world's medical requirements and that in consequence the contraband traffic continues to increase, as is proved by the quantity of drugs seized.

Considers it advisable that full application should be given to the principles contained in the Hague Convention Article 9 and confirmed in the Second Geneva Convention Article 3 by which the contracting parties undertake to reduce the production of manufactured drugs to the quantities needed for medical and scientific purposes. It is of opinion that it would be advisable to make a study of the measures which should be taken in order that the manufacture of drugs be reduced to agreed quantities. In order to attain these objects the Advisory Committee proposes to the Council that it should hold an extraordinary session at a date to be fixed by the Council.

After some manœuvring the members of the committee had to vote. The complete vote was as follows:

Great Britain	No
British India	No
Holland	No
France	No
Switzerland	No
Serbia	No
Japan	No
Italy	Yes
Siam	Yes
Germany	Abstained
China	Absent (ill with influenza)
Portugal	Absent (from the room)

We have given the bare outlines of Miss La Motte's article. The amusing and graceful byplay at the committee meetings we have omitted—at any rate for the present.

This episode is one more proof of the hypocrisy of powerful governments.

cost of the education directly as well as indirectly through the exploitation of the poor teachers and through violation of the principles of sanitation hygiene physical culture etc

There are still in India many proprietary institutions. In most of these institutions, the teachers are inhumanly under paid and over worked—the boys are huddled into ill ventilated rooms and made to pursue their studies under conditions that often injure them for life. There are other forms of corruption and evils also which need not be discussed. Recently the University of Calcutta disaffiliated two high schools the Marton and the Canton Institutions on account of the undesirable way in which those institutions were being run. Their fate however did not serve as a warning to another Calcutta school which is at the present moment busy carrying the "principle of proprietary tyranny beyond all limits of justice.

The proprietor of the Athenaeum Institution who is reputed to be a successful school owner some time ago appointed himself to the post of the headmaster and reduced the actual headmaster to a joint headmastership in order to enjoy fully the privileges of a headmaster enjoined by the new school code. The degraded headmaster as well as some of the teachers who had enough moral courage to stand up against such tyranny, approached the University for redress. The University ordered the proprietor of the Athenaeum Institution to reinstate the headmaster and also to improve the management of the school in certain other ways. The proprietor did nothing of the kind. Instead he dismissed the headmaster and several other (troublesome) teachers.

The University authorities have since written further letters to the proprietor but he seems to be thriving well in spite of the letters. The teachers, who have been so unjustly deprived of their job are going about looking for justice. Whether they will obtain it or not will largely depend on how the University is going to tackle this defiant school owner who it is rumoured has influential friends and sympathisers in the Syndicate.

A group of the Labour Party in England have drafted a Bill providing complete Swaraj constitution for India. The correspondent adds that the Bill when introduced in the House of Commons will get no further than first reading but it is significant propaganda.

The air of mystery which has been sought to be given to the matter is quite unnecessary. Now that the matter has become public, it is permissible to state that the editor of this Review, among others, received the draft of this Bill with a covering letter about a month ago *not for publication* but for careful consideration, discussion with colleagues, expression of opinion and suggestions. This draft constitution for India has been prepared by a number of members of the Independent Labour Party in consultation with their Indian friends. That Party recognise the right of India to self-determination. They believe that the representatives of the Indian people have the right to decide what the constitution of India shall be. At the Annual Conference of the Independent Labour Party last year, the view was accepted that the right course for the next Labour Government would be to ask representatives of the Indian Parties in the Legislative Assembly to submit a Constitution for adoption.

The members of the I. L. P. stand by that principle of self-determination. They know that a satisfactory settlement of the Indian problem cannot be imposed from Great Britain. It must come from India itself.

At the same time they earnestly want justice to be done to India as soon as possible, and do not want the delay which would be occasioned if no preliminary steps were taken before Labour comes again to office. The appointment of a Royal Commission to prepare a revised constitution for 1929 also makes early action desirable. The Independent Labour Party are therefore, venturing to take the initiative in seeking to bring about an understanding between the Indian Parties and the British Labour Movement, with a view to action acceptable to India being taken when Labour next has the opportunity.

They wish to make it perfectly clear that they are not limited in their commitments to this draft constitution. They would support any democratic scheme which had the endorsement of representative Indian opinion. They would support the transference of responsibility for "defence" to India

at the earliest possible moment, and would urge the withdrawal of British troops from India as soon as Indians considered it possible. They would also desire that relations with the Indian States should be directly a matter for the Indian Legislature and not for the British Government. If Indians thought it well to put forward demands less drastic than these, they would, of course still support them, but, naturally, the more fully Indian demands embody democratic freedom, they declare, the happier they will be in championing them.

There are two points, they think, which require a special word. They have based the Bill on Dominion status, but they recognise the right of the Indian people to full national independence. If that were the considered judgment of a representative gathering of the Indian Parties, they would feel that they should support it, but they realise that such a demand would probably delay the coming of political freedom and lead to antagonisms. If, however, India, after a full consideration of the consequences, made such a claim, they would not falter in their championship of it.

The Bill as drafted, also embodies the bicameral system of Government. They have incorporated this system in the draft, because it is the accepted system of government in democratic countries. It should be borne in mind, however, that the Double Chamber system of government has not always worked well for democratic purposes and it might be considered whether a single Chamber, with a Committee system for the detailed consideration of Bills, might not be more satisfactory.

The present draft bill is the outcome of the I. L. P. India Advisory Committee, accepted by the Annual Conference of the Independent Labour Party, at Whitley Bay, in the year 1926. It has been drafted with a view to formulating a constitution for India whose terms should, as far as possible, harmonise with the views of all shades of progressive Indian political opinion, while at the same time it embodies those principles of democracy, self-government and freedom which the I. L. P. regard as fundamental to such an undertaking.

It is important to bear in mind, however, that the Bill is in no way put forward as being fixed or finally determined as regards its contents, or in connection with the policy to which it seeks to give effect,

but that, on the contrary, it is advanced simply as a tentative basis upon which future work may be done. No part is unalterable, the whole can, if necessary, be changed in any way which is desired.

The task of preparing this Bill has been considerably lightened by the existence of the Commonwealth of India Bill known as the Besant Bill. The drafters of the Labour Swarajya Bill consider the Besant Bill an exceptionally able and carefully prepared piece of work, whose form at any rate, they deem incapable of improvement. And, in addition, a considerable portion of its matter can be regarded as non-controversial. The Besant Bill has therefore been quite frankly taken as a foundation for the L. L. Party's Bill and those alterations and additions introduced which seemed best calculated to bring it into conformity with the ends which the L. L. P. desire.

We do not intend to examine in any detail the draft provisions of this Bill. But the number of members assigned therein to the Provinces for the central legislature shows that no basis of representation has been uniformly and consistently followed, which is a defect. The numbers assigned are given below:

Senate or Upper House.	Legislative Assembly
Assam 13	Assam 26
Bengal 33	Bengal 66
Bihar and Orissa 33	Bihar and Orissa 66
Bombay 33	Bombay 66
Burma 26	Burma 52
Central Provinces 17	Central Provinces 34
Madras 33	Madras 66
Punjab 26	Punjab 52
United Provinces 33	United Provinces 66

High Schools in Big Centres and Small Centres

In his Report on Public Instruction in Bengal for the year 1925-26 Mr. Oaten, the Director, observes:

'At the risk of being accused of being an opponent of educational expansion one must emphasise the fact that there are too many high schools in Bengal. What is wanted is concentration in the big centres of high school education, and a consequent reduction in status of the others to a middle school standard. Perhaps in the future agricultural and other courses fused with such middle schools will provide a type of education which will meet more nearly the needs of that majority who can never hope to enter the University or carry education beyond the school stage.'

'It might then be possible in time to provide for the real high school education by first

class teachers, in good buildings and in good surroundings.'

We do not impute any bad motives to Mr. Oaten, but we do not support his opinion. Bengal is mainly an agricultural province with mostly a rural population. Big towns are smaller in number here than in many other provinces. The number of villages being large, and there being a demand for English education, it has been necessary to found and conduct a large number of schools, many of which have a comparatively small number of pupils. Many of these schools have to depend to a great extent on the income from fees. The reduction in status of high schools to a middle school standard would mean loss of income without corresponding decrease in expenditure, and hence such a step would practically amount in many cases to the abolition of the schools, and the deprivation of village boys of the advantages of education. Most parents in Bengal who live in villages or small towns and desire to educate their children are too poor to send them away from home to bigger centres of population, paying in cash for all items of expenditure. Agricultural and other courses may be fused with high school courses also in schools situated in villages and small towns. As for good buildings we appreciate architecture, but think that in a poor country and for poor boys well ventilated and well-lighted school rooms with cemented floors, free from damp should quite suffice. As for good surroundings, sanitary condition being the same, we should prefer the surroundings of villages and small towns to those of big towns.

If one can examine in detail the intellectual and moral qualifications and methods of teaching of the teachers one may be able to judge who are "first class teachers" and who not. But in the mass the only means possessed by the public of judging whether the teachers of a school are "first class" or not, is to look at the results of public examinations. Grammers may pass as good teachers. But surely examinations may be so conducted as to baffles examiners to a great extent.

Judged by the standard of examination results, some schools in small centres of education would seem to possess good teachers. For instance this year, on the results of the Matriculation examination,

four students belonging to Bankura, one of the smallest districts in Bengal in which there is not a single big town, have won four places out of the first ten in order of merit. The first place has been occupied by a student of the Mahara school in this district. Mahara is a small village. The other three belong to the Bankura Wesleyan School.

Let us take an example from another district. The school at Iloba Mendlar a small village in Hughli, was founded in 1806. This year it sent up 7 boys, all of whom have passed, 5 in the first division and 2 in the second. In spite of debts and the small number of students the villagers and teachers have bravely struggled to keep it up for well nigh three-quarters of a century. Surely the proper thing to do with regard to such schools is not to practically abolish them, but to increase their grants from public funds and for members of the public to help them with subscriptions and donations. That would be a fitting recognition of the educational zeal of their conductors.

We may also add that in the conditions which prevail in Bengal it is more practicable to pay attention to the individual needs of the pupils in small schools than in big ones.

Well supported schools in comparatively small centres of population may become big centres of education, e.g. Eton Harrow Rugby.

Vidyasagar Anniversary

The celebration of the Vidyasagar anniversary reminds us once again of the character and life work of Pandit Iswar Chandra Vidyasagar. The combination in the same individual of stern resolve, uncompromising independence and self reliance and tenderness of heart surpassing that of mothers such as was met with in this great son of India is rare in all countries. He is best known and will be best remembered for stating the movement for the remarriage of girl widows. He also practically helped forward the cause of the education of girls and women. He was one of the makers of modern Bengali literature. He was the first to establish a private unaided college for high education in Bengal. He was interested in and practically promoted many other social service movements and philanthropic causes. While he deserves all the

praise that is bestowed on him, the best way to do him honour is not to pay him mere lip homage but to do as he did—particularly to help girl widows by getting them remarried and in as many other ways as possible.

Destruction of a Hindu Temple

The destruction of a Hindu temple in Calcutta at dead of night, by the police with desecration of the idol has naturally caused widespread indignation, which is not confined to Hindus. The police commissioner has trotted out the excuse that the temple was built on Government land without permission. But it was built years ago. Why was no objection then raised? And why, again was not the Hindu community given notice that the Government wanted the few square yards of land on which the temple stood for very urgent purposes of state and therefore the idol should be removed? Why was the destruction of the temple effected in the darkness of night? This act of cowardice and vandalism should be visited on its authors in an exemplary manner by the Bengal Government and the temple rebuilt and the idol replaced.

Russia and the League of Nations

The Soviet Government of Russia has been accused of refusing to enter the League of Nations, which has been construed as refusal to co-operate with the members of the League in the promotion of world peace. M. Rykov, president of the council of people's commissars, thus refutes the charge—

"Is the League of Nations really struggling for peace? As is known both China and Great Britain are members of the League of Nations. The question arises what changes have occurred in the relations between these two States as a result of this circumstance? The British armed forces are carrying out in China an intervention just as had it not worse than before the organising of the League of Nations, which has not even brought out for discussion the question of the war in China, not to mention the conflict between Yugoslavia and Italy the treaty between Italy and Albania the war in Nicaragua and so forth. If a war or an attack by a strong State on a weak State is taking place then the League of Nations is not to be seen. The League of Nations is a tool in the hands of a small group of a few very big imperialist States for dominating all the other States. We are quite prepared to support any real pacifist

crimes it has been sometimes asserted by some correliogists of theirs that the women said to have been abducted or kidnapped away from home of their own accord and conversion to Islam has also been sometimes pleaded as the motive. Taking the first explanation first, if it were true in all or most cases why should force, house trespass, house breaking, removal from place to place, gang rape etc, have been necessary in even a single one? As for the second explanation Christian missionaries also convert Hindu girls and women. But we do not know of a single case where a Christian desiring to convert a non Christian girl or woman has been accused of the kind of outrages under discussion. It may be and has been urged that Hindus bring false cases against Musalmans. But why do they not bring such cases against Christians? Again, there is no need for Musalmans to convert Muslim girls and women. Why then are there so many cases of Musalman men abducting kidnapping or ravishing Musalman women?

There are non Mubammadan organisations for rescuing and otherwise helping women who have been victimised. We shall be really glad to know that there are such Muhammadan organisations also. We shall thank our readers to let us know the address of any such.

—

Sedition and Imputation of Bad Motives

Recently in Bengal there have been several cases of sedition. It appears from the judgments delivered in such cases that the imputation of bad or base motives to Government is one form of sedition for which the offenders must be punished.
